# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 1. ROCHESTER, N. Y.—SATURDAY, JANUARY 1, 1853. WHOLE NO. 157.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

#### THE NEW YEAR AND VOLUME.

YOUR attention a moment, reader. This number commences the Fourth Volume of the RURAL NEW-YORKER, and in presenting it we would fain arrange preliminaries with friends and strangers. Our remarks are penned in haste, amid preparations for the new year and volume,—yet, though somewha impulsive, may not prove altogether inappropriate.

The RURAL enters upon a new year and volume under the most favorable auspices, having already received substantial invitations to visit numerous former and many new acquaintances throughout the United States and British Provinces. The realities and indications are most gratifying,—indeed far more positive and encouraging than we had anticipated. Hence, we feel particularly well pleased with the public, ourselves, and the "rest of mankind,"—just like wishing everybody and all their friends a "Happy New Year," as we do you, reader, most sincerely. As we have said on a similar occasion, May "you and I, and all of us"—the members of every Family Circle in the land—taught by the experience and observation of the past, this day turn an unsullied page, and inscribe thereon a preface embracing rules of guidance and action which shall lead to such performances as will naturally secure the essentials of happiness and prosperity.

To those who are already familiar with the pages of the RURAL we have little to offer in addition to what has been said in late numbers. We look to former and continued friends and agents for favorable reports at this season, and confidently anticipate large accessions to our subscriptien list through their exertions and influence. Reader, are you of this number? If so, now is the time for action. We need not put words in your mouth, for you can speak of the RURAL from your own knowledge. The question is whether you *can* and *will* give the matter a little attention. We trust your response will be in the affirmative—for you can do much in little time, and with few words. The RURAL is becoming so well and favorably known that it is now far easier to obtain subscribers than formerly. Of the truth of this assertion we have received abundant evidence, recently, and trust you will furnish additional.

A word to readers unacquainted with the RURAL—those to whose sight and attention it is now first introduced. All strangers into whose hands this number may be placed, are respectfully invited to give it a careful examination—and to compare its *contents, appearance* and *price* with those of other papers. *We invite such examination and comparison*—not only because it is the most proper manner to judge of its merits, but for the additional reason that we believe the result will be a conviction that, in all the essential requisites of a good Agricultural, Literary and Family Newspaper, the RURAL NEW-YORKER is not excelled by any in its sphere. Friendly stranger, please give it an examination, and if considered worthy, extend in its behalf your support and encouragement.

To All:—We are resolved to use every essential requisite in our possession in furtherance of the best interests of our readers and community. And we frankly ask all who approve the RURAL, and desire to aid in promoting its objects, to lend a portion of influence to enhance its usefulness.

#### THE SLACK HAND AND THE HAND OF THE DILIGENT.

He becometh poor that dealeth with a slack hand; but the hand of the diligent maketh rich.—*Solomon.*

IT is a quiet evening following one of the early days—perhaps the earliest—of 1853, when you take up this number of the RURAL NEW-YORKER. A farmer, seated by your own comfortable fireside, its perusal is one of the pleasures you can afford to enjoy—at least we may safely presume so—and you look over its varied contents with a varying interest as the subjects may speak to your tastes and feelings. This quaintly entitled article may be the last, or possibly, the first which attracts your attention. Be that as it may, you will not refuse to ponder on the declaration of SOLOMON—to meditate the contrast of the Slack Hand and the Hand of the Diligent.

"He becometh poor that dealeth with a slack hand," says the wise man. This is indisputably true when applied to the farmer. In the culture and management of the soil and its varied products, such dealing ever tends to poverty. The implements of agriculture are sturdy implements—the axe, the plow, the scythe, and the flail, need a firm hand and a steady purpose to make them tell in forest, field and granary—Dallying with them, with a slack hand and a faint heart, will accomplish nothing. The forest long casts its circling shadow round the hut of such a pioneer; the fallow of such a farmer lies half-subdued in autumn, with numerous baulks and ample margin; and his scanty crops lose still farther in value, in their tedious transfer from field to market place. His domestic animals, and everything with which he has to do, feel and show the influences of such unfaithfulness—for dealing with a slack hand, leaves an unmistakable mark upon its victims—effacing slowly but surely, every evidence of comfort and prosperity from the home and premises.

But this is an unpleasant subject for contemplation. And, there are few who have not seen it exemplified in many and varied instances and in every calling of life, for the Slack Hand tries all, and fails alike in all.

The second head of our meditations, that "the hand of the diligent maketh rich," is also especially true in agriculture. Speculation never turns its thousands in a day in raising grain or growing beeves for market. Both these enterprises are safe and profitable ones, but time is required, and above all the hand of the diligent must direct and perform the work. The farmer needs to be earnest and active in his calling. He cannot give his attention to "saving the country," or the concerns of other men, and at the same time raise crops and breed stock which take premiums and command best prices. He must be diligent in plowing and manuring, in planting and tilling, in sowing and reaping, in feeding and tending,—all seasons, even winter, having their appropriate demands upon his labor and attention.

The Hand of the Diligent, directed by the active and intelligent mind, gathers wealth on every side. Comfortable homes rise in the midst of fertile and well-stocked fields, and prosperity declares its presence in everything that meets the eye of the beholder. This is the result not only of work but of thought,—not the thought of abstruse themes and impracticable theories, but the study of work and its every-day requirements. He who is diligent to know and to carry out the true principles of productive labor, creates wealth by every blow he strikes, every furrow he turns, and every crop he cultivates. And to accomplish such an end as this—will it not reward the ambition and stimulate the energies of every man, of every true working man, in the country? Let us deal no longer with the Slack Hand, but take hold on the tasks set before us with the firm grasp of the Diligent.

#### OHIO STATE AGRICULTURAL SOCIETY.

THIS Society held its annual meeting at Columbus, on the 8th of December, 1852, the President, ARTHUR WATTS, Esq., in the chair. On calling the roll, delegates from *sixty-three* counties presented themselves, and handed in reports upon the progress of agriculture in the districts represented.

The Secretary presented an abstract of the financial condition of the Society, from which it appeared that the receipts from all sources, during the year, amounted to $23,823 69. Expenditures for the same period $17,524 18. Leaving a balance in the treasury of $6,299 51. The Society is thus shown to be in a very prosperous condition financially, for which much credit is given to the Fair at Cleveland, and to the citizens of that fine city, for their arrangements and liberality. The Corresponding Secretary, Professor MATHER, read an abstract from his report of the operations of the Society in securing a chemical analysis of soils, and otherwise promoting the cause of agriculture.

The Legislature having appropriated the tax on traveling exhibitions and from escheated estates to the funds of the Society, it is expected that $4,000 will be realized from this source. Resolutions were adopted, for more accurate statistical information respecting the amount of annual crops; to provide for the incorporation of County Agricultural Societies; also recommending the passage of a law authorizing County Commissioners to subscribe, for the purchase of permanent sites for County Fairs, an amount equal to that subscribed by the citizens.—A resolution was also adopted to increase the premiums on farm crops, and place them at the head of the list. J. G. GEST, R. W. STEELE. W. H. LADD, DAVID MCINTOSH and J. T. WORTHINGTON were elected members of the State Board. A resolution was adopted for memorializing the Legislature for a law for the better protection of sheep from dogs, a law for which many of our readers in Ohio would be duly thankful.

A proposition for a law authorizing Horticultural Societies to send delegates to the State Society, with the same privileges as agricultural delegates, met with little favor. The State Board was instructed to communicate with the Boards of other States, with a view to having a meeting of delegates at Columbus, to digest measures for a general Industrial Fair at such points as may be agreed upon. It was made the duty of the President to deliver an address at each annual meeting. The State Board were required to provide for premiums on spring and fall grains.

No place was designated for the holding of the annual Fair. After the adjournment of the Society the new Board elected the following officers for the current year:—SAMUEL MEDARY, President; JOSEPH G. GEST, Secretary; MICHAEL L. SULLIVANT, Treasurer, and designated S. MEDARY, J. G. GEST, and R. W. STEELE as the Executive Committee.

These proceedings are full of interest and instruction. The operations of the Board for the past year have been upon a large scale, and will undoubtedly result in much good to the cause of agriculture in Ohio.—Although first organized in 1846, their receipts and expenditures are much ahead of any other State Society in the Union, while the funds on hand and the available means ensure success for the coming year. "In the multitude of counsellors there is safty," and we might add, the prestige of success. The Ohio State Board consists of over fifty persons, to which may be added the President, or one delegate from each County Society. These constitute the "State Society." Business transacted by them has more influence and character than it can have where the Society is made up of all persons who choose, for any purpose, to become, for the time being, members. It effectually prevents centralization of power in the hands of a few interested persons, or the retaining of office, year after year, by the same set of men.

#### AN ESSAY ON DRAINING.

BY N. DAVIDSON REDPATH.

DRAINING is that operation in husbandry by which wet lands or retentive soils are freed from their superabundant moisture, and reduced to that proper degree of dryness which renders cultivation easy and profitable. In some countries, however, the ground is so very dry and the climate possesses so very little moisture, that instead of draining, the land would require, at certain seasons of the year, to be bountifully irrigated. But, in our northern and temperate latitude there are few farms on which drainage would not be attended with complete success, and therefore, a thorough understanding of the most approved modes of conducting this department of agricultural economy, is desirable. To aid the young or the inexperienced farmer in the principles of this important branch of agriculture, is the object of the present essay.

It ought to be kept in mind that the necessity of draining is twofold, arising in the first instance, from water issuing from springs beneath to the surface above; or, secondly, from stagnant rains, or other surface water, being unable to penetrate into the strata beneath, owing to the impervious quality of the sub-soil. In many instances these two causes are combined. In each case, however, thorough draining is the great remedial measure, and according as either cause, or, a combination of each, predominates, must the operations be conducted.

All soils, with few exceptions, are subject to overwetness, either from their own retentive nature, or from the retentive nature of the sub-soil. Even sandy and gravelly soils, in many cases, would require draining, when lying, as they sometimes do, on an indurated and impervious sub-soil. Clay, on the other hand, whether on the surface, or beneath, owing to its adhesive nature, is always retentive of moisture, and consequently to such soils draining is essentially necessary. The necessity of draining is equally strong, although not so apparent, in what may be called *composite soils*, or such as are composed of a mixture of clay, sand, iron, &c. These ingredients readily combine and render the substratum very impervious.—Loamy soils, in their several varieties, readily imbibe, but usually retain too much moisture, especially when lying on clay, and it is therefore of the first importance that drains be cut in proper directions for its removal.

That great crops have been raised on wet soils is not to be questioned, but this must depend on the state of the seasons, more than on the quality of the land, a contingency that every judicious farmer would endeavor studiously to avoid. It may be fearlessly maintained, that undrained lands will not give an average of crops over a series of years, but must fall fearfully short as regards either the quantity or the quality of their produce, when compared with other lands, all other things being equal, which have been subjected to a thorough system of drainage. The truth of this assertion, if, to some, not self-evident, may be verified by simply observing the autumnal results of a drained and an undrained farm. Or, its truth may be tested by observing the difference of appearance and produce of a drained over an undrained field, upon the same farm, although lying contiguously, and differing in no respect the one from the other, except, that the overwetness has been removed from the former while it remains on the other. Wet soils are continually water-sick, and consequently produce stinted and sickly crops.—Do we wonder at the sickly mother producing the sickly child?

Drains are of several kinds, varying in their dimensions, according to the nature and situation of the soil, and receive their designation from the materials with which they are filled. But of whatever description, to work efficiently, mains, sub-mains, and tributary drains are required. One of the most experienced writers on the subject in describing a main and an inferior drain, says:—"The main drain should be directed along the chief hollow or valley of the grounds, where the whole or greater portion of the drains can be led into it. If any lesser hollows occur in the field they must also have their proportional mains or leaders. The bottom of the main drain should be at least 3 feet, and, if possible, 3½ or 4 feet under the surface where it passes along; and it should have throughout as uniform a fall as the nature of the ground will admit.

It should be flagged in the hollow, or, where flag-stone are expensive, built as an inverted arch, to prevent the possibility of washing away under the side building.—The dimensions necessary will depend on the fall or declivity, and the area of land from which it has to receive water. With a fall in no place less than one foot in 100 yards, a drain 10 inches wide and 18 inches deep, will void the rain water from 100 acres. It is of great importance to make the open area of such drains narrow and high, as smaller bottoms and covers will suit and be less liable to give way; and the current of water being more confined, mud and sand will be less apt to settle in the bottom.—Let the sides be smoothly and securely built with flat stones, either with or without mortar; and let strong flat covers be placed over, or, where such are not to be found, rough simple arches may be built with thin stones and mortar, for the bottom and cover, packing the haunches of the arch well up to the sides of the cut. Where lesser hollows occur, crossing the fields, it is necessary to cut sub-drains along the bottoms, about 3 or 3½ feet deep, and having openings of suitable dimensions formed by inverted stone couples, or with drain tiles, or, where a very large flow of water has to be provided for, with an inverted tile, and a covering-tile, placed above the bottom one, with larger tiles made on purpose.

There should be a cross sub-main at the bottom of every field, or stretch of drains, to receive the water from all the parallel drains; and such drains should always be cut six inches deeper than the drains running into it, that the water may have a free drop, which will prevent the lodgment of mud or sand at their junction or mouths.—Open cuts or ditches, either as mains or sub-mains, should never, except from necessity, be adopted, being apt to get filled with mud and grass, by which water is thrown back into the drains, which often chokes them; besides, the loss of land, annoyance in plowing, constant expense of cleaning, and the unsightly appearance of the thing, are serious objections.

Having thus provided for a main drain, with sub-mains flowing into it, matters are prepared for setting off and executing the parallel, freqent drains in the body of the field. The drains can be executed at any season, when the weather will permit, but the spring and summer are most suitable for the work. It is best to execute the drains when the field is in grass, as it can then be done in all weathers, in a more cleanly manner.

In laying off the drains, the first object for consideration is the nature of the subsoil. If it consist of a strong, stiff till, or a dead sandy clay, then the distance from drain to drain should not exceed from 10 to 15 feet; if a lighter and more porous subsoil, a distance of from 18 to 24 feet will be close enough; and in very open subsoil, 40 feet distance may be sufficient. When the ridges of the field have been formerly much raised, it suits very well to run a drain up every furrow,* which saves some depth of cutting. The furrow being afterwards made over the drains, the hollow is filled up, and the general surface ultimately becomes level. When the field is again ridged, the drains may be kept in the crowns, or middle of the ridges; but if it is intended to work the field, so as to alternate the crowns and furrows, then the ridges should be of a breadth equal to *double* the distance from drain to drain; and by setting off the furrows in the

*Hence called furrow draining.

middle, betwixt two drains, the crowns will be in a similar position; so that when the furrows take the place of the crowns, they will still be in the middle betwixt two drains, which will prevent the risk of surface water getting access to the drains from the water furrows by any direct opening."*

As before stated, the width between the tributary drains will depend on the nature of the soil and sub-soil. but in Scotland, from 15 to 30 feet is generally considered as about the right distance It may be laid down as a general rule, that, when the drains are 15 feet apart they will require to be cut to the depth of 24 inches, and when 30 feet asunder, 36 inches.

In cutting drains, the implements required are few and simple; a common spade, and one or two somewhat narrower; and when the ground is hard, a *pick* for loosening and a shovel for throwing out the soil. The work should be done neatly and smoothly, preserving the slope gradually from the top to the bottom.†

[*To be continued.*]

* Smith on draining.

† In cutting 3 feet drains, experienced drainers make the width of the top about 18 to 20 inches. and the breadth of the bottom 10 to 12 inches. A 4 feet drain will require to be 26 inches wide at the top and 12 at the bottom. But this depends, too, on the quality of the soil.

## JANUARY.—FARM AFFAIRS.

JANUARY, the first of the two months added to the ancient Roman calendar by NUMA, was not known as the first month of the year in England, till 1752, though in Rome it had been so regarded from the adoption of the NUMAN calendar. This month was named in commemoration of a Roman deity, JANUS, who is represented with two faces, and is supposed to have been a very ancient king of Italy: an impersonation of NOAH, looking back upon the antediluvian world, with the face and beard of an aged man, and forward with a joyous face upon the new world, rising out of the waters of the deluge. So January looks back upon the old year and forward to the new.

With us, January is the coldest month of the year. The thermometer usually ranges from zero, or a little below, up to 45 above, averaging about 30. The maximum of cold is generally about the 20th, and sometimes as late as the 10th of February. The range of the barometer is about 1.25 inch, averaging about 29.60 inches. We do not generally have much rain during this month. Most of the vapor is frozen and comes down like wool. The prevailing wind is west north-west.

The FARM WORK consists chiefly in seeing that the cattle and sheep, and other domestic animals are protected from the inclemency of the season, and well and seasonably supplied with good, nutritious feed. Cattle that are housed should be well littered and so kept clean. This is essential.

If any ewes begin to lamb this month, they should be tended with great care. If you have rowen it should be fed to them with turnips and cabbage; all of which are good feed for ewes.

The cows that are expected to calve this month should also receive particular attention. They should be better fed and more carefully protected. Your cattle, sheep and horses should be fed at regular and stated times. Our rule used to be, to feed twice in the morning with hay and twice at evening, and once at noon, deeming it better to feed twice in the morning, rather than to put the feeder all before the animals at one time; for they will eat more and waste less.

Much of your teaming may be done this month, such as drawing manure from the town, or city, removing compost heaps, &c. Rails for repairing and making fences may be removed this month to their places of use.

Wood-chopping may be well attended to some time during the month, whether for the market abroad, or for home consumption. This should be drawn to the house, when, in due time, it will be made ready for the fire. Every farmer should keep about a year's stock of dry wood on hand — for it is better economy to burn dry wood than green — and who that gets up in the morning to make the first fire, has not learned that it is far more convenient.

Truly has it been said of the frugal husbandman, that he is never out of work. In summer, he prepares for winter. In winter, he either does, or should prepare for summer. Thus he moves on in seasonable work as the busy seasons run their regular courses.

These fine, long winter evenings after the short day's labor has been done, furnish a good opportunity to replenish the mind with useful knowledge, such as sweetens toil by increasing its productiveness. Idleness like rust, consumes whatever it fastens upon, unless quickly arrested—while industry ever prompts to action, either mental or physical, and generally to both. Put on, then, the joyous face of JANUS and go forward full of labor and hope, and not stand looking back upon the past, feeding on regrets.— W.

## DOMESTIC ARCHITECTURE.

WITHIN a few years, many favorable changes have been introduced in the styles of architecture prevailing in this country. To no one are the public under greater obligations than to the genius, taste and enterprise of the lamented DOWNING, who, at the time of his sudden death, was engaged in carrying on one of those peaceful revolutions that make all men happier, their homes more beautiful, and the whole world better.

The cities, villages, hamlets, and rural districts of Western New York begin to exhibit new features and look more attractive. The stately mansions of the rich, and the humble cottages of the industrious, are surrounded by many charms that make them seem splendid and pleasant. Those who came here half a century ago, and established themselves in the midst of an uncultivated wilderness, built the rude log cabin and took possession of it. During the first toilsome and lonely years of their struggle with the forest and its savage dwellers, it was almost the only tenement that sheltered the pioneers from the vicissitudes of the varying seasons. In time, as the hardy settlers prospered, they erected the more commodious frame house, and surrounded it with appropriate embellishments. If a traveler who had passed through this region twenty years ago, were now to repeat his journey, he would be delighted as he witnessed the many indications of improvement in Rural Architecture that would meet his watchful gaze on every side. He would see that nearly as much progress has been made in the art of building, as has been made in the art of traveling. As our citizens have become more wealthy and refined, they have naturally sought to build habitations in which comfort and convenience were more perfectly blended with beauty and attractiveness, and in many cases this desirable object has been most happily accomplished.

It is an occurrence worthy of notice, that a citizen of Western New York has just published a work of real and substantial merits, on the theory and practice of building. "THE DOMESTIC ARCHITECT," by OLIVER P. SMITH, of Lockport, is title of the new book to which allusion is made. It is an elegant quarto, carefully written, finely illustrated, and well printed. Though a home production on an interesting and important subject, we have no wish to claim for it any consideration its intrinsic worth will not fully justify—its success or failure being nothing to the writer of this, any more than to any one else who is only desirous of seeing what is true and good become widely known and appreciated.—The design of the author of the work is to furnish, in a cheap and accessible form, actual builders with all the established principles and approved rules of construction, and to urge the adoption of such changes as experience and observation have suggested. In the hands of intelligent and practical workmen, this volume will be found both a useful and safe guide, and an acquaintance with its contents will add much to the stock of knowledge they already possess on the subject of Domestic Architecture.

The following reflections on the moral and elevating influence of a beautiful and happy home—where innocence and goodness can be but cherished—are not only timely and true, but well worthy the serious regard of all who contemplate building for themselves and children a homestead.

* * * "Nothing has more to do with the morals, the civilization, and refinement of a nation, than its prevailing architecture. Virtue and Beauty are twin sisters, while Vice and Deformity are in constant association. The moral and refined seek a home where the virtuous influences that are ever reflected from Beauty and Order are congenial to their cultivated minds and moral constitutions, while the coarse and vicious are best content with rude haunts, as barren of beauty, as their own hearts of virtue. To the intelligent observer this fact is almost constantly visible, and is the subject of frequent remark. Indeed, it is instinctively understood by all. The traveler, in his journeyings, looks at the coarse dwelling, standing in repulsive nakedness by the roadside, barren of all ornament, destitute of architectural symmetry and beauty, and with none of the surrounding adornments that encircle the home of quiet virtue, and secretly and instinctively the impression steals upon him, that the inmates of that dwelling are as coarse in mind and morals as the rude tenement they inhabit. Yet, when a little farther along, his eyes are greeted with a beautiful residence, tasteful in design, and symmetrical in all its parts, reposing within the shade of green maples and stately elms, and ornamented with wreaths of clambering vines, with a becoming grace and harmony in all its adornments and an air of cheerfulness and comfort pervading the entire scene, a silent yet impressive whisper tells him that Virtue and Happiness have there a congenial home — that love and social refinement have there a sanctuary where the bitter fruits of vice and immorality are never tasted. The truthfulness of this picture will be readily acknowledged by the observing reader.

And thus it is, the world over. Our minds and manners are subject to constant influence and modification, gradual yet lasting, by the inanimate walls with which we are surrounded. It has been well remarked, that every child is influenced for good or for evil by the external objects with which it first grows familiar, and that nothing, except it be the teachings of a Christian mother, can do more towards moulding its character into virtuous shape, than Beauty, Order and Symmetry in its early home. How important, then, that the builders of our country should be thoroughly instructed in the business of their profession, since upon their judgment, skill, good taste, and knowledge of architecture, we are dependent for the beauty, grace and convenience of that dearest spot on earth, the centre and sanctuary of our social sympathies—HOME."

This is but a fair specimen of the spirit and style of the literary execution of the work. Every thing is made as plain, easy and agreeable as the nature of the subject discussed would admit. Practical Architects, who have made the art of building the business of their lives, regard its appearance at this time a public benefit, so useful are its teachings and so correct its principles. It is only from a belief that it will be a valuable aid to those for whose improvement it is intended that we have ventured to commend it to a favorable reception. Like similar publications, may its popularity be only co-extensive with its usefulness.

D. W. BALLOU, JR.

Lockport, January 1, 1853.

## EXPERIMENTS IN THE USE OF MARL.

EDITORS RURAL:—For some time I have been waiting for some practical farmer, of more experience than is claimed by myself, to reply to your inquiries about the application and value of muck and marl.

Having on my farm about eight acres covered with marl from two to four feet deep, over which is a covering of muck from six inches to a foot in depth, I have been making free use of it in different ways and for different purposes, the result of which is cheerfully furnished for publication.

In the first place, I tried to raise crops upon the bed as it lay in field, but every crop proved a failure, except buckwheat, and it was too strong for that to fill well.—Next its use was commenced upon the garden. It acted as a mellower of the ground, and proved of more value than any other manure I have ever used, not excepting plaster—one load being more than equal to three loads of common farm manure. The vegetables, not only grew very thrifty and healthy, but were less affected by drouth, than those where it had not been applied. Another advantage is the absence of weeds; the marl being free from the seeds with which barnyard manure abounds. If the gardeners about your city should once use a few tons of marl, they would consider it an object to come out here twelve miles and buy that in preference to any thing else.—I have made use of marl in my fallows for for wheat and on ground prepared for corn and other spring crops, and have received a double benefit from it. On land where muck and marl have been applied, it has produced this year thirty bushels of wheat, where previous to its use, and on the part where none was put, only twenty bushels have been raised.

Where marl and manure have been used side by side, a plain difference in the growth of straw and stalks have been readily seen all the season. I used marl upon a small lot belonging to JOHN MCVEAN, near me, which was almost worthless for wheat or corn. The soil was clay, and hardly produced any thing. The past year, after dressing with marl, it yielded seventy-five bushels of corn, and the same the second year. The third crop was oats, ninety bushels to the acre, after which the stubble was burned in October, and prepared for wheat. The yield was twenty bushels per acre, making four good crops from one application of marl to our poorest land.

It is my custom to plow land very deep. After the clover gets a good growth, six horses are hitched to one plow, cutting a furrow from eight to twelve inches deep and sixteen inches wide. The horses tread down the clover, and the plow moves along so easily that the plowman has no difficulty in turning the clover all under, which I term, well manuring in the furrow. The land is then tilled ready for wheat, when the marl is applied as a top dressing, the effect of which will be seen for three or four crops with very little diminution.

Some of your correspondents desired to know how to use long manure for spring crops. Let them commence about the fifteenth of March and draw out some thirty loads in a pile, and if they have muck or marl, put on about six inches of either, and pack it down hard. By the first of May it will be a good pile of fine manure, and they will save the loss of leaching and evaporation which always occur when manure lays through the summer to decay, besides the gain of having it so much earlier for use.

Marl is also the best manure I have ever tried for fruit trees; any one putting out a nursery or planting an orchard of young trees in the spring would be repaid if they brought marl twenty miles to put round the trees. I have an abundance and to spare which will be supplied very cheap to any who are disposed to test its value. It was not my design to say as much, but if it induces any one to apply muck or marl to their lands, I shall feel well repaid.

Scottsville, N. Y. Dec., 1852. G. W. G.

## GREEN CROPS FOR MANURE.—INQUIRIES.

EDS. RURAL:—I wish to make a few inquiries through the medium of your columns, in relation to green crops for manure. Which kind of clover is preferable, large or small? As it is more liable to "heave out" the second spring than the first, on clay soils, would it be advisable to turn it under during the autumn previous, for corn instead of waiting until the second spring?—Indeed, how long should heavy soils lie in clover, with economy in regard to heaving out, before turning under? Why more liable to heave out the second than the first spring?

All are aware that some of our lands are too low and moist for clovering to advantage. Now, is buckwheat positively a safe or reliable substitute? Has it all and singular the properties required to renovate worn out or impoverished lands? How much should be sown per acre for turning under?

Is green-sward, turned in spring, adapted to turnips and carrots?

There is no doubt of the efficacy of plaster of Paris on some varieties of soils. Are there any upon which it is either worthless or injurious? W.

Phelps, N. Y., Dec., 1852.

## CALVES AND YOUNG CATTLE.

CALVES must have good keeping through the first winter or they will prove small and inferior cattle. The best of hay should be fed to them and in the fore part of the winter, they should have fine rowen. In the latter part they will be older and more able to manage common merchantable hay.

They require less warmth than cows and old cattle, and they are frequently kept in open sheds. But they need something in our long winters in addition to good hay.—They are more often costive than older cattle, and they need something to counteract this tendency. A little meal given daily will do them no harm—oats and Indian are the best. But roots of all kinds are good. Apples are good for them, but apples should be crushed.

It is not a good practice to tie calves by the head in stalls. Three or four of them may be kept in a pen loose without risk, as they cannot use their horns with much effect. When kept in pens they require a great deal of litter to keep them clean and dry. It is surprising to see what a quantity of good manure may be made in a winter from a few calves. In many places leaves may be gathered rapidly at this season by the roadside, and we see no better way to dispose of them than to put them in the calf pen. If you have no calves put the leaves into the hog pen for nests.

Yearling cattle are wintered at less expense, and our farmers here prefer to buy such in preference to calves. But calves must be wintered somewhere, and farmers in the far interior are unwilling to sell very low after the first winter. Young cattle more than a year old will live on straw and poor hay,—but they look better in the spring when they have had roots and hay. Water in abundance should always be supplied, and the water should be brought to the cow yard.—*Mass. Ploughman.*

## COWS WORTH HAVING.

THE Poughkeepsie Eagle says that Mr. D. E. Billings, of La Grange, has two cows which have given a sufficient quantity of milk to furnish his family with milk and butter, besides which he has sold in six months and six days 209 pounds of butter, amounting to $85. The cows have had no other food than pasture.

The editor of the Clinton Co. Whig says:

The above paragraph has been the rounds of nearly all our exchanges, without being matched, and we think it high time we begin to brag a little about a cow of our own. We have *one* cow which is capable of doing more than half of what is stated to have been done by Mr. Billings' two cows.

During the past season, with no food but pasture, and poor pasture, she has given sufficient milk, cream and butter for our family of seven. Had we two such cows we could of course set all the milk of one for butter without disturbing it for family use.

We have only once tested the number of pounds of butter which all her milk would yield; but on that occasion we made six lbs. lacking one ounce from the milkings of 3 days, which is at the rate of about fourteen pounds a week. She had no extra feeding for the trial. Calling her capable of an average of twelve pounds a week for the six months and six days which we have no doubt she would make, we would have 324 pounds, which is considerably more than the 209 pounds of Mr. Billings'.

CORN COBS.—As cob meal is really a good food for cattle, we advise farmers to shell their corn before selling, and have the cobs ground into meal to feed to their stock.—Farmers should, in all things economise their cattle food.

## POULTRY RAISING.

AT a recent meeting of the Concord Farmers' Club, the question being, "Is the raising of poultry profitable?" Mr. James P. Brown said he had entertained the opinion that the raising of poultry could not be made profitable among the farmers in Middlesex county. His sons, however, having a different opinion, a year ago he proposed to sell them all his poultry, and purchase of them what eggs and chickens he wanted for the family, upon the condition that they were to keep an accurate account of expenses, and make a true return to him at the end of the year.

Before coming in to the meeting he called upon them for a return up to this time, the period including nine months, and the following is their statement:

| | | |
|---|---|---|
| Had on hand, March 1, 1852, 26 fowls, valued at | | $10,00 |
| Cost of keeping, consisting of corn meal, potatoes and meat | 19.65 | $29,65 |
| Received for 32 pairs chickens sold | 28,13 | |
| For eggs up to Dec. 1 | 19,31 | |
| Have 82 fowls worth 33 cents each | 27,33 | 74,67 |
| Expenses | | 29,65 |
| Profit in nine months | | $45,02 |

He had seen from day to day how the fowls had been taken care of, and after reading this statement, had changed his opinion, and now believes that poultry may be profitably raised in Middlesex county, by bestowing upon it the same attention that is given to other farm stock when well taken care of. These fowls were plentifully supplied with such food as is accessible to all who usually keep them—corn, oats, meal, potatoes, and occasionally fresh meat, such as the plucks of sheep, or the flesh of young calves, many of which are killed when three or four days by those who are selling milk.

Mr. Jacob B. Farmer, said a few years ago he thought he knew something about fowls, but recently had almost come to the conclusion that his knowledge was not to be relied on. He had often found as much clear profit from a single hen through the winter as from a cow. Had frequently got $1,40 per bushel from the grain fed to them, and had received as high as $2,40 a bushel. They should be kept, he said, in a dry, warm place. During the last year his fowls had been diseased, and he had received no profit from them whatever. When he had made a profit it was from a native breed.

Mr. C. W. Goodnow said he had been thinking of Mr. Brown's profits on a single hen, and that they would be about 500 per cent. on the investment. He thought Mr. B.'s opportunities for keeping fowls very advantageous; his own advantages were not so good, but he thought they afforded a fairer opportunity to get at the actual profits, than where they are running on the farm. He had only an acre or two of garden, and was obliged to keep his fowls within somewhat narrower limits than the farmer does his. By careful experiment he had ascertained that each hen requires one bushel and a third of grain in a year, which he thought would not be at a less average cost than $1,33 a year;—then how shall he find his profits? Would she afford him twelve dozen eggs in a year? if so, she would pay cost, but nothing more; in all his experiments, which had been many, he had not been able to derive a profit from them, beyond the keeping of some eight or twelve, which number would provide mostly for themselves while the ground is open.

Mr. Simon Brown related some experiences in which he had realized larger profits from the investments made in his poultry, than from any other item on his farm.—*N. E. Farmer.*

## FARM FENCING—WIRE.

As the early built and unperishable fences of our farms are fast wearing away, and the scarcity and high price of timber make their renewal with such material too costly, it becomes us to look about for some efficient substitute to supply their place. Stone in sufficient quantity is not to be found except in limited sections of the country: and even when it is to be had, it is questionable whether building field inclosures with them is the best use we can apply them to, when the vermin they harbor, and the constant repairs to which they are subject by the action of frost and other things are considered.

Judging from our own experience and the observation of others, wire fence bids fair to become a cheap and effectual material for farm inclosures. Two years ago we examined in company with Mr. Samuel Verplanck, of Fishkill, a piece of wire fence, perhaps eighty rods in length, which separated a wheat field from a pasture, in which a herd of cattle, large and small, had grazed during the summer, and the fence effectually excluded them from the growing wheat. It was rudely and cheaply constructed, at a cost of not more than half a dollar a rod.—At Whitesboro', last August, we saw on the broad bottoms of the Mohawk, another wire fence of a much greater length, which separated a luxuriant meadow from a lean pasture where were kept sixty or seventy head of cows, oxen, and cattle. It had not been broken once, (as we were told,) by the animals, although the luxuriant grass in the meadow was a continual temptation to them, when contrasted with their own closely cropped herbage. The fence, too, was a cheap one—not so expensive as the post and board, and rail fences adjoining, although very ordinary in their appearance.—*N. Y. Agricultor.*

THE SEASON TO CUT TIMBER.—I. E. Crouse, of Westminster, Md., having had considerable experience in the preservation of timber, says it should be sawed or cut out in the rough for the purpose intended as soon as possible after the tree is felled. If that cannot be done the bark should all be taken clean off, as the worms generally breed between the bark and the wood. The best time for cutting the timber, he states, is during the winter season.

# Orchard and Garden.

## PRUNING AND TRAINING THE GRAPE VINE.

THE management of our native grapes is an exceedingly simple affair, yet comparatively few think so, or understand the best mode of training and pruning them. They will produce abundantly with very little care, but the fruit is far inferior in quality to that grown on vines properly treated.—Every owner of a rod of ground should grow them. "A grape vine" says the Fruit Garden, "neatly trained on a trellis, with its luxuriant ample foliage, and rich pendulous clusters of fruit, is one of the most interesting objects of the garden, and, at the same time one of the most profitable; for the shade and ornament alone that it produces, are a sufficient recompense for its culture."

The present is not the time for planting, but it is a suitable season for pruning the grape vine. For old or neglected vines winter pruning is particularly required.—They can then be cut back without essential injury, and this should be done if good and abundant fruit is desired. The grape vine bears its fruit on shoots of the current year, produced from eyes on the previous year's wood. Thence the necessity of keeping up a supply of young wood wherever the fruit will best mature on the vine.

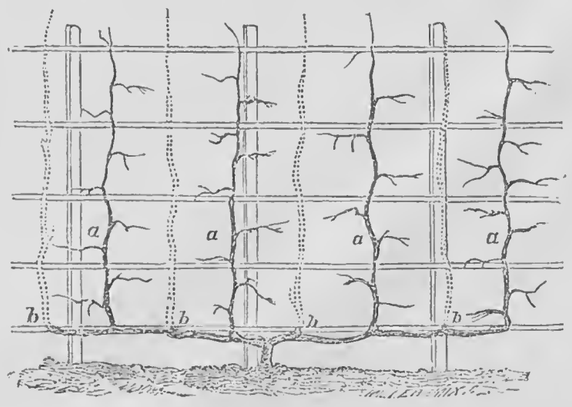

FIG. 1.

The accompanying engravings from THOMAS'S Fruit Culturist, are designed to illustrate both winter and summer treatment.—Fig 1. exhibits a vine trained to a trellis and treated on the renewal system. "It is to be distinctly understood that this space is not to be occupied at once by the young vine, which would give weak and slender shoots, but the extension must be gradual, requiring some years to cover the intended surface. That is the pruning should be such that there shall be but two upright shoots the first year after planting; then four the second year, six the third, and so on. If an old vine has been neglected, it must be pruned back in winter to a mere stump, leaving a few buds for new shoots, only two of which are to be allowed to grow for horizontal arms.

After the trellis is covered, as shown in the figure, a regular annual crop is secured by the following management. The shoots *a a a a* are of last year's growth, and the spurs on the sides are of the present season,

FIG. 2.

and bear the fruit. (A portion of these upright shoots with their fruit-bearing spurs is shown in fig. 2.) While these are bearing to present year, provision must be made for a crop the next. For this purpose last year's bearing shoots were cut off to a bud, (or rather to two or three buds, with the best only allowed to grow,) at each of the points *b b b b*, so that strong upright shoots are now growing, as indicated by dotted lines, for a crop next season. Bunches of fruit will form on these the present year, but they must be rubbed off early that the vigor of these shoots may not be retarded. In this way, a constant succession is keptup.

The two right hand fruit-spurs in fig. 2. show the ordinary length they are allowed to grow before the ends are pinched off, the upper one being already shortened, and the lower showing the point at *c* where it should be nipped.

It must never be forgotten that the *full growth* and *perfect ripening* of the FRUIT depends wholly on healthy, well developed LEAVES, to furnish food to the forming berries. Hence they must have plenty of room, light and air for their healthy developement.

And hence too, the error of the practice of picking off the leaves to let the light on the fruit. The longer the shoots or spurs extend themselves the better, before they are pinched off, provided they do not interfere with each other."

## TEXAS WINES.

WE learn from the Houston Telegraph, that a large quantity of wine has been made in Texas, this season, from native grapes. Most of the wine has been made from the Mustang grape, which yields a wine of a beautiful claret color, and seems to combine some of the qualities of claret and port. The Telegraph, speaking of the culture of the grape, says:

"There is scarcely a doubt that the culture of the grape might be as profitable here as in any part of Europe, or in the vicinity of Cincinnati. It is estimated that upwards of 1200 acres of land are now under cultivation in vines in the vicinity of Cincinnati, on the Ohio. The products of these vineyards is said to amount to upwards of 300,000 gallons of wine, valued at many thousands of dollars, and affording sustenance to upwards of 2000 persons.—The climate of Texas being similar to that of Italy and Spain, must be more favorable to the culture of the grape than that of Ohio, and we are confident that vineyards are more profitable here than in any part of the valley of the Ohio. We believe the only attempts that have been made in Texas to cultivate the grape, have been made in the level region on the coast.

These attempts have all failed, for the same reason, probably, that similar attempts have failed in Europe. The vineyards there are never found on the plains, but on the hillsides or mountains, and rich earth is often carted many miles, to form terraces on the mountain sides for vineyards. The vines thus cultivated, have thorough drainage for their roots, and they grow on, year after year, even for centuries, without being subject to blight or mildew. The mustang grapes on the hill sides in thh undulating regions of Texas, grow on year after year in the same manner; year after year produce successive crops of grapes that are as luxuriant and free from defect as those of the best vineyards of Spain or Europe. We recently visited the valleys of New Year's Creek, Washington county, and were astonished to notice the immense quantities and the extraordinary luxuriance of the grape vine. They were extended in many places in festoons, several rods in length, and some of them seemed loaded with tons of fruit. We believe we saw several vines, each one of which would yielded a barrel of wine. If these native grapes grow thus luxuriantly on these natural terraces, surely the choice varieties of the grape might be cultivated to advantage. The valley of the New Year's Creek probably contains a hundred thousand acres that are as well adapted to the culture of the vine as the lands in the valley of the Rhine; and if an enterprising and wealthy capitalist, like Mr. Longworth, of Cincinnati, would encourage a few poor emigrants from the vine regions of Europe to commence the culture of the grape in this beautiful valley, in a few years Texas might furnish the Atlantic cities with wine of a quality equal to the best that has ever been imported from Europe."

ADVERSITY is apt to discover true genius, prosperity to conceal it.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending December 14, 1852.

WM. P. BLAKE, of New York, N. Y., for improvement in lining for iron safes, &c.

James C. Forrest & Geo. Baker, of Schenectady, N. Y., for improvement in trip-hammers.

Jos. H. Gest, of Batavia, O., for improvement in field rollers, for cutting stalks and weeds.

Robt. Hinton, of Roxbury, Mass., for improvement in the manufacture of ball castors.

Joseph W. Houston, of Conway, Mass., for improvement in stone picks.

Clark Polley, of May's Landing, N. J., for improvement in buckets for endless chain pumps.

Zimri Hussey, of Chilicothe, O., for improvement in apparatus for treatment of fractures.

Henry Nycum, of Uniontown, Pa., for improvement in seed planters.

Chas. Abram & Chas. Clow, of Port Byron, N. Y., for improvement in scythe snaths.

Joel Dawson, of Barnesville, O., for improvements in straw-cutters.

Wm. Field, of Providence, R. I., for improvements in machinery for forging metals, &c. Ante dated June 14, 1852.

Zimri Hussey, of Chilicothe, O., for improvement in apparatus for the cure of club-feet.

Harvey Sprague, of Riga, N. Y., for improvement in plow regulators.

Philip P. Trayser, of Baltimore, Md., for improvement in spike machines.

Moses D. Wells, of Morgantown, Va., for improvement in seed planters.

Wm. H. Seymour, of Brockport, N. Y., assignor to W. H. Seymour & Daton S. Morgan, of same place, for improvement in grain and grass harvesters. Ante-dated Oct. 25, 1852.

Cullen Whipple, of Providence, R. I., assignor to the New England screw company, of same place, for mechanism for pointing and threading screw blanks in the same machine. Ante-dated Oct. 16, 1852.

Lydoviann Ricketson, (Administratrix of Henry H. Ricketson, deceased,) of New Bedford, Mass., for improvement in machines for cutting whale blubber.

DESIGNS.

Jas. Wager, Volney Richmond & Harvey Smith, of Troy, N. Y., for design for a box stove.

Nichs. T. Horton, of Cincinnati, O., for design for iron railing.

Gilbert Knapp & Adnah H. Neal, of Honesdale, Pa., for design for a coal stove.

For the week ending December 21, 1852.

JEARUM ATKINS, of Chelsea, Ill., for improvement in rakes to grain harvesters.

Wm. S. Carr, of New York, N. Y., for improvement in water closets.

A. S. Dozier, of Norfolk, Va., for improvement in ventilators.

Warren Gale, of Louisville, Ky., for improvement in straw-cutters.

W. A. Gates, of Mount Comfort, Tenn., for improvement in plows.

Lansing D. Hopkins, of New York, N. Y., for improvements in machinery for manufacturing hat bodies.

Jno. Jones & Alex. Lyle, of Rochester, N. Y., for improvement in grain threshers and cleaners.

Wm. H. Morrison, of Indianapolis, Ind., for improved equalizing apparatus for engines which use steam expansively.

Jacob L. Ream, of Mount Pulaski, Ill., for improvement in maize harvesters.

S. W. Rogers, of Baltimore, Md., for cut-off valve-motion.

Jesse N. Seeley, of Forsyth, Ga., for improvement in potato diggers.

Thomas Snook & Stephen Hill, of Rochester, N. Y., for improvement in lamps for locomotive engines.

Jno. Swindells, of Manchester, England, for improvement in the manufacture of chromate of soda. Patented in England, Nov. 14, 1850.

Wm. E. Underwood, of Middlefield, Mass., for improvement in fulling mills.

Daniel Walroth, of Chittenango, N. Y., and Lucius Evans, of Manlius, N. Y., for machinery for separating iron from furnace cinders.

Caleb C. Walworth, of Boston, Mass., for improvement in steam flat-irons.

Aretus A. Wilder, of Detroit, Mich., for improvement in planing machines. Ante-dated July 17, 1852.

Wm. H. Woodworth, of Salmon Falls, N. H., for improvement in method of measuring cloth on the cloth-beam.

Linus Yale, Jr., of Newport, N. Y., for improved safety-lock.

DESIGNS.

Sherman S. Jewett & Francis H. Root, of Buffalo, N. Y., for design for stove-plates.

Sherman S. Jewett & Francis H. Root, of Buffalo, N. Y., for design for a cooking-stove.

James Wager, Volney Richmond & Harvey Smith, of Troy, N. Y., for design for a hearth-plate.

Washn. L. Pearsall & Sylvester W. Pearsall, of New York, N. Y., for design for a spittoon.

MR. WILLIAM P. CHADWICK, of Edgartown, Mass., has recently made an important improvement in oil presses, to be used on board of whale ships, for the purpose of extracting the oil from scraps or pieces of whale blubber, and has received a patent for the same. It is calculated that a saving of four per cent. in the oil taken will be made by this machine.

Is it not better that your friend tell you your faults privately, than that your enemies talk of them publicly?

## THE NEW YORK CRYSTAL PALACE.

STIMULATED by the unexampled success which crowned the great Exhibition in London, in 1851, and attracted by the novel and unique edifice in which it was held, some enterprising citizens of our own State projected the praiseworthy enterprise of erecting in the city of New York, a similar building, in which to hold an exhibition of the same character.

Early in January, 1852, they obtained from the municipal authorities of the city, a lease of Reservoir Square, for that purpose. On the 11th of March, following, the Legislature granted a charter providing for the incorporation of an association with a capital of two hundred thousand dollars, with the privilege of increasing the same to three hundred thousand dollars. They were authorized to occupy any real estate that might be granted them, and thereon to erect a building for the purpose of the Exhibition of the Industry of all Nations. They were further empowered to award Prizes, and to do every thing necessary to carry out the general object. On the 17th of March, Mr. THEODORE SEDGWICK was elected President, and Mr. WM. WHETTEN, Secretary.

Desiring to have contributions from all nations, the officers took steps to secure the countenance and co-operation of the General Government, which resulted in an arrangement by which the building, when erected, would be made a bonded warehouse so as to receive goods free of duty while on exhibition. A foreign department has been organized by the appointment of Mr. CHAS. BUSCHEK, of London, who is authorized to secure the co-operation of the manufacturers of Europe.

Plans for building were furnished by Sir JOSEPH PAXTON, the late, lamented A. J. DOWNING, and others, from which the board ultimately adopted the one furnished by Messrs. CARSTENSEN and GILDEMEISTER, both of whom, though foreign artists of much celebrity, had taken up a residence under the aegis of Republican Institutions.

WE take the following description of the New York Crystal Palace from the Scientific American:

THE outside form of the building is that of a Greek cross. Each diameter of the cross will be 365 feet 5 inches long. There will be three similar entrances—one on the Sixth avenue, one on Fortieth, and one on Forty-second street. Each entrance will be 47 feet wide, and that on the Sixth avenue will be approached by a flight of eight steps. Each arm of the cross is, on the ground plan, 149 feet broad; this is divided into a central nave and two aisles, one on each side—the nave 42 feet wide—each aisle 54 feet wide. On each front is a large semi-circular fan-light 41 feet wide and 20 feet high. The nave or central portion is 57 feet high, and is of an arch 41 feet in diameter. There are to be two arched naves crossing one another at right angles. The exterior width of the ridgeway of the nave is 71 feet. The central dome is 100 feet in diameter—68 feet inside from the floor to the spring of the arch, and 118 feet to the crown; and on the outside, with the lantern, 149 feet. At each angle is an octagonal tower, eight feet in diameter and 75 foot high. Each aisle is covered by a gallery of its own width, 24 feet from the floor.

The number of the columns on the ground floor will be 190, all hollow, and of 8 inches diameter, and of different thicknesses from ½ to 1 inch. On the gallery floor there will be 122 columns, and the whole structure will be constructed of iron and glass.

The palace is to be erected on Reservoir Square, in this city, a place granted to the association at a nominal rent for the term of five years. It is situated about two miles from the City Hall, and persons will be enabled to reach it from the lower part of the city in half an hour.

The building will be octagonal, the double cross being the galleries. With the three public entrances there will also be a private entrance. The ground floor is divided into four compartments separated from one another by the naves and transepts running at right angles with two tiers of galleries. The whole of the building is to be lighted by the large dome in the centre.

The building will be seen for a considerable distance, and it will command an extensive view of the city. It will be a larger building than any ever erected in our country, and will contain, on its ground floor, 111,000 square feet of space, and in its galleries, which are 54 feet wide, 62,000 square feet more, making a total area of 173,000 square feet for the exhibition. The interior view of this building will be larger and more expensive than any structure in our land, and those who have been astounded with the first view of a great assembly under a huge tent, will, when they first behold the inside of this structure next year, teeming with a living moving mass of congregated thousands "hold their breath for a time."

Of the objects and advantages of this project, the circular of the Association remarks as follows:

Such is the building which will soon salute the eyes of the city of New York. In asserting that it will be the largest and most beautiful construction in the country, nothing has been said more than it deserves.—but this is its least merit. The objects to which the building is destined form its real recommendation.

There is offered here to the European and domestic producer an unequalled opportunity of displaying the works of his skill, without any charge from the time that they enter the building till withdrawn.—The Association have already made public the fact that their object is *Exhibition* alone, and that they have no interest whatever, direct or indirect, in the final disposition to be made of the articles displayed. They thus avoid coming in conflict with any branch of regular industry. There will be gathered here the choicest products of the Old World, and the most cunning devices of the ingenuity of the New. The interests of Manufacture, Commerce and the Arts, will find encouragement and protection within these walls, and another guarantee will be given to the permanence of peace. Here will be collected multitudes of all nations; but the great and crowning feature of the enterprise is, that it will offer to the working classes, such as they can find no where else; that it will be a Palace for the People.

The Exhibition is already announced to open on the 2d of May, 1853.

## CHEAP BUILDING MATERIAL.

IN these days when lumber is getting scarce, and bricks, iron or stone high in price, the laboring men of our cities have to pay exorbitant rents, or emigrate to the distant west, where nature opens her bounteous store for the poor man's benefit. The great want with this class here then is *cheap* building material of a permanent character. The inventive mind that succeeds in supplying this want will be entitled to the lasting gratitude of mankind. This consummation, most devoutly wished, seems likely to be realized, according to the following from a New York paper:

Mr. Fowler, of the firm of Fowler & Wells, has built a house near Fishkill, on the Hudson River, the walls of which are made of prepared gravel. The cheapness of the material, the unique character and comforts of the bulding, have engaged much attention. Walls 256 feet in circumference, and 11 feet 4 inches high, cost seventy-nine dollars to put up, and this amounts to as many feet as are embraced in a house 45 feet wide, and 21 feet high—two stories and a half. The materials of which the walls are compounded, are eight bushels of slacked lime, sixteen bushels of sand, and about sixty bushels of fine and coarse gravel.—This is thoroughly mixed up together in a a bed of proper consistency, and laid up in walls with standard guide boards, braces, &c., to lay the wall solid and straight. This wall has stood summer heats and winter frosts well. It is plastered inside and out, and is both comfortable and solid. The inside walls are made of studs, lathed and plastered, but we only refer to the outside wall as being made of a cheap material, which is asserted to stand the weather perfectly, and is getting harder and better every day.

# Domestc Economy.

## PRESERVED FRUITS.

AT a recent meeting (says the Times) of the American Institute Farmers' Club Mr. SMITH, of Macedon, presented samples of different fruits preserved in their own juice, and retaining their natural taste or aroma in great perfection. Prof. ANTISELL, in remarking upon them, said it was a principle that two fluids, with a porous substance between them, would unite. In preserving fruits in alcohol, the weightier fluid, or juice contained in the fruit, was replaced by the lighter fluid, alcohol; and we eat alcohol instead of fruit; while in preserving them in saccharine juice the flavor went entirely into the syrup, leaving the fruit comparatively tasteless. The plan pursued by Mr. SMITH of preserving the fruit in its own juice, obviated these difficulties, by making the syrup of equal density within the fruit, thereby preserving both aroma and flavor.

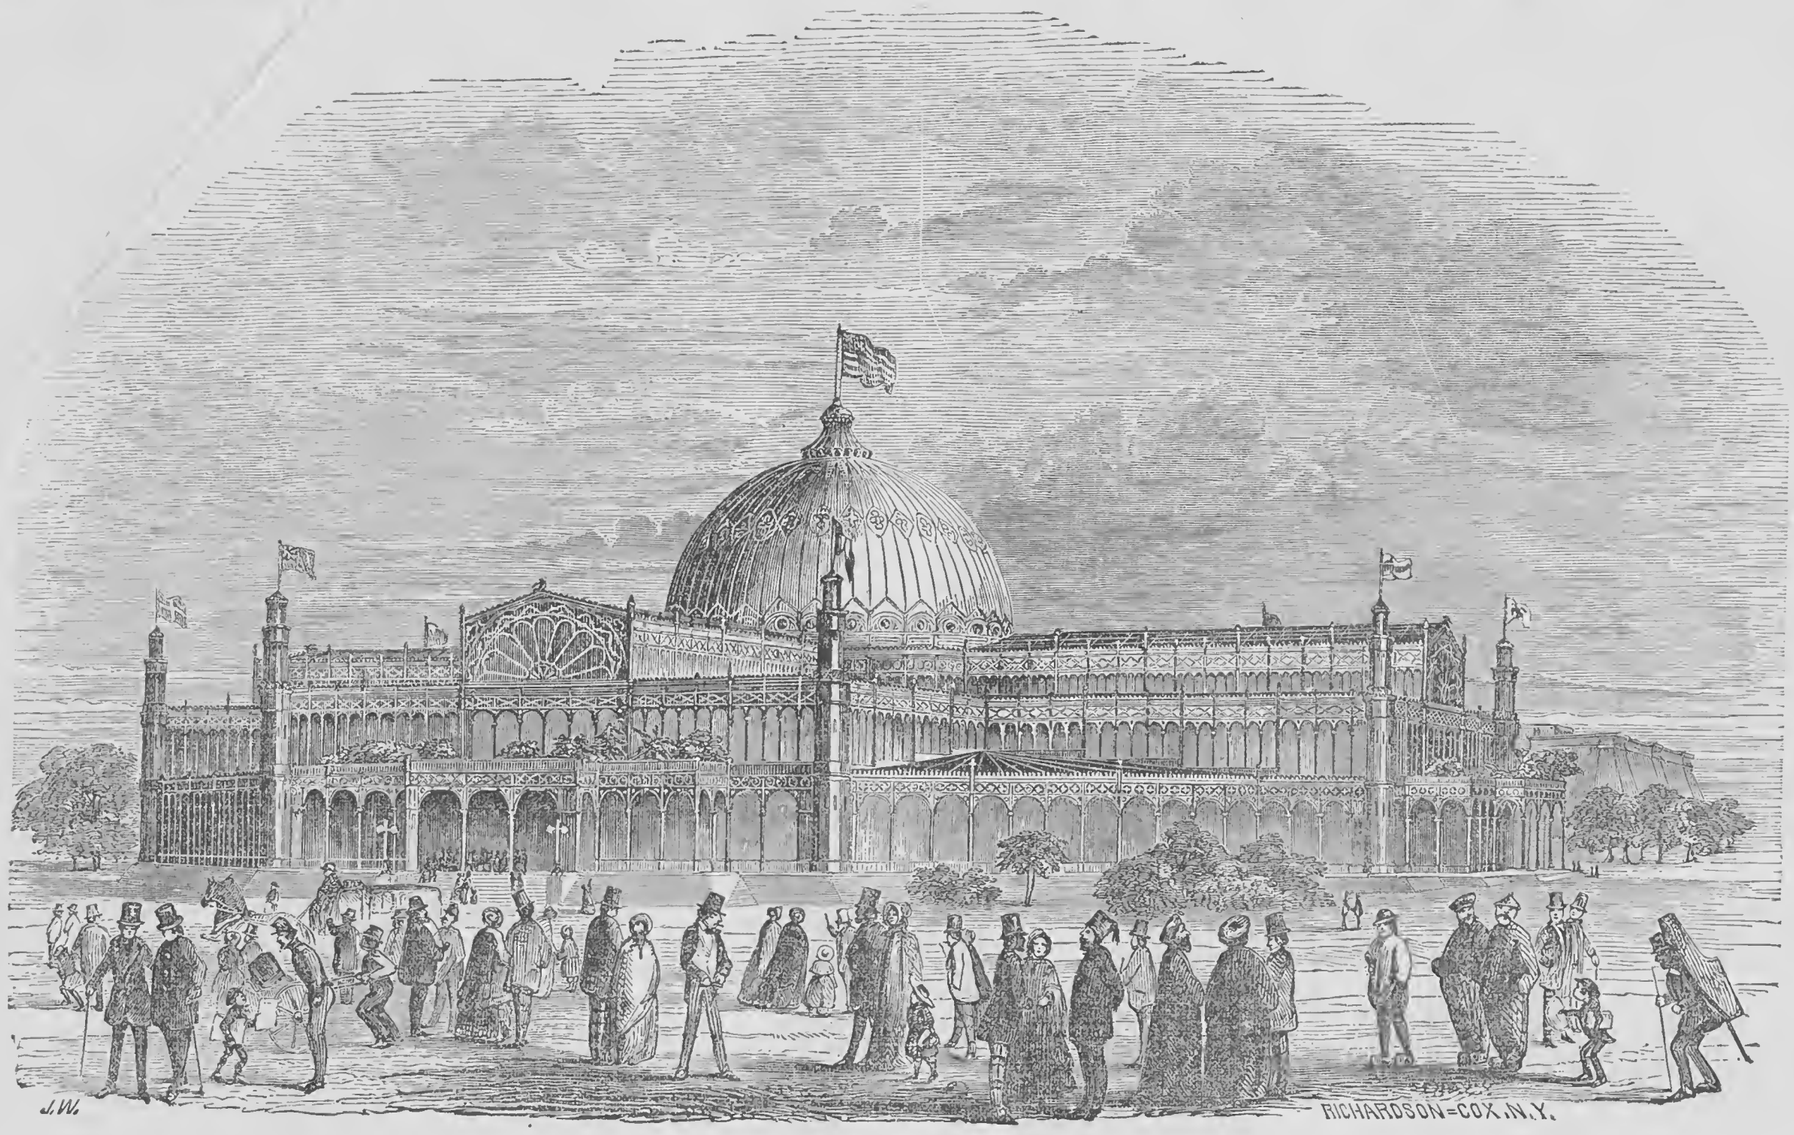
TO MAKE RUTA BAGA PUDDING.—One and a half pint of pulped Ruta Baga, two spoonfuls of wheat flour, four eggs, half pint of milk, and one table spoonful of butter.—The pan greased and floured, and baked with a quick fire.

*Another way.*—One pint and a half of pulped Ruta Baga, and a half a pint of wheat flour, four eggs, and a half a pint of suet, and a pint of milk. The pan as before.

*Another.*—One pint and a half of pulped Ruta Baga, five spoonfuls of flour, a tea cup full and a half of beef marrow, three eggs, two spoonfuls of mace, and one pint and a half of milk. The pan greased as above.

TO DETECT DAMPNESS IN BEDS.—First have the bed well warmed with a warming-pan; then, the moment the pan is taken out, introduce between the sheets an inverted glass tumbler. After it has remained there a few minutes, withdraw it. If the glass is found dry, you may go to bed without any apprehension of chill or rheumatism. If the glass is covered with drops of wet or damp steam, the safest plan is to take off the sheets and sleep between the blankets, as a second pair would probably be no better than the first.

TO RESTORE LINEN THAT HAS LONG BEEN STAINED.—Rub the stains on each side with wet brown soap; mix some starch to a thick paste, with cold water, and spread it over the soaped places; then expose the linen to the air, and if the stains have not disappeared in three or four days, rub off the mixture, and repeat the process with fresh soap and starch. Afterwards dry it, wet it with cold water, and put it in the wash.



## New York Crystal Palace for the Exhibition of the Industry of all Nations.

This building, constructed of Iron and Glass, is erected on Reservoir Square, New York City, by the Association for the Exhibition of the Industry of all Nations, incorporated under the Act of the Legislature of the State of New York, the 11th day of March, 1852. The use of Reservoir Square is granted by the Municipal Authorities of the City. The Ground Plan of the Building forms an octagon, and is surmounted by a Greek Cross, with a Dome over the intersection. The extreme length and breadth of the building are each 365 feet. Height of Dome to top of Lantern, 148 feet. Entire space on Ground Floor, 111,000 square feet. Galleries, 62,000 square feet. Whole area, 173,000 square feet, or four acres. For further description of this magnificent building, names of officers of the Association, &c., the reader is referred to article on preceding page.

# Educational.

### WHAT IS IT TO TEACH?

Our land is filled, literally filled, with those who profess to teach. Every subject, and every ism finds ready laborers to instruct the uninitiated in its hidden lore.—What is the vocation of a teacher? Shall he, like the warehouseman, bring forward a stock of what is possessed by himself, and fill the inquiring mind to its utmost capacity with what he believes to be correct?—Shall he require of his pupil to commit to memory, and recite the ideas of others upon any given subject? We have not so learned the high, the holy vocation of a teacher. Books are indeed indispensable to the pupil as to the teacher, but they should never be allowed to engross too much of the time and labor of either. To our apprehension the teacher should so discipline the mind of his pupil, as to enable him to search for the "hidden things in knowledge" for himself. It is not enough that he learns by rote what others have learned before him; his mental faculties should be drawn out to the labor of new fields, to tread in paths yet untried. Until those who aim to teach can thus discipline the minds of their pupils, and make them originals instead of copyists, they do not fully appreciate what it is to be a teacher. They have not yet themselves learned the duties and the privileges of the vocation they have chosen.

It behooves the teacher to consider well the ground upon which he stands. The new year is a most appropriate time for this labor. With its commencement let every one thus employed ask himself,—"Am I doing all that can consistently be done to prepare the scholar for the important duties soon to be assumed? Has my training of the immortal mind been in keeping with its magnitude, and its destiny? Have I rightly considered its capabilities and labored to increase and mature them? If not, what better time than the present, than now, to commence anew, and to commence aright those important labors?" Upon the teacher rests a responsibility no one should lightly assume, until he understands and appreciates what it is to teach.

The Trustees of Antioch College, Yellow Spring, Ohio, have appointed Miss Pennell, who, for the last seven years has been at the head of the Massachusetts State Normal School, at West Newton, "Professor" [Professeress] of the Natural Sciences. President Horace Mann is Professor of Mental, Moral and Political Science.

Always respect age and your elders.

### THE TEACHER.

It is a holy task to guide the immortal mind of the young, and the teacher has much to cheer him in the great work, much that should cause him to press on with hope renewed in the devotion of his whole energy to the spread of truth and knowledge. No one imbued with right principles can look on the amount of ignorance still existing, without being moved with pity and a strong desire to do what he may be able, to dispel the darkness. With the settled superstitions he may not expect to grapple very successfully, yet he feels it is noble to instill right principles into the infantile mind, and lead it gently forth to the fields of living knowledge and wisdom, whose pure light shall make the grim spectres of darkness flee forever away. T. E. W.

### PARENTAL SYMPATHY.

Domestic rule is founded upon truth and love. If it have not both of these, it is nothing better than despotism. It requires the constant exercise of love in its most extended form. You must learn the dispositions of those under you, and teach them to understand yours. In order to do this, you must sympathize with them, and convince them of your doing so; for upon your sympathy will often depend their truthfulness. Thus you must persuade a child to place confidence in you, if you wish to form an open, upright character. You cannot terrify it into the habits of truth. On the contrary, are not its earliest falsehoods caused by fear much oftener than from any wish to obtain any of its little ends by deceit? How often the complaint is heard from those in domestic authority.—they are not confided in. But they forget how hard it is for an inferior to confide in a superior, and that he will scarcely venture to do so without the hope of some sympathy on the part of the latter.

Poetry.—Every belief, or non-belief, has found its poetry, excepting always modern materialism, as represented by the utilitarian philosophy. There is no speculation in *its* eye—no man of genius can make it beautiful, because it has not one beautiful element in it, and because no man of genius can believe it; its sole music is the chink of money; its main theological principle—the gradual developement of mud into man, and dirt into deity—is as incapable of poetic treatment as it is of scientific proof; and what unless to place it as a prime article in the museum of human folly, can be done to a *caput mortuum* so hateful and so helpless? —*Bards of the Bible.*

Friendship and Enmity.—He who is a friend to himself has seldom any lack of enemies; but he who is his own enemy, is generally considered a clever fellow, and has a plenty of friends and well wishers.

"And hitherto doth love on fortune tend,
And who not needs, shall never lack a friend;
But who in want, a hollow friend doth try,
Directly seasons him his enemy."

# Natural History.

### THEREBY HANGS A TAIL.

It hangs to what the naturalists call a Puma, the Mexicans a Lion, the Texans a Mexican Lion. A splendid fellow he is, too, with great, sleepy, green eyes, a skin as soft as velvet and beautifully mottled, teeth a half inch long, and sharp as razors, claws over an inch in length, jaws four inches across, limbs as finely proportioned as a sculptor could desire, and as brawny as any plowman's you ever saw, a chest broad as a young colt's, a body as flexible as a snake's. The fellow is playful, too; the only precaution to be taken, is not to put your hand where he can get hold of it. To look at him, one would think him the gentlest of kittens, as weak and delicate as a mouse; but a look at his old cage, with the thick timbers torn up as if struck by lightning, will changed this opinion at once. Once or twice already, he has got loose in the big warehouse where he is kept, and such a sudden disappearance of the human inhabitants thereof, as then took place was never before witnessed. He did no harm, however, being mercifully inclined.

This specimen of what Texas can produce in the way of wild animals, was, when a cub, caught on the Rio Grande, by an officer in the army, and was presented by him to a friend of his residing at Corpus Christi.—He grew up under charge of a Mexican, who led him about without a chain, and treated him as he would a favorite dog. The animal never attempted to harm his guardian, and appeared to have a decided affection for him.

Not long since an acquaintance of ours, a young man unacquainted with the ways of the world, and particularly the world of Texas, was out on horseback in the prairies, back of Corpus Christi, "looking for what he could see." Presently, in moving along a road, he came across one of those low, odd, awkward looking things called a Mexican cart. It occupied the middle of the highway; the oxen harnessed to it were lying down, chewing the cud of animal reflection. The vehicle was apparently unoccupied.

Our adventurer rode nearer, and just as he was within a few feet of the cart, up rose suddenly a tall, black, oil-skin covered, steeple shaped, Mexican hat, and under it one of the strangest faces that ever astonished a stranger. It was no less an individual than our "lion," who had sprung up, and sat there on his haunches, showing his teeth in a grim smile, and staring out of his big, green, glistening eyes in no pleasant manner for a person unaccustomed to such adventures. Our traveller felt "all overish" down to his boots; his horse, frightened out of his wits, snorted and reared, and pranced around, getting as far out of the way of the cart as he could. The lion sat still, wagging his long tail, and evidently enjoying the scene. His appearance with the tall, queer hat, was ridiculous enough; still there was something about him that made it more natural to desire to get out of his neighborhood than to stay near and laugh at him.

Our traveller speedily regained his presence of mind, and forced his horse up to the cart. A man's head now rose above the sides of the cart, and called out in Spanish what the Senor wanted. The lion's companion was his guardian—a Mexican. He was going down to Corpus Christi to deliver him to his owner, and at noon had stopped his cart and laid down to take a nap. The lion's haunch was an excellent pillow for the Mexican's head, and the lion's head a superior deposit for the Mexican's hat. So both had gone lovingly to sleep together.

The Mexican lion no wise resembles his African or Asiatic namesake. He is more akin to the tiger. The one we have spoken of above, is the finest specimen of the race we have ever seen. They are now quite rare in Texas.—*N. O. Picayune.*

### THE GREYHOUND AND HORSE.

A gentleman of Bristol had a greyhound which slept in the stable along with a very fine hunter, about five years ago. These animals became mutually attached, and regarded each other with the most tender affection. The greyhound always lay under the manger beside the horse, which was so fond of him that he became unhappy and restless when the dog was out of sight. It was a common practice with the gentleman to whom they belonged, to call at the stable for the greyhound to accompany him in his walks—on such occasions the horse would look over his shoulders at the dog with much anxiety, and neigh in a manner which plainly said—"Let me also accompany you."—When the dog returned to the stable, he was always welcomed with a loud neigh he ran up to the horse and licked his nose; in return, the horse would scratch the dog's back with his teeth. One day, when the groom was out with the horse and greyhound for exercise, a large dog attacked the latter and quickly bore him to the ground; on which the horse threw back his ears, and in spite of all the efforts of the groom, rushed at the strange dog that was worrying the greyhound, seized him by the back with his teeth, which speedily made him quit his hold and shook him till a large piece of the skin gave way. The offender no sooner got on his feet, than he judged it prudent to beat a precipitate retreat from so formidable an opponent.

About the Moon.—By looking through Lord Ross's great telescope, every object on the surface of the moon, of the height of one hundred feet, is distinctly seen. "On its surface are craters of extinct volcanoes, rocks and masses of stone almost innumerable. But there are no signs of habitations such as ours, no vestige of animal remains to show that the moon is, or ever was inhabited by a race of mortals similar to ourselves. No water is visible, no sea, no river; all seems desolate." This desolation is unaccountable, unless we suppose that the inhabitants licensed grog-selling till the people drank the rivers dry and then themselves kicked the bucket.

Praise and Blame.—The more experienced we become, the more scrupulous and skeptical are we in bestowing praise; but we never lose faith in the efficacy of censure.

# Sunday Reading.

For the Rural New Yorker.

### PARABLE OF THE TARES.

The question has not unfrequently occurred, to the mind of the young and inexperienced christian, whether the design of this parable of this illustration or resemblance, should be considered as applying to the church only, embracing true and false professors, or to the world generally, embracing good and bad men. The most reasonable and satisfactory answer to this inquiry would seem to favor the opinion, that it refers to the world in its broadest sense. The explanation to the disciples by the Savior himself, strongly favors this opinion, if it does not conclusively decide the point. The field he declares to be the world. In Mark xvi, 15th, he explains what is "the world." It embraces not only the church, but every creature. To the world in this sense, he orders his gospel to be preached. And in its broadest sense of the whole world, he says, consequent upon this preaching, "He that believeth shall be saved, and he that believeth not shall be damned."

The good seed are the children of the kingdom, and the bad seed the children of the wicked one, wherever found in this whole world.

The sowing of the tares is designed to suggest and illustrate the evil, corrupt, and sinful influences, and their effects, which the great adversary spreads among men; especially among those who are careless, heedless, unconcerned. Their indifference, unconcern and exposure, is illustrated by representing them as asleep.

As it was necessary to gather and secure the wheat when it was ripe, so it was necessary to notice and separate the tares at the harvest, to prevent the good seed from being vitiated by the bad. The offer to separate the tares at an earlier period was declined, because, in eradicating them, the wheat would necessarily be torn up by the roots. This would not be true except in a limited sense, if it referred only to true and false professors in the church. This refusal, therefore, to eradicate the tares, goes far towards deciding the question, while it illustrates the meaning of the parable, viz., the impossibility of separating the wicked from the righteous in this life; as from the manner in which they are associated, the destruction of the one would necessarily involve the destruction of the other. To limit the design of this illustration therefore, to the church, as composed of good and bad men, would hardly seem in accordance with the explanation given of the parable by the Savior himself. E. D.

# Miscellaneous.

### THE CHARCOAL VENDER.

I MEET a fellow often in my way,
Urging a horse and wagon through the streets,
And shouting "Charcoal!" to each one he meets;
I came upon him only yesterday,
But did not feel so much disposed to smile
At his crocked features and his brimless tile,
As is my wont; the fact is, I had dined
Extremely well, and felt benign and kind.
Thought I, "That fellow in those shabby clothes,
Driving all day that shapeless horse and cart,
Owes nothing to the tailor's magic art,
Like all our gallant, well-dressed city beaux;
And would that all of us, like him could say
Each night, that our pursuits throughout the day
Had left no tarnish harder to erase
Than what he had upon his hands and face!
There's not a spot of black upon his heart,
It's all upon his face, and hands, and cart,—
And he may stand a better chance to go
To Heaven than I, or many that I know.

But this was Fancy's work, and we,
Though better dressed, perchance, *are just as good as he.*

## OLD FORT HILL!

### A REMINISCENCE OF THE GENESEE VALLEY.

BY EDWARD WEBSTER, ESQ.

THERE is unwritten romance as well as history connected with our Valley of the Genesee. Every hillside and valley has associated with it some faint, fast-fading traces of a departed race. The magic wand of some "Wizard of the North" or "Geoffry Crayon" could endue its quiet recesses and shady nooks with life, and retouch with glowing colors the shadowy legends of other times. Like the silent string that waits only the touch of the musician in order to captivate the ear, the legends of the Genesee want only to be moulded by a master hand; but, though still living in the memory of a few, they are fast passing to oblivion for want of a chronicler to render them immortal.

Some twenty miles south of Rochester, on a tributary of the Genesee, an old woolen mill is located immediately at the foot of a steep declivity known to the present race of inhabitants as "Old Fort Hill." Men have grown grey and gone to their long homes, since the foundations of that old mill were laid; and the mill itself has seen various vicissitudes of fortune, and almost as many revolutions as its own great wheel, which, for forty years past, has kept on its laborious and unceasing circuit. Some money has been made by it, but more has been lost. Some men have withdrawn from a connection with it unscathed in fortune, but many more have been involved in bankruptcy and ruin. I have no reason to bear malice against it however. My first breath was drawn within hearing of its rattling looms. Almost my first experience of the primal curse inflicted upon mankind, namely, "to eat his bread in the sweat of his brow," was had within its walls. My first faltering steps in the rugged road of science were taken after the labors of the day as a factory boy were done. My first effort to write an article for the public press (and if it had been rejected would have been my last) was made of a Saturday night after the old wheel had ended a six-days run. The money, which served to carry me through old Dartmouth College, was earned by my own hands in that temple of industry. My childhood's home is there, but it is home no longer; the ties of kindred have been sundered by removal and by death, and shadows now mingle darkly with the bright memories of early years.

But of Old Fort Hill! It was the burial place of the Indian, and within my recollection, before the plow had furrowed its summit, and obliterated the traces of mortality, the indentations of its sunken graves were within six feet of each other all over the surface. Strange stories of ghosts and goblins, mysterious appearances, and buried treasure, were connected with it; and when any of us would hie home from an apple frolic or a dance late at night, by a short foot-path over the hill, it would be with a hasty step and palpitating heart. The groaning of an old oak tree, rubbing its limbs against its giant neighbor, has caused our hair many a time to stand on end. The croaking of a bull frog, or the distant whistle of a whippoorwill, connected with the image of a stump or thorn bush glistening in the pale, faint beams of a waning moon, has often conjured up the shadowy outlines of a ghost.

The western brow of the declivity is surmounted by a mound more thickly studded than the rest of the hill with human graves; and here our boyish fancies (and some fancies not so boyish,) were wont to fix the abode of the spectral watchers over the sleeping multitude, and over a treasure hidden somewhere in the vicinity.

One fourth of July—a holiday for the operatives of the mill, as it is and ought to be for everybody throughout our land—the factory boys, by no means behind their seniors in patriotism, were early astir and discharging divers pyrotechnical missiles in the shape of squibs crackers and pewter guns. They were assembled on the "Pinnacle," as the mound was called, on Old Fort Hill.—They had cut and drawn to the spot a tall slim tree, for the purpose of erecting a liberty pole, and one of the juvenile heroes was industriously wielding a pickaxe excavating a hole for its reception, when the point of the instrument struck sullenly and gratingly into what seemed to be an earthen pot. All the stories of hidden treasure he had ever heard rushed into his mind, and without pausing to examine further, he leaped from the hole shouting at the top of his voice,—"I've found a pot of money! I've found a pot of money!" The other boys took up the shout—*We've* found a pot of money! We've found a pot of money!" and the hills around reechoed the burden of "Found a pot of money—pot of money—money—oney," until it died away fainter and fainter, in a distant and sullen roar.

In a moment the little hamlet at the foot of the hill was deserted, men who had never been known to run before—women with babies at their breasts, and small children clinging to their apron strings rushed up the hill; the old and the young—the active and the infirm—the man in health and the invalid, each according to his or her physical abilities, made haste to the spot of the discovered treasure, in order to come in for a share in the distribution of the spoils.—The agent of the mill, a man of great consequence in the little community, for he was chief of fifty men and boys, and had also been a member of the Legislature, very corpulent, and covered with dust and sweat from his unwonted exertions, took upon himself the management of the exhumation; and after carefully digging around the mysterious casket took out—not a pot of money, but a human scull. Instantaneously the excited countenances of the crowd, from the pompous agent down to the veriest boy, changed to an expression of blank disappointment and dismay. The boy, however, who made the discovery, and several of those who joined in raising the shout, stoutly persisted in declaring that they had struck a veritable pot of money; that they had heard the chink of genuine coin, and seen the flashing of virgin gold, but that the genius the place had removed the same, and interposed in its stead, this poor remnant of mortality, empty even of what it was originally designed to hold, namely, a human brain. Whether such was the fact or not, I shall not undertake to say; but young as I was at the time, my sentiments were akin to those which have since been expressed by the chief of American Poets:

"Gather him to his grave again,
And solemnly and softly lay,
Beneath the verdure of the plain,
The warrior's scattered bones away.
Pay the deep reverence, taught of old,
The homage of man's heart to death,
Nor dare to trifle with the mould,
Once hallowed by the Almighty's breath."

### A CHEERFUL HEART.

I ONCE heard a young lady say to an individual, "Your countenance to me is like the rising sun, for it always gladdens me with a cheerful look." A merry or cheerful countenance was one of the things which Jeremy Taylor said his enemies and persecutors could not take away from him. There are some persons who spend their lives in this world as they would spend their lives if shut up in a dungeon. Every thing is made gloomy and forbidding. They go mourning and complaining from day to day, that they have so little, and are constantly anxious lest what little they have should escape out of their hands. They look always upon the dark side and can never enjoy the good that is present for the evil that is to come. This is not religion. Religion makes the heart cheerful, and when its large and benevolent principles are exercised, men will be happy in spite of themselves.

The industrious bee does not stop to complain that there are so many poisonous flowers and thorny branches in his road, but buzzes on, selecting the honey where he can find it, and passing quietly by the places where it is not. There is enough in this world to complain about and find fault with, if men have the disposition. We often travel on a hard and uneven road, but with a cheerful spirit, and a heart to praise God for his mercies, we may walk therein with comfort, and come to the end of our journey in peace.

CROSSES NECESSARY.—When fortune humors, she corrupts us. Our own way is often the wrong way. Rugged roads make wary travelers. Dark trials are shining lights; and the more we are diverted from what we covet and love, the better are we adapted to that kind of life which most people are compelled to lead; which they rebel against and denounce, but which is the daily school of wisdom and self-knowledge, whose discipline is sharp and severe, but appropriate to a warring and fluctuating world, whose calms are as stagnating and baneful as its storms are purifying and healthful; and where tranquility is not a fixed and permanent condition, but the casual quiescence and unstable harmony of opposing and conflicting forces.

IT is a shame, if any person poorer than you is more contented than you.

### MR. BRYANT'S HABITS AND CHARACTER.

MR BRYANT'S habits of life have a smack of ascetism, although he is the disciple of none of the popular schools which, under various forms, claim to rule the present world in that direction. Milk is more familiar to his lips than wine, yet he does not disdain the "cheerful hour" over which moderation presides. He eats sparingly of animal food, but he is by no means afraid to enjoy roast goose, lest he should outrage the names of his ancestors like some modern enthusiasts. He "hears no music" if it be fantastical, yet his ear is finely attuned to the varied harmonies of wood and wave. His health is delicate, yet he is almost never ill; his life laborious, yet carefully guarded against excessive and exhausting fatigue. He is a man of rule, but none the less tolerant of want of method in others; strictly self-governed, but not prone to censure the unwary or the weak-willed. In religion he is at once catholic and devout and to moral excellence no soul bows lower. Placable we can perhaps hardly call him, for impressions on his mind are almost indelible; but it may be with the strictest truth said, that it requires a great offence, or a great unworthiness to make an enemy of him, so strong is his sense of justice. Not amid the bustle and dust of the political arena, cased in armor offensive and defensive, is a champion's more intimate self to be estimated, but in the pavilion or the bower, where, in robes of ease, and with all professional ferocity laid aside, we see his natural form and complexion, and hear in placid tones the voice so lately thundering about the fight. So we willingly follow Mr. Bryant to Roslyn; see him musing on the pretty rural bridge that spans the fishpond; or taking the oar in his daughter's fairy boat; or pruning his trees; or talking over farming matters with his neighbors, or—to return to the spot whence we set out some time ago—sitting calm and happy in that pleasant library, surrounded by the friends he loves to draw about him, or listening to the innocent prattle of infant voices, quite as much at home there as under their own more especial roof, his daughter's within the same inclosure.

In person, Mr. Bryant is quite slender, symmetrical and well poised; in carriage, eminently firm and self-possessed. He is fond of long rural walks and of gymnastic exercises—on all which his health depends. Poetical composition tries him severely—so severely that his efforts of that kind are necessarily rare. His are no holiday verses; and those who urge his producing a long poem are, perhaps, supposing that he would in gratifying their admiration, build for himself a monument in which he would be self-enveloped. Let us rather content ourselves with asking "a few more of the same," especially of the later poems, in which, certainly the poet trusts his fellows with a nearer and more intimate view of his inner and peculiar self than was his wont in earlier times. Let him more and more give a human voice to woods and waters; and, in acting as the accepted interpreter of nature, speak fearlessly to the heart as well as to the eye. His countrymen were never more disposed to hear him with delight; for since the public demand for his poems has placed a copy in every house in the land, the taste for them has steadily increased, and the national pride in the writer's genius become a generous enthusiasm, which is ready to grant him an apotheosis while he lives.

### A COMPARISON.

AT the opening of the Manchester, England, Free Library, speeches were made by Dickens, Thackeray, Bulwer, and others.—Among the good things said by Sir Edward, in his characteristic and figurative way, was the following:

Gentleman:—You will remember that story of Aladdin, which we have read in our childhood—how a poor youth decended into a cavern, and brought back from its recesses an old lamp. Accidentally he discovered that at the mere friction of the lamp a mighty genius appeared at his command. Awed by the terrors of the spirit that he had summoned, he at first, only ventured to employ its powers to satisfy his common and his humblest wants—to satisfy mere hunger and thirst—but gradually accustomed to the presence of his gigantic agent, he employed it to construct palaces, to amass treasures, to baffle armies, and triumph over foes, until at the close of the story, the owner of the wonderful lamp is the sovereign of a peaceful empire, assured to his remote prosperity.

Gentlemen, that story is a type of labor at the command of knowledge. When we find the lamp we are contented to apply its genius solely to our common and physical wants; but as we are accustomed to the presence of that spirit which we have summoned, we find that we have obtained a secret which places the powers of earth, air, and ocean at our command. That genius, left to itself, would be a threatening ministrant, because it is only rude physical force; but to him who possesses the lamp, that genius is a docile and bonignant ministrant, because here physical force is the slave of intellectual will.

Now, gentlemen, in that same physical force, which, in the phrase of the day, is sometimes called the "power of the masses," lies a great problem for all thoughtful men to solve. Knowledge has brought us face to face with it, and knowledge must either instruct that force or it will destroy the invoker. May, then, all those who possess the knowledge, who are gifted with the lamp, use it only for beneficent and useful purposes, so that the genius whose tread could arouse the earthquake, and whose breath could bring down the storm, may only come to enrich the treasury and assure the empire.

THE industrious, modest boy will prosper.

# For the Ladies.

### TO MY CHILD, EDDIE.

BY E. M. PHILLIPS.

SLEEP on, sweet babe, so pure, so fair,
The angels love to bend above thee,
And our continual tender care
Shall prove how earnestly we love thee.

How calm and innocent thou art
In thy young morn of beauty sleeping;
Shall sin e'er blast thy tender heart,
Or sorrow whelm thine eyes with weeping?

Yea! poisonous weeds will ever spring
Where fruits and flowers are brightest, rarest,
And storm its cloudy pall will fling
O'er summer skies the gayest, fairest.

But there was once a child like thee,
Whose soul was pure, whose nature holy,
From sin, but not from suffering free;
They found him in a manger lowly.

And as he walked his weary way
Through life, keen sorrow on him pressing,
For those who hated him, he'd pray,
To those who cursed, return a blessing.

To Him, my child, to JESUS turn,
Let thy young heart to him be given,
The gift he'll not despise or spurn
But lead thee to His home in Heaven.

Albion, Dec. 1852.

Written for Moore's Rural New-Yorker.

### THE FIRESIDE.

THE fireside is the most important spot with which life is familiar. It is the centre and source whence all good and evil flow.—Here the germ is planted which in after years is to bud and blossom into virtue or vice. The principle of thought, of feeling, and of action, here receives the form which marks its future development. Whatever be the rank or position attained in a subsequent period of life, the primary motives of action may be traced to the associations of the fireside, the home-circle of childhoods days.

The fireside is a social place. Here we receive our first lessons of social feeling.—This principle of divine origin, implanted by creative wisdom, is nurtured and brought out. It becomes animated and invigorated by kindred influences. The ideas of the mind and the passions of the heart are made evident. The influence is genial.—The expression of thought calls forth a reciprocal. The deep, pent up emotions mingle and flow in unruffled harmony. It pervades the whole intellectual nature, giving power and vigor to the faculties of the soul. Mind acts upon mind, emitting sparkling rays in beautiful coruscations. It is the altar whereon are placed the offerings of undying friendship.

In early childhood the affections of the heart are susceptible of deep and abiding impressions. The nature of youth is sincere and confiding. It is all innocence, purity, and loveliness. It lives and breathes in an untainted atmosphere. Unknown to it are the frivolities of mature youth, the realities of manhood, the cares and perplexities of riper age, and the misgivings and repentings of declining years. Hence, its trusting disposition, its love of all, its hope of good. The living principle, the soul of the affections, is inwoven with the objects of attachments. The innocence and ardor of youth array all in the garb of purity. It sees no deformities, it marks no imperfections. The ties which are formed, are formed forever. And in after years, though keen be the shafts of envy and malice, tho' the venomed tongue of slander pierce the font of cherished affections, still the heart lingers around the loved of other days. It preserves sacred the memories of childhood. Fondly does it turn to those halcyon scenes and lives, over and over again, those happy hours when there was naught to mar its peaceful serenity. The same deep and strong tide of feeling ever gushes from the fountain of the heart. Its warm and glowing radiancy, its mild and genial influence, its sweet and pure harmony are ever felt.

The fireside is sacred as the source of deep toned morality, the altar of zealous piety. Here the mind is first imbued with the love of truth and warmed with a devotedness for good. Whatever be the tendencies it here receives, by such will it be characterized in after life. If the precepts be pure and upright, if the teachings be mild and salutary, the path of future good will be traced. The vital spark, the principle coexistent with the being, is roused and receives a direction which is to tell on its future destiny. If it is familiarized with sacred and divine associations, if it is taught reverently to contemplate the works of Deity, it will ever bear the impress of exalted virtue. High morality will touch every action, and beratch its healthful influence on every nature of life. If the desire is awakened to comprehend, as far as the limited powers of the mind are able, the nature and attributes of the Creator, a thousand avenues will be explored, earth with its countless beauties and varying charms, and the vast space of the empyrian, studded all over with an infinite number of glowing orbs all rolling in beauty and grandeur, will be carefully considered and inferences drawn.

The fireside is a seminary of infinite importance, because it is universal. All are permitted to enjoy its priceless advantages. The schools proffer their learning to a small number; the honors of a college are conferred upon but few—yet all are graduates of the earth. The education received in this cherished and venerated spot, being woven in with the woof of childhood, gives form and color to the whole texture of life. The wreath of the university may wither, its learning may fade from the recollection, its classic lore may moulder in the halls of memory; but the simple lessons of home, enameled upon the heart of childhood, defy the rust of years, and outlive the more mature but less vivid pictures of after days.

Rochester, N. Y. Dec. 6, 1852. A. J. E.

### THE FINE ART OF PATCHING.

WE said a few words, in a late number, about the neglect of homely, household arts in the education of girls. We find, in an Edinburgh paper, something further and better on the same subject, to which we invite the attention of mothers and teachers:

"To patch—how vulgar is the term!—Yet it is an operation requiring far more skill than does the making a new garment, and, when well executed, may save the purchase of many a costly one; the most expensive robe may, by accident, be torn, or spotted, the first day of its wear; the piece inserted in lieu of the damaged one is a patch. If a figured material, the pattern has to be exactly matched; in all cases the insertion must be made without pucker, and the kind of seam to be such as, though strong, will be least apparent, the corners must be turned with neatness. Is not this an art which requires teaching? So of darning, much instruction is necessary as to the number of threads to be left by the needle according to the kind of fabric; then there is the kind of thread or yarn most suitable, which requires experience to determine; where the article is coarse, the chief attention is directed to expedition, but a costly article of embroidery on muslin can only be well darned with ravellings of a similar muslin; such particulars do not come to the girl by inspiration, they must be *taught*, or left to be acquired by dearly-bought experience.

The third mode of repair is well understood and practised by our continental neighbors, though rarely in this country. The stocking stitch is neither more difficult nor tedious than the darn, yet how many pairs of stockings are lost for want of knowing it when a hole happens to be above-shoo?—Practice in lace stitches is more desirable, particularly for repairing lace of the more costly descriptions. The deficiency of a single loop, when lace is sent to be washed, often becomes a large hole during the operation, and thus the beauty of the lace is destroyed. Indeed, lace when duly mended, on the appearance of even the smallest crack, may, with little trouble, be made to last twice or thrice the usual term of its duration. So the shawl stitch is never taught in this country, though, by employing it with ravellings from the shawl itself, the most costly cashmere can be repaired without a possibility of discovering the inserted part.

Proficiency in such *useful* works might well merit as much approbation as is now bestowed upon crotchet or other fancy works, and might be considered as equally desirable qualifications in a tradesman's governess as music. In populous places it might well answer to establish schools where the art of mending apparel should be the chief object of instruction; a month or two spent in it might be sufficient for the damsel, already a good plain needle-worker. It must further be observed, that without a practical knowledge of needlework, no young lady can judge whether her servant has or has not done a reasonable quantity of it in a given time; and if this be true as to the plain seem, it is still more essential in regard to mending of all kinds."—*Home Jour.*

### FASHION.

FASHION rules the world, and a most tyrannical mistress she is,—compelling people to submit to the most inconvenient things imaginable for her sake.

She pinches our feet with tight shoes, or chokes us with a tight neck-kerchief, or squeezes the breath out of our body by tight lacing.

She makes people sit up by night, when they ought to be in bed, and keeps them in bed in the morning when they ought to be up and doing.

She makes it vulgar to wait upon ones' self, and genteel to live idly and uselessly.

She makes people visit when they would rather stay at home, eat when they are not hungry, and drink when they are not thirsty.

She invades our pleasures and interrupts our buisness.

She compels people to dress gaily, whether upon their own property or that of others—whether agreeably to the word of God or the dictates of pride.

HUMANITY will direct to be particularly cautious of treating with the least appearance of neglect, those who have lately met with misfortunes, and are sunk in life. Such persons are apt to think themselves slighted when no such thing is intended. Their minds being already sore, feel the least rub severely. And who would be so cruel as to add afflictions to the afflicted.

A GOOD word is an easy obligation; but not to speak ill requires only our silence, which costs us nothing.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JANUARY 1, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ THOSE who are forming large clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 30 cts. a copy, which is the lowest club price.

☞ SEE Terms, Premium List, &c., on last page.

## All Aboard, Gentlemen!

ON this Natal Day of the New Year we weigh anchor and set sail on our fourth voyage in the good ship RURAL NEW-YORKER. Our gallant craft hath already proved herself eminently sea-worthy,—having stemmed opposing currents, outrode every storm, escaped all dangerous breakers, and safely landed her numerous passengers and valuable cargo, at the termination of each former voyage. Of the praise bestowed upon her speed and bottom, and officers and crew, it becometh us not to speak. Suffice it, that she ranks A, No. 1, in most respects, and presents superior inducements to all inclined to sail in a vessel of the first class. With experienced officers and a picked crew, our well tried vessel—with a new figure-head, and other improvements—promises all who take passage, a pleasant and successful cruise during the ensuing twelvemonth. The capacity of our taut craft is such that, though always well laden, she can accommodate, and hopes to ship, several thousand more passengers (subscribers) than have heretofore been entered upon her books.

It is confidently believed that all who have proved her sailing and other qualities, will again take passage in the RURAL,—and earnestly desired that each will introduce other passengers to her quarter deck and cabin. Those familiar with the RURAL, are especially requested to notify all their shipmates in the journey of life, of her excellent conveniences and accommodations. And please do her owner the favor to state that the cargo of the RURAL comprises a more complete assortment of valuable wares—including Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and Miscellaneous essays, sketches and items—than any other vessel of her class hailing from an American harbor. Also, that great care is bestowed upon the production or selection of every article shipped, in order that all passengers may be benefited and entertained, and none in any wise injured. While the "lords of creation" are furnished with proper food for thought and action, the Ladies' Saloon and Youth's Cabin will always comprise something appropriate, entertaining and unique.

Ladies and Gentlemen, register your names at once if you would start from the sailing point.—Revenue officers and light-house keepers (Agents and Post-Masters) will promptly forward your names and funds—or you can send direct, not forgetting to include as many friends as may be induced to become fellow voyagers. So doing may you never lack "shot in the locker," but be favored with an abundance of siller and sea-room, and ere long safely cast anchor in the haven of Prosperity and Happiness.

## Your Wants and Ours.

READER, we take it that you are more or less interested in the success of this paper. That you like it, and desire, with us, that it may improve as it advances. You want the best paper obtainable, not only for yourself, but for those who surround your Ingleside. We are endeavoring to supply this desideratum. To accomplish the object to the satisfaction of all parties, however, there are a few items wanted on our side—prominent among which are a few thousand new subscribers. Now, we propose an exchange. If you will aid us in obtaining the subscribers, we, in return, can and will furnish you a better paper. You can essentially aid this enterprise—and now is the very time to manifest your disposition in the premises. Each new subscriber counts—and even ones and twos, coming from a thousand or five thousand sources, swell the aggregate to a large number. But perhaps you can, and are disposed, to do more than obtain one or two subscribers. In that case get your neighbors to unite with you in forming a club—and if one is already started by another, please help it along, thus increasing the list beyond expectation. Do us the favor to show this number to those of your neighbors who are unacquainted with the RURAL—(we will supply another, if it is lost or worn out)—and recommend the paper to friends and acquaintances generally.

THIS NUMBER is not as complete in contents, nor issued as early as we intended—though tolerably well filled, and printed before its date. The great and unexpected influx of subscribers during the week, and the change in portion of type, &c., have occupied time and caused some delay. We hope to have all right in a week or two.

☞ The Hon. Elisha Spencer, a distinguished citizen of Yates county, died a few days since.—He was a member of the Convention which adopted the present State Constitution, and was highly esteemed. He was 77 years of age.

## Literary Notices.

FOOTSTEPS OF OUR FOREFATHERS: What they suffered and what they sought. Describing localities, and portraying personages and events conspicuous in the struggles for religious liberty. By JAMES G. MIALL. Boston: Gould & Lincoln. 1853.

An interesting and neatly printed volume, with thirty-six illustrations of localities and incidents connected with the religious history of England. For sale at DARROW'S Main St. Book store.

WE have received from Mr. E. R. HALL, General Agent for TALLIS & Co., London Publishers, the following numbers of their Illustrated Publications:

"BEAUTIES OF MOORE," No. 1.—This work will be completed in 12 monthly parts, comprising a series of portraits of female characters, engraved in the highest style of art, from original paintings by eminent masters. Each part will contain four plates with descriptive letter press. Price 75 cts.

"LONDON AND ITS ENVIRONS," No's. 11, 12.—The history of London embodies, to a great extent that of England. Nothing can be more interesting and instructive than a book of this character, which embraces engravings of all the principal buildings and scenes of interest in and around the great Metropolis. Price, 25 cts. per part.

"CRYSTAL PALACE," No's. 7, 8.—We have hitherto spoken in such high terms of this work that it is needless to add anything more. Price, 25 cents.

We understand that the same firm are soon to issue the "Life and Times of Wellington." It will, without doubt, meet with an extensive circulation.

WILBUR M. HAYWARD, Periodical Agent, No. 4, Burns' Block, is also Agent for the above mentioned works.

THE NEW YORK MAGAZINE.—The publisher has placed upon our table the initial number of this Rochester new Monthly. It is well executed, in the style of the Knickerbocker. The articles with which it is filled are mostly by residents of Western New York, and would not do discredit to older magazines. It is embellished with a fine steel portrait of Hon. A. BOODY, M. C. elect from this district. The enterprise deserves well of the citizens of Rochester and Western New York. $2 per annum. James E. Duryee, publisher, Rochester, N. Y. †

THE KNICKERBOCKER for the current month commences the forty-first volume of this excellent magazine. We can fully endorse the following from a contemporary journal:—"The Knickerbocker has been and will be a fact of its own; a genuine living thing, all the more desirable now that the new crop of magazines filled with articles pirated from English authors, makes home creations more conspicuous and desirable." New York: S. Heuston publisher, $3 per year; five copies for $10. HAYWARD, Agent, No. 4, Burns' Block.

"PUTNAM'S MONTHLY" comes out a neatly printed volume of 120 pages, rich and varied in matter, and lively in style. It numbers among its contributors a large proportion of our best authors, and proposes to be both American and original. The number before us shows an excellent tact in the selection and treatment of topics for discusion and illustration. New York: GEO. P. PUTNAM & Co. $3 per annum, 25 cts. per number. Sold at DARROW'S.

THE NATIONAL MAGAZINE for January, entitles to rank with the best in its line. It is a successful effort to combine with popular literature and pictorial embellishment such as is everywhere relished, the discussion of great practical questions, and a just recognition of unsectarian religion.—New York: Carlton & Phillips, $2 per year. A volume commences with this number. DARROW, Agent.

REDDING & Co., of Boston, send us through the mail a neat pamphlet edition of the great speeches of WEBSTER and HAYNE. It is published at 25 cents, and can be ordered by post.

ACKNOWLEDGEMENTS.—Thanks, most profound and sincere, are tendered to the numerous friends of the RURAL who are daily manifesting their generosity and influence, by favoring us with large accessions of new subscribers. Our receipts on subscription during the past week have *more than doubled those of the corresponding week of last year.* We make this statement in no vain-boasting spirit, but with appreciative gratitude,—and assure all, far and near, that we shall, in return, strive to merit the confidence bestowed.

—To the Press, also, we are under great obligations for highly complimentary notices of the RURAL. To all—Agents, Post-Masters, Editors, and other substantial friends—are due and tendered our best acknowledgments.

SINGLE SUBSCRIBERS.—We have on our books a large number of subscribers who receive their paper in a single wrapper. We beg leave respectfully to suggest to such, that they can better insure the prompt receipt of their paper, and do their friends and the RURAL a favor, by obtaining additional subscribers in their vicinity. Such attention would be duly appreciated on our part, and we should labor to make suitable return therefor.

IRISH BUTTER IN BOSTON.—The Niagara which arrived at Boston on the 18th ult., brought 1,084 firkins of Butter. It was put up at auction on Thursday following. A large crowd being present, 762 firkins were offered, but only 100 were sold at from 22 to 24¾ cents per pound. The Butter was of excellent quality, and was in bond, which adds about 4 cents per pound in price to purchasers.

## Congressional.

### Synopsis of Proceedings.

TUESDAY, Dec. 21.—*Senate.*—Several petitions, resolutions, &c., were offered. A bill was passed conferring the rank of Lieutenant General on WINFIELD SCOTT, by a vote of 34 to 12. By joint resolution A. D. BACHE and J. M. BERRIEN were elected Regents of the Smithsonian Institution.—After an executive session the Senate adjourned.

*House.*—The principal question was upon the reference of the Tariff portion of the Message to Committee of Ways and Means. This led to a discussion of the various propositions for reducing the revenue, for relieving railroad iron from duty, &c., and finally the original motion of reference was passed.

WEDNESDAY, Dec. 22.—*Senate.*—A variety of bills were reported, among which was one from Mr. GWIN, looking to the construction of a Pacific Railroad, which led to some discussion, and finally to the resuscitation of a bill brought forward last session, which was made the special order for the 10th of January. A proposal to change the mode of compensating members of Congress with a fixed salary was after some debate, indefinitely postponed.

*House.*—The sitting was occupied mainly with the presentation of petitions, memorials, &c., and resolutions reported by committees. Among the latter we notice one to pay a Mr. TALIAFERRO—of Virginia, of course—per diem and mileage while contesting a seat in 1811, and again in 1813. One of the claims was allowed.

THURSDAY, Dec. 23.—*Senate.*—An important debate occurred on the acquisition of Cuba, in which Messrs. MASON, CASS and UNDERWOOD took part. It arose upon a resolution offered by Mr. MASON, of Virginia, calling for the official notes in relation to the Cuban Tripartite Treaty, proposed by England and France. The Senate adjourned until Monday.

*House.*—Various bills, resolutions, &c., were under consideration, but none of importance enacted. A letter was read from the Secretary of State, giving an abstract of the return of American Seamen, registered during the year ending Sept. 30, 1852, by which it appears there were in Maine, 968; New Hampshire, 54; Massachusetts, 4,440; Rhode Island, 242; New York, 1,096; Pennsylvania, 575; Maryland, 351; Virginia, 355; North Carolina, 53; Georgia, 83; District of Mississippi, 1,891; Florida, 35; Texas, 6.

The House then adjourned to Monday.

MONDAY, Dec. 27.—*Senate.*—Several reports were made and resolutions adopted, but nothing done of general public interest.

*House.*—The same as the Senate.

TUESDAY, Dec. 28.—Nothing of importance in either House.

WEDNESDAY, Dec. 29.—*Senate.*—Papers on the Mexican Boundary Commission, were laid by the chair before the Senate, and referred, Various petitions and resolutions were offered.

*House.*—Little business was done or attempted in the House.

## Gunpowder and Starvation!

WE are informed that *Comstock*, the "terra-culturist," while "disclosing his disclosures" in Egypt, N. Y., the other day, exhorted his audience to *blast* the RURAL NEW-YORKER. We hope the Egyptians will discover the "seat of life" before they apply the match. For their guidance, we will say that it is *not* in the *pocket*—as the *terror*-culturist "discovered" when he proffered us money to publish articles *written by himself, in praise of himself!* He first tried to open our columns with a gold wedge, but now, incendiary like, resorts to profanity and gunpowder!

—By the way, we learn that the "Professor" advertises the RURAL at most of his lectures We are daily receiving large lists of subscribers from places where he has recently "disclosed"—over sixty names from one town, fifty-seven from another, and nearly forty from another, by the last mail—and it must be in consequence of his *influence.(?)* If this is the way his "disclosures" are "taking the bread out of the mouths of agricultural editors" we beg him to proceed! *We* can endure *such* martyrdom with complacency!

BRUTAL MURDER.—On the evening of 21st inst., as Mr. JOHN BROWN, of Pembroke, Genesee Co., was returning from Buffalo, he was most brutally murdered near North Alden station, on the Rochester and Buffalo railroad. From all the indications, it is supposed he was first knocked down with a stone, and his brains afterward beaten out with a bludgeon. Mr. BROWN had resided near Long's Corners over twenty years, and was 66 years of age. It is believed the horrid deed was done only from a desire of plunder. The amount obtained could not exceed sixty dollars. No clue has been obtained of the perpetrater of the foul deed. †

OUR STATE LEGISLATURE—This body will meet at Albany on Tuesday next, and we shall probably receive the Governor's Message just too late for insertion until the week after. Our usual synopsis of all proceedings of the Legislature of importance to our readers, will be given, and we hope to secure a regular correspondence from the Capital.

THE WEATHER.—The temperature for the past week for the greater part of the time has been very mild. On Christmas day it was muddy, and continued so until Tuesday, when it became cool with very high wind from the west and north-west. To-day, Wednesday, has also been cool and windy—some flakes of snow—no sleighing down to the present day.—w.

☞ It is agreed on all sides that the votes in the House of Representatives sufficiently indicate its disposition to consider no proposition for the modification of the tariff.

## News Paragraphs.

☞ The new rates of telegraph charges are given by the Advertiser as follows: "25 cents for 10 words, and 2 cents for an extra word, where it used to be 20c and 1c; 37c and 3c, formerly 30c and 2c; 50c and 4c, previously 40c and 3c.—Aggregating a message at 15 words, which is low, the increase would be 40 per cent. on the shortest distance, while the second distance would be about 26 per cent. higher; and upon the furtherest distance the rate will increase 28 per cent."

☞ We are gratified to learn, that during the last month, the publishers of Webster's Dictionary have filled an order for a case of the "Unabridged," from Hong Kong, in China, and another from Northern India. They frequently supply orders for the work from the British Provinces, West Indies and California. We wish that every reader of this could own a copy of this valuable dictionary.—*Watchman.*

☞ The Baltimore and Ohio Railroad Company have resolved to proceed at once with the construction of 100 miles of double track—60 between Baltimore and Cumberland, and 40 between Cumberland and Wheeling. One hundred thousand dollars worth of additional locomotives and cars have been ordered. $2,500,000 bonds are to be issued to cover these objects.

☞ Of the twenty millions of gallons of wine consumed in this country, only six millions are imported. Of the fourteen millions of gallons of the home product, all but about three hundred thousand gallons is manufactured from cider, turnips, logwood, and various deleterious drugs. No wonder wine bibbers have foul stomachs and aching heads.

☞ Among the signs of "civilization" among our red brethren, the Minnesota Democrat says that in a council the other day with Gov. Ramsey, one of the Winnebago chiefs complained that the Chippewa Indians stole seventeen horses from his people some time ago, and what was worse, killed the horses, dried the meat and sold it to them for *jerked elk!*

☞ We observe, by the Art Union Journal for December, that the engravings intended for subscribers of last year, will be sent to them, the same as though the regular drawing had taken place. The engravings, as stated by the Journal, are now being printed, and will be furnished to subscribers at as early a day as possible.

☞ Some of the most noted English Noblemen are lecturing this winter, before public assemblies. The Earl of Carlisle is announced to lecture on Gray, at Sheffield; the Duke of New Castle is to lecture to the mechanics at Worksop; Sir Alexander Cockburn, at Southampton, and Lord John Russell at Manchester.

☞ Chicago, it appears, has a considerable sprinkle of business in carriage building. It seems that there are 25 coach and wagon factories in that place, employing 233 men and turning out 2,625 vehicles in the course of the year. Their aggregate value amounts to $210,145, and the capital employed is $127,000.

☞ By the report of the Commissioner of Pensions it appears there are now 18,868 persons drawing pensions from the government, exclusive of Navy pensioners. During the past year the number has decreased 742. The amount paid out in pensions since the last report, amounts to about $1,500,000.

☞ John Wentworth, of the Chicago Democrat, a few weeks since, came out with a proclamation, purporting to come from Gov. Duncan, appointing a day of Thanksgiving. It took; was read in the churches and observed by the people, and all supposed it to have been by authority, until some days after.

☞ A jeweller in Erie has lately received a note written in a female hand and enclosing a five dollar bill, the writer stating that the money was intended "to pay for a ring taken from his store by an inconsiderate person some fifteen years ago." A circumstance which leads to pleasant reflections.

☞ The renowned Tristam Burges, of Rhode Island, distinguished for eloquence and ability in Congress, especially in his rencounter with John Randolph is still alive and hearty, though now in his 83d year. He retains his mind, and his pen is busy with prose and poetry.

☞ Of the entire number of cases of idiocy in Massachusetts, examined by Dr. Howe, in all but four instances, he found the parents of those idiots were either intemperate, addicted to sensual vices, scrofulous, predisposed to insanity, or had intermarried with blood relations.

☞ Horatio Greenough, the Sculptor, whose mental derangement has been recently announced, died at Somerville, Mass., on Saturday morning week. Greenough was a native of Boston—was born in the year 1805—and in the year 1825, graduated at Harvard.

☞ The last Russian novelty is the smoking of cigarettes containing tea instead of tobacco.—The French papers in which we find the circumstance, says the practice is becoming quite fashionable, and tea has at least the merit of being less narcotic.

☞ According to the returns of the assessors of New Orleans, there has been a decline in the value of property in the city of three millions three hundred and ninety-two thousand three hundred and forty-two dollars, within the past year.

☞ Mr. E. H. West, of Charlestown, N. H., recently killed a pig nine months and six days old, weighing 440 lbs. Mr. Gilman Bowen, of the same town, also slaughtered one nine months and eleven days old, weighing 474 lbs.

☞ The Manchester (N. H.) Mirror says: "An Irishwoman in North Haverhill, in this State, gave birth to four live children, one day last week! They were all doing well when last heard from. This is a progressive age."

☞ The Census Report gives 2,210,828 as the number of foreign born inhabitants in the United States. Of these 961,719 are Irish; 563,225 Germans; 380,000 British; 147,000 British American; and 54,000 French.

☞ It is now confidently asserted that fifty miles of the Canada road—east from Detroit river—will be completed in the spring, and the entire road, from Detroit to Hamilton and the Falls, as early as September next.

☞ The commerce between California and the Society Islands has become of so much importance, that the American Consul at Tahiti, has requested the Collector at San Francisco to make known the Police and Custom House regulations of the Islands.

☞ The spot on which the Duke of Wellington breathed his last, is believed by scholars, and antiquarians, to be the identical place where Julias Cæsar disembarked with his army nineteen hundred years ago.

## News Brevities.

—— There are to be four new banks started in New York soon.

—— Apples are selling in Texas at seventy-five cents per dozen.

—— The Roman Post-office levies a double tax on all envelopes.

—— The next Ohio State Fair is to be held at Dayton.

—— There has been an extensive freshet in South-Western Georgia.

——To-Day, a Boston literary gazette, ceases to be published with the year 1852.

—— The next Georgia State Fair will be held at Augusta, commencing on Monday, Oct. 17, '53.

—— The Papal government has at length allowed the city of Rome to be lighted with gas.

—— All the telegraph lines in Wisconsin have been sold to pay taxes due the State.

—— The real estate of Albany is appraised at $15,831,630, the personal at $4,073,671.

—— Mr. Alexander Cook, of Chambersburg, Pa., forwarded to Baltimore last week a hog weighing 1,000 lbs.

—— There are six acres of barrelled pork three tiers high at Louisville, and about six acres of live hogs in pens.

—— An editor at Marshall, Texas, has seen a sweet potato thirty-nine inches long, coiled in the shape of a snake.

—— Senator Borland was fined $100 in the Criminal Court, for an assault on Mr Kennedy, of the Census Bureau.

—— The Art Union Engravings will be sent to subscribers the same as though the regular drawings had taken place.

—— There is quite a freshet in the Hudson.—The water was over the pier on Sunday. Of course the river is clear of ice.

—— 95,790,524 letters passed through the mail the past year, of which very nearly two-thirds were pre paid.

—— Several of our exchange papers use Presidential tickets for wrappers. The supply exceeded the demand.

—— During the present year, 1,620,300 bushels of barley, valued at $1,184,161, have been sold at Albany, N. Y.

—— The balance in the New York Sub-Treasury is now $3,100,000—a reduction of three millions in a few weeks.

—— Georgia Flour, of superior quality, is becoming an article of merchandise in Charleston, South Carolina.

—— The New York and Erie Railroad has declared a semi-annual dividend of 4 per cent, payable the 15th day of January inst.

—— The fly is said to be depredating pretty extensively upon the early sown wheat in some parts of Pennsylvania.

—— Sandford Corey, of Weathersfield, was killed on Friday week, by the falling of a limb from a tree, while chopping.

—— The National Era says it has increased its circulation 10,000 within the last six months. It now has 25,000 subscribers.

—— Cranberries are selling at wholesale for $14 per barrel, and the groceries retail them at 18¾c. per quart in Boston.

—— The French Courier says the Pope has decided to crown the Emperor and Empress of France, as also the Emperor of Austria.

—— During the week ending Dec. 23d, 7,000 hogs, dead or alive, arrived at Dunkirk, and from thence were taken to New York.

—— The Wyoming County Mirror publishes a communication which commences thus:—"Repent ye, for the Maine Law is at hand!"

—— The people of the Island of Maderia publish an appeal to the United States for aid. They are in want of the necessaries of life.

—— Wm. Lyon Mackenzie, M. P. P., will establish at Toronto a new weekly paper entitled "Mackenzie's Weekly Message."

—— The number of hogs arrived at North Madison, Ind., per railroad up to the 12th ult., was 71,629 against 37,207 same date last year.

—— In Albany, a young lady has started a "Ragged School," in which she now has forty or fifty children, picked up in the street.

—— Public auctions for the sale of butchers' meat have been established in the Marche des Prouvaires, Paris, and are very successful.

—— The whole number of votes for President in the nation at large will not be less than 3,160,000; being an increase of 300,000 since 1840.

—— Twenty millions of bricks are required to complete the Capitol extension at Washington. They are furnished at $2,29 per thousand. Very low.

——The statue of Thomas Jefferson—the second in Crawford's Washington monumental group—has just been cast in the Royal Foundry in Munich.

—— Ohio, which in 1840 occupied the fourth place as a corn producing State, now ranks as the first. Kentucky is second, Illinois third, and Tenuessee the fourth.

—— School teachers are said to be in great demand in Texas. But on one account, it is a bad State,—there was no proclamation issued there this year for thanksgiving.

—— The Terre Haute [Ia.] papers say that for some time past the trains on the Indianapolis Railroad, from press of business, have been running day and night.

—— The Dundee Record says an application will be made to the Legislature the present winter, to annex to the county of Yates, the towns of Reading, Tyrone and Wayne.

—— Seven car loads of dressed hogs are daily sent from Columbus, Ohio, to New York, where they are cut up and packed. It is a great and rapidly growing business.

—— The New York Crystal Palace stock, which cost par, and which started with a capital of $200,000, the Express says, sold lately at forty per cent premium.

—— The Wheeling Intelligencer reports that a drove of turkeys, amounting to three hundred head, arrived there from Ohio, recently, en route for the Eastern market.

—— The Traveler states that Mrs. Harriet Beecher Stowe is about to visit Great Britain, at the expense, and by the invitation of a number of ladies and gentlemen of Glasgow.

—— A verdict of $1,000 has been rendered against a fire company in Buffalo for running over and injuring a boy on the sidewalk, where they had no right with their machine.

—— Gen. Cass having declined to deliver the address at the placing of the equestrian statue of Gen. Jackson, on the 8th of January, before the Democratic Association, the invitation has been offered to Senator Douglass, who accepts.

# Foreign Intelligence.

### Arrival of the Canada.

The steamship Canada arrived at Boston on the 26th ult., with news to the 11th from Europe.

The news by this arrival is of no general interest.

The Cotton market has experienced a decline.

The London papers report that the Russians have met with a most disastrous defeat from the Circassians.

The Austrian Government were making preparations to check the progress of Louis Napoleon.

The French Government was adopting measures for the subjugation of Piedmont.

The Morning Post says the French Minister in Brussels signed on Thursday last with the Belgian Minister for Foreign Affairs, a convention, which puts again in force the Treaty of Commerce of 1845, until a new treaty may be concluded between the two countries.

London Markets.—In the Colonial and Foreign produce markets business has been dull this week, but tea has advanced 1d to 1½ per lb. Wheat is 2s per qr., and flour 1s@2s per bbl., dearer. Cotton is at ¼d decline. Iron, Lead and Tin are again higher.

Liverpool Grain Market.—The corn market was very animated in the early part of the week, at a further advance of 2d per bushel on wheat, and 1s on flour, but speculation having ceased for the time the following quotations are given, but are barely maintained: White wheat 7s 2d@8s, and red 6s 7d@9s 4d per 70 lbs, Western canal flour 27s@29s 3d; Philadelphia, Baltimore and Ohio 29s 6d; Canadian 29s 6d@29s 8; sour, 21s 6d@26s. White Indian corn 36s, mixed 34s@34s 6d per quarter.

Periodical Storms.—A correspondent of the Newark Advertiser, calls attention to the fact that we have had a succession of rainy Fridays, and mentions some other instances in which storms occurred at similar intervals of seven days each. We can say a word on this point. Some years since a society of students in Harvard College made a large collection of meteorological tables from all parts of the country, extending over a considerable length of time. An extensive examination of these tables showed that this principle, or coincidence, prevailed to an unexpected extent in the return of stormy days. In some cases for ten, twelve, or even more weeks, the same day would be entered rainy or stormy; then would come some long storm or long-continued prevalence of fine weather, and some other day of the week would take the rain. So far as we know, no regular report of the Society referred to was ever published.—*N. Y. Tribune.*

The Caloric Ship.—Again we are enabled to state for the gratification of the public, that the machinery of the caloric ship Ericsson has been in motion. It was worked yesterday during ten consecutive hours—making over six revolutions per minute. The furnaces were intentionally worked upon a checked shaft. Only 420 pounds of coal was put into them during each hour, and upon this trifling quantity of fuel the fires continued to augment constantly during the day.—We understand that the machinery will be worked for several days to come, and that the trial trip will not be made until the engines are in complete working order.—*Cour. & Enq., Dec.* 21.

Stock in Vermont.—The slaughter of cattle and sheep in Vermont, this Fall, has been great. The short supply of winter feed raised a panic among the farmers, and they have sold a large part of their stock. Very many estimate that one-half the sheep have been sent to the butcher. Certainly not less than one-third have been slaughtered. The slaughter of fat cattle has also been very great. But the drouth of summer has been compensated by the mild weather of November and December, and there is now a good demand for cows. The price of hay has fallen one-third, and there is little fear of an intolerable winter.—*St. Albans Messenger, Dec.* 23.

A Minnesota Night.—One is not filled with a perfect sense of the charms of our climate until he witnesses one of our moonlight nights. In winter they are nearly as bright as the day. The hills round about the meridian throw a strong reflection of the moon's light in upon our town, showing every feature, rendered more charming in the softness of the light. The trees of the forests, bespangled with frost, set off the scene like a fairy land. The air is silent as death. The only sound that breaks the silence is that of an occasional owl, perched in the woods of the Sioux side.—*St. Paul Pioneer, Dec.* 2.

Large Cattle.—A drove of about forty head of cattle, fattened on the farm of Mr. Jesse Cunningham, in Bourdon county, Kentucky, were driven through the city yesterday, and to New York, by the Little Miami Railroad. They were the largest beeves we have yet seen, averaging over two thousand pounds. One of them, (the bullock that took the premium at the Lexington Agricultural Fair,) weighed three thousand two hundred and fifty pounds.—*Cin. Enq., Dec.* 5.

Salt Well in Ohio.—We see it stated that a well has been sunk in Hocking Valley, Ohio, to the depth of six hundred feet for the purpose of obtaining salt water. The object of the enterprising individuals has been fully accomplished, a supply of water having been reached which requires but fifty-three gallons to make a bushel of salt of fifty pounds. The water rises spontaneously to the surface, and flows at the rate of four thousand to five thousand gallons per day.

Successful Enterprise.—Messrs. Patterson & Co. recently went over the mountains, to California, taking with them 150 yoke of oxen, 1,600 sheep, and 17 wagons. They carried freight enough to Salt Lake at a *shilling a pound*, to make a freight bill of $12,000. Their oxen are worth in California, from 6 to $700 per pair; their sheep $17, and their wagons $500 each.

Potato Business South.—The trade in potatoes at New Orleans is very extensive. One firm at Louisville has shipped 60,000 barrels to New Orleans since the 1st July. The additional shipments reach 75,000 barrels from Louisville for the same market, the net value of which amounts to $112,500. The average price of potatoes at Louisville has been $1 per barrel, and the freight to New Orleans about 50 cents.

Tahiti.—It is stated in the late advices received by way of Chili, that the French authorities in Tahiti had again interfered with the English missionaries, ordering them to reside at Papeste, and directed that their churches should have only such preachers as the nobles of the village might select, thus placing the missionaries entirely in the power of the government.

# California News.

### Arrival of the Uncle Sam.

The Steamer Uncle Sam with later news from California arrived at New York on the 23th ult.

The news is of little importance.

Sacramento was fast being rebuilt. Pierce's majority was 7,000 in California.

The news of Mr. Webster's death caused much regret.

There was no material change in the markets.

The miners had nearly deserted the mountain diggings on account of snow, but at the placers, are doing well.

A fire at Yumas destroyed $200,000 of government stores.

Thanksgiving was observed. The new city government of San Francisco was fairly under way.

The mail steamer due here in a day or two, has on board nearly $3,000,000.

An earthquake at Acapulco, had destroyed many buildings, and involved a loss of $200,000.

From other parts of the Pacific there is no news of importance.

Free Trade in the Post-Office Business.—The new letter envelopes, with the single and double stamps, will soon be ready. Then every steamer, every railroad train, every stage, every express line, and every man, is made a mail carrier by act of Congress. Letters, in the government envelopes, can be sent in any way, by any route, and by any conveyance. So says the law.—*Herald.*

The Apple Trade.—The Wisconsin Argus, judging from the number of barrels of apples entered at Milwaukee from abroad—21,000—says that there have been received in the State at least 80,000 barrels, averaging two dollars per barrel, or the round sum of $160,000 for the green apples alone. Large quantities of the dried article have also been imported into that State.

Tobacco in Algeria.—The cultivation of tobacco in Algeria is carried on with great spirit and success. The total product of last year was nearly 1,500,000 lbs; estimated this year 4,800,000 lbs. The first experiment in tobacco raising was made in 1844. Up to last year, one-half was the product of Arab labor. This year, however, European labor greatly preponderates.

Law of Newspapers.—The Postmaster General, in reply to a letter from Mr. Pease, a Hartford news agent, says:—"You are at liberty to send newspapers by mail to bona fide subscribers from your place of business, at the same rate of postage as if sent from the office where such newspapers are printed."

### News Clippings.

☞ The wife of Elizur Wright has again blessed her husband by giving birth to a fine pair of twins—a girl and a boy. This addition makes 18 children the happy man has had to provide for—one regularly every 11 months.

☞ The meat cakes made at Galveston, Texas, are finding a large sale in England. They are cakes made out of flour and good meat, mixed together, and then dried. They will last for years and are highly nutritious.

☞ The balloon Le Napoleon, which ascended from Vangirard with 40,000 printed proclamations of the Empire to scatter over the line of its route, descended safely in one of the eastern departments.

☞ The Ohio Legislature have under consideration a proposition for appropriating part of the earnings of convicts in prison, to the support of their families, in cases where they have been left in want.

☞ The distance from Buffalo to Washington by the new railroad route now under contract, and to be completed in two years, is only about 380 miles, or 120 miles less than from Buffalo to New York.

☞ The cattle train on the N. Y. and Erie Railroad, which passed Owego last Thursday, carried 2,000 hogs in freight and several cars loaded with cattle, all for the New York market.

☞ In many places in New York and Ohio, ladies are regular operatives in the telegraph offices. This is an easy and pleasant employment, and one in which females may profitably engage.

☞ The Hon. John W. Crockett, son of the renowned David Crockett, died at Mempis, Tenn., on the 24th ult., aged 45 years. He had served in Congress six sessions, with marked ability.

☞ A mile a minute has heretofore been considered pretty fair traveling; but it is said that the cars on the Milwaukee and Mississippi Railroad make 14 miles in 12 minutes.

☞ There were weighed at the Albany lock, during the past season, 4,500 loaded boats, and 516 light ones. The aggregate cargoes of the boats amounted to 417,142,191 lbs.

☞ Louis Napoleon's crown, now in process of manufacture, will have the value of 23,000,000 of francs, including the diamonds of the old regal crown.

# Marriages.

On the 25th ult., by the Rev. S. M. Bainbridge, JOSEPH WERNHAM and Miss ROSA JULIA ROBERTSON, both of York, Livingston Co.

In this city the 21st ult., at St. John's Church, by John Mandeville, A. JAY HOYT, of Brighton, and Miss HULDAH D. LODER, of Irondequoit.

In this city the 23d ult., by Rev. R. S. Crampton, JOSIAH T. CRITTENDEN, of Bergen, and Miss HARRIET HUNT, of Riga.

On the 23d ult., by Rev. L. C. Pattengill, ANDREW JACKSON and Miss CATHARINE ANDERSON, all of Newstead, Erie Co.

Also in the same town, by the same, Nov. 19, SAMUEL MARTIN and Miss BETSEY JELLEY.

In Moscow, Livingston Co., by the Rev. Mr. Leonard, D. HARRIS, Jr., of Albany, and Miss A. M. OSTRUM, of the former place.

In Henrietta, Dec. 16th inst., by Rev. S. W. Streeter, Mr. EVERILL F. TERRY and Miss RHODA A. NEELY, all of Henrietta.

Moore's Rural New-Yorker is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in its extracts and subjects for editorials, and opens rich, like a honey comb, —having sweets in every cell.—*New England Farmer.*

Its leading feature, perhaps is agricultural; but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

We think it a model paper for the farmer's family, and of a kind much more likely to be patronized, than those purely agricultural. If we were to start a periodical again, it would be in imitation of the Rural New-Yorker.—*Am. Agriculturist.*

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Dec. 30, 1852.

We approach the ushering in of a new year under auspices which give every indication of a prosperous season. In the great commercial marts of the world, money is most abundant, while from California and Australia the golden current continues with unabated richness and profusion.

Stocks, bonds, and other securites command high prices. Farms, the foundation of wealth, are increasing in value, while every kind of manufactured goods, all descriptions of household and farm products command high prices; but labor, the poor man's capital, has not yet felt the genial influence of better prices, though the prospect is encouraging.

Flour.—This staple continues buoyant, and advancing. The foreign advices are favorable, and home demand brisk Good Genesee commands $5@5,50. Fancy and Extra brands something better.

Grain.—Very little wheat is offering. All prime samples readily command $1,12@1,18. Corn is not brisk at 60@65c. Oats 40@42c. Barley 50@56. Rye 56@63c. Buckwheat 50c.

Provisions.—The provision market is active. Butter is scarce at 20@22c. Eggs 18@20. Lard 12½. Potatoes from teams sell at 31@37½. Apples the same. White beans $1,12@1,25 in small quantities to retailers.

Fresh Meats.—Dressed hogs come in plenty, and sell at $7,25@7,75. Beef, good quality, $4,50@5,50. Mutton carcasses 3@4.

Poultry has been abundant at 6@7c. for chickens, and 7@9c. for turkeys.

Hay.—Hay is plenty, and firm in price, ranging from $8 to $14.

In other marketable commodities no change of note, the current prices will be found in the table below.

*ROCHESTER WHOLESALE PRICES.*

| | | | |
|---|---|---|---|
| Flour, bbl. | $5,00@5,50 | Butter, lb. | 18@22c |
| Pork, mess, | 16,00@19,00 | Cheese, | 7@8 |
| Do. cwt, | 7,25@7,75 | POULTRY. | |
| Beef, bbl. mess, | 10,00@10,50 | Turkeys, lb | 7@8 |
| Do. cwt, | 4,50@5,50 | Chickens, | 6@7 |
| Lard, tried, | 12c | SEEDS. | |
| Do. leaf, | 11c | Clover, bu. | $4,50@5,50 |
| Hams, smoked, | 12c | Timothy, | $2, 2,50@3 |
| Shoulders, do., | 10c | Flax, | 1,25@1,37½ |
| Potatoes, | 25@37½c | SUNDRIES. | |
| GRAIN. | | Whitefish, bbl. | $3,50@10,50 |
| Wheat, bu. | 1,12@1,18 | Codfish, cwt, | $4,50 |
| Corn, | 60@65 | Salt, bbl. | 1,63 |
| Buckwheat, | 44 | Apples, bush. | 25@38 |
| Rye, | 56@62 | Do. dried, | 75@$1 |
| Oats, | 40@42 | Eggs, doz | 18@20c |
| Barley, | 50@56 | Beans, bu, | 1,00@1,12 |
| HIDES. | | Hay, ton | 9@14 |
| Slaughter, cwt, | 3,50@4,00 | Wood, hard, cord | 3,50@4,50 |
| Calf, lb. | 8@10 | Do. soft, | 2@3,50 |
| Sheep Pelts, | 1,12½@1,25 | Wool, lb. | 50@60 |
| Lamb skins, | 50@75 | Flour barrels, | 36@37 |

### New York Market.

NEW YORK, Dec 29—4 P. M.

FLOUR—There is scarcely anything doing this A. M., and the market for common descriptions is better at the closing prices of yesterday. Receivers seem disposed to wait for the Pacific's news, while speculators manifest a desire to realize, even by accepting still lower prices.—There is but little export demand, while buyers for home consumption appear to be pretty well supplied. Sales 1,000 bbls, at $5,50 a 5,62½ for common to good straight State, mostly at $5,56¼. Some parcels not in very good order, have been sold as low as $5,37@5,44; $5,68@5,81 for common to good Ohio and mixed to fancy Michigan and Indiana. Canadian held at $5,87½@$6,00, and no sales of importance.

GRAIN—Market for wheat quiet. There is some demand for export, but buyers and sellers are rather wide apart in their views. White Michigan can be had at $1,29; prime Genesee at $1,43@1,34; very good Canadian at $1,26. The supply of corn is large, and the market favors the buyer. Sales 13,000 bu, at 68@69 for inferior southern and Jersey yellow; 69@70 for good to prime white and yellow southern. Oats dull at 50@52 for State and western.

PROVISIONS—Less enquiry for pork, and market scarcely so firm. Small sales at $18 for old, and $19,25@50 for new mess; $16 for old, and $16,50 for new prime. Clear held at $16, and small parcels mess selling at $16,50, and prime at $13,50. Dressed hogs selling at $5@5¾. Lard selling slowly at 12@12¼. Small lots prime at 12⅞@12¼. No change in butter and cheese, and the sales are moderate.

### Albany Market.

ALBANY, Dec. 28.

The transactions in Flour are quite limited, and the sales have not been of a character to establish quotations; in Grain nothing of moment has been done—the stormy weather has tended to check business in the street. The market for Dressed Hogs is unfavorably affected by the weather. The arrivals by Railroad since our last have been moderate—receivers are generally disposed to wait a favorable change in the weather before offering their consignments. A sale of 70 light hogs was made at the road last evening at 5c. Barley Malt is selling in retail parcels at 90c. Hops are quiet, but held steadily at 21@22c. Whiskey market unchanged—sales 50 bbls. Prison at 24½.

### New York Cattle Market.

NEW YORK, Dec. 20.—At Washington Drove Yard—At market 2,100 Beeves (800 Southern, remainder from this State.)

Demand brisk; sales were made at rates ranging from 6 to 9c per lb—about 200 head left over unsold.

At Browning's—Offered 5,000 Sheep and Lambs, and all sold at from $2,50 to 5,00 for Sheep, and $2,00 to $3,50 for Lambs. 50 Cows and Calves offered and all sold at from $25@45,50.

At Chamberlain's—Offered 350 Beef Cattle; sales at from 7 to 9c per lb. 30 head left over. 20 Cows and Calves offered—sales at $20, 32@45. 9 left over. (Market brisk.) 2,500 Sheep and Lambs—Sales of Sheep at $2,00 to $3,50@5,00; Lambs $2, 2,50, 3,50@5. All closed.

### Albany Cattle Market.

ALBANY, Dec. 21.—Woolford's Bull's Head—At market 336 Beef Cattle. Prices extra, $6,75; 1st quality, $6@6,25; 2d do. $5; 3d do. $4,00@4,50.

Cows and Calves—In market 15. Prices, at from $25, 30 to 35.

Sheep and Lambs—1,126 in market—Prices of Sheep at $2,50, 3,50@5,50. Lambs $2, 2,50 to 3,50.

Swine—200 in market. Prices $5@6,25.

### Cambridge Cattle Market.

CAMBRIDGE, Dec. 22.—At market, 1,976 Cattle, about 1,800 Beeves, and 176 Stores, consisting of Working Oxen, Cows and Calves, yearlings 2 and 3 years old.

Prices—Market Beef—Extra, $6,50; 1st quality $6; 2d do $5,25@5,50; 3d do. $4@4,50; ordinary $3,50.

Hides—$5,00 per cwt. Tallow—$8,00@8,50 per cwt.

Pelts—$1@1,50. Calf Skins 10c per lb.

Barreling Cattle—$4. 4,50@5.

Veal Calves—$4, 5@6.

Working Oxen—$75. 89, 93@120.

Cows and Calves—$19, 24, 31@37.

Stores—Yearlings—$5, 6@7,50.

Two years old—$8, 9, 10@15.

Three years old—$18, 19, 25@11.

Sheep and Lambs—6,723 at market. Prices—Extra—$3, 4, 5@6; by lot, $1,50, 1,75, 2, 2,50@2,75.

Swine—1,795 at market. 1,721 large fat hogs at 6¼c ₱ lb., and 74 shoats at 7½c. wholesale.

### Brighton Cattle Market.

BRIGHTON, Dec. 23.—At market 2,000 Beef Cattle, 185 Stores,—nine Working Oxen,—68 Cows and Calves, 6,000 Sheep and Lambs, and 300 Swine.

Market Beef—Prices—Extra, $6,50 ₱ cwt; 1st quality $6; 2d do, $5@5,50; 3d do. $4@4,25; ordinary $3@3,50.

Stores—Yearlings $5, 6@7; two years old $7@14; three years old $17@35,

Working Oxen—$85, 92, 100@110.

Cows and Calves—Sales $23, 33, to 35.

Sheep—Sales by lot $1,50, 1,62@1,75; extra $3, 4, 5@6

Swine—6@7c; retail 7@8½c; fat hogs 6@6¼c.

### THE EVERGREEN SWEET CORN.

A FEW bushels of this new and valuable variety of corn from seed raised by Professor Mapes, for sale. Per bushel $10; half peck $2; quart $1. Sent by express to any part of the United States, on receipt of the money by mail. Seedsmen supplied. This is beyond all doubt the most prolific variety of sweet corn ever grown. No farmer should be without it. Address

ALFRED E. BEACH,
157–3t* White Plains, Westchester Co., N. Y.

Moore's Rural New-Yorker, valuable for its illustrations, and for its fidelity as an organ of the country—its peculiar interests and pursuits. Mr. Moore ought to make a fortune out of his Journal, and we trust he will for he is helping to make the fortune of the country. We bid him "God Speed."—*Ohio Statesman.*

# MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## Designed for both Country and Town Residents.

The Rural New-Yorker has already attained an extensive circulation and high reputation. It embraces more Agricultural, Horticultural, Mechanical, Educational, Scientific, Literary and News matter, interspersed with numerous Engravings, than any other paper in the Union—and has no superior as an

### AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER!

Its various Departments are under the supervision of an efficient corps of Editors, who are determined to render the whole paper Useful, Pure, and Entertaining. The Fourth Volume, commencing January, 1853, will surpass either of its predecessors—exhibiting, continuously, "progress and improvement" in both Contents and Appearance. As our motto is *Excelsior*, we shall strive to keep the Rural *in the van*—maintaining its reputation as the

### LEADING WEEKLY OF ITS CLASS IN AMERICA!

Our facilities are abundant, and all the essential requisites will be used to render the paper increasingly valuable and acceptable. Its high literary tone, and *entire freedom from anything injurious to mind or morals*, renders the Rural a safe and desirable companion for the young—and one of its special objects is to Instruct, Entertain and Improve those who form the Family Circle. Each number embraces the latest and most important News, briefly, yet definitely stated—and Reports of the principal Grain, Provision and Cattle Markets.

### FORM AND TERMS OF THE PAPER.

The New-Yorker is published in the best style. Each number contains Eight Double Quarto Pages, (forty columns) illustrated with Engravings. A Title Page, Index, &c., at the close of each volume, complete for binding. It is pronounced by its Patrons and the Press the model paper of its class, in both *Contents* and *Appearance*,—and we invite all who desire a first class journal, for the Home Circle, to give it an examination, and, if approved, support.

Terms—In Advance:—*Two dollars a year—$1 for six months. Three copies one year for $5; Six copies, and one to agent, for $10; Ten copies, and one to agent, for $15; Twenty copies for $25.* ☞ *Large Premiums for subscribers. Specimen Numbers, Premium List, &c., sent free to all post-paid applicants. Give us your address.*

[For $2 we will send the Rural one year, and either vol. of the Wool Grower and Stock Register.]

☞ In judging of its cost, bear in mind that the Rural is not a *monthly* of twelve issues yearly, but a large and beautiful Weekly of Fifty-two Numbers!—and that the postage on it within this State is only 13 cents a year, and but 26 cents to any part of the Union.

Subscribe Early! if you wish to commence with the New Year and volume. Subscription money, properly enclosed, may be mailed at our risk. Address,

Dec. 1852. D. D. T. MOORE, Rochester, N. Y.

# THE WOOL GROWER AND STOCK REGISTER,

AN ILLUSTRATED MONTHLY JOURNAL,

## Devoted to the Interests of Wool Growers, Stock Breeders, Graziers, &c.

This Journal is the only one published in America, primarily devoted to the Interests of Wool Growers, Stock Breeders, Graziers, Dairymen, &c., and should be in the hands of

### EVERY OWNER OF DOMESTIC ANIMALS.

The Fourth Volume, commencing July, 1852, will embrace a vast amount of useful and reliable information in regard to Wool and Stock, which can be obtained from no other source. It is conducted ably and independently, published in the very best style, and illustrated with

### NUMEROUS BEAUTIFUL AND COSTLY ENGRAVINGS!

Embracing Portraits from life of Sheep, Cattle, Horses, Swine, Poultry, etc.,—Designs of Farm Buildings, &c., &c.,—with proper descriptions. Each No. contains a careful Review of the Wool and Cattle Markets.

### TERMS,—ONLY FIFTY CENTS A YEAR:

Five Copies for $2; Eight for $3; Eleven for $4; Twenty for $7,—*in advance.* Back No's and volumes furnished.

The Wool Grower and Stock Register is published in a form suitable for binding—each number containing sixteen Large Octavo Pages, with Title Page, Index, &c., at the close of each volume. ☞ Specimen numbers sent free to all applicants. Subscription money, properly enclosed, may be mailed at our risk.

Dec., 1852. Address, D. D. T. MOORE, Rochester, N. Y.

### NOTICES OF THE PRESS.

Moore's Rural New-Yorker is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The Rural New-Yorker, we can recommend, conscientiously, as pure, good, interesting, and useful—calculated to make every family into which it is introduced, both wiser and better.—*Arthur's Home Gazette.*

The Rural New-Yorker, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

The Wool Grower and Stock Register is devoted particularly to the subjects of raising wool and the breeding of stock; and as it is conducted with undoubted ability, should be in the hands of every farmer.—*Rock. Democrat.*

We cordially recommend the Wool Grower and Stock Register to all our friends interested in those departments. —*Granite Farmer.*

It is a journal for which we should suppose every one engaged in sheep husbandry or stock raising, would gladly pay 50 cents a year.—*Middlesex Farmer.*

We commend the paper most heartily to the patronage of Farmers, stock growers, and all who are interested in its objects.—*Detroit Free Press.*

### VALENTINES,

For St. Valentine's Day, February 14, 1853.

D. M. DEWEY, Rochester, N. Y., Wholesale and Retail dealer in Valentines, in order to supply distant customers by mail, and to accommodate the young ladies and gentlemen, has put up in a case a nice variety of Valentines, &c., called the Valentine Casket, for one dollar, which contains—

| | |
|---|---|
| 1 Sentimental Valentine, | 38c. |
| 1 " " | 25c. |
| 1 " " | 13c. |
| 3 Sheets Lace, | 18c. |
| 4 Comic Valentines, | 25c. |
| 6 Fancy Envelopes, to match, | 25c. |
| 1 Valentine Writer, | 6c. |
| Box and Postage, | 20c. |
| 10 Valdutines—Retail price for all, | $1.70—all for $1. |

Upon the receipt of $1 by mail, post-paid, I will mail the Casket to any part of the United States, free of postage. If $2 or $3 worth of Valentines are desired, I will select them and mail as above, so as to go safely and promptly,

Dealers supplied, for cash, with cases assorted as above, containing $5, $10, or $15 worth, at a discount of 40 per cent. from the retail price.

Address D. M. DEWEY.
Arcade Hall, Rochester, N. Y.

☞ The Valentines are now ready to send.

January, 1853. jan1-8feb5.

### Manny's Patent Adjustable Northern Illinois REAPER AND MOWER.

First Premium Machine for 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. Harmon Wheatland, Monroe Co., N. Y.

149- tf. R. HARMON, Agent.

### Important to Farmers!

### PORTABLE MILL.

[From the Ohio Farmer, December 2, 1852.]

Ross' Improved Patent Conical Burr Mill Stones.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
151–tf opposite the Arcade, Rochester, N. Y.

*Were I a young writer, I would sooner my writings would appear in the Home Gazette, than in any other paper of the kind in the Union.*—Daniel Webster.

### ARTHUR'S HOME GAZETTE FOR 1853.

Twenty Copies for $20, and One Copy Additional to the Agent or Getter-up of Club.

FROM all sides has come the spontaneous acknowledgement, that the Home Gazette has thus far been the Purest and Best Family Newspaper published in the United States; but with this testimony has also come the over and over again repeated wish that we would reduce the club prices so low that persons of moderate means could, by forming large clubs, procure the Home Gazette for $1; the price at which so many papers can now be obtained.—To this desire we have yielded, and have also reduced the whole range of Club Prices, so that as small a number as four persons, by joining in a club, can get the paper for $1,25 each.

In conducting the Home Gazette, the editor's aim is, to blend the entertaining, the useful, and the instructive together in such a way as to secure a high degree of interest, and yet at the same time instruct and elevate both the intellect and the affections.

With the new year will be commenced a new story, or nouvelette, by T. S. Arthur, the editor, entitled

"SPARING TO SPEND;
OR, THE LOFTONS AND THE PINKERTONS,"

In which the wisdom and true economy in all personal and domestic relations will be set forth and illustrated in the author's peculiar manner.

As heretofore, the original contributors to the Home Gazette will be among the best writers in our country.

*TERMS, IN ADVANCE:*

One copy, per annum, $2; Two copies $3; Three copies $4; Four copies $5; Eight copies $10; Twelve copies for $15.

When a club of twelve subscribers and $15 are sent, an copy extra will be furnished to the agent or getter-up of the club, or to any address he may designate.

At these terms, the Home Magazine will be, for the amount of choice reading matter furnished, the *cheapest Monthly Publication* in the United States.

For $3, a copy each of Home Gazette and Home Magazine will be sent for one year.

In making up clubs, it may frequently be desirable to unite in a single club both Home Magazine and Home Gazette subscribers. This can be done by always making the club price to the Magazine subscriber $1,25, no matter what the size of the club may be. The extra copy to the getter-up of the Club, in all such cases, can be the Gazette or Magazine, at the option of the party who is to receive it.

Postage on Arthur's Home Magazine.

The postage under the new law, which went into operation on the 30th of September, 1852, will be on each number, 3 cents. If postage is paid quarterly or yearly in advance, it will only be half of this rate: or 18 cents for the whole year.

☞ Specimen numbers sent on application.

T. S. ARTHUR & Co.,
153–2t–cow 107 Walnut-street, Philadelphia.

### ARTHUR'S HOME MAGAZINE.

*THE CHEAPEST AND BEST YET OFFERED!*

Eighty Pages per month of Choice Reading Matter for $2 a year, or in clubs of four at only $1,25.

THIS new Magazine is made up of the best articles that appear in the Home Gazette, thus fixing in permanent shape, and for circulation in new channels, literary matter from the pens of many of the ablest writers in the country. It is from this cause that the publishers are able in the outset, to furnish the work at so low a rate.

A new nouvelette from the pen of T. S. Arthur, the editor, was commenced in the first number for October, 1852, entitled

"THE OLD MAN'S BRIDE."

This story is continued through the first four numbers of the Magazine, from October to January.

With the February number, another new story, by Mr. Arthur, entitled "Sparing to Spend; or, the Loftons and the Pinkertons," will be commenced, to be continued during several months. Thus in the first volume of the Home Magazine, two Nouvelettes by the editor will be published. As only a limited edition of the first numbers of the Magazine was printed, those wishing the "Old Man's Bride," must send in their subscriptions early.

*TERMS:*

One copy one year, $2; Two copies $3; Three copies $4; Four copies $5; Eight copies $10; Twelve copies for $15.

When a club of twelve subscribers and $15 are sent, an copy extra will be furnished to the agent or getter-up of the club, or to any address he may designate.

At these terms, the Home Magazine will be, for the amount of choice reading matter furnished, the *cheapest Monthly Publication* in the United States.

For $3, a copy each of Home Gazette and Home Magazine will be sent for one year.

In making up clubs, it may frequently be desirable to unite in a single club both Home Magazine and Home Gazette subscribers. This can be done by always making the club price to the Magazine subscriber $1,25, no matter what the size of the club may be. The extra copy to the getter-up of the Club, in all such cases, can be the Gazette or Magazine, at the option of the party who is to receive it.

Postage on Arthur's Home Magazine.

The postage under the new law, which went into operation on the 30th of September, 1852, will be on each number, 3 cents. If postage is paid quarterly or yearly in advance, it will only be half of this rate: or 18 cents for the whole year.

☞ Specimen numbers sent on application.

# Poetical.

## MONODY.

BY MRS. R. S. NICHOLS.

Bleak Winter trod the frozen land
And Earth grew dark beneath his frown:
'T was then, as ebbed life's latest sand
He of the open heart and hand
To silence and to dust went down!

To silence and to dust, went down:
Though there no marble, false and cold,
Bears witness to a hist renown,
His name shall live wherever known
The deeds that consecrate his mould!

The deeds that consecrate his mould!
The widow's eye is sunk and dim;
She weeps to know his heart is cold,
Though still her children softly fold
Their little palms in prayer for him.

Their little palms in prayer for him—
For him who brightened their young eyes,
When Want, with hungry phantoms grim,
Fed on their light, and made them dim
As fallen stars from Paradise.

As fallen stars from Paradise!
And yet like stars they beamed again;
Like stars new set in azure skies,
While he, their angel in disguise,
Was blessed among the sons of men.

Was blessed among the sons of men,
For joy was in the widow's breast;
And orphan hearts were happy then,
And merry were their glances—when,
He sank to his eternal rest!

He sank to his eternal rest!
Whatever faults were his, forgive;
His charities were never dressed
In flaunting garb, but mutely blessed
Where boastful hands forgot to give!

# Rural Sketch Book.

## KATIE'S NEW YEAR'S GIFT.

BY MRS. M. A. DENISON.

"Run to the door Katie, run quick; it's something for me, I know."

"A boquet miss, and oh! so beautiful!" said the girl, tripping back to the parlor.

"How rare! what perfume. Katie, don't you wish you could have such things sent to you? There! place it carefully in the vase—to-night I will wear some of them in my hair. That will do; I'll ring for you when I want you."

"Such great, loving-looking blue eyes, and such a noble forehead;" mused little Katie as she flew about the kitchen, intent upon her morning work. "Such soft eyes, and such a serious, handsome face—oh! how very dearly Miss Julia must love him. If I only—but what nonsense;" and she burst out into a light, clear laugh.—"Little Katies that live in kitchens mustn't expect lawyers or rich men for husbands."

Katie stood that evening behind Miss Julia's chair, her little red hands half buried in the rich dark curls that she only had the requisite taste to adjust. The daintiest implements of the toilet laid scattered in profusion upon the marble table, and the mirror, framed exquisitely in bronze and gilt, reflected the beautiful face of the heiress in all its varying moods of expression.

"I declare, Katie," she suddenly exclaimed, "you are almost handsome. I have a mind some time to dress you up and see what kind of a lady you would make. How old are you, Katie?"

"Fifteen," answered the child voice, while a deep blush mantled the round cheeks.

"Fifteen," mused the heiress; "a promise of something more in the face—figure slight and graceful—hands, oh! the hands are decidedly too large and coarse! See! who is that?—quick, Katie. *He* can't have come yet!"

"A note, Miss Julia."

The beauty read it eagerly, then threw it with an angry toss upon the table. "Provoking!" she muttered; "Frank has been taken ill with a violent head-ache. Just now, of all times! My dress hurried for nothing"—a satin robe, richly embroidered, laid in a recess—"and this the first ball of the season.

There Katie, put the ear-drops down and just undo my hair again; is it not ridiculous, mother? just for a slight headache to disappoint me so," she exclaimed, her cheeks reddening with two intense red spots; "I am downright angry. If he had only proposed, I declare I'd go."

"But if he is sick, daughter."

"Sick! nonsense—he is a schemer, and I *do* believe he is trying me in some manner. Any other than Frank should rue it; but I have too much respect for his fortune to affront him now. Well, I suppose I must stay at home—but the idea is so very ridiculous! disappointing me either for jealousy or some other foolish notion. I'm angry with him."

Katie unbanded and uncurled with trembling fingers. It was a new lesson in life, this arrogant bending to circumstances.

It was a new lesson in life, this fashionable "affection of the heart," this love for the purse, not the person; she could not understand it. For a long, long while she sat musing upon it before the fire, in the pleasant, tidy kitchen.

Katie was an orphan. She had wept bitter tears above the dying forms of both father and mother; nay, she had held both dying heads upon her bosom, and closed their eyes with her own hands.

She was a girl of rare natural talents, as yet undeveloped. Her brain was that of a woman; her manners partook of the innocent simplicity of childhood. She had been nurtured in poverty, yet by noble parents, who had taught her the meaning of the word, duty. Sweetly unassuming, humble, yet with a natural pride that would submit to nothing dishonorable, Katie was almost a companion while she was a servant. Had her lot fallen where she could have been rightly appreciated, she would have been taken to the heart as a daughter, by the right of nobility of character, and gentleness of nature.

"So she will not come; and he calls for her so often—oh! it is cruel;" and the speaker moved hastily through the room, whose splendor was darkened to a twilight sombreness.

"Dear lady, will you let me stay with him?"

"You,—child!"

"I know I am young, but I am strong and not afraid; and if he does not see, he may—think—"

"It is her; so he may—so he might; he is delirious much of the time; the room is dark, too; but my good child, remember it is a contagious fever, and one in which the physician gives very, very little hope," she cried, clasping her hands with anguish. "I am myself an invalid; we cannot get a regular nurse for at least a week—and to take you, so young and healthful, to tie you down to a sick room—"

"Oh! say nothing, please madam," exclaimed Katie, "do let me stay. I know I am only a child, but I have seen sorrow and suffering before now—my father—my mother—both died in my arms;" she faltered, and overcome by some sudden recollection, sank weeping upon a seat.

The lady arose, and with trembling fingers herself untied the poor, neat bonnet, and smoothing back the fair hair, said, "bless you, my child—you shall stay; and if my love will repay your devotion you are already recompensed."

"Where did you say Katie had gone, mother?" said Julia, languidly lifting her head from the lounge.

"Over to our neighbor's to inquire after Frank."

"Oh! mother, you will not let her come near the house again," exclaimed the beauty, springing with energy from her seat; "that dreadful fever! Papa says there are six lying dead with it down town."

"I told her if she went she must stay; but she seemed possessed to go, and even hinted at taking care of him; you know they cannot get a nurse."

"Can't they? Poor fellow! I pity Frank; he thought so much of me; isn't it well we were not engaged, mama—it would have been so *awkward* in case of his death! He has sent for me, you say; he certainly, if he loves me, does not wish to expose me so frightfully; perhaps it is only in his delirium he calls for me. I hope he'll get well, poor fellow; I am sure I should miss him if he were to die. But it is so strange about Katie! What in the world did *she* want to go there for?" and sinking back gracefully upon the soft cushions, she placed one delicate hand beneath her temple, and as unconcernedly as though there were no sorrow in the world, continued the thrilling novel upon whose page were marks of tears, shed over imaginary woe.

Far different with Katie. Oh, how tireless she was—a ministering spirit in that sick room. Her hands "decidedly too large and coarse," though Miss Julia had compassionately termed them, moved softly over the fevered forehead of the sick man. Ever at his side was she, with no thought in her loving heart, but how she might ease his suffering. And when the faint light in the room fell upon his closed eyelids, and over that pale high brow, and wasted form, she would kneel at the bedside and implore heaven that he might be saved.

Hour by hour when the fever was high, she bent above him; delighted as a child when he would call her Julia. No romantic affection, no jealousy disturbed her gentle heart: she was doing a good deed for the pure love of goodness—nor once did this humble, beautiful girl think of herself as an equal of either Julia, or the lawyer.

Day after day, though her strength grow less, did she continue devotedly by the sick couch, alternating with the feeble mother in discharging her arduous duties. The crisis came—passed.

"He is saved," said the doctor; "but only by the most unremitting care, under God," he continued, casting a glance of admiration at poor Katie, who, overcome both with watching and joy, fell weeping like an infant into the arms of the grateful mother.

"How delicious this tastes," murmured Frank in very feeble tones; "but mother," he continued, pushing slightly away the plate and the orange, "I may surely see Julia now."

"She is not here, my son," said the lady softly."

"But somebody is here," and with a nervous movement he parted the curtains, before Katie could escape.

"Why, Katie, as I live! Come here child—you are looking pale, Katie," he said, tenderly taking her hand, "you are quite pale, little Katie; your roses are all gone; have *you* been sick, too? Sit down here, and tell me; tell me all about Julia—is she well?—How kind she was to nurse me during all my sickness.

Katie's cheeks were as crimson now, as they were white before. Her lip quivered, too, and she cast a timid look towards his mother. In her bright eyes tears were gathering, and they did not escape the young man's observation.

"For heaven's sake, tell me," he exclaimed, "is Julia sick? did she take the fever?"

"Neither sick now, nor has she been," said his mother gravely. "It is best to tell you at once that while you was ill, she sometimes formally inquired for you—attended two balls, and never came near the house."

"Mother! you would not deceive me; surely I saw her; surely she was here by my side—her hand in mine."

"No, Frank, I repeat it; she has not called—scarcely sent here since your first attack. Katie has been your good angel for five long weeks."

He glanced once at the sweet girl; his eyes filled with tears, but his lip was grieved. He drew the curtains silently together, and turned his face to the wall.

After that day he said little about Julia. He would lay watching Katie as she sat by his mother, and very, very often when they looked up, the grieved expression was upon his lip.

New Year's morning came, clear, beautiful, and cold. But within the chamber of luxury only the bright sunlight streamed, and the frost changed from forests into little brooks, and wandered about the window panes in silver circles.

Frank, pale, and spiritual-looking, sat by the window. Now and then touching the white petals of a tea-rose, or glancing over the columns of the morning paper, he seemed rather restless, and his eye wandered frequently towards the door.

Presently, in came Katie; and as she drew near to wish him a Happy New Year, a clear light came to the young man's eyes.

"I thank you little Katie," he said, taking her hand and drawing her to his side; "but my child, have you no New Year's present for me?"

Katie started, and, embarrassed, looked down. She, poor girl—why should he expect a New Year's present from her—and she so poor, without parents, without a home.

"Dear Sir," she murmured after a pause, "I wish I had; but I—I can only give you my best wishes."

"Katie, if I dared ask you—I know you have that which if you would give me, would make me the happiest of men—but—I dare not."

"Oh! ask it, sir; if I have any poor gift"—suddenly she started—paused. A new revelation flashed upon her soul—his look, his manner! did they mean *that?*

"Katie," he said again, low and tremulously, drawing her unresisting form yet closer to his side; "is your heart free, my little Katie? Can you give me so priceless a thing for my New Year's present? You have cared for me, Katie, when all but my mother forsook me. In this fevered room, with death threatening, you passed the weary hours, you prayed for me—forsook rest for me—oh! I have heard all—and such devotion unmans me. Not that I think you did it for any selfish purpose, dear child," he continued, dashing away the tears; "I know you would have gone alike to the poor man's hovel; God bless you, noble Katie!"

"My child, my daughter," murmured Mrs. N——, straining the weeping girl to her breast, "you have a *mother's* blessing; dear Frank, she is worthy of you."

"And now, my child, when you have learned all these things" Frank fondly said, the same evening, "you shall be my own dear wedded wife; but Katie, before we say good night, assure me again that the priceless gift is mine. Not many have received so sweet a New Year's present, I fancy."

Of all who heard the news, none were so much surprised, so indignant as Julia, the proud and cold-hearted, but ambitious girl, when it was told to her that little Katie had given to Frank N——, the rich and courted Frank whose fortune she once loved—a very precious New Year's Gift.—*Olive Branch.*

## FLEXIBLE POWDER.

The Japanese do not bury their dead in coffins, but place them in a tub two feet and a half in diamater at the top and two feet at the bottom. The flexibility of the usually rigid dead body is produced by putting a powder called Dosia, into the ears, mouth and nostrils of the corpse. The following is related by an eye witness:

An experiment took place in the month of October, 1783, when the cold was pretty severe. A young Dutchman having died in our factory at Desima, I directed the physician to cause the body to be washed, and left all night exposed to the air, on a table placed near the window, in order that it might become completely stiff. Next morning several Japanese, some of the factory and myself, went to examine the corpse, which was as hard as a piece of wood. One of the interpreters, named Zenby, drew from his bosom a *santock*, or pocket-book, and took out an oblong paper, filled with coarse powder resembling sand. This was the famous *Dosia* powder. He put a pinch into the ears, another pinch into the nostrils, and a third into the mouth; and, presently, whether from the effect of this drug, or some trick which I could not detect, the arms, which had before been crossed over the breast, dropped of themselves, and in less than twenty minutes by the watch, the body recovered all its flexibility.—*N. O. Pic.*

Stick to Your Own Business.—Let speculators make their thousands in a year or day, mind your own regular trade; never turning from it to the right hand or the left. If you are a merchant, a professional man, or a mechanic, never buy lots or stock, unless you have surplus money which you wish to invest. Your own business you understand as well as other men, but other people's you don't understand. Let your own business be one which benefits the community. All occupations posess the elements of profit in themselves, while mere speculation has no such element.

Affecting Appeal.—Haller, the celebrated engraver, died, as he had for the principal part of his life lived, in the greatest poverty. Within a few days of his dissolution, bailiffs were sent to seize the bed on which he lay for a small debt which he was unable to discharge. "Spare me," said the expiring artist, "my bed for a little while—only till I can find another in the grave."

# Wit and Humor.

## DUTCH ANECDOTE.

It was a gentleman of a benevolent turn of mind who licked this Dutch anecdote into shape.

"I say, square, what'll yeou take for that are dog o' yourn?" said a Yankee pedler to an old Dutch farmer, in the neigborhood of Lancaster, Pennsylvania: "what'll you take for him? he ain't a very good lookin' dog; but what was you cal'latin', may-be, he'd fetch?" "Ah!" responded the Dutchman, "dat dog ish'nt wort no'ting, 'most; he ish'nt wort' you to by 'um." "Guess tew dollars abeout would git him, would'nt it? I'll give you that for him," "Yaas; he isn't wort dat." "Wal, I'll take him," said the pedler. "Sh'stop!" said the Dutchman; "deres one ting about dat dog I gan't sell.' "O, take off his collar; I don't want that," suggested the pedler. "Tain't dat," replied Mynheer: "he's a boor dog, but I can't sell *de wag of his dail when I comes home!*'

An Extract.—The following is from "Revenge" a new novel, by the author of the "Smiling Axe" and "The Sanguinary Crowbar:"—His eyes were ripped from their sockets, and melted lead poured in—and the fiend yelled again:—"Ha! Tophet's furies! wretch! fiend! demon! blood! daggers! frenzy! parricide! fraticide! matricide! suicide! murder! villain! pirate! robber! rascal! scoundrel! Revenge!—Ha! ha! ha! he! he! he! ho! ho!—oh! oh!!—o—o—o!!!!!!"—and he died.

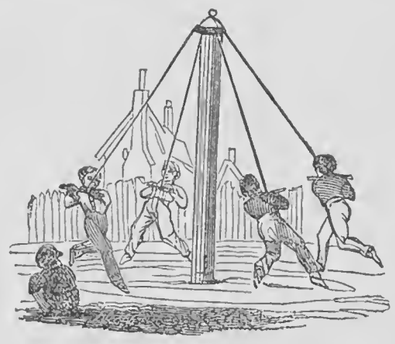
What's in a Name?—One of our exchange papers, speaking of the candidates for the Legislature, in one of the counties of Wisconsin, says that J. M. Root is the Democratic, Robert Hogg the Free Soil, and T. H. Dye the Whig candidate. So, with the voters wo suppose it will be *Root, Hogg, or Dye*—and no mistake.—*Christian Advocate.*

Dobbs says that a man behind time should be fed on *ketch-up.*

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

Among the novelties of this Department we shall introduce engraved illustrations of various Sports, Pastimes and Recreations for the amusement and instruction of our juvenile friends. The following is one of a course of Gymnastics. These athletic exercises have been employed for unfolding and strengthening the muscular powers from the time of the ancients until now, and in their various forms have been found of great utility in giving health and vigor to the physical frame.



THE FLYING STEPS, OR GIANT STRIDES.

For this exercise there should be fixed in the ground firmly a stout mast or upright beam of wood, on the top of which is an iron cap that moves round with facility in a horizontal direction; to this cap are appended four ropes, with short bars of wood fastened to the end. The pupils take hold of these bars, and vault or step out in a circle, increasing their velocity by degrees, and bearing with all their weight upon the ropes. When at their utmost speed, they seldom touch the ground with their toes.

For the Rural New-Yorker.

## MISCELLANEOUS ENIGMA.

I am composed of 11 letters.
My 1, 3, 4, 11 indicates a trial.
My 2, 6, 7 is an article of food.
My 3, 9, 5 we are often tempted to do.
My 4, 6, 8 is good to drink.
My 5, 6, 4, 11, 3 is a sense.
My 6, 4, 8 is venomous.
My 7, 6, 11 will lie upon the floor.
My 8, 6, 4, 11 cannot be recovered.
My 9, 8, 3 is a quadruped.
My 10, 6, 8 is in general use.
My 11, 3, 7, 8, 3, 4, 1 is destructive to both property and life.

My whole was an abuse which the early colonies resented. A. T.

Aurelius, Cayuga Co., N. Y., 1852.

## POETICAL ARITHMETICAL QUESTION.

Six times seven, and seven times three,
This to my age, if added be,
It will exceed six nines and four,
As twice my age exceeds a score;
Now tyro skilled in numbers well,
What is my age, say can you tell?

Media, Pa., 1852. J. S. G.

## ANSWER TO ENIGMA, &c., IN NO. 52.

Answer to Miscellaneous Enigma.—*The Empire State.*

## TO AGENTS AND OTHERS.

Encouraged by the brilliant success which has thus far attended the publication of Moore's Rural New-Yorker, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* Premiums. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the Rural New-Yorker from any one town in *the State of New York*, in proportion to its population, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in Books or Agricultural Implements, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($5.) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the Rural and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

Moore's Rural New-Yorker is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The Rural New-Yorker we can recommend, conscientiously, as pure, good, interesting, and useful—calculated to make every family into which it is introduced, both wiser and better.—*Arthur's Home Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

One Dollar per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the New-Yorker is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

Terms:—Fifty Cents a Year. Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 2. ROCHESTER, N. Y.—SATURDAY, JANUARY 8, 1853. WHOLE NO. 158.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### FARMERS' HOMES.

We have long purposed to say a few words to farmers and residents in the country, about their homes and the surroundings thereof. Farm houses, for the most part, are built with a view to convenience and comfort, though some farmers who have means in abundance, build too large and too expensive structures for their purposes. The home of the farmer, without being extravagant, should combine all that is useful and pleasant; for here himself and his family are to spend much of their time and enjoy most of the comforts of life.

Farm dwellings are often wanting in some of the nicetics of taste and refinement, having been erected more with the idea of cheapness and comfort than for show. This is commendable, yet, too often, little care is taken to make them any better than is necessary to keep out the wet and cold and give them an air of respectability. Yard fences are of the cheapest character, perhaps of posts and rails. The house stands exposed to the bleak winds of winter, and to summers' scorching sun, with not a solitary tree to defend it from the former, or to cast a friendly shade to protect it from the latter. The effect upon its appearance is too evident and familiar to need more than a passing notice.

With our pioneer settlers there was abundant excuse for a lack of attention to these matters. They were wanting alike in time and means to devote to beautifying their dwellings. Now, however, it is far different. It is time a better taste was cultivated, and put into extensive practice. There is a propriety, as well as use and beauty in so arranging yards and dwellings as to be pleasing to the eye. The desire for such embellishment is increasing and should be encouraged, as a means of awakening, strengthening, and developing the best affections of the human heart.

In the dullest mind there is an appreciation of the beauties of nature. A tree, a shrub or plant are objects of the deepest interest. A judicious arrangement of them around your houses cannot be too strongly recommended. They not only adorn the home, but are useful in the influence they are calculated to exert. The love of nature, and natural scenery, warms and elevates the heart, rendering its sorrows more gentle, its joys more abundant, and the emotions of pleasure more enduring. It serves to correct and refine the mind, control its passions, and elevate its conception of the beautiful, the good and the pure. It would be an approximation to the better world, indeed, if our moral sentiments were trained to harmonize with the divine qualities and delicious harmonies of the world of nature by which we are surrounded.

To the lamented DOWNING and other kindred spirits, the public are under many obligations for awakening a conception of the beautiful in Rural Architecture and Landscape Gardening, and thus forming a taste, the good effects of which will not only be seen and felt, but which will grow stronger with the lapse of time, until our rural districts shall literally bud and blossom as the rose.

May we not then, urge upon farmers the propriety and importance of adorning their grounds with trees, shrubs and flowers the verdure and the fragrance of which all so much admire? Nor should the dwelling itself be longer neglected. A coat of paint and good blinds, though not indispensable, are luxuries within the reach of nearly all, and will abundantly repay the necessary outlay. Though these, with smooth lawns and nice gravelled walks may seem unimportant matters, they should not be lightly neglected.

It is no uncommon thing to hear farmers complain that they cannot keep their sons at home. Despite all their efforts, there is an irresistible desire to seek some other vocation than the safe and wholesome pursuit of their fathers. Why is this? One reason is, that farmers, as a general rule, have been at no labor to so instruct their sons in the duties of the farm as to imbue their minds with a love, or even respect for agricultural pursuits. Thousands of them not only furnish them no publications or papers devoted to their interest, but decry as the veriest humbugs, all those who conceive there is such a thing as method and science connected with the daily labors of the farm. All the reading matter about the house is calculated to create a distaste for rural pursuits, and leave the impression that of all things a country life is the most dull and insupportable. This is all wrong. If those who till the soil, would interest their sons in the same calling, steps should be early taken to unfold to them its interesting and instructive features. Geology, botany, and chemistry, are so nearly allied to farming that a knowledge of them enables farmers' sons to understand and appreciate the labors of the field. The formation and improvement of the soil, the germination and growth of plants, and every process in the great laboratory of nature, would be invested with new beauties, and render their labor rather hours of delight, than mere tasks unwillingly performed.

Again, there is no effort made to render home attractive. The mind of the young is ever pleased with that which wears a freshness and beauty. Contrasting the farm residence in its primitive plainness, with the neat, quiet, garden-embowered cottage of some village acquaintance, they very naturally conclude there is something connected with town or city life, or with some of the professions, which in themselves furnish a clue to all this beautiful profusion of trees, shrubs and flowers, which awakes in them such varying and joyous emotions. Judging from appearances, they at once decide that a country life, and particularly the life of a farmer, is too dull, too tiresome, to be congenial to them.

These errors, for errors they are, should be corrected. The place to begin is *at home*. Make the homestead pleasant, by surrounding it with evidences of cultivated taste, by placing in and around it, objects pleasing to the eye and congenial to the mind. Cultivate a love for rural life and rural pursuits. Furnish the means of fireside instruction and amusement. Make a good selection of books and papers, and our word for it, your sons will learn to love a "farmer's home."

†

HORACE GREELY A FARMER.—About thirty miles from New York city, on the line of the Harlem Railroad, HORACE GREELY, of the Tribune, has a farm of thirty acres of bog swamp and mountain rocks, on which his future home is now building. It is near Chapaque, in Westchester county. Here the city editor will play the country farmer, and having money to spend, will doubtless enjoy himself in making, "the wilderness blossom as the rose," and reap profit in health and happiness, if in no other shape.

A GOOD HEIFER.—Mr. JOHN MATHER, of Middlesex, N. Y., writes under date of Dec. 6, as follows:—"I had weighed this day a heifer, two years old last April. Her live weight is one thousand three hundred and fifty pounds. She has never had any grain or extra care till within the last two months." A good heifer, that.

### AN ESSAY ON DRAINING.*

BY N. DAVIDSON REDPATH.

#### Stone Drains.

In situations where stone is abundant, it is used to great advantage in making and filling up drains. The conduits at the bottoms of the cuts are made by placing flat stones 8 or 9 inches high along the sides of the drains, and over these are placed strong flat stones, for covers. In the majority of cases, the bottoms will not require to be flagged, (except, when the drains pass over a quicksand,) the ground, in general, will be found sufficiently hard for the purpose of the water course. After the completion of the conduit, the drain is filled up with small stones to within about 12 inches of the surface; sods, turned with the grass side down, are laid immediately above them, to prevent the surface soil from penetrating downwards. Straw, stubble, &c., are used for the same purpose, though not with the same good effect, as these materials afford shelter for mice and other vermin, which frequently make their nests therein and carry down loose matter, which occasionally impedes the current of the water. The surface soil is thus filled in and the work is completed. The water percolating through the stones is received by the conduit below, and thence carried away into the mains and ultimately voided into some creek, river, or lake. These drains, if constructed with common care, will run for hundreds of years.

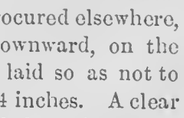
The following diagram represents the section of a stone drain:—Four feet deep, two feet wide at top, and 13 inches at bottom; the conduit is 9 inches high and 4 inches broad. In constructing the conduit of a drain the height ought to be at least double the breadth, to prevent the lodgment of fibrous matter. The roots of wheat, which will frequently strike down 6 or 7 feet below the surface, are particularly annoying in this respect. The fibers penetrate through the interstices of the stone into the water course beneath, where, in the fall, they rot off, and, matting together into large balls, will choke up the drains where sufficient elevation is not provided for their exit.

#### Rumble Drains.

Rumble drains are made similar to the common stone drains, just described, except that the conduit is dispensed with. In countries where *small stones only* are found, can these kind of drains be tolerated.—Having no conduit in the bottom of the cut, they are apt, in a short time, to get choked up with sand and mud, and utterly defeat the object for which they are constructed. Since the introduction of drain tiles they have fallen into disuse.

#### Brush Drains.

Before the introduction of drain tiles, in some parts of the Old Country, where stones are scarce, or had been exhausted by draining purposes, farmers were in the habit of filling drains with the cullings of thick thorns, branches of trees, furze, &c.—These were placed in the drains (beginning at the end,) in an oblique direction, somewhat from the perpendicular, and sods or straw were used to cover the brush to prevent the admission of the surface soil, as formerly explained. These drains, (if made up at the open ends with stones, so as to exclude the air,) have been known to run for a hundred years. In this country, where wood of the very best quality can be procured in the greatest abundance, and at little or no expense, this kind of drain, somewhat improved, might be constructed for durability and efficiency little inferior to the best stone or tile drain, without increasing any other expense except that of manual labor. A conduit for the bottom could be made of split wood, such as oak, or any other kind not subject to rot in water, after the manner described under the head of Stone Drains. Or the conduit could be made after the manner called "coupling," that is, two pieces of split wood, say 12 or 16 inches broad, and of any convenient length, may be placed at the bottom of the drains with their under edge resting against the sides of the cut, and the other edges brought together like the roof of a house, so as to form, when united, the figure of a triangle.—



Above the wooden conduit, place good oak or other durable limbs, and finish as directed in the description of Common Brush Drains. It may be proper to state, that the open ends of these drains must be finished so as to exclude the atmosphere as much as possible. A drain finished in this way would last for centuries.* If quick sands occur in the course of the drain, remember that the space must be covered by stout planks, placed as a bottom to the conduit, until the danger is past.

#### Turf or Sod Drains.

These drains are well calculated for the draining of swamps or marshes. The skill of the drainer will be called into exercise to discover the springs whence the water issues, from which one or two good drains, where practicable, may be cut to carry off the surface water. Various experiments have been tried for this purpose, such as digging deep drains on the firm ground, around the margin of the swamps, sinking deep pits, &c., into which surface drains, cut in dry weather, are made to run.

In some cases a single pit will be capable of draining a considerable extent. Small drains should be run in the direction of these pits, or to a main drain when possible. These tributary drains are generally dug to the depth of about 2 feet, tapering to about 6 or 8 inches at the bottom. Thick sods taken from the surface, or procured elsewhere, are placed, grassy side downward, on the bottom of the drain, but laid so as not to reach the bottom by 3 or 4 inches. A clear passage being thus afforded to the water, the surface matter is filled in above the turf or sod, and the work is finished.

Drain tiles will not answer in soils of this kind unless boards are laid along the soft bottoms, to prevent them from sinking below the level. In this country, perhaps, a better plan would be, after boarding the bottoms, that the conduct should be made of split wood, after the manner called coupling, described in former part of this essay.

* It may not be uninstructive to mention, especially to those who entertain doubts of the durability of brush drains, that in Scotland, before the introduction of the tile-drain, and in the absence of better materials, drains were filled with furze, and frequently with *straw!* and oftentimes with *nothing at all!!* Cut a drain and simply fill it in again, and the water will be carried off by this simple process for a long time!

[*Concluded next week.*]

### NOTES.—MUCK AS A MANURE.

THINKING to economise in the article of manure, last season I used a muck compost on the half of a field with satisfactory results. The muck was taken from open ditches and the residue from those covered—costing nothing but the hauling, besides leaving the banks of the ditches in a clean and neat condition. One hundred loads of muck thus obtained was covered with 25 of stable manure, and over this was spread 200 bushels (6 loads) of unleached ashes—ashes from the salt works, containing a small per centage of salt, or chlorine of soda.—The pile was about 80 feet square, and 3 or 4 feet high. The past spring the compost was applied to the half of a six acre field, at the rate of about 30 loads to the acre; the residue of the lot covered with half decomposed barn yard manure, in about the same quantity per acre.

Both the muck and the manure were spread after plowing, and mixed with the soil by a wheel cultivator. The field was planted to tobacco. The season was remarkably dry, which gave some advantage to the muck; but making all due allowance for the season, I was satisfied that the muck was much the best, as it was the cheapest manure, as a few figures will show.

Estimating the cost of muck at the price for hauling, 100 loads at a shilling per load, $12,50; twenty-five loads of manure at fifty cents per load, $12,50, and two hundred bushels of ashes at two and a half cents, $5,00. Total $30, or $10 per acre. Of barn yard manure an equal number of loads at fifty cents per load, cost $15 per acre—a difference of fifty per cent.; while the difference in the crop was at least fifty per cent the other way, in favor of the muck compost.

So marked was the difference that it was noticeable to the most casual observer.—Though I think the season had something to do with the marked disparity between the two kinds of manure, still I am of the opinion that the condition of the land is improved for a future crop where the muck was applied, equal to the difference of the past season, in other words, that the muck, &c., is possessed of the organic and inorganic principles in the proportion of at least two to one over the barn yard manure.

Yours, T. A. S.

Syracuse, Dec. 24, 1852.

### FARMING A PAYING BUSINESS.

MR. EDITOR:—The repeated assertion that land will not pay or clear the interest on the money invested in it, at the present high prices, is my excuse for offering this article for your disposal.

I do not deny that some of the items in the following statement are by estimate, but the main articles are from actual measurement, such as wheat, &c. I do not pretend to any extraordinary skill or management, knowing that there are others that go far before me; being a young farmer—a novice in the business—just in my a b abs, anticipating great progress. In this statement, the great staple article was sold low. Nor is this a strained effort for one year; I have now thirteen acres more wheat on the ground, all fallowed, and several acres more for cultivation next summer—and have produced more some seasons before. But to the figures.

ACCOUNT OF RECEIPTS OF FARM FOR 1852.

| | |
|---|---|
| 1,800 bushels of wheat at 7s. 6d. | $1,687 50 |
| 35 tons Timothy hay at $8 per ton, | 280 00 |
| 160 bush. potatoes at 31c. per bush. | 50 00 |
| 273 " oats at 37½c. " | 102 38 |
| 7 acres of corn, (45 bush. per acre,) at 62c. per bush. | 196 87 |
| Stalks from the above at $5 per acre, | 35 00 |
| Wool and lambs sold, | 129 78 |
| 70 cords of wood for fuel at $1 per cord, | 70 00 |
| 600 lbs. of pork made on swill, grass and shack, at 7½c, | 45 00 |
| 1,200 lbs. of beef at 5c. per lb., made on grass and pumpkins, | 60 00 |
| Keeping 3 cows one year for family, | 45 00 |
| Growth of 9 colts one year, | 150 00 |
| Fruit sold and for family use, | 35 00 |
| House and garden rent for one year, | 75 00 |
| Amount received for pasturing, | 21 38 |
| Use of horse for family to drive, | 10 00 |
| Oat straw, eggs, poultry, butter, ashes, &c. | 32 47 |
| Total income for current year, | $3,025 38 |

FARM EXPENSES FOR 1852.

| | |
|---|---|
| For interest on capital invested in farm, 210 acres, at $75 per acre, | $1,102 50 |
| Taxes on the above, | 40 00 |
| Interest on $1,500 invested in farm tools, stock, &c., | 105 00 |
| Annual wear of plows, wagons, &c., | 50 00 |
| Blacksmith's bill, | 20 38 |
| Clover seed and plaster, | 45 00 |
| Wear and tear of horses and harness, | 60 00 |
| Expenses of haying, harvesting and thrashing, | 160 00 |
| My own time and labor, | 300 00 |
| 20 tons of hay for stock at $8 per ton, | 160 00 |
| 200 bush. oats for horses at 37½c. | 75 00 |
| Amount paid for month help and board, | 280 00 |
| Seed wheat, oats, potatoes, &c., | 116 50 |
| Incidental repairs, | 11 00 |
| Total expenses, | $2,525 38 |

This taken from the income leaves $500 clear profits. Nor is that all; the land is enhancing in value and increasing in fertility. The building of Railroads,—bringing us within 24 hours of the great city markets, is a guaranty that we are to have henceforth, remunerative prices—that the business is coming up permanently. It is not yet fully appreciated, honored, or reduced to a science. Good grain land will continue to advance in price until it gets to at least $100

* Continued from page 5, last number.

por acre. The figuring above shows, under *my poor* management, that it pays over ten per cent, and pays all taxes which should not have boon brought in to this statement, as we are liable to taxos in any business.—Nor must we overlook our rural joys and pleasures, affording more happiness than to any othor business class, nor tho suro competency, it gives to the industrious and economical.

Now if the above statement doos not satisfy tho capitalist, I would say that I have somo neighbors that can present a richer footing. If it will not satisfy their cupidity to invest in these "diggins" they had best seek their "Eldorado," in California, or Australia, whore thoy can get gold by the ton. DAVID P. KNEELAND.

Le Roy, N. Y., December, 1852.

### WINTERING POULTRY.

EDITORS RURAL:—I am not sensible of having a touch of the poultry fever, but I am satisfied that farmers generally might winter them in a manner to receive a greater profit for the outlay. For several years I have adopted a plan, which has been a great improvement on the old one of feeding them once or twice a day.

Firstly, they should have a place in which to winter, so warm that one seldom gets its comb frozen. Mine winter under my horse barn which is 24 by 48 feet. Under the north half of the barn is a cellar for roots, and the bottom of the sills a trifle above the level of the ground on the north end. The land descends to the south, sufficient to have an open shed under the south half, which is ten feet from the ground to the bottom of the sills, and has a good substantial stone wall laid in lime mortar on three sides of it, but open to the south. Over this shed or open cellar are my stables, and the manure passes through the floor. This shed is occupied by my cows and poultry though the poultry have the same range they did in summer. Their roosting place is in one corner of this shed, just below the sills, with a shelf by the side of the roost.

As soon as they require feeding in the fall, I set a large box of corn or other feed on the shelf, and keep a good supply by them. For a fortnight they will consume more food than before, but they then become fat, and the rest of the winter, I think they require no more food than they did by the old practice. The result has invariably been if they stop laying in December, many of them commence in January and February, and through the spring months, they do better than they did by the old treatment, and if a fat chicken is wanted they are sure to be found.

Some of my neighbors have given their poultry the same keeping, and say instead of having to wait till March for eggs, they have a supply all winter. It lessens the care, and the extra feed is bountifully repaid in eggs.

If the ground is covered a great length of time with snow, they require some gravel or lime mortar, and any refuse fresh meat will help to increase the amount of eggs.—I find several important advantages in the arrangement of my horse barn; the cellar for roots, the warm open shed for my cows, and poultry. All the grain and hay from the stable is saved by them, and last, though not the least advantage is the increased quality and quantity of the manure heap.—Put a load of straw under the shed, and let it have the litter from the cows, poultry and the stable. Every three or four weeks, it should be removed to the field and placed in small heaps or it will heat or fire fang, which injures its quality. Nothing is so sure to make a farmer feel proud of his crops as a plenty of manure of the first quality, applied to land that is sufficiently drained, so that its strength is not lost.

ALVIN WILCOX.

West Bloomfield, N. Y., Dec. 31, 1852.

### SENECA CO. AG. SOCIETY.—WINTER FAIR.

THIS Society will hold a winter fair at the Court House, in Waterloo, on Thursday, Feb. 3. The premium list is liberal, embracing grain, flour, seeds and roots; also fat cattle, sheep, hogs and poultry—for which high premiums are offered. These frequent gatherings of the farmers, to compete with each other in the products of their labor, are not only deeply interesting, but must result in much good. Few Societies understand this better than that of Seneca Co.

A GOOD CALF.—A calf one year and a half old, belonging to AARON WILSON, of Ovid, Seneca Co., weighed on the 13th ult. eleven hundred and seventy-five pounds.—Its length was twelve feet eleven inches; girth, six feet eight inches. This calf must have been growing every day of its life.

THE dealer in merchandise simply causes wealth to change hands; and what he gains another loses. Not so with the farmer; for any increase in the quantities produced is adding so much to the wealth of the nation. —*Prof. Mapes.*

### FOUNDERED HORSES.

MR. EDITOR:—What is a foundered horse? As it respects their feet, it is a lame horse? Are all horses that are lame, foundered.—Some people say so when they don't know what ails them.

I have seen horses that I was told had been lame for years, and were called foundered, when nothing but the shoeing, from time to time, kept up an irritation, but there is a permanent lameness, such as a contraction of the heels, and swelling or bulging out in front of the foot, not being placed naturally under him.

He sprains his foot joint, and extends his feet forward, and when quite lame, he raises his heel and rests on his toe. Let the foot be placed directly under him, by raising or pulling off his shoo, and placing him in some soft place, like a barn-yard, and he will get well, if attended to the first two months—the sooner the better.

What is the cause of this? I never heard any one express any other opinion than that they supposed it was done by eating grain or drinking water. I have examined the subject a number of years, and have every reason to believe it to be a mistake; the thing convicts itself.

How can it be reasonable to believe what a horse eats for food, should single out one foot, and that always a fore foot, and always a concave, or dishing foot, never a flat one, and commonly the fleetest traveling horses. I ask how all this should take place on one fore foot, and all the others in good health, or both, after a while, and is then called chest foundered—one and the same thing; it has to favor the lame foot, and that comes on imperceptibly. Now there is a cause for all the lameness in a horse's foot, and that cause, I have reason to believe, is produced by impropor shoeing; except accidents, such as wounds and bruises.

The process of shoeing is very easy; if we follow the case pointed out, we will suppose a horse has got his shoe off, and broken the sides of his hoof. The heel and toe are commonly entire; just rest the shoe on the heel and toe, so they may not rock or tilt, and if the shoe does not touch the sides, within an eighth of an inch, it will not affect his traveling at all, and the next time he wants shoeing, his hoof will be grown up square again, and may go thro' life in that way, without being lame, and his foot as perfect at the last shoeing as at the first.

Corns seem to think they have a right to put in for a share in laming horses. I shod horses thirty-five years, before I ever heard or saw the name of corns mentioned, and have seen but three that lamed them; it was something else put to their account.—Three times within thirty years, the English mode of shoeing horses has been published in one newspaper; the amount of it is, a shoe without heel or toe, and have the frog freely touch the ground. It might do for a convex foot, because the frog is small and insensible, but a flat-footed horse has a larger, sensitive frog, and the shoe and heel should be high enough to clear the frog, or he will cripple. Its other objection is, when the heads of the nails are worn down, it becomes a skate, and cannot hold.

Much has been said and done to keep hoofs in order: two things are necessary—without them, all that I have seen done is of little consequence; with them, there is not anything else wanting. Keep the horse in the stable instead of pasture, and shoe him once in two months correctly, and a foundered horse will be a scarce article.

What I have written I believe to be true, and if it should be the means of saving one poor horse from being lame or foundered, I shall be richly compensated for my trouble. —*Boston Cultivator.*

### HEAVY SPADE vs. LIGHT FORK.

LITTLE stands have been made about the farm by manufacturers, who take advantage of the agricultural gathering at Tiptree to display such tools and implements as are thought worth displaying. The stand is made over a patch of the hardest soil, a spade is taken, and it is found that with much effort it is simply impossible to dig with it efficiently in soil so hard. The man then takes a light fork, weighing two pounds less than the agricultural fork commonly put into the hands of laborers. Its five narrow prongs are of cast steel, and it is completed of one solid piece without joint or weld. With this fork the man proceeds to dig with wonderful facility the heavy stony soil. The prongs of such forks yield place to the stones, and bend round them, loosening the soil, springing instantly, when withdrawn, into their original form.

A match was on one occasion tried between two workmen, one of whom used the old-fashioned, rigid, and broad-bladed fork, the other used one of these light implements (Winton Parkes' they are called) with narrow tines of elastic steel. The man with the light fork earned four shillings, while the other was earning two shillings and three pence, and the heavy fork after the match required an outlay of sixpence for repairs. The savings in repairs and renovation pay for the light fork several times in the course of a year, and in labor the saving is so great, that a man using this fork is said to lift—by the saving of two pounds in each effort—five tons less in the course of a day's work than his old-fashioned neighbor. Some of these forks are made still lighter for the use of children, who can earn good day wages by the use of them at twelve-inch trenching. These forks were regarded as playthings by the men when they were first brought to Tiptree, but it was soon found that whoever could get one of them to use was saved twenty per cent. of labor, and was able to perform his work more thoroughly than it could otherwise be done.—Thus it appears that there is room for Young Agriculture to display its brains, even upon a pitchfork.—*Dickens' Household Words.*

# Orchard and Garden.

### AN EXCELLENT SUMMER SQUASH.

EDS. RURAL:—I herewith send you a few seeds of an excellent summer squash. Of its name and origin I am ignorant. My father first obtained the seeds fifteen years ago of a neighbor, then living in Genesee Co. N. Y. After a little we accidentally lost the seed, and could not find any again till a year or two since.

They are tender, readily and quickly cooked and excellent flavor. Whilst young and tender their color is white; as they mature and their shells harden, they take a light orange color, somewhat mottled and striped by a lighter hue. Size ordinarily one and a half by two and a half inches, flattened at the ends. The vines are not great runners but prodigious bearers,—eight or ten hills under ordinary circumstances being sufficient to supply a moderate sized family, with a daily mess, if desired, till frost. I think they are not generally cultivated, but wherever known, so far as my knowledge extends, they are highly appreciated. *We* think them decidedly superior, and since we have them again, we discard all others.

I took pains to save quite a quantity of the seeds, and if there are any readers of the RURAL who desire a few seeds to plant, I will cheerfully distribute a portion to such as will post-pay their requests.

Laphamville, Kent Co., Mich. T. E. WETMORE.

### WINTER CARE OF HOUSE PLANTS.

OUR lady readers who have undertaken to winter through a favorite lot of House Plants, are just now fully entitled to all our sympathies. This frosty weather, while it is very welcome to those intent only on a sleigh ride, or an evening devoted to fun and frolic, is anything but acceptable to those who have undertaken to accomplish the miracle, of carrying their house plants through the winter, in a cold place, and without the assurance of heavy stone or brick walls, or uniform temperature.

Gentle, patient, and kind hearted, as the women confessedly are, (for the confession must be made) it is greatly to be feared that their sweet dispositions may be sorely tasked, and their patience submitted to a severe ordeal, before the returning sun and genial weather of Spring shall permit them again to commit their *treasures*, with confidence to the earth, or trust them in an open piazza. And who can blame them for a little loss of temper, a trifling deviation from their accustomed amiability, when on examining their plants on a cold morning, a favorite Rose, Geranium, or other choice products of a year, or perhaps several years labor, is found frozen down, destroyed, ruined beyond the hope of recovery. If they could endure all this, without mourning, they would really be in truth the angels they have been represented, and worthy of an admiration more devoted than that now showered upon them.

But seriously, for this is a serious business, too much care can hardly be bestowed upon the plants which are to be carried safely through the winter. In favored situations, where the house is always warm night and day, but little danger need be apprehended, but in a majority of the dwellings, in this cold latitude, the chances are very decidedly against success. Various expedients may be resorted to, such as removal to the cellar, keeping fires nights, &c., but an unlucky day generally comes at last, which sweeps away the result of a whole years care and patient cultivation, and with it the hopes of success in future. Two or three such disappointments generally force upon the fair cultivators, the fallacy of attempting to aid nature in her appropriate functions, unless indeed the artificial shall approach very nearly to the natural element.

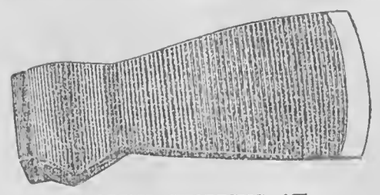
It is a mistake to suppose, that in order to avoid the dangers of freezing, the room in which plants are to be wintered should be kept very warm. Too high a temperature, while it will not destroy the vitality of plants as quick as freezing, is nevertheless sure to accomplish the same result in the end. A moderate uniform temperature is indespensable to a healthy growth of the plant, and development of the blossoms.—Careful watering, not only of the roots, but of the leaves and branches is also required, at all seasons of the year.

While the cultivation of House Plants is attended with so much care, and their loss causes such bitter disapointment, successful culture brings with it pleasures amply equivalent for all the attention bestowed upon them. There is hardly a more welcome sight, or one which will more rejoice the person susceptible of feeling, than a beautiful display of flowers at a season when nature is clothed in her winter robes. It speaks of joy and gladness within, while without all is cold and cheerless—of refinement and taste in the ladies of the household, which is sure to find a warm appreciation in the hearts of their visitors.—*N. Y. Farmer.*

OLD APPLE TREE.—The Hartford Courant says there stands on the "Charter Oak Place," owned by Hon. L. W. Stowart, an apple tree imported in 1638 by Geo. Wyllys, and therefore at least two hundred and fourteen years old. It is an English Pearmain. The past season it bore quite liberally, and a small branch on which is a number of apples, has been preserved in spirits and presented to the Historical Society.

AVOID that which you blame in others.

# Mechanic Arts, &c.



ENGLISH CHOPPING AX.

THE cut here given is a faithful representation of the chopping ax used in England. The one from which the engraving was made, has been loaned us by C. ASHLEY, Esq., of Ogdensburgh, by whom it was imported, and may be seen at the office of the RURAL. The length is eleven inches and the width of the bit, four and a half inches, differing as will be seen, very much from those in use in the United States. Our trans-Atlantic neighbors have been accustomed to boast of the superiority of every thing emanating from their manufactories, but no woodsman in America could be induced to substitute the English ax, for the genuine Yankee one in general use. The outside pressure has of late been so strong, that the English manufacturer has commenced imitating American tools, having as an instance procured an ax from our popular friend, BARTON, as a *Ne plus ultra* pattern with which to supply the demand for better tools. Other English tools are as widely different from our own as the ax, and we may, by well executed engravings give the readers of the RURAL an opportunity to compare and decide which is the better article. †

### RESULTS OF ACCIDENTS.

SOME of the most useful inventions owe their existence entirely to accident; such, for instance, as the accidental discovery that Plaster of Paris was a non-conductor of heat—a peculiarity to which our "fire proof safes" are entirely indebted for their usefulness and popularity. This discovery was first made in this city in 1830, by a mechanic, who carried on various branches of smith-work in Eldridge Street. Having occasion to heat some water, he took a cast-iron vessel in which plaster of Paris had been used, and to which some had adhered, forming a crust or coating on the inside of the kettle from one-half to three fourths of an inch in thickness; he poured in water, and put it over a fire, with a view of heating the water sufficiently for his purpose; to his great surprise, after remaining in some time, he found that no change had been made in the temperature of the water; he blew the bellows, rendered the fire still hotter, and was still more surprised, after a long lapse of time, that the water would not become warm; he left the water on the fire, and went on with his work. Returning after some hours, he found the water had become a little tepid; on this he laid various combustible substances on the fire, but still no effect was produced. Being somewhat puzzled to account for so strange a state of things, he next day instituted a series of inquiries, the result of which was the invention of the celebrated "Salamander Safe," for the privilege of manufacturing which, Mr. Wilder, of this city, pays the discoverer, S. C. Herring, $25,000 per year. So much for having an accident in the family and properly taking advantage of it.—*N. Y. Dutchman.*

### NEW FLOORING COMPOSITION.

SATURATE a quantity of chalk, or marl, or lime, or loamy clay, or sandy earth previously reduced to the state of fine powder, with oil or tar, or mineral tar, or vegetable napths, or any other resinous, oily or fatty matter. Then take one cwt. of rosin, and melt it in a caldron exposed to a gentle fire, until all the water is evaporated, and throw into the caldron, 2 cwt. of the saturated chalk, or other earth, and mix it well with the melted rosin. Next add from three to six pounds of Liquid Indian Rubber, or from three to six pounds of essential oil of tar, or some other oily or fatty substance, and after that from 3 to 5 cwt. of sulphur, and finally two cwt. of dry grit, keeping all the contents of the caldron well stirred, till the whole are thoroughly amalgamated.—When cool the compound is of a saltish grey color, and of a close, granular texture.

This compound may be used by being laid down in a hot and fluent state, of sufficient thickness; or combined with any of the natural asphaltes, or bitumen, or with wood or stone, to make a perfectly anti-damp flooring, durable and cheap.

THE CRYSTALOTYPE.—The Tribune has the following:—"The latest effort of invention, in the way of art, is one of singular beauty, called the Crystalotype, invented and patented by John A. Whipple, of Boston, and brought to this city and now practised by Root, the well known daguerrean artist, No. 363 Broadway. The Crystalotype is a method of taking likenesses upon glass and paper, so that when finished they present all the beauty of an actual painting, with the unerring accuracy of the daguerreotype likeness. The process is easy, and when one picture is made, hundreds of copies may be taken—thus in a measure rivalling the steel-plate press, &c."

A NEW METAL.—Dr. Owen of England, has discovered a new metal, of the earthy class, holding an intermediate position between magnesia and maganese; the name given to it is Thalium. Its oxide, dissolved in hydrochloric acid, is of a beautiful pea-green color.

### ENGLISH AND FRENCH PATENT LAWS.

Perhaps a portion of the readers of the Tribune, would be pleased to be informed of the recent changes made in the Patent Laws of England and France.

It is well known that by the former laws of England, it was necessary to take out separate Patents for England, Scotland and Ireland, and that the inventor could secure his right throughout Great Britain, (not including the Colonies.) only by an expenditure of about two thousand dollars.

By the new law recently enacted, a Patent issued in England has full force and effect throughout the Empire, whether it be in Ireland, Scotland, Canada, Jamaica, or any of the Colonies. At the same time the cost is very materially diminished, besides giving the patentee an opportunity of paying his money or not, as he finds it for his interest to keep up the Patent.

For example—$20 secures the Patent for six months, $100 extends it for three years, at the end of which time, by paying the additional sum of $250, the patentee can extend his right for seven years more, and at the end of this period, he may, if he chooses, by the payment of the sum of $500, secure an additional term of seven years. Thus the poor patentee may secure himself the benefits of his invention without dividing with a capitalist, who will advance the money necessary to secure the right. If the Patent is of no value, it can be abandoned without much loss; if valuable, it furnishes the means of its own renewal.

In France, the total expense of a Patent securing a right for fifteen years, is $300, which was formerly required to be paid on taking out the Patent, but, by the amended law, as it now stands, this sum may be paid by annual instalments of $20 a year. If the annual payment is not made punctually, on or before the expiration of the year, even by an hour, the right is forfeited,—but this is the only penalty of non-payment, so that the patentee may abandon his right whenever he pleases. In France too, there is no previous examination, but whatever is asked for is granted, and all questions as to the novelty of the invention, or the right to the Patent, are left to the courts should it ever be contested. In England—as in the United States—a previous examination as to the novelty and ability of the invention is always made by the persons appointed for that purpose.

A NEW LAMP.—Foreign papers state that a patent has recently been taken out by a Mr. Whele, for an extraordinary and rather singular lamp. It has a clock face, and as the candle burns, the hands mark the hours and minutes correctly, and a hammer strikes the time. As a light for a sick room, it can be set to strike at given periods, when the patient may require attention. It rings an alarm at any stated period; puts out the light itself if required; and if the sleeper must be aroused, it is said to fire a percussion cap. It also determines the amount of light produced, and the rapidity with which the candles of different manufacturers are consumed. And to put on the finishing stroke, all this is said to be accomplished by the most simple machinery imaginable.

# Domestc Economy.

PICKLING BEEF, OR OTHER MEAT.—A process by which you can preserve your beef, mutton, or venison, and keep eating it all the time, and it will remain free from any taint, as I have never lost a piece in my life.

Take all the bone out of the beef, mutton, or venison, cut in pieces of from one to two inches thick. Take cold spring or well water and put it in a clean tub, then put in the salt and stir as long as it will dissolve, adding a little more. Then put your meat in and let it remain some 24 hours. Then renew the brine again, (throwing the old on a compost heap, so as to suffer no loss) in the manner above described, cleansing the tub well and adding more salt than the water will dissolve, to supply that which may be taken up by the meat.—*So. Cult.*

THE covering for preserves, used by the trade, instead of a bladder, is made by brushing over sheets of wet paper, of the thickness and length required, with linseed oil which has been previously boiled. The sheets should be hung on a string, and be thoroughly dry before using. The material is also used for tulip shades, and as a substitute for glass in workshops. It is perfectly water proof.

HOW TO MAKE HOMINY BREAKFAST CAKES.—Mash the cold hominy with a rolling pin, and add a little flour and milk batter, so as to make the whole thick enough to form into little cakes in the hand, or it may be put on the griddle with a spoon. Bake brown, eat hot, and declare you never ate anything better of the batter kind.

REASONS WHY COFFEE IS NOT WELL MADE.—The berries are frequently too rapidly roasted, their proper color being that of cinnamon. 2d. The coffee is ground too fine. 3d. Not enough coffee is used. 4th. It is usually overboiled, by which means the bitter principle is extracted from the berries, and little or no pains are taken to clarify it.

TO BLEACH A FADED DRESS.—Wash the dress in hot soda, and boil it until the color appears to be gone; then rinse it and dry it in the sun. Should it not be rendered white by these means, lay the dress in the open air, and bleach it for several days.—If still not quite white, repeat the boiling.

PERHAPS it is not generally known, as it should be, that salt put in the mouth, will instantly relieve the convulsive movements in fits, either of children or animals.

# Public Documents.

## GOVERNOR'S MESSAGE.

*To the Senate and Assembly:*

FELLOW CITIZENS:—Charged with administering the affairs of a State unequalled by any in the Union in its population, wealth, and commercial interests, we have reason to distrust our own ability in the performance of the duties imposed upon us, and to implore the continued direction of that Providence which has hitherto guided and blessed the people of the State and Nation.

In reviewing the events of the year, we find that the interests of religion and learning have been promoted, the efforts of industry rewarded, our mechanics profitably employed; and in various departments of agriculture, trade and commerce, an unusual degree of prosperity has prevailed. Although some branches of manufactures have failed to yield remunerative returns, we have reason to believe that an increasing demand for their productions will soon place them in a prosperous and healthful condition.

In the midst of the enjoyment of freedom, peace, and prosperity, we have been aroused to a sense of the uncertainty of human life and happiness, by the startling appearance in some portions of our State, of a mysterious pestilence. We have also been impressed with the fleeting character of earthly pursuits and honors, by the death of two eminent statesmens of our country. While differences of opinion are entertained, as to the correctness of their political views, it is gratifying that all classes of our citizens have united in manifesting their respect for the services, abilities and patriotism, of the illustrious men whose deaths are regarded as national misfortunes.

### CHARITABLE INSTITUTIONS.

The numerous charitable and benevolent institutions of the State, designed to relieve the subjects of bodily and mental affliction, are successfully fulfilling the objects for which they were established. Their liberal support and endowment, are proper and becoming public expressions of gratitude, for the bestowment upon our people, of abundance, peace and prosperity.

The number of patients in the State Asylum at Utica, was:

| | Males. | Females. | Total. |
|---|---|---|---|
| At the commencement of the year, | 220 | 215 | 435 |
| Admitted during the year, | 200 | 190 | 390 |
| Total number treated, | 440 | 405 | 825 |

There have been discharged during the year:

| | Males. | Females. | Total. |
|---|---|---|---|
| Recovered, | 92 | 63 | 156 |
| Much improved, | 7 | 4 | 11 |
| Improved, | 21 | 21 | 42 |
| Unimproved, | 63 | 89 | 152 |
| Died, | 22 | 17 | 39 |
| | 205 | 195 | 400 |

I have received the following statement in reference to the Lunatic Asylum on Blackwell's Island;

| | |
|---|---|
| Remaining in the Asylum on the 1st January, 1852, | 517 |
| Admitted from the 1st January to 18th December, '52, | 488 |
| | 1005 |
| Discharged during same period, | 341 |
| Died, | 128 |
| | 469 |
| Remaining December 18, 1852, | 536 |

Of those admitted, 99 were natives, and 389 foreigners.

Of those discharged, 71 were natives, and 270 foreigners.

Of those who died, 29 were natives, and 99 foreigners.

It appears from the last annual message of my predecessor, that the number of insane persons in the State in 1850, as shown by the census of that year, was 2,506, of whom 1,106 were in Asylums, leaving 1400 to be supported in private families, or poor houses. I concur with him in suggesting that "further provision ought to be made for the relief of this unhappy class of our fellow beings."

I recommend the establishment of another asylum in the western part of the State.

The annual report of the asylum for idiots, will be laid before you, and will receive at your hands, I doubt not, that attention which the nature of this most benevolent charity must awaken in every intelligent mind.

The report confirms the hopes indulged in that of the preceding year, and satisfactorily shows that a class of human beings whose condition has generally been regarded as utterly hopeless, may, by proper training and culture, have their faculties so developed and improved as not only to relieve the anxiety of parents and friends, but also to enable them to engage in many occupations of life. The views of the trustees in respect to a moderate increase of the present accomodations so as to admit of a larger number of pupils, and meet to some extent, the wants of this unfortunate class of inhabitants, seem so just and reasonable, and are so strongly enforced by the necessities of the case, and the sympathies of our nature, that there can be no hesitation in carrying them into effect. A State by whose enlightened liberality the blind are educated for usefulness, and the insane provided with the best means of recovery, will not have completed the circle of its duties, until it has also made ample provision for reclaiming from darkness and desolation, those afflicted beings whose minds are closed against the light of knowledge and the sense of duty. It appears from the census of 1850, that the number of idiots in the State is equal to that of the insane.

The number of pupils now in the New York Institution for the instruction of the Deaf and Dumb, is two hundred and fifty-nine; of this number, one hundred and eighty-five are supported by the State. At the last session of the Legislature, the number of pupils thus supported, was increased thirty-two, adding one from each Senate district; making the whole number of State beneficiaries, one hundred and ninety-two. This institution continues to improve its system of instruction, to increase the value of its results, and to gain in the estimation of the public.

The institution for the blind, is successfully conducted. There are one hundred and fifty-three blind persons in the establishment; forty-two are employed in the workshops. The introduction of new trades has been attended with great advantage to the inmates. The imposition of heavy assessments for grading the streets around the buildings of the institution, will require increased pecuniary aid from the Legislature.

### RELIEF OF EMIGRANTS.

I have the following statement from the Commissioners of Emigration.

| | |
|---|---|
| "Whole number of aliens who arrived at the port of New York since May 5, 1847 | 1,336,960 |
| No. arrived during this year up to Dec. 15th | 295,272 |
| " of persons admitted to Immigrant Refuge Hospital, Ward's Island, during tha year, about | 15,000 |
| " of persons admitted to Marine Hospital, Staten Island | 8,511 |
| " of persons relieved in the various counties in the State, and chargeable upon Commutation Fund, about | 13,133 |
| " of persons lodged and relieved temporarily in the city | 18,394 |
| " of persons for whom employment was found in the city, various parts of the State, and in other States, from the office in this city under the charge of Commissioners | 11,612 |
| " of persons forwarded to various places at expense of Commissoners | 4,965 |
| " of persons for whom special bonds have been demanded during the year, under the amended act of July, 1851, about | 1,000' |

The Commissioners state that six years experience has shown that the commutation of $1,-50 for each person, is sufficient to provide for the support and relief of the helpless emigrant, but not enough to cover the expenses of procuring buildings for their reception. Since May, 1847, the State has been relieved from all expense of both sick and destitute abroad. Large numbers of emigrants have been aided in getting employment here, or in going to other States where their labor was in greater demand. The Commission is indebted $170,000 for land and the erection of buildings.

### EDUCATIONAL AFFAIRS.

On the 30th of September, the public funds devoted to education amounted to the following sums:—

| | |
|---|---|
| The Common School Fund, | $2,354,530 69 |
| United States Deposite Fund, | 4,014,520 71 |
| Literature Fund, | 172,880 12 |
| | $6,641,930, 92 |

These funds are securely and productively invested. In 1851, there were 11,537 school districts in the State.

The returns for the years 1850 and 1851 show the condition and progress of our common school system.

| The number of pupils attending the district schools was, in— | 1850. | 1851. |
|---|---|---|
| | 726,281 | 862,597 |
| The number attending private schools | 43,510 | 31,767 |
| The number of schools for colored children | 105 | |
| The number of pupils attending them | 5,305 | 4,416 |
| Pupils instructed in the district schools during the whole year | 7,037 | 8,765 |
| Pupils instructed 10 months and less than 12 | 43 306 | 39 059 |
| 8 months and less than 10 | 59 962 | 68 742 |
| 6 months and less than 8 | 110 981 | 125 745 |
| 4 months and less than 6 | 170 065 | 178 330 |

| | 1850. | 1851. |
|---|---|---|
| Amount paid for teachers' wages | $1 350 345 92 | $1 681 31u 00 |
| Amount paid for district libraries | 89 104 96 | 90 579 50 |

| | 1850. | 1851. |
|---|---|---|
| The total amount expended for common schools was | $1 884 82u 16 | $2 249 814 02 |
| Amount paid for building and repairing school houses, &c., | 445 161 23 | 477 918 51 |

From these statistics it appears that about one quarter of the population of the State, are receiving in our district schools, the education that is to fit them to perform their duties as citizens of our republic. Their characters and success in life will be greatly influenced by the kind of instruction they receive in these schools. We cannot estimate their importance too highly. They will exert a vast, perhaps a controlling influence upon the future prosperity of our country. Every consideration of prudence, patriotism and benevolence, demands that our common school system shall be so arranged and supported, that the employment of competent teachers may be employed. This can only be done by giving them just compensation for their services, and by a proper appreciation on the part of the Legislature and the public, of the dignity and value of their labors.

In preparing and training competent teachers for our schools, the State Normal School, and the departments for the education of the common school teachers in the academies, exercise an important influence. These are understood to be in a flourishing condition. The Normal School has more pupils than at any preceding period.

An impression has heretofore prevailed, that our colleges and academies were institutions of learning, distinct from, if not in some degree antagonistic to, our district schools. This idea has been injurious by creating a popular prejudice against the former, while it has injured common schools by disconnecting them in public estimation, from the pursuit of higher branches of learning. These different classes of schools are intimately connected, and all serve to give interest, value and dignity, to the cause of education.

Formerly we had but few colleges and academies, and the expense of attending them limited their advantages to a small part of our population. They are now so numerous and so distributed, that they are accessible to all who desire to avail themselves of their advantages. They furnish teachers for our schools, and contribute largely to the general dissemination of the knowledge which enables our citizens of every age and condition in life, to become intelligent and successful in their respective pursuits. Science and learning are no longer elaborated for the benefit of a favored class; all valuable or interesting discoveries, are at once made public by the aid of schools, popular lectures, and the press.

The discovery of the scientific professor in an institution of learing, immediately becomes a part of the popular intelligence, and its advantages are universally diffused to aid the pursuits or increase the knowledge of our citizens. Enlightened legislation, and particularly the interests of our common schools, demand a fair degree of legislative aid and encouragement to our colleges and academies. I recommend the adoption of some principle, in giving them assistance, which may prevent the practice of special legislation in favor of particular institutions.

### AGRICULTURAL AND MECHANICAL SCHOOLS.

Numerous memorials have been presented to the Legislature for the establishment of schools or colleges for the promotion of agricultural, mechanical, and natural science. I commend them to your favorable consideration.

In a memorial presented to the Legislature, it is urged that "we have no institution of learning which is at once fully adapted to the present condition of science, and to the peculiar wants and character of our country. In this age, and in this country, where more than in any other, the discovery of new truth in pure science is hardly announced before it is followed by its practical application; where the most abstract principles, and the most subtile elements of nature are immediately seized upon and applied to the commonest purposes of life; it is a matter of interest to all, and to none more than those engaged in agricultural and manufacturing employments, that we should have an institution where all the leading branches of science, in their highest and best estate, shall be represented by the ablest men in each department; and where instruction, in any and every branch, should be readily and cheaply afforded to the utmost extent that the knowledge of the day will admit." Such an institution would be very different, in its organization and objects, from any existing academy or college, and would in no degree supersede or conflict with them.

On the contrary, the project is advocated by many of their officers and professors. It would not be restricted to the education of youth, but would be resorted to by persons of different ages and conditions, for the purpose of obtaining such information as would be particularly useful to them in their several pursuits.

The anxiety manifested for the establishment of agricultural and mechanical colleges, adapted to the wants of our citizens engaged in those pursuits, shows the importance which is now attached to more thorough and perfect education. The inventive character of our people renders a knowledge of the sciences particularly valuable to them, while their elevation and improvement, intellectually and morally, becomes a political necessity, under our system of government. Some of the mechanics of our State have adopted measures for the establishment of a college particularly designed for instruction in the practical sciences, upon principles which promise, by combining instruction with labor, to place its advantages within the reach of all who desire to embrace them. An application will be made to you for a charter for an institution of this character, which will be entitled to your favorable consideration.

### PENITENTIARIES, ETC.

The House of Refuge at New York and Rochester, for the reformation of juvenile delinquents are among our most interesting and valuable institutions. They have engaged the attention and receive the care of enlightened philanthropic individuals, who have properly appreciated the duty and importance of rescuing youthful offenders from lives of degredation, misery and crime, and of making them virtuous and useful citizens. Every consideration of benevolence, as well as due regard for the safety of the community and the prevention of crime, demand that these institutions should be liberally sustained. They will be obliged to apply to you for pecuniary aid and some legislative enactments. The high standing of their managers, and the motives that have induced them to assume the duties of their position, give assurence that any applications they may make to you, will be founded on a conviction of their propriety and necessity.

The number of convicts in the prisons of the State, are as follows:

| | |
|---|---|
| At Sing Sing | 879 |
| At Auburn | 759 |
| In Clinton county | 155 |
| Total | 1,793 |

This is an increase of sixty nine above the returns of last year. The number of female convicts is about eighty

The expense of maintaining the prisoners beyond the amount of their earnings, with the cost of indispensable improvements, will make the following appropriations necessary:

| | |
|---|---|
| For the prison at Auburn | $14,000 |
| Sing Sing | 7,009 |
| in Clinton county | 27,000 |
| | $48,000 |

The officers are confident that after the contemplated improvements are paid for, these establishments will sustain themselves. A detailed statement of the expenses and condition of these prisons will be given you in the annual report of the inspectors.

Great interest is felt by a large class of our mechanics in the success of the Clinton Prison. The character of the labor of the convicts at that place, conflicts less with the interests of some of our citizens than the employments pursued in the other prisons. This establishment has heretofore been quite expensive to the State, and has been regarded as an unsuccessful experiment. The prisoners have been engaged it digging, separating and preparing iron ores for the use of the neighboring furnaces. The depressed state of iron manufactures has lessened the demand for the ore, and the prices at which it is sold. The original plan of the prison contemplated the erection of the necessary works for making iron, and manufacturing it into some of its ruder forms. The Legislature, at its last session, made an appropriation for furnaces for smelting and manufacturing iron.—These are not yet completed, but they will soon be finished at a cost not exceeding the amount appropriated.

The inspector in charge of the prison is confident that when the establishment is completed according to its original design, it will give a revenue to the State beyond the cost of maintaining it.

I refer you to the last annual message of my predecessor, for his valuable suggestions respecting our prisons, the terms of imprisonment, and the review by our Supreme Court, of the testimony and proceedings in cases of capital conviction. The prisons, penitentiaries, jails, and houses of refuge in this State, contain thousands of misguided and criminal persons, whose due punishment for their offences, and whose improvement in morals and intelligence are matters of great interest and importance.

### SURVEYS AND LANDMARKS.

An accurate survey of our State and the establishment of permanent monuments which will serve for the determination of magnetic variations, is very desirable for the purposes of science and for the prevention of litigations and other evils and embarassments. Without these it will become impossible to determine with accuracy the boundaries of farms, towns, and counties, or to make topographical surveys of the whole or any parts of our State.

The value of land is becoming so great that more accuracy will be required hereafter in ascertaining true limits. Our present inaccurate system of surveying, causes frequent controversies and embarrassments, and we are destitute of any fixed monuments which will give certainty and permanency to boundaries and admeasurements. The subject should engage the early attention of the State government.

### MANORIAL LANDS.

The agitations in relation to manorial titles in some sections of our State, have excited great interest among all classes of our citizens, and have been subjects of executive recommendation, and legislative action. So far as they originated in a desire to determine the validity of titles, or equitably to extinguish tenures that had proved injurious to the communities in which they existed, they secured the sympathy of the citizens of this State. But violations of law in some instances causing the destruction of life and property have excited a deep feeling against the perpetrators of such acts, which has been extended to many whose purposes were unobjectionable, and who regarded resistance to the laws of the State as alike injurious to their own interests, and to the principles of good government.

For the purpose of inducing the owners of large tracts of land to sell them to the occupants, and thus to obviate the evils attendant upon lease-hold estates, the Legislature has abolished distress for rent, and taxed the interest of land owners in leases. To prevent the recurrence of the evils experienced, the Constitution of the State forbids the leasing of agricultural lands for a term extending beyond twelve years. The quarter sales reserved by some leases have been decided by our courts to be restraints upon alienation, and therefore void.

The suits which were instituted by the State for the purpose of determining the validity of certain titles, have been decided in favor of the landlords, except in one instance, where the State reserved some vacant lands. In this case the Court held that the lapse of time gave a title to the landlord, to the lands which were occupied by tenants, and which comprise the principal and most valuable portion of the manor. The landlord has carried the cause to the Court of Appeals.

It appears from the message of Gov. Young, at whose suggestion the suits were brought by the State, that they were instituted because "one of the fruitful sources of disquietude among the tenants, is the apprehension that the landlords have no title to the lands, and that, after paying rents and making improvements for a long series of years, they may, in virtue of a superior title to that under which they hold, be ejected from their possessions."

When the purposes for which the suits are brought are effected, the continuance of litigation serves only to create agitation, to excite unfounded expectations and prevent adjustments between landlords and tenants, which are desirable in every respect.

Many arrangements have been made between these parties, and the prosperous condition of the country, the abundance of money, and the high prices now commanded by the productions of the soil, are circumstances favorable to the tenants in securing the full ownership of their farms. It is understood that the prices originally asked by the land-holders, have been in many instances, very much reduced. The decision of the courts having established the validity of their titles and their legal rights, it is believed that the land owners will recognize the importance of selling their lands upon favorable terms and of extinguishing tenures injurious to the interests of the community and inconsistent with our political institutions. If any action is had by the Legislature upon the subject, it should not be of a character to excite unfounded expectations and in the end injure those it is apparently designed to serve. When the titles of the landlords are established, any assistance given to the tenants must be at the expense of the State, and not of the legal rights of any of the citizens.

### LEGAL REFORM.

The change in legal procedure contemplated by the Constitution (Art. 6, sec. 24,) have not been carried into complete effect. The Commissioners appointed for that purpose, reported from time to time under the direction of the Legislature. Their first report adopted in 1848, has since been modified and amended by succeeding Legislatures, and has become the settled system of the State. The legal remedies by various special proceedings which occupy a considerable share of the attention of the Courts, were not included in the reports adopted; these are still administered under laws as they existed before the adoption of the present Constitution. The final report of the Commissioners, presented to the Legislature January 1, 1850, among other subjects, embraces these proceedings and a revision of these laws.

With no practical knowledge of the details of the reforms already enacted, and those proposed in the reports referred to, I am unable to express an opinion of their merits. But regarding the existing code of practice, as the established system by which remedial justice is to be hereafter administered, it seems due to consistency that such further legislation should take place as is necessary to provide that civil remedies, both by special proceedings, and by civil actions, should be prosecuted under a general method of prodedure.

A considerable part of the jurisdiction of the courts, is exercised under statutes conferring powers upon the Chancellor and various officers of his court, and upon courts of common pleas which have been abolished by the new Constitution. The Legislature has passed various laws to render the proceedings applicable to the courts as they now exist; but a revision and a more perfect adaptation of them to our present judicial system is desirable.

### PUBLIC DEFENCE.

The enrolled militia of the State of New York numbers 289,306 men. Many uniformed companies, not only well equipped, but well drilled and disciplined, have been formed in our State. These companies are composed of intelligent and active men, who are interested in preserving the peace and good order of society.—Without subjecting the State government to any expense, they constitute an important part of the executive power of the State. They number about 15,000 men, 5,800 of whom are in the city of New York. These companies are usually formed in large towns and cities, where popular disturbance and resistance to law are most likely to occur.

They serve to overawe turbulent and disorderly members of society, and constitute a powerful body, prepared at all times to aid the civil authorities. Their vigor, intelligence, and the interest they have as respectable citizens, in upholding the law, together with the degree of dicipline they have attained, render them much more efficient and reliable than an equal number of mere mercenary soldiers.

### RECIPROCITY WITH THE BRITISH PROVINCES.

The enlightened and liberal spirit of the age, no less than the interests of commerce, demands the establishment of a system of reciprocal trade with the adjoining British provinces.—Their vast extent of coterminous boundary, the character of their productions, and the nature of their wants, their use of a common language with ourselves, and the similarity of habits and customs, render a free and unrestricted intercourse and commerce with their population, of great interest and importance. Our own State is particularly interested in the adoption, by the general government, of some measures calculated to effect this desireable result. It would increase the business of our canals, add to the prosperity of the towns in the northern and western sections of our State, and increase the commercial importance of the city of New York.

### INDUSTRIAL EXHIBITION.

The striking success of American Industry and skill at the London Exhibition and in the British waters, during the year 1851, naturally aroused a desire for the organization in this country of an Industrial Exhibition, analogous to that which has conferred so much honor on England. The limitations of the powers of our National and State governments, prevented their more direct action, but a charter was granted by the Legislature at the session of 1852, forming an association designed to accomplish the enterprise. With the favor of the General Administration, and the active aid of the city of New York, the Association is pursuing its task with energy, its managers appearing fully sensible of the high expectations excited by their undertaking. While the producers of Europe will avail themselves of so favorable an opportunity to bring their fabrics to the notice of the consumers of this country, the collection on a national scale, of the products of American industry, must of itself, secure a result of such interest and practical value, as fully to repay the great labor which the work requires. The building designed to receive the exhibition, now partly erected, promises to unite convenience and ample space with a high and novel character of architectural beauty; and may, if the success of the enterprise shall warrant its preservation, remain for similar uses through future years.

### BANKS AND BANKING.

The number of Banks, banking associations, and individual bankers doing business in this State, on the first days of December, 1851, and 1852, were as follows:

| | 1851. | 1852. |
|---|---|---|
| Chartered Banks | 72 | 70 |
| Banking Associations | 95 | 118 |
| Individual Bankers | 77 | 89 |
| | 244 | 277 |

The bills issued by the Banking Department to the Free Banks amount to $19,159,056, being an addition to the amount held by them on the 1st December, 1851, of $3,488,052, and an increase of $7,978,381, within three years. The Free Banks have, within the same time, about doubled in number.

The actual circulation of all the Banks, as shown by their quarterly reports, in September, 1851, amounted to $27,254,458
1st of December, 1852, to 38,790,985

The Superintendent of the Banking Department, in his annual report, will call the attention of the Legislature to the fact that many of the free banks are established merely to get bills for circulation. They evade the provisions of the laws requiring them to do business at some designated place, and circulate their notes through brokers in the commercial cities. They frequently allow their notes to be discredited for the purpose of buying them at large discounts, thereby subjecting the bill holders to loss. The multiplication of banks of this description is attended with numerous evils, and, in times of pressure in the money market, will cause great embarrassments. Further legislative restraints are necessary to save the public from frauds and losses. In some instances, bills have been obtained upon insufficient security by fraudulent representations.

### RAILROADS.

I have been furnished with the following abstract of some of the statistics of the railroads of the State of New York, taken from the returns made to the State Engineer, for the year ending September 30, 1852.

Twenty-seven corporations only have made returns. Three other corporations, which made returns last year, have not yet filed the annual reports required by law.

There has been filed in the office of the Secretary of State, articles of association for forty-one additional railroad corporations. Several of these roads are known to have been completed, and upon others large expenditures have been made. The railroad corporations are by law required to file their annual reports with the State Engineer by the 1st day of December. None of them have complied with this provision, and the late date at which many of them were sent in, delays the State Engineer, and prevents him from complying with section 103 of the general railroad law, which requires him to arrange the information in a tabular form and to report to the Legislature on the first day of its session.

The number of miles of road in use on the 27 railroads reported is, 2,797 miles
And adding the length of these roads not reported, 2,027 do
This is an increase in the number of miles in use, over the number reported last year, of 297 do

The total cost of the 27 roads reported up to 30th Sept. 1852, is $82,812,160.63.

The total expenditure on all of the roads constructed and commenced in this State, is probably about one hundred millions of dollars.

The total number of passengers carried in cars on twenty one roads reported, is 7,061,909 And the number of miles travelled by the passengers is 332,847,667. The increase on 18 roads, over the preceding year, was, of passengers, 1,487,007, and of miles travelled, 92,858,-850. The number of tons of freight carried over 21 roads reported is 2,060,379. The increase over the preceding year on 17 of these roads is 821,101 tons.

The number of persons injured in life or limb on 26 roads reported, is 256; of whom were killed, 158. The increase over the preceding year, on 25 of these roads, is, of persons killed, 59, and of persons injured 44.

These railroads traverse almost every county in the State. There are no sections of its territory which have not now cheap and convenient avenues to market, by means of lakes, rivers, canals, and railroads. The recent extension of the last named improvement, will rapidly increase the wealth and population of the State.

### FINANCE AND PUBLIC WORKS.

The Constitution of this State which was adopted by a great majority of the popular vote, establishes a well defined and comprehensive financial system, designed to pay off the debt created for the purpose of internal improvements, and provide for the completion of our unfinished canals; and also to pay the General Fund debt of the State, and provide for the support of its government. To prevent the recurrence of the evils of indebtedness, it forbids the creation of any debt beyond one million dollars, except to repel invasions, sup-

# Educational.

## HINTS TO TEACHERS.—BY A PUPIL.

Messrs. Editors:—The scholar has frequently received excellent advice in your columns from teachers and others; will you allow a pupil to give his ideas in return?—If you think them valuable, please publish; if they are otherwise judged of, let them pass promptly to oblivion and waste paper.

Every teacher should adopt a mild, mutual plan of government, treating all scholars justly and impartially, whether the children of rich parents or of poor. And from this rule of action let nothing divert him. Be mild and even-tempered at all times, and under all circumstances. As like produces like, anger is productive of anger. If scholars find it exhibited towards them by the teacher, they, in return, will reciprocate its manifestation, and consequently hatred or discord is engendered, which renders a school worse than useless to the extent of such exhibitions. Anger ever acts as a law of repulsion, unfitting the teacher for giving, and the scholar for receiving instruction—destroying that harmony of feeling that should ever exist between them.

But let a teacher once thoroughly convince scholars that he *loves* them, and is striving to promote their best educational interests, and how soon does he receive in return their love and esteem, that grows brighter and stronger as time wears away, and which can never be obliterated. Then, there is nothing that can induce them to wrong him in any way, or to disobey what he requires of them, but on the contrary his very wishes are anticipated, and need not a verbal request to have them complied with. Their minds are fully prepared to receive any instruction he may wish to impart, and he is much better prepared to instruct them, than when laboring under the degrading influences just spoken of. How tractable and easily governed does he find them whon they are bound to him by the attracting principle of love. Order and harmony reigns, and the school is a prosperous and happy one. Should not those who have the care of training youthful minds—those tender scions that depend upon the goodness and faithfulness of your cultivation for what manner of fruit they shall bring forth, whether of good or evil—pay particular attention to that little word, love, and see that they act out in everything they do, its every requirement? Let its principles ever have a home in their breast, and never drive them hence, but let them ever govern those who would govern others.

Ohio, December, 1852.

## ORLEANS CO. TEACHERS' ASSOCIATION.

A session of this convention was held at Albion, Dec. 18, at which a fair number of teachers were present. They discussed a set of good resolutions, affirming the profession of a teacher to be first in the rank of professions; that the standard of qualifications for teachers was not high enough for the best interests of education. Teachers' County Institutes were highly commended, and they resolve to resuscitate them in the county and petition the Legislature for appropriations therefor. After a very pleasant and useful meeting the Association adjourned to meet at the Court House in Albion the 29th January inst., for the election of officers. An address will be delivered by Rev. Mr. Fancher.

## CONVENTION OF EDUCATORS.

The Teachers and Professors of Collegiate, Academic and scientific Institutions of the State, held an adjourned meeting in Rochester on Friday, (Dec. 31.) Several reports were read by committees appointed at the previous meeting. Prof. C. Dewey, LL. D., of the University of Rochester, was appointed President. The topics considered and discussed were such as intimately concern the practical educator. The next meeting will be held in Auburn.

## HOW TO TEACH WRITING.

Writing has been taught solely as an art. Copies are set in the books taken by the pupils to imitate, by hook or by crook, as best they can, the handwriting of the master. Did you ever look over the pen scratchings of a district school? What quail tracks! What aspiring after utter impossibilities!—What legible impressions of ideas from inky fingers and upset inkstands! I venture to affirm that there are not five schools in Northern Illinois, claiming a share of public money, that have a set of writing books fit to be seen!

Every teacher has his own notion about teaching writing, and about every parent too, so far as to the time when "Darling Charley" shall learn to write. So I shall not prescribe which side must lean against the desk, or how the pen must be held, or the paper lay, but shall proceed to give a few common place notions about teaching writing.

When the teacher (not the parent) decides it is time to begin tracing characters in ink, let the pupil supply himself with a substantial copy-book, not too large, an inkstand not liable to be overset, and pens. If quills are used in this iron age, the teacher should mend and make them out of school hours, so that when the writing signal is given, nothing else may require his attention. Copies should also be set, and every arrangement completed, so that nothing whatever shall disturb the stillness of the writing hour. Let the a b c scholars alone till it is over with.

Habits of neatness and care must be formed now, if ever. Every hasty line and every blot must be scrutinized and reproved. Improper postures and habits of hand, must be repeatedly noticed and corrected by the teacher. His eye must be everywhere and on everything. None should discontinue writing, until the signal is given for all to do so. Then the pen should be carefully wiped, upon the wiper attached to the copy-book, and when the ink is dry, the book closed, and laid away or gathered up to lie upon the teacher's desk until next writing hour.

Do you think, teacher, this standard is too high for you? Not a whit! If you ever want the writing exercise to be a pleasant one, and your copy books fit to be seen, you must aim high. Straight marks look well, if they show pains-taking.

"Pot-hooks and trammels" are ten times better to discipline the muscles of the fingers than all the fine hair strokes of the writing master. Suit your copies to your pupils ability, and oblige them to attend to them the requisite time. Some may teach writing in twelve lessons, to older brains and more practiced fingers, and pocket the $5 with the consciousness that it has been a most potent incentive to the attainment of the hand, but you can't teach it in thrice twelve lessons, to the tow-heads of our common school. System and perseverance alone will enable you to succeed.

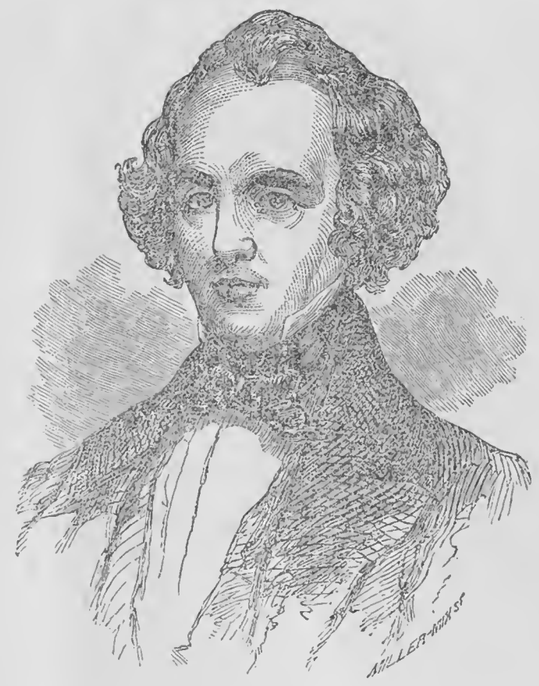
Don't forget that black board. Don't you suppose you can imitate a poor letter and show how to make a good one on it? Besides, *there* is the place to show the science of writing, analyze its principle more thoroughly than you know how.—*Prairie Far.*

## PUBLIC EDUCATION.

That the people must be educated, in order to the permanence of free institutions, is, at this hour so evident a truism, that it were ridiculous to insist upon it with any degree of persistency. The participation and supervision, with which each citizen is indirectly invested, with regard to those institutions, will naturally impress upon them the character of the people, whatever that character may prove. Now to participate in the government, and to supervise its action, they must understand its mechanism; and to understand that mechanism, they must be furnished a certain amount of necessary knowledge, which cannot exist out of the conditions of primary education. By right of sovreignity they hold the political power in their hands; and if it be suffered in violation of our duty, to become an ignorant and increasing power, we shall be preparing days of difficulty, and if not of disasters, for the Republic. The best enactments of your constitutions shall prove but frail monuments against the dissolving influence of general ignorance and of the moral depasement, which it fatally involves; they will sink and crumble away from the moment that they shall cease to rest upon public and private virtue, developed by universal intelligence. If knowledge, as maintained by one of the master intellects of modern times, be power; most essentially does it behoove republics to turn into a power fruitful of good.

These truths, so obvious in themselves, appeal with peculiar solemnity to those, upon whom is devolved the responsibility of framing the laws of society. Their duty, when they have enacted laws to govern the people, is but half discharged. There is yet higher and more difficult duty to perform in devising such a system of legislation as shall have the effect of converting the people into a law—a good, safe and living law—to themselves. The most efficient laws, after all, are those which control, not by the power of the sword, but by the influence of enlightened principle. Without this principle, vivified by the touch of education, there can be no peace in the community, no morals in society, no wisdom in the legislator. By the probation, which it imposes upon every one, to become a good and useful citizen, it contributes to the abatement of the vices, which deform the body social—dignifies the plainness of republican morality—exalst the character of private worth—fosters the development of public virtue—check the inroads of grasping cupidity, and in the opening which it affords for every social merit, opens a source of general prosperity. Such a principle can grow out of no elements but those of a vigorous system of free public education, which is the common share of the patrimony that the State is bound to dispense to its younger members. As their necessary introduction, therefore, to the membership of society, that form of education is absolutely necessary to all of them. The State, therefore, owes that form of training to all; and not only does it owe the means of training, but it also owes the application of those means.—*Prof. Dimitry.*

Parental Example.—Your children will be more animated to vigorous perseverance, and self-dependence, the more they witness your exertions to provide for your future welfare. There are few who can witness the daily display of parental and provident care, without having the desire created within them of doing something for themselves. "A thrifty father," says a Hindoo proverb. "may have an extravagant son, but a diligent father rarely has an idle son."



NATHANIEL HAWTHORNE.

We like to look upon "the counterfeit presentments" of distinguished men, and feel assured that most of our readers share in this predilection. The portrait above is that of one who has made an ineffaceable mark in American literature; his writings being most remarkable for an unique beauty and originality of diction, found nowhere else. The Biographical sketch below, is condensed from an extended notice by the Poet Stoddard, accompanying a portrait in the National Magazine for January:

Nathaniel Hawthorne was born in or about the year 1807, in the town of Salem, Massachusetts, in a house built by his grandfather, who was a maritime personage. The old household estate was in another part of the town, and had descended in the family ever since the settlement of the country; but this old man of the sea exchanged it for a lot of land situated near the wharves, and convenient to his business, where he built the house, (which is still standing,) and laid out a garden where the future author rolled on a grass plot under an apple-tree and picked abundant currants. One peculiarity of Hawthorne's boyhood was a grievous disinclination to go to school, and (Providence favoring him in this natural repugnance) he never did go half as much as other boys, partly owing to delicate health, (which he made the most of for the purpose,) and partly because much of the time there were no schools within reach.

When he was eight or nine years old, his mother, with her three children, took up her residence on the banks of the Sebago Lake, in Maine, where the family owned a large tract of land; and here Hawthorne ran quite wild, and would, we doubt not, have willingly run wild till this time, fishing all day long or shooting with an old fowling-piece, but reading a good deal too, on the rainy days especially in Shakspeare and the "Pilgrim's Progress," and any poetry or light books within his reach. Delightful days must those have been; for that part of the country was wild then, with only scattered clearings, and nine-tenths of it primeval woods. But by-and-by his good mother began to think it was necessary that her boy should do something else; so he was sent back to Salem, where a private instructor fitted him for college. He was educated (as the phrase is) at Bowdoin College, Maine, as were also Professor Longfellow and General Franklin Pierce. What progress he made in his studies we know not; judging from the scholarly air of his books, we should say no mean one.

It was the fortune or misfortune, just as the reader pleases, of Hawthorne to have some slender means of supporting himself; and so, on leaving college, in 1825, instead of immediately studying a profession, he sat himself down to consider what pursuit in life he was best fit for. He had read endlessly, all sorts of good and good-for-nothing books, and in the dearth of other employment, had early begun to scribble sketches and stories, most of which he burned. Some, however, got into the magazines and annuals; but being anonymous, or under different signatures, they did not soon have the effect of concentrating any attention upon the author. Still they did bring him into contact with certain individuals.—Mr. S. G. Goodrich, (a gentleman of many excellent qualities, although a publisher!) took a very kindly interest in him, and employed his pen for "The Token," an annual.

From the press of Monroe & Co., Boston, in the year 1837, appeared "The Twice-told Tales," Mr. Hawthorne's first acknowledged volume. "The Twice-told Tales" was a collection of essays, allegories, and stories contributed to various magazines and periodicals. In 1842 was added a second volume. The success of "The Twice-told Tales" was a disgrace to public taste. The foreign novels of James and Bulwer, the home manufactures of Simms and Ingraham, and hosts of other standard writers created "sensations," and sold by whole editions, while the finest and purest tales ever written in America—the most spiritual creations of a beautiful genius—dropped from the press almost still-born; or, to say the most, attracted a quite limited share of attention.

In 1839, Mr. Bancroft, the historian, without solicitation, gave him a situation in the Boston Custom-house, which proved considerably lucrative, and of which Hawthorne discharged the duties like a man of this world. After two years he resigned and went to the Brook-Farm Community, at West Roxbury, where he continued one season, not much to his own satisfaction, according to all accounts. Of this period of his life he has written largely, though under the vail of fiction, in "The Blythedale Romance." The next year he was married, and went to live in the "Old Manse," at Concord, Mass. His manner of life here is charmingly described in the introduction to "The Mosses from an old Manse."

From Boston he went to Salem again, and into the Custom-house there. Gladly would we copy, had we room, Hawthorne's own account of his life at Salem; for here (see the introduction to "The Scarlet Letter") he is his own biographer, as in "The Old Manse," not so fully as in that instance, however, for there is but little interest in the life of a Custom-house surveyor, poet or dreamer though he be.

Punctually and faithfully fulfilling his duties, he remained in this ungenial employment, until he was ejected by the Whigs, on the accession of General Taylor, on whose soul, and on all their souls, be blessings forever! Free again, he immediately set to work on the "Scarlet Letter," the idea of which was already in his mind; this he finished in Salem, and shortly afterward left the city for Lenox. "The Scarlet Letter" was published in the spring of 1850. The good time had come at last. The author of "The Twice-told Tales" had written a book which was popular. The first edition of twenty-five hundred copies was all ordered before the day of publication, and another edition put immediately to press. Its success was complete. At home and abroad the newspapers and reviews were loud in its praise; and they have not done talking of it yet. Four years had elapsed since the publication of "The Mosses from an Old Manse," and in that time, and slowly perhaps, for some years before, Hawthorne's fame had been steadily on the increase.—Among his brethren of the quill he was well-known already; among purely literary people he had a fair reputation; but purely literary people never buy editions of books, and put money in each other's pockets.

The success of "The Scarlet Letter" brought out a new edition of "The Twice-told Tales," and "True Stories from History and Biography," (a child's book,) and encouraged the author to write "The House of the Seven Gables," and "The Wonder Book," both of which last were written among the mountains of Lenox. Hawthorne, if we may judge of him by his nomadic habits, seems not to be a person who attaches himself very strongly to any one locality; so in autumn, 1851, he removed from Lenox, and took a house for the winter as West-Newton, where he wrote the "Blythedale Romance," which was published in July of the past year. A few months since, (probably in the hope of inducing himself to take root, by making the soil his own,) he bought a small house and estate at Concord, where he now resides.

## THE POETRY OF NATURE.

We copy the following from the Optimist, a work by Tuckerman, the object of which, as he states it, is to point out and uphold the poetry of life, and the common resources of Nature, to which habit is so apt to make us indifferent:

"I know it is sometimes said that the era of romance has passed, that with the pastoral classic and chivalrous periods of the world, the poetic element died out. But this is manifestly a great error. The forms of society have greatly changed, and the methods of poetical developement are much modified, but the principle itself is essential to humanity. No! mechanical as is the spirit of the age, and wide as is the empire of utility, as long as the stars appear nightly in the firmament, and golden clouds gather round the departing sun; as long as we greet the innocent smile of infancy and the gentle eye of woman; as long as this earth is visited by visions of glery, and dreams of love, and hopes of heaven; while life is encircled by mystery, brightened by affection, and solemnized by death, so long will the poetical spirit be abroad, with its fervent aspirations and deep spells of enchantment."

Calhoun.—Powers, in a recent letter from Florence, says:—"I have no bust in my studio which attracts so much attention as Calhoun's, if I except ideal ones. Many have said that it would pass for a bust of Brutus. One said:—'I should not like to be judged by that man, unless my cause was good.' Another said:—He is a very stern man, but good and amiable, notwithstanding.' Neither of these know whose bust it was.'"

## SONNET: A LOVING LIFE.

Let love inspire thee, and thy life shall be
A daily prayer to heaven for sinful earth;
For by true love hath all true virtue birth,
And He, whose life was Love, shall strengthen thee.
For love, like perfume in the flow'ret's cup,
Its balmy influence still renders up,
To fill each breeze with sweetness like its own:
Thus by our loving lives a sway is thrown—
Even though that sway to us be all unknown—
O'er many a wanderer in this world of guile;
And thus a soul may cost us but a smile!
Let then our love in loving *deeds* be shown;
For, as their fragrance lifts itself above,
Be sure that many a heart is lifted thus by love.

## VIRTUE.

"Virtue is the highest proof of understanding, and the only solid basis of greatness."—*Ben. Johnson.*

"Virtue is that quality in our actions by which they are fitted to do good to others or to prevent their harm."—*Rutherford.*

"There can be no happiness without virtue."—*Seneca.*

"The christian religion hath ascertained the precise quantity of virtue necessary to salvation."—*Paley.*

"An action, though honest, is not therefore truly virtuous, unless it be out of choice, and with a good will."—*Cicero.*

"Virtue dwells not upon the tip of the tongue, but in the inmost temple of a just and purified heart."—*Seneca.*

"Virtue presented singly to the imagination or the reason, is so well recommended by its graces and strongly supported by arguments, that a good man wonders how any can be bad."—*Dr. Johnson.*

"It is utterly impossible there should be any virtue unless it it disinterested."—*Cicero.*

"Virtue is beauty."—*Shakspeare.*

"Virtue maketh men on earth famous, in their graves illustrious, and in Heaven immortal."—*Chilo.*

"Such as have virtue always in their mouths and neglect its practice, are like a harp, which emits a sound pleasing to others, while itself is insensible to the music."—*Diogenes.*

"Every thing great is not always good, but all good things are great."—*Demosthenes.*

"Virtue, the laws and ordinances of men is the rule of a wise man."—*Antisthenes.*

"Virtue is bold, and goodness never fearful."—*Shakespeare.*

## THOUGHTS OF HEAVEN.

If heaven doth not enter into us by way of holiness, we shall never enter into heaven by way of happiness. If you would lay up a treasure of glory in heaven, lay up a treasure of grace in your hearts. If your souls are rich in grace, they will be rich in glory. The more you do for God in this world, the more God will do for you in the world to come. As heaven is kept for the saints of Christ, so they are kept for heaven by the Spirit. In heaven all God's servants will be abundantly satisfied with his dealings and dispensations with them; and shall see how all conduced, like so many winds, to bring them to their haven; and how even the roughest blasts helped to bring them homewards. How can we expect to live with God in heaven, if we love not to live with him on earth? If thou lovest to worship God here below, God will take thee up to worship Him above. Thou shalt change thy place, but not thy employment. Heaven is a day without a cloud to darken it, and without a night to end it. We would be seated in the heavenly Canaan, but are loth to be scratched with the briars and thorns of the wilderness. In heaven there is the presence of all good and the absence of all evil. Grace and glory differ but as the bud and blossom. What is grace but glory begun? What is glory but grace perfected? We may hope for a place in heaven if our hearts are made suitable in the state of heaven. If there be any grief in heaven, sure it will be for this, that we have done no more for God on earth.—*Mason.*

The Soul of Man in Search of Rest.—Almost all mankind are constantly catching at something more than they possess, and torment themselves in vain. Nor is our rest to be found amongst those enjoyments of the world, where all things are covered with a deluge of fluctuating restless waters; and the soul flying about, looking in vain for a place on which it may set its foot, most unhappily loses its time, its labor, and itself at last, like the days of the flood, which, having long sought for land, till their strength was quite exhausted, fell down at last and perished in the waters.—*Leighton.*

The Peace of God.—This "passeth all understanding." It cannot, therefore, be defined; it refuses to be held in the vice of our logic, or be subjected to the iron pressure of our metaphysical systems. It comes to the soul through the avenue of the sensibility, and not through the intellect or the will. The knowledge of it it derived from the experience of the heart rather than from any process of the understanding. Peace comes from God!

Eloquence.—For vividness of imagery, we do not believe the following sentence from Mr. Webster's address in commemoration of the landing of the pilgrims, was ever excelled: "We hear the whisperings of youthful impatience, and we see chilled and shivering childhood, *houseless but for a mother's arms, couchless but for a mother's breast,* till our blood almost freezes."

## "BOSSY BRINDLE."—A BALLAD.

A sad little tale, I'll endeavor to tell;
Our old "Bossy Brindle" that carried the bell
Is dead. She was dying when Margaret found her;
In silence the children are sorrowing round her.

The reader would learn how she happened to die—
We were digging potatoes, my father and I,
The children picked up, all by fits, nothing loth,
Though often exhibiting symptoms of sloth.

They often stood up like the helve of an axe,
And bent back their shoulders while rubbing their backs,
Or crawling along on their hands and their knees,
They'd pick—often changing their posture for ease.

At night we had laden a wagon, and found
As many or more in a heap on the ground;
We despatched little Jemmie and Susan to bring
The cows, which were slowly approaching the spring.

We milked. Stiff and weary I hurried to bed,
And slumbered as soon as I pillowed my head:
Next morning my sister came hurrying forward
And leapt o'er the rickety fence at the door-yard.

My father's prompt question "Why what is the matter?"
As promptly was answered by Maggie, his daughter;
We all hurried out, and we soon comprehended
How Brindle, her useful existence had ended.

The gate was left open, old Brindle went through it,
She noticed the wagon, and soon hobbled to it;
She sidled the wagon box all round about,
With tongue curling downwards and high reaching snout.

Desponding, she slowly looked round her and saw
Two cows at the heap which we covered with straw,
They yielded their place with some show of resistance,
But Brindle made both keep respectable distance.

She raised up her head and endeavored to guide
A potato with walloping tongue to one side;
She closed her old molars to "squash it in two,"
But grooved by her teeth round the end, it slipt through

And rolled down her throat. Oh! she swallows and
squeezes,
She holds down her head, and she winks, coughs and
sneezes,
Oft thrusting her tongue up her nostrils. She thought
That opening them wide would let air down her throat.

Save a rare sneezing cough, all in silence she stood,
And died as the sun glistened clear through the wood.
O, she was our sole cow in the days of my childhood,
When the first stroke was struck in our own echoing
wild-wood.

Old grandfather gave her with smooth little horn,
To Maggie, my sister, his daughter's first born;
We tended her well, and our kindness was well
Repaid by old Brindle that carried the bell.

My sister and I, or alone, or together,
With Dido oft went, in the warm summer weather,
In quest of old Brindle. No doubt we would take,
A stroll through the paths of the raspberry brake.

Our wearying mother would see us too late,
With hands scratched and bloody arrive at the gate,
With lips, cheeks, and fingers well stained with the berry,
She easily saw "What on earth made us tarry."

My sister, less selfish than Willie, her brother,
Some berries would save in her apron for mother;
Her brother would rarely bring anything back,
Save a wood-chuck just caught, or a squirrel so black.

We all in succession old Brindle have tended,
All loved her and grieve that her days now are ended;
The best cows we have, are her daughters. We'll now
Make Spotty, her eldest, our old bell cow.

Willie Lumsden.

Franklinville, Catttaraugus Co.

## A MELANCHOLY INCIDENT.

As I was passing through Auburn a few days since, I witnessed a scene which caused me many unpleasant reflections. The cars stopped a few moments opposite to the State Prison, and whilst waiting there, we saw a grey-headed man in charge of an officer, taken from the cars, shackled and hand cuffed, and saw him enter the gloomy and forbidding walls of the prison, perhaps never again to enjoy his freedom, for his form was already bowed with age, and he seemed tottering on the brink of the grave, and we learned that he was sentenced for a term of five years. It was indeed a sad spectacle to see one so old, immured in the gloomy walls of a prison to pass his declining years—the time, if ever, when the human heart most needs sympathy—amid its toils and privations, with no kind hand to minister to him in sickness and no saympathising heart to share the secret of his sufferings. Alone and uncared for, he must toil on whilst life and strength remain, and when over-burdened nature sinks under its accumulated load of sorrows and life ebbs out, he sees no kind friends around his couch to smooth his passage through the dark and terrible valley of death. Alone he must pass to the portals of eternity, and there awake to its dread realities.

Never did I more forcibly feel that "the way of the transgressor is hard," and, could I reach the ear of every youth in our favored land, I would entreat them to shun every appearance of evil—to walk in the paths of virtue and sobriety if they would find a sure reward for the toil by which we alone may truly fulfil our duty to God and man in this world. For a time the transgressor may "sail on flowery seas," but sooner or later tempests will arise—the day of retribution will come and make shipwreck of his unworthy hopes and gains, and bury him in merited oblivion. A good character and a good name are priceless gems.

Alabama, N. Y., Dec., 1852. R. B. W.

If you mean to make your side of the argument appear plausible, do not prejudice people against what you think truth by your passionate manner of defending it.

# Miscellaneous.

## ENGLISH WEATHER AND WORKMEN.

Mr. Bryant writing from London, Nov. 29th, speaks as follows of the prosent condition of England:

On my way to this city, it seemed to me that I had never seen a country drenched like England. Seven weeks of almost constant rain have saturated the ground with water, swollen the springs, turned the ditches into streams, and raised the rivers till they have in many places swept away their bridges, and everywhere drowned the low grounds. Such numbers of wet women and children I never saw before; wet wagoners walking beside their dripping teams; wet laborerr, male and female, digging turnips in the muddy fields; wet beggars in the towns, their rags streaming with water; wet sheep staggering under their drenched fleeces, nibbling the grass in the yellowish-green fields—for the pastures wear, at this season, a sallow verdure—or biting the turnips scattered for them by the farmers in long rows. I saw, frequently, mills standing with their motionless wheels, deep in turbid currents of water; fields prepared for grain, which cannot be seen, and others ready for the plow which cannot be plowed. In some places, houses, and even hamlets have been carried away, and the inhabitants drowned; and drowned cattle, I am told, are seen floating in the currents. It is said that the country has not seen such floods since the year 1795.

Almost everybody in England speaks of the present condition of the country as extremely prosperous. The partisans of free trade insist that there has been a gradual diminution of pauporism, and an improvement in the condition of the working classes ever since the repeal of the corn laws. At present it is admitted that this effect has been greatly heightened by the emigration to Australia and the United States. "We have sent out," said an intelligent gentleman to me, "great numbers of laborers to Australia, the very men by whom our soil was tilled last year; the paupers have succeeded to those places, receive the same and even better wages, and are paupers no longer. Besides these, we have sent out from other classes, particularly from the class of merchants, numbers of intelligent, enterprising men, some of the best men of England; and next year we shall give Australia a still larger host of colonists. They have gone out for a purpose of which they themselves, are scarcely aware; they are gone out to found the structure of that new community on solid and liberal foundations.—Within thirty years you will see a populous, prosperous, powerful, and enlightened community in Australia, and long before that time it will be independent of the mother country, for the men who have migrated to that country will not endure that it should remain in a state of dependence on a distant government a moment beyond the time when dependence is a necessity, or at least a convenience."

In the meantime, I hear a good deal said of the difficulty of providing workmen for the different tasks of agriculture. During the season which has just closed, the ordinary dependence upon laborers from Ireland failed, and when the grain was to be cut, the soldiery, in order to save the crops from destruction, were sent into the fields with sickles in their hands, instead of muskets and swords. Many kinds of work, which were formerly cheaply executed are now neglected; the more necessary employments are filled, and the others postponed. I hear a great deal said of the depopulation of Ireland. "Ireland," said a gentleman to me, "is already half Protestant;" but it is probable that this is an exaggeration. It is true, however, I believe, that English proprietors and farmers are going over in some numbers, and I heard of one case of an emigrant to America, who returned because he could buy land in Ireland of the same quality and nearness to the market, cheaper than in the United States.

## CHURLISH HUSBANDS.

The Rochester Temperance Journal, in reply to an article describing the miseries of a wife who had a churlish, indolent husband, says:

Who are most to blame for such husbands as the one described above? We verily believe that the proper answer is—*Mothers.*—Yes, mothers, who have gone for the pail of water, or dug the wood out of the snow, while her lazy lout of a son has been permitted to sit and roast his shins by the fire she has made.

We have lived to see sons thus brought up, become husbands, and we never knew one that did not dishonor that relation.—Ah! yes: and the boys who are permitted to lie in bed until father or mother has got up and made the fire, will be savage enough to let their wives do the same. The only way to manufacture decent husbands out of such sons, is for the wife to begin immediately after marriage, and, if need be, lie in bed until she has starved or shamed her husband out of it.

Good Advice.—Be and continue poor, young man, while others around you grow rich by fraud and disloyalty; be without place or power, while others beg their way upward; bear the pain of disappointed hopes, while others gain the accomplishment of theirs by flattery: forego the gracious pressure of the hand, for which others cringe and crawl. Wrap yourself in your own virtue, and seek a friend and your daily bread. If you have, in such a course, grown gray with unbleached honor, bless God and die.

Cultivate an amiable disposition.

## SPEAKING OF PIGS!

We take the following racy paragraphs from the "Up-the-River" letter in the January No. of the Knickerbocker Magazine:

"Ever since the frosty rime appeared, and the air has become sharp, your ears are stunned at the break of day by long-continued and most agonized squealings. They come from all parts of the compass. The tender pigling, the bristling, obese grunter, turns his white, bleared eye, now suffused with flame, for the last time with a tender reminiscence to the vacated pen, to the soft, wallowing sty. Visions of potato-parings, refuse, and sweet nubbins, straw-laid bed, and ring-tailed darlings, mingle with an instinctive presentiment of the whetted knife. Piggy does not march to his execution with the silent, dogged resignation of a condemned criminal, but invaribly with a resistance of the strong police, and immense lamentations. As he always went contrary when driven, from the time of the ringing of his rooting snout, he now uses his vast muscular energy to take his own part, and issues a squealing protest against being killed. He resists with all his might, as he is dragged, pulled, and pushed along to slaughter. But Piggy should reflect that he is not the only animal who must eat. His destiny is compound: To eat and to be eaten. The first part he has fulfilled, according to his nature. For the latter he is not responsible. You will now see him divested of his bristles, washed as white as snow in a scald-bath, and strung up by the heels, with his jaws stretched apart by a dry corn-cob. The next morning, frozen as hard as a rock, he will be stored with other produce in a wagon, with his hoofs sticking out from beneath a blanket, while the countryman, his head crouched on his shoulder to protect him from the north-east wind or a driving snow storm, slowly wends his way to market.—His final sepulchre is the human stomach. He whose habitation was so lately a pig-sty, and his foot in the trough, whose aspect was most beastly, most hideous, will soon become a part of 'fine lords and fine ladies,' and no doubt enter—I say it without disrespect—into the grand mausoleum of the President of the United States. Behold that Senator expound the Constitution!—Behold that Judge upon the bench! For some part of his composition he is indebted to the sty.

"So much for the transmigration of bodies, of which there can be no doubt, and the flesh of pig become beatified in transparent corporation. It resides in the vigor of the manly arm; it is in the purple blush of youthful beauty; it is in plumpness, and flowing lines, and tender lineaments, going before a greasy age, when the stomach abjures fat. When, during the past summer, it was my amusement to hasten to the sty, at the emptying of the desiderated slop-pail; when I listened to those percine grunts, and was a witness of that beastly emulation to obtain the tid-bits of the leavings, and the choicest of the peels; when I turned away from the ill-smelling mud, and reflected seriously how much is conveyed in the very name of hog, I can scarcely realize the transfusion of such grossness to so much delicacy and delight. Each household is now enlivened with preparation for a 'feast of fat things.' The kitchen is a scene of continual festivity: every tub is in requisition; the empty larder is replenished; the lean poor wax fat. What a hissing and what a frying! What an unctuous smell! What an herbal fragrance! The cloven feet are turned to bowls of transparent, palpitating jelly. And souse! souse! Souse is a gelatinous, emolient, dainty morsel. Spare-ribs are as delicate as delicate can be! Steaks! Cook them in a devil-dish, with a little currant-jelly and sauces, after the Doctor's fashion, and they are beyond all praise.—But when I come to speak of crackling!—'fat, call it not fat'—O Charles, Charles! I yield the palm to thee! That pen of thine could add a charm to every subject, and like the winter-time bedeck with greenest sprigs and fragrant parsley the very front of pig!

"Again, the little ruddy chunk, with its alternate layers of lean and fat, suited alike for Jacob Sprat or for his excellent wife, whose tastes were diverse, used in my kind father's family to be served up at judicious intervals, in a dish called sour-crout. This dish we reverence for the sake of our Dutch ancestors; and although the cabbage at a certain stage has volitant principles which, beginning at the kitchen, walk without ceremony into the parlor, and stop not short of the cock-loft and rafters—a sort of spiritual cat—yet it has to the initiated a fierce relish, which can scarcely be described. The St. Nicholas Society will bear me out in what I say. But if there be any relish of life for which we are indebted to Piggy, it is sausage; and sausage, we have been always taught, to be relished, must be eaten at home. I remember, when a boy, the particularity of my old grandmother in the preparation of sausage. What cleanliness was required! How adequately the powdered sage and other herbs were mingled in its composition! And when it came upon the table, with buckwheat cakes, buttered and cut into four quarters on a hot, full-sized plate, upon my word, if the coffee were well composed, no breakfast could be more complete. But to hear me talk in this way, you might take me for a sensual epicure, instead of being, as I am, a man who can live upon a dry crust, and except at few-and-far-between intervals of hilarious health, cares not what he eats, so long as it be well served and clean:

'I cannot eat but little meat,
My stomach is not good.'

Perhaps Mrs. Hale's immortal cookery-book gives the best recipe for sausage. Having said thus much for Piggy, I have only done it to show how admirably every part of creation fulfils its destiny, and contributes to its proper end."

# For the Ladies.

## ANGELINE.

[In the Congressional Burial Ground at Washington is a tomb-stone, on which is inscribed only the name "Angeline," and these words, "Other refuge have I none."]

I

"Other refuge have I none!"
Carve ye this on my head-stone,
This, and my poor name alone,
Angeline—plain Angeline;
And I would no text divine—
To illustrate life of mine—
Neither gloze death's truth, nor garble;
Simply on the milk-white marble
Write—and should some lone bird warble
The same sadness in the gray
Of the ghostly eve, I pray
That ye drive it not away;
But permit its music moan
Utterance for the dead—cold stone—
"Other refuge have I none."

II

"Angeline!" no other name,
Adjunct, antecedent, fame,
Style nor title, do I claim;
Maid or matron, widow, bride.
Of what lineage, how allied,
Tell not to my shame or pride—
Green the branch, or grayly mossed,
It must fall; white death, a ghost,
Comes in Spring and Autumn frost;
Give no date for either fate—
God's design is consummate,
Die we early, die we late;
So of me be nothing shown,
Save that here, where I lie alone,
"Other refuge have I none."

## THE OLD BONNET.—A STORY FOR WINTER.

BY MISS C. W. BARBER.

It was a bleak, chilly day in November. The wind went wailing like a living thing among the naked trees, and dying away in hollow murmurs through the leaf-bestrewn vallies.

But in the parlour of Mr. Birdleng all was as cheerful as May. A fire in the grate cast a genial warmth through the richly furnished room, and the light from the sombre sky stole in through the heavy damask curtains, casting a crimson shade over everything—over a soft richly pliod carpet, the nicely polished chairs, sofas and tables, and even staining to a deeper glow the cheeks of two young girls, who sat with some net work in their hands before the fire.

They sat and gossiped about the dress, manners and habits of the various individuals whom they knew. They were the d ughters of a rich merchant, and had made their entree into the world.

"I think," said Susan Birdlong, the elder of the two, "that that Jane Dixon, to whom we were introduced at Mrs. Myer's yesterday can't be much. Did you notice her dress? Her gloves fitted her hand well enough, but she has, I dare say, worn them a dozen times before, and her bonnet looked as though Madam Noah might have worn it into the ark. She had but little to say I noticed, and I consider that proof positive that she can't talk, for when people can talk they generally do. At any rate, I don't like the looks of her bonnet, and I mean to cut her acquaintance, let who will visit her."—Her sister smiled an approving smile; and then the two proceeded to dissect the character of others.

But let us turn to Miss Dixon, the young lady who had drawn upon herself censure by daring to wear an antique article of dress. She sat, upon the same morning in which we have introduced the Misses Birdlong to the reador's notice, in a parlor equally well furnished—equally cheerful, and in her hands, strange to tell, was the very bonnet—the old fashioned bonnet, which might have belonged to Mrs. Noah. She was turning it around, and contemplating the appearance of its faded ribbons. Every now and then, as a wilder blast swept by, she however raised her head, with an anxious expression upon her face, to listen.—Once she laid down her bonnet and went to the window to look out.

"It is a bitter day" she said to herself mentally, "I wonder how that poor Irish family, the McCarties, will get along? I think I must go over and see after them.—Let me think! If I can manage to wear my old bonnet another winter, I can afford to buy wood for them, and by curtailing some other expenses, I could send those two eldest children to school. Once educated they could aid in the education of the younger members of the family. As it is, all are growing up in idleness and mischief. I think I must try and do this. But that old bonnet does look shabby. Yet I can repair it, by retrimming it, until it will look neat, and why need I care if it does not look fine? Those who know and love me, will not care what kind of a bonnet I wear—those who do not know me, certainly need not concern themselves about my dress. I think that I shall manage to wear it." So saying she went back to her seat, took up the unconscious object of her soliloquy, and after retrimming it, went out to look after the McCarties.

In the Irishman's hovel she was received with clamorous demonstrations of joy. Her face became as radiant with good humour and benevolence as an angel's. She bought the wood and entered the children's names at school.

On her way home, she met Susan Birdlong, accompanied by several fashionable acquaintances, not one of whom chose to recognise her. Had she been fashionably dressed, the result would have been different.

Was she a gainer or a loser by wearing that old bonnet? Her own happy heart as she mounted the steps of her father's mansion, and took it carefully off, whispered "a gainer." The angels, those bright intelligences, who bending from the Mount of God keep watch over the actions of men, and shout to each other for joy when they see mortals "bearing another's burthen," and fulfilling the "law of love," shouted in one united chorus, then, we fancy, "a gainer;" but Susan Birdlong, and several individuals belonging to her highly aristocratic circle, thought otherwise.—*Madison Family Visitor.*

## "MARRIAGE BY SURPRISE" IN ITALY.

The Florence correspondent of the London News says:—I met in society a few days ago an English lady who had just been released from prison, where she had undergone two months solitary confinement for having contracted marriage with a Tuscan officer in the manner termed *matrimoni di sorpresa*, which may be considered equivalent to a Gretna Green match in England. The parties being much attached to each other, although family obstacles prevented their immediate marrying *in forma*, they resolved to adopt the plan above mentioned, which consists in the couple presenting themselves before the curate of the parish, and stating to him in the presence of two witnesses that they are man and wife. This forms a valid marriage, according to the law of the Church of Rome. The lady in the present case being a Roman Catholic, sent to the curate to inform him that she wished to confess, and requested him to name the hour that would suit him to hear her. At the hour named she repaired to the confessional, and had fully engaged the priest's attention, when her lover, attended by two witnesses, suddenly presented himself. The lady arose and gave him her hand, the fatal words were pronounced, the witnesses attested, and the curate became the unwilling instrument of "marriage by surprise." But although the marriage contracted in this manner is perfectly valid, it is punishable in Tuscany as a civil misdemeanor, so that the law condemns what the church sanctions.

The officer was first confined in a military fortress, deprived of his rank, and dismissed the service, and then sent to expiate his offence in civil point of view, by two months solitary confinement in the Mauratto cellular prison, and his wife had undergone a similar term in another prison.

Another instance of this kind occurred here recently, wherein the priest was sent for as if to attend a dying person; but one of the witnesses getting alarmed before the curate arrived, went down stairs and warned his reverence that a snare was prepared for him. The curate very indignantly sent for a couple of gendarmes, and with them presented himself to arrest the culpable parties. The other witness got out an upper window and escaped over the tiles; but the bridegroom, nothing daunted by the priest and his *posse comitatus*, and resolved not to miss marriage for want of witnesses, addressed the curate in the usual formula: "This is my wife," said he. "And this is my husband," responded the lady; "and these two gentlemen," resumed the bridegroom, pointing to the two astounded gendarmes, "are witnesses." The priest was done, and the marriage was valid.

## TAKING THE RESPONSIBILITY.

Since President Jackson, of hickory memory, "took the responsibility," that phrase has become rather common in the mouths of all. Sometimes there are particular situations in life, with which is associated considerable responsibility, and more than every one is willing to assume. But there are some kinds of responsibilities that must be taken, notwithstanding all objections. The ladies have lately come out strong for woman's rights, still some of them dread the responsibility attending success. Miss Lucy A. Simmons writes to Mrs. Amelia Bloomer, on matters and things about "women rights," and says:

"Some almost doubt the *propriety* of woman's taking the responsibility!"

On this, an exchange says:—"They must be queer creatures, indeed, who doubt the propriety of woman's performing that great duty! If a woman *has* a "*responsibility*" who *should* "take" it if she should *not?* Is it not her peculiar province, not only to "take" it, but to hold it, tend it, wash it, dress it, nurse it, rock it, trot it on her knees, &c.? It is the duty of Miss Simmons to expose the unnatural mortals she alludes to, and we trust she will do so."

Mrs. Swisshelm, a strenuous advocate for women's rights, it seems has "taken the responsibility," and we understand she is taing very good care of it, too. Ladies may do as she has done. It is much better taking such a responsibilty, than spouting in the halls of Congress, or leading armies to the field. It is this latter class that Miss Simmons ought to expose as "unnatural mortals." They are the ones who "doubt the propriety of woman's taking the responsibility" that belongs to her. There are some strange women as well as strange men, in the world. And we take the responsibility of saying so.

The Bi-fold purposes of Life.—The Italians have a proverb, "He that does not amuse himself will soon die." Liberally interpreted, contrast and change of thought and scene are necessary. To extract rational enjoyment and novelty from life, is the happiest of all arts; to impart them to others, the best of all endowments. The tangible passes from hand to hand, the intangible from mind to mind, and from heart to heart. The eye speculates and beholds, the soul appreciates and adores; and continually there are two lessons, the ardent rush of things and their quiescent reposo, the diurnal sun, the nocturnal stars, that our days may be illuminated by cheerfulness, and our evenings hallowed with the light of peace.

Some ladies will forgive silliness; but none ill manners. And there are but few capable of judging of your learning or genius; but all of your behavior.

## GOVERNOR'S MESSAGE.

[*Continued from page* 15.]

press insurrection, or defend the State in war; unless authorized on a direct appeal to the popular will, in the manner directed by the Constitution. These important provisions have recently been topics of earnest discussion, in popular assemblages, in the halls of the Legislature, and before the judicial tribunals.

The finances of the State, and the condition of the public works, are at this time subjects of great interest; I therefore deem it my duty to recur to the reasons which led to the adoption of the financial provisions of the Constitution, to give my views of the condition of the public works, and to make such recommendations with regard to them as I think best calculated to effect their completion, and make them the channels of commerce between the great and productive regions of the West, and the markets of the East. The Constitutional Convention caused statements to be prepared showing the financial condition of the State; and ascertained that the debts contracted for the canals, amounted to $17,516,119.57, and that a large additional sum was required to complete them; that the debt incurred for other purposes, was $5,885,549.-24, and that the revenues of the State were insufficient to pay the expenses of the government, so that this debt was constantly increasing.

Of the general debt of the State, $3,000,000 had been incurred for the benefit of the New York and Erie Railroad.

To extinguish the canal debt the 1st section of the 7th article of the Constitution directs that after paying the expenses of repairs, &c., there shall be set apart from the revenues of the canals, in each fiscal year, $1,300,000, until the first of June, 1855, and, from that time, the sum of $1,700,000, in each fiscal year, as a sinking fund to pay the interest and redeem the principal of the canal debt, as it existed on the first day of June, 1846.

To pay the General Fund debt of the State, the 2d section of the 7th article provides, that in each fiscal year, after complying with the 1st section, there shall be set apart from the canal revenues, the sum of $350,000, as a sinking fund to pay the interest and redeem the principal of that debt. After the canal debt is paid, the sum to be set apart for the payment of the General Fund debt, is to be increased to $1,500,000.

To aid in paying the expenses of Government, the third section of the 7th article directs, that there shall be paid out of the surplus revenues of the canals for that purpose, a sum not exceeding $200,000, in each year, after complying with the provisions of the first and second sections.

To secure the completion of our unfinished public works, it repuires that the remainder of the surplus revenues of the canals shall, in each fiscal year, be applied to the Erie canal enlargement, and the Genesee Valley and Black River canals, until they are completed.

When the purposes of the Constitution shall be accomplished, according to these arrangements, the Erie canal enlargement and the Black River and Genesee Valley canals, will be completed, the State of New York will be free from debt, and will own 858 miles of canals, yielding large revenues, which will be unincumbered with debt or interest, or sinking fund accounts. We can then make such reductions of the taxes on the transportation of the products of the country to market, as may be necessary to increase their sale, to secure the commerce of the Western States, and give to our citizens the profits of a vast carrying trade.

The mistaken idea is entertained by many, that the spirit of our Constitution is hostile to our public improvements. The members of the Constitutional Convention acted upon the belief that a sound system of finance was essential to the successful management and completion of the canals; that the unprovident creation of debt, not only embarrassed the finances of the State, but also delayed the completion of the unfinished public works. The history of our canals gives abundant proofs of the truth of these propositions.

Before the year 1825, the State of New York had built 656 miles of canal, connecting the Hudson river with the Erie, Ontario, Cayuga, Seneca and Crooked lakes; and with the valleys of the Chemung and Susquehana rivers. This great system of internal improvements cost only $11,652,652,96. Its first and greatest enterprise, the Erie canal, was commenced in 1817. It traversed a vast extent of dense forests and pestilential swamps. Great numbers of laborers were disabled or destroyed by the diseases incident to uncultivated low grounds; the contractors, without the facilities now enjoyed, in many instances without the convenience afforded by common roads, were obliged to overcome numerous obstacles with which they had to contend, unaided by experience. Yet this great work, 364 miles in length, connecting Lake Erie with the Hudson river, cost only $7,143,789.86,

In 1835, the successful and rapid completion of the public works, and the extinguishment of the principal part of the debt created for their construction, was a just cause for pride and congratulation. Since that time there has been expended on ou canals $25,245,000, besides $9,477,000 paid for interest; yet the enlargement is not completed, nor any new canals finished. Our finances are embarrassed, and our resources diminished, until we are threatened with an increase of direct taxation. I do not deem any apology necessary for giving in detail my views of the causes which have produced these disastrous results

I have heretofore had occasion to examine this subject, as a member of the Legislature, and chairman of the committee on canals. At that time, as on the present occasion, I consulted those engaged in building or navigating ou canals, for the purpose of obtaining correct information respecting their history, interests and condition. I have been compelled to the conclusion that the practice of borrowing and expending large sums of money within short periods of time, has been at once ruinous to them, and injurious to the public interests. The effective application of money previous to 1835, extended through a period of about eighteen years. The average amount borrowed or expended within each year, was less than $1,000,000.—Speculative excitements were not then created by profuse expenditures; extravagant plans were not engendered by placing great amounts at the disposal of disbursing agents; localities were not stimulated to press for ornamental or questionable improvements. Limited annual appropriations induced all to desire such application of the money as would most promote the great object of increased facilities for transportation. When it was decided, in 1835, to enlarge the Erie canal, it was proposed to accomplish the work by the application of the surplus tolls, without resorting to loans. There has been collected from taxation upon the transportation of property upon our canals, since that time, the sum of $41,221,000, the expenses of keeping them in repair amount to $11,459,000.

The balance might have been applied to the completion of our public works if we had created no debts involving charges for interest and Sinking Fund accounts; it is believed that the balance of $29,768,000, if it had been applied as it accrued from the revenues, would have finished the works; the estimate of their cost was $30,734,000. Unfortunately, the prudent system of expending only our surplus tolls was abandoned. The policy of borrowing is always adopted when money is abundant; when a speculative feeling pervades the community; when extravagant plans are popular; when materials and labor are high, and when the application of money produces the least effect. This state of affairs prevailed to an unexampled extent in the years 1837–8–9 and 1840, when under its influence and during that time, the State borrowed more than sixteen millions for canal purposes, and incurred obligations in addition, that swelled the sum of liabilities to $20,-713,905.58, and created the heavy interest account that has absorbed so much of our revenues.

The expenditure of these great amounts increased the speculative spirit of the times, and caused the adoption of uselessly expensive structures on the lines of the canals. The cost of doing the work was swelled still more, by putting large amounts under contract at one time. The expense of structures was much greater than it would have been under other circumstances. The regularity of the pursuits of the industrial classes was disturbed; great numbers of laborers were drawn from all quarters, who, when thrown out ous of employment by the inability of the State to pay their employers, increased the general distress. The full force of the evils of indebtedness was felt in the autumn of 1841, when the State officers were unable to borrow money to pay the contractors. The work on the canals was not suspended by a mere legislative act. The stocks of the State could not be sold at par, for some months before the Legislature of 1842 convened and passed the law to restore the credit of the State, and enable it to pay the debts due to its citizens.

In some instances the contractors were compelled to take the stocks of the State at par, and sell them in market at a loss of ten or fifteen per cent. The distress caused by the loss of public credit, was not confined to the public creditors.—Their embarassments involved others in their misfortunes. The laborers, who, relying on the ability of the State to keep its engagements had built their humble cabins on the lines of our canals, were left in a condition of destitution and suffering. The act of 1842 was passed to restore the credit of the State, and enable it to pay its debts and relieve the public creditors. It was a bold and honest effort to stem the tide of repudiation that threatened to sweep away the character for integrity and honor of many of the States of the Union.

It cannot be said our condition in 1842 was owing to the financial embarassments of the time. If the State had not involved itself in debt, it would have been beyond the reach of pecuniary revulsions. Instead of increasing the distresses of the farmers, mechanics and merchants, by borrowing the money they needed, it would have afforded them relief by the annual expenditure of its surplus canal revenues, thus giving employment to labor, and creating a demand for the productions of the soil. But the State fell from its proper position, and in the place of giving aid to its citizens, it became a competing borrower in the money market.

In consequence of the absorption of its revenues by sinking funds and interest accounts, it was unable to avail itself of the low prices which prevailed from 1843 to 1847. The annual expenditure of the surplus revenues we should have had in those years, if we had borrowed no money would have been of great advantage to our unfinished works, while it would have given seasonable relief to our citizens.

It is desirable to have contracts on the public improvements taken by men whose skill and experience enable them to perform the work upon terms favorable to the State, and yet profitable to themselves. When large amounts are borrowed and expended within short periods of time, inexperienced persons are induced to leave their proper pursuits and apply for contracts. It is evident that such persons must be paid high prices or be compelled to apply to the Legislature for relief. This has been a source of great loss to the State, and of great evil in legislation.

The system of borrowing affects injuriously the public interest in other respects. More than $40,000,000 have been paid to the State for tolls in addition to the cost of transportation, by those using our canals, since 1835. This enormous weight of taxation has borne heavily upon the producing classes and business interests of the country. If the State had created no debt for canal or other purposes, since 1835, we could now, or in a few years, relieve the canal commerce from any taxation beyond the amount necessary to keep them in repairs, and make such contributions towards the support of Government as might be deemed advisable. The aggregate of these surplus revenues would amount, in 1855, to more than thirty-eight millions of dollars, a sum sufficient to have completed the Erie Canal Enlargement, the Genesee Valley and Black River Canals, and to have paid the balance of canal indebtedness due in 1835.

The toll upon the transportation of a barrel of flour from Buffalo to Albany, at the present reduced rates, is about twenty-three cents. If we were not burdened with debt, eight cents would be its proportionate amount of tax for keeping the canal in repair, and contributing an ample yearly sum towards the support of government. The saving of expense of transportation, by the completion of the enlargement, would have been ten cents more, making a diminution of twenty-five cents in the expense of conveying this important article of food and commerce to the city of New York.

It is deemed a matter of great national interest to be able to export freely the productions of the soil; the continuance of taxation, which should have been avoided, will frequently prevent the shipment of provisions, deprive the farmer of a market, and the merchant and ship owner of an important trade and transportation.

If a tax of twenty-five cents should be imposed by legislation on each barrel of flour consumed in our eastern cities, or exported from New York, such an act of injustice, mischief and folly would be justly denounced by the laborer, merchant and farmer. To prevent such injurious legislation, the Constitution of the United States provides that "no tax or duty shall be laid on articles exported from any State." Our unfortunate canal debt, as it practically imposed such a tax, does inflict this injury upon us in addition to the derangement it has occasioned in our finances, and the delay it has caused in the completion of our canals. The tax which it imposes upon the wood, lumber, and other coarse productions of our State is still more onerous. If from the toll now imposed upon these articles, there is deducted enough to keep the canals in repair, and to aid in supporting the State government, it will be found that if we had borrowed no money and finished the canals by our surplus revenues, the toll on a thousand feet of pine lumber from Dansville to Albany, on the Genesee Valley canal, could be reduced to one dollar; that a reduction could be made of 33 cents on each thousand feet of green hemlock, and of 67 cents on each thousand feet of green spruce, and of 18 cents on each cord of wood carried to market from the head of the Black river feeder. Investigation will show that the canal debts has materially diminished the value of real estate in many localities.

The amount of business upon the canals is not governed by the amount of the productions and supplies of the west, for they are inexhaustible; but by the demand for them in the markets of the eastern cities, or of the commercial world.—The extent of our market, and the distances to which we can export our productions, depend upon their cost in New York. We cannot foresee how far the unfortunate policy we have pursued will deprive us of the advantages of foreign markets; but it will without doubt affect seriously the exportation of provisions.

The object of the Constitution is to prevent a recurrence of the evils we have experienced, to provide for the extinguishment of our debts, and for a judicious prosecution of our public works.

Since the adoption of the Constitution, there has been expended upon the public works $6,-715,000; the surplus tolls applicable to the purpose, amounted, in 1851, to $964,432. In 1851, the Legislature passed a law to raise nine millions of dollars for the purpose of completing, at once, the unfinished public works; and at the same session relieved certain railroads from the payment of tolls levied to protect the canal revenues. It was objected to the law of 1851 that it violated the letter and spirit of the Constitution, and would produce the evils which it was designed to prevent; that if the law was Constitutional, it would injure our canal system by burthening it with the payment of the principal and interest of the sum borrowed, rendering continued taxation upon its commerce necessary; that the expense of the work would be increased by putting so much under contract at one time; that prices were high and the money market inflated, and would become more so, under the influence of the law, as it permitted the certificates for the money borrowed to be made the basis for banking, thus converting the indebtedness of our canals into bank bills for circulation; that if the amount of the certificates should should not be equal to the contracts made under the law, while the indebtedness would be increased, no resources would be left for the completion of the works, as the bill proposed "to sell all surplus revenues" applicable to that purpose, for the repayment of the nine millions raised under its provisions.

Unfortunately the Legislature rejected a proposed amendment, providing that the constitutionality of the law should be determined before any contracts should be made, or money borrowed. Canal certificates for $1,500,000 were sold in August and December, 1851, at a premium of less than one per cent, while the stock of the State, of known conatitutionality, bearing the same interest, commanded a premium ranging from 9 to 16 per cent. The contracts were let; it has been supposed that they only amounted to $8,029,727,-42, but this is upon the assumption that all the excavation on the enlargement would be of the easiest kind, and of the description which was to have been done at the lowest prices under the contracts. No allowance was made for the fact, that by the terms of these contracts, much higher prices were to have been paid far the quicksand or hardpan that might be excavated in the performance of the work. It is difficult to estimate what amount would have been required, if the law had been declared constitutional; the aggregate is variously estimated by different engineers to be from ten to thirteen millions of dollars.—For the payment of the expense of the work beyond the amount to be raised by the law of 1851, there was no resource left, as the surplus tolls were all disposed of, until the $9,000,000 were paid; and the works would have stopped, or resort must have been had to taxation upon the people.

The law was declared to be unconstitutional by the highest judicial tribunal of our State. Justice requires that the money received from the certificates should be refunded, and that the State should pay for the work done under the contracts. The amount required for this purpose must be raised by a tax, or by submitting to the people a law authorizing a debt for the purpose, and providing for the payment of the interest and principal by a tax, according to the provisions of the Constitution.

Although the law has been pronounced unconstitutional, the legislation of 1851 has seriously affected the resources of our canals.

For the fiscal year ending September 30th, 1851, the surplus amounted to $964,432; for the fiscal year ending Sept. 30, 1852, they are less than $300 000, a sum insufficient to have paid the interest on the proposed debt of nine millions. When tolls were taken off from the lateral railroads, the canal revenues were not only deprived of a contribution from that source, but the roads became more formidable competitors, and rendered necessary a reduction of canal tolls.

The honor and interest, of the State of New-York, require the completion of the Erie canal enlargement, and the Genesee Valley and Black River canals. These enterprises have lost none of their importance. Their completion is demanded as soon as is consistent with a judicious and economical application of money. The amount needed to finish the Black River canal, and improvement, is $248,784; to complete thirty miles of Genesee Valley canal, is $389,000. Upon the Erie canal, the locks, aqueducts, and other structures, which determine the future size of the enlargement, are mostly completed. The work which remains to be done is principally the adaptation of the channel work to the size of these structures.

The Canal Board have directed that the old locks between Port Byron and Rochester, shall be lengthened and widened, and contracts have been made to have the work done during the suspension of navigation, so that they may be bro't into use by the first of June When this is accomplished, a boat of the dimensions adapted to the enlarged canal, can go from Lake Erie to the Hudson river. When the new locks upon the Oswego canal are finished, the same class of boats can also be used upon that route. The mistaken impression prevails, that the work which has been done upon the enlargement, is useless until the entire enterprise is completed, and this is frequently urged as a reason for making a debt to complete it at once. This is not so. The improvements already made have doubled the capacity of the canal. When it was first built, the boats used upon it carried, on an average less than forty tons.

| | | | | |
|---|---|---|---|---|
| The average tonnage of the boats built in | | 1841, | " | 64 tons. |
| " | " | 1845, | " | 67 " |
| " | " | 1846, | " | 73 " |
| " | " | 1847, | " | 76 " |
| " | " | 1848, | " | 74 " |
| " | " | 1849, | " | 76 " |
| " | " | 1850, | " | 80 " |
| " | " | 1851, | " | 87 " |
| " | " | 1852, | " | 90 " |

The application of surplus revenues, and some small appropriations made before the adoption of the Constitution, have increased the capacity of the canal nearly one-half since 1844; and when the locks are lengthened next spring, it can be navigated through its entire length by boats of the largest contemplated size, carrying one hundred and twenty tons. Boats of this size are now used between Rome and Albany, and between Buffalo and Rochester. It appears from examinations made by the State Engineer, that with an expenditure of about $400,000 in addition to the work under contract, the water can be deepened so that the new boats can carry one hundred and fifty tons, or four times the original tonnage.—Only $200,000 of this amount will be expended for purposes that are temporary, or that will not advance the enlargement. The work under contract for enlarging the locks, will make this improvement of the channel way indispensable.—Without it, the wedging of boats will prove a serious difficulty.

If one million dollars can be expended annually, upon unfinished public works, the lateral canals will soon be finished, the enlargement constantly improved from year to year, and the boats hereafter built can soon carry their full loads of two hundred and forty tons. This increase of tonnage will not require any increase in the dimensions of those built after this year, as they will be of the full size required for the enlarged canals. It will be gained by allowing them to draw more water. Every increase of six inches to the draft, will add about twenty-five tons to their loads.—To gain this increased tonnage, from year to year, it is not necessary to make repeated improvements of the whole channel of the canal; it can be obtained by finishing the enlargement at the obstructed points, and by procuring an abundant supply of water where the want of it occasions difficulty.

Of the enlargement, about 150 miles are completed. The capacity of the remaining 214 miles, is very unequal on different sections. On some portions of the old canal the boats adapted to the enlargement can be conveniently used, while in other places, the smaller ones, when loaded, are delayed by want of water or by narrow channels. The points of least capacity on the canal, which may be very short in extent, limit the size and tonnage of the boats navigating its entire length. Removing the obstructions at such points will practically increase the capacity of the whole canal. The judicious application of expenditures to the most needed improvements, will rapidly increase the amount carried by the enlarged boats.

The western end of the canal is supplied with water from Lake Erie to the Seneca river, a distance of 159 miles. It is difficult to keep up a supply for the locks at the eastern end of the line, through a narrow and obstructed canal, and the State has been frequently compelled to take water from the Genesee river and other streams, to great detriment of the manufacturing establishments dependent on them. The introduction of enlarged boats will diminish the evil, as they will lessen the number of lockages, and the amount of water drawn off by each lockage. The early enlargement of the canal at different points between Buffalo and Rochester, will entirely obviate the difficulty, and improve navigation, by allowing an abundant flow of water from Lake Erie.

It is very important to allow the enlarged boats to be introduced at this time, for other reasons, although their whole capacity cannot be used immediately. There will soon be a deficiency of boats, unless the number built in each year shall be equal to the number destroyed by time and use. This will be very injurious to the commerce of the canals. The forwarders and boatmen are anxious to build their boats of full size, so that they may not lose the value of their investments in this kind of property. These vessels will not be able to carry over one hundred and twenty tons at first, yet they will meet the increased demands of commerce, while the quantity they can carry will not give them such advantages as to destroy the value of the present class of boats.

These can be run with profit, until they are worn out or placed upon the lateral canals.—Many of the smaller boats can be lengthened, and all will be able to make their trips in less time than heretofore. The number now navigating the canals is computed to be about 4,000, and their value to be about $3,000,000. They constitute the means of support to their owners, many of whom have invested all their property in them. Any sudden change destroying the property of a meritorious class of citizens should be avoided.

I have deemed it my duty to give detailed statements on this subject, to correct the impression that we can derive no advantage from the expenditures on the enlargement until it is completed; to show that we are now benefited by the improvements made; that we can, render them still more available from year to year, by the judicious application of moderate sums; that we can have "an enlarging canal until it becomes the enlarged canal;" that this annual increase of capacity will meet the increasing demands of commerce; and that all this can be effected without the creation of a large debt, which experience has shown to be prejudicial to our public works.

The purposes of our canal system is to direct the vast commerce of the west into artificial channels traversing our State, and thus secure to us the profits arising from its transportation. Can these artificial channels be made cheap enough to command this internal trade, against the competition of the St. Lawrence and Mississippi rivers, or of the rival artificial routes?

The whole enquiry is resolved into the expense of construction, and economy of management. Sound, honest and intelligent financial management, constitutes our only assurance of success in the undertaking.

Many entertain the opinion that railroads will, in a few years, to a great extent, divert commerce from the canals. I do not concur in these views, but if they should prove to be true, the canals would be of great value in controlling the rates of transportation. They are owned by the people of the State who are always anxious to reduce to the lowest point, the expenses of conveying their productions to market. Railroads are owned by individuals who are interested in getting large returns from their investment. While the canals are in good order and under judicious management, combinations cannot be successfully formed between corporations to the detriment of the public interests.

To complete our unfinished public works in the manner above proposed, it is necessary to expend about $1,000,000 annually. If the amount of the surplus tolls could be restored to the point at which they stood in 1851, they would be sufficient for the purpose, but they are less than $240,-000 for the fiscal year ending September 30, 1852, and in the year 1855, an additional charge of $400,000 will be made upon them for the payment of the canal debt. We have reason to believe the present low rate of tolls and the enlarged capacity of boats will greatly augment them, but we cannot hope that they will give the required amount beyond this additional charge of $400,000. We cannot raise the rates of tolls, and it may be desirable to reduce them.

The competition between the canal and other channels of commerce, is now very severe. An increase of tolls would either drive business from the canal, or it would compel the freighters and boatmen to reduce their charges which are now low enough. Low tolls not only widen the circle from which we draw business, but they also enlarge the bounds of the markets within which the products of the country are sold. If we would retain commerce upon our canals, we must do so by making them its cheapest avenues. The great difficulty with which we have to contend is the annual tax of $2,259,000, caused by our present debt, which will hereafter be levied upon our canal commerce in addition to the expense of keeping the canals in repair. If we can keep down the tolls and the charges for transportation, by the introduction of large boats and an annual increase of their loads, we shall be able to extricate our public works from their present embarrassments.

There is now estimated to be due to contractors and for land damages, &c., for a large portion of which, drafts have been given by the Canal Commissioners on the Auditor, which are unpaid by him for want of funds,..$400,000
The amount estimated to be due for work performed under the contracts made on the 30th of Dec., 1851, is,..... 200,000
The cost of the work recently let between Port Byron and Rochester will be about..... 100,000
Engineering and miscellaneous expenses,..... 100,000
The cost of the work on the canals necessary to be done within the year, is..... 500,000

$1,300,000

When provision is made for the payment of the $1,500,000 received on the canal certificates issued under the law of 1851, there will be made available an unexpended balance of... $250,000
If the surplus tolls for the fiscal year ending September 30, 1852, are equal to those of last year, they will amount to.. 225,000

475,000

$825,000

The reputation and interest of the State require that immediate provision be made for this balance of $825,000. A large portion of the amount is now due to the creditors of the State, many of whom hold drafts on the Auditor which have been dishonored for the want of funds. The residue is to make indispensable improvements upon the canals. The only way to procure the money necessary to meet these pressing demands, is to impose a tax, which, with that now levied for the support of Government, will amount to about one million on the assessed valuations of 1851.

I deem it of great importance to secure an application of at least one million of dollars, annually, towards the completion of the Genesee Valley Canal, the Black River Canal and improvement, and the enlargement of the channels of the Erie and Oswego Canals. This will in a short period of time effect these desirable objects and relieve the embarrassments on the line of the Erie Canal arising from an insufficient supply of water and narrow channels, and enable the boats hereafter to be built to carry their full loads of two hundred and forty tons. Many expensive works of mere convenience can be postponed until these essential points are gained. A judicious application of six millions of dollars (a sum nearly equal to the original cost of building the whole Erie Canal) expended in equal annual sums, will effect these great objects.

It is impossible to estimate with any degree of accuracy, the amount of the surplus tolls, during the next six years. To enable the State to make an annual expenditure of one million of dollars on our canals, it will probably be necessary to raise in each year, from some other source, about $500,000, in addition to the amount of the surplus tolls.

Different modes have been proposed to raise the sums necessary for the prosecution of our public works. The Legislature may, in each year, impose a tax for that purpose; or, it may borrow the money under the provisions of the 12th section of the 7th article of the Constitution, which require that an annual tax shall be imposed, that will pay the interest, and redeem the principal, within 18 years from the time of the contraction of the debt; or, a proposal to amend the Constitution may be submitted to the people, which, by the terms of the Constitution, must be agreed to by a majority of the members elected to each of the two Houses, of two distinct and consecutive Legislatures, and then submitted to the people for their approval and ratification.

Objections exist in the minds of some, to any changes of the financial provisions of the Constitution, as they are apprehensive that they may lead to the improvident creation of further debt, or to a postponement in the time for the payment of the existing debt.

If any amendment of the Constitution shall be proposed by the Senate and Assembly, to enable the Legislature to borrow money to complete our canals in the manner suggested, it should conform, in all respects, to the provisions of the Constitution, in relation to the payment of the existing indebtedness, by requiring the creation of a Sinking Fund to pay the interest and redeem the principal of any such debt, within 18 years from the time of its creation; and, if the surplus tolls should be insufficient for the purpose, that the Legislature shall provide for any deficiency by equitable taxes.

The finances of the State are not in a satisfactory condition. In 1814 the State had a fund applicable to the support of its government, amounting to $4,396.93. This has been spent and a debt created which, on the 1st of June, 1846, amounted to $5,992,840 83. To extinguish this debt the Constitution provides that the sum of $350,000 shall be set apart from the canal revenues, as a sinking fund, to pay the interest and redeem the principal of the General Fund debt, including the loans to the railroad companies. After the canal debt is paid, the sum of $1,-500,000 is to be set aside in each year for that purpose. It was evidently the intention of the Convention to ascertain and fix the amount of the Canal and General Fund debt as it existed on the 1st of June, 1846, and so to arrange the Sinking Funds that their annual application would pay the interest and a portion of the principal of these debts. In 1819 the Legislature made a loan for $385,000 to pay an alleged indebtedness of the General Fund to the Canal Fund, and added this amount to the principal of the General Fund debt. Other loans were made at the same and the preceding session amounting to $89,819 34, which were added to the principal of the canal debt. The constitutionality of these loans has been asserted and controverted in official reports. Without inquiring into their propriety at this time, it is proper for me to state that they pledge, beyond the design of the Convention, the time within which the canal debt can be paid, and make the sum of $350,000 set apart to pay the interest and redeem the principal of the General Fund debt, inadequate to the payment of the interest. Instead of being diminished, this debt is increasing by accumulation of interest; or, if the excess of interest over the $350,000 is paid from the general revenue of the State, the means to pay the expenses of government are thereby lessened, and increased direct taxation is made necessary.

The amount borrowed by the State, since the adoption of the Constitution in 1846, exceeds the amount of debt paid by the Sinking Funds.

It appears from the report of the Comptroller, which will be submitted to you, that the expenses of the State Government for the fiscal year ending Sept. 30, 1852, exceeded its revenues about $200,000.

The report of that officer will show the character of the expenditures and the necessity for their retrenchment. It is believed that many charges upon the treasury can be cut off or diminished. Unless the expenses of that State are curtailed, it must withdraw its benefactions to institutions of learning and asylums for the unfortunate subjects of mental and physical infirmities, or it must increase the amount of taxes imposed for the support of Government.

A strict regard for economy and the mandates of the organic law are of vital importance in republican governments. The Constitution of our State is the barrier erected by the people for their own protection against injudicious or injurious legislation. The Constitution of the United States is the bond which holds together the numerous independent States of this confederacy, enabling them "to form a more perfect union, establish justice, ensure domestic tranquility, provide for the common defence, promote the general welfare, and secure the blessings of liberty to us and our posterity." Under the terms of this compact the different States of the Union, occupying a territory nearly equal to the whole of Europe, have existed in harmony, notwithstanding great diversity in their condition, pursuits, climate, productions, and domestic institutions. We can perpetuate our Union only by a strict construction of the Constitution of the United States, and by confining the action of Government to those subjects designated in the compact of Union, and which are of common interest and value to all portions of this great confederacy.

The welfare of our State and Nation, will be best promoted by rigid economy in the conduct of their affairs, and by a strict maintenance of Constitutional Law.

HORATIO SEYMOUR.

ALBANY, January 4, 1853.

## News Paragraphs.

☞ There are eight Colleges under the supervision of the Methodist Church, with property and funds to the amount of $494,063. The oldest of them at Middletown, was founded in 1830. There are 46 academies and seminaries, the oldest of which is at Wilbraham, founded in 1849, under the auspices of the lamented Wilbur Fisk.—In 29 of these there are 4,936 students, an average of 178 each.

☞ The St. Louis Intelligencer, referring to the statement which went the rounds not long since, that the hired girls of Pittsburgh had sent home $35,000 to their relations in the old country within the six months previous, states that within twelve months, the immigrants from Ireland in St. Louis, have purchased and transmitted home $110,000.

☞ The Louisville Journal states that an effort is being made in Texas to ship the cotton of that State direct to Germany. A ship is daily expected at Indianola from Bremen, which on its return to the latter port will take cotton at one cent per lb. that to New York would pay three-fourths of a cent.

☞ According to the recent annual message of the Governor of Iowa, the receipts into the Treasury of that State during the year have been $139,-683; disbursement to $130,631. The funded debt of the State amounts to $81,795 75—of which amount $26,795 75 is payable at the option of the State.

☞ The movement in favor of a straight railway from Syracuse to Utica, has probably ended in the organization of a company with a capital of $400,000 to build a straight track from Utica to Oneida, 20 miles. From thence to Syracuse the present road is nearly straight.

☞ The Pomologists of Pennsylvania are invited to attend a Convention to be held at Harrisburg on the 8th inst., to consider the propriety of forming a State Pomological Society. The State Agricultural Society will meet at Harrisburg on that day.

☞ The notes on the Merchant's Bank of Oswego, and Farmers' Bank of Onondaga, are selling in New York at 63 and 75 cents on the dollar. The Tribune states that there is some prospect of an arrangement by which they will resume business again.

☞ Hon. John Thompson, of New Lisbon, O., died on the 2d inst., aged 75 years. Mr. Thompson was well and favorably known throughout Ohio. He was a member of Congress from 1829 to 1837, and has held other important public positions.

☞ The Panama Railroad Company has made a dividend of ten per cent, payable in stock. The road has been in operation, we think, about six months. This, for an unfinished work, is certainly highly encouraging.

☞ The Washington Intelligencer publishes a circular, signed by a large number of members of Congress, recommending organizations in all the states and territories, to raise funds for a monument to Henry Clay at Ashland.

☞ Recently, a single locomotive, No. 136, brought into Elmira, on the Erie Railroad, fifty-five eight wheel cars heavily loaded with produce for New York. The weight of the train exclusive of engine and tender, was 935 tons.

☞ A witness of the two late ceremonies in France and England, says that the proclamation of the Empire was far less magnificent than the Duke's funeral, and a great deal more melancholy

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JANUARY 8, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *Lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ THOSE who are forming large clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 30 cts. a copy, which is the lowest club price.

☞ SEE Terms, Premium List, &c., on last page.

## The Governor's Message.

THIS important document was received on the eve of going to press, but by extra effort we are enabled to give it at length in this number of the RURAL. Its publication of course prevents us from giving the usual variety in this and some other departments; yet, as the document is one of considerable interest, we consider any apology unnecessary. We are confident that a great majority of our readers—every New Yorker certainly—will be glad to receive the Message thus early, and in a form suitable for preservation. For the convenience of hasty readers,—and those who may wish to refer to particular portions,—we place appropriate headings indicating the principal topics discussed.

The Message is an able, straight-forward, business-like document—creditable to the new Executive of the Empire State. In tone and temper it is admirable, and generally sound in sentiment.—Such is our impression from a hasty perusal, and without reference to political questions. We commend it to the careful perusal of every reader who desires to be properly posted in regard to the affairs of our Commonwealth.

Monthly mean, 34.30 degrees.
Monthly mean of barometer, 29 50 inches.

REMARKS.

THE month of December was exceedingly mild, its average mean temperature being nearly two and a half degrees above the freezing point.—There was but little snow—rain frequently—and but little fair weather. The weather of the present month down to Tuesday has continued of the same general character. The weatherwise now say, that we shall have an open and very mild winter.

THANKS—*and an Explanation.*—We would fain repeat, with interest, the acknowledgment tendered last week to the friends of the RURAL, near and distant, who are daily manifesting their interest in its success in the most positive manner. We anticipated an increased subscription, but were not prepared for so copious and liberal a benefit as that we are receiving. We bend low in grateful acknowledgment

—The unexpectedly large accession to our subscription list during the past week, has rendered it impossible for us to keep up with our orders in some instances,—yet we believe all papers have been mailed within two days from reception of order, and most of them on the same day. For the same reason, we have been unable to acknowledge reception of money by letter, as some request us to do; but the receipt of the paper will notify our friends that their orders have been safely received. Having additional assistance in the mailing department, we hope to keep matters up to time after this week.

N. Y. STATE AG. SOCIETY.—*Annual Meeting.*—The Annual Meeting of the State Society will be held at Albany, on the second Wednesday of February next, at which time there will be an exhibition of fat cattle, grain, fruit, seeds, dressed meats and poultry, for which large premiums are offered. The meeting will be one of much interest, and we hope to see every County Society in the State fully represented.

TO CORRESPONDENTS.—We are under great obligations to many friends for favors in the way of contributions to the different departments of the RURAL, and beg them not to think us neglectful if their articles are not decided upon for some weeks yet. We cannot now find time to examine more than are needed for each paper as issued.

# Congressional.

### Synopsis of Proceedings.

WEDNESDAY, Dec. 29.—*Senate.*—Several resolutions were passed, and petitions presented and referred. The following are among the bills then passed:

The House bill providing for the construction of certain Military Roads in Oregon; for the relief of Hodges, Landsdale and Johnson, owners of tobacco in Maryland destroyed by the British during the last war; to compensate Lieut.-Col. Dumont for a horse lost in Mexico; the joint resolution to confer additional powers and duties on the Solicitor of the Treasury; the House bill to extend the provisions of the Act for carrying into effect the existing compacts with the States of Alabama and Mississippi in relation to the five per cent fund and school reservations.

*House.*—A discussion of rather an interesting character occurred in this wise:—It seems that Mr. SMITH, of Maine, offered a resolution in relation to two vessels seized and confiscated by the Spanish Government, and published in the Globe a long speech upon it, attacking the Administration, not one word of which he had spoken in the House. Mr. STANLY brought up the matter in a resolution forbidding the regular Reporters to publish these silent, unspoken orations for the future, which was discussed, and with some slight change, passed.

THURSDAY, Dec. 30.—*Senate.*—After the usual reports, petitions, &c., the Senate passed several bills, but none of general interest, held an Executive session and then adjourned over to Monday.

*House.*—Met, but accomplished nothing except an adjournment until Monday.

MONDAY, Jan. 3.—*Senate.*—The Senate refused to vote a compensation to Dr. Wells for his discovery of chloroform, and debated the question of the interposition of the Government to secure religious liberty to American citizens residing in foreign countries. Resolutions calling on the President for information in regard to Cuba were adopted, several private bills passed, and the Senate adjourned.

*House.*—Speeches on the Cuba question occupied the most of the day. The bill for the payment of Navy and Invalid pensions was passed.—Adjourned.

# Legislature of New York.

### Synopsis of Proceedings.

TUESDAY, Jan. 4.—*Senate.*—The Clerk and other officers of last session, were returned without a vote. After the usual resolutions the Governor's Message was presented and read by the Clerk.—Adjourned.

*Assembly.*—After the usual proceedings of organization, &c., the following officers were elected: Speaker, WM. H. LUDLOW, of Suffolk; Clerk, JNO. S. NAFEW, of Albany; Sergeant-at-Arms, JOHN F. PHELPS, of Cattaraugus; Door-Keeper, GEO. W. WOOLBRIDGE, of Sullivan; First Assistant do. HUGH CLAY, of New York; Second Assistant do. S. A. BROWN, of Oswego. The Message was received and read. Adj.

CANADIAN CURRENCY.—The Toronto Examiner has a strong article in favor of changing the denominational character of the currency there, and of substituting therefor the decimal denominations used in the United States. It asserts that it is pure jealousy on the part of the Home Government that a change so desirable to all concerned has not long since been made.

ROCHESTER AND G. V. RAILROAD.—We learn that the line from Rochester to Mt. Morris, is fully under contract, in all the particulars of grading, fencing, and the furnishing of ties; and that the purchase of the rail has been ordered.

TWENTIES on the State bank of Saugerties altered from ones are in circulation. Though not very well executed, they are liable to be taken unless much care is exercised.

WM. ELLSWORTH, of Mayfield, Cuyahoga county, Ohio, says he got 52½ pounds of milk from one cow, for 21 successive days.

# Foreign Intelligence.

### Arrival of the Pacific.

THE American Mail steamer Pacific, Captain Nye, arrived at her wharf in New York on Saturday noon, having sailed from Liverpool on Wednesday the 15th inst.

The political and general news by this arrival is not important. We have only space and time this morning for the more interesting intelligence by the Pacific.

The Cotton market a shade better, with a good demand.

The debate on the budget continued to excite considerable attention.

The English papers were commenting rather severely on the Cuban invasion.

It is stated that a commercial treaty had been negotiated between France and England, and only awaited certain modifications prior to being publicly announced.

It is rumored in London that General Narvaes has been ordered to quit Spain. Six prisoners of war, supposed to have been connected with the revolutionary schemes of Mazzini, were gibbeted at Mantua, on the 7th of December.

LIVERPOOL MARKETS.—After the sailing of the Canada, a further decline in Wheat and Flour was submitted to, Philadelphia Wheat having been sold at 7s 4d, and Western Canal Flour at 27s 6d, but at this day's market a portion of this decline has been recovered. Indian Corn is in steady request, and rather dearer.

LONDON CORN EXCHANGE, DEC. 15th.—The supply of English wheat was limited, and a fair business done at Monday's rate.

White wheat 40s@46s. Red 38s@40@50.

# News Brevities.

—The value of land in the centre of London, is £400,000 per acre.

—Cholera is prevailing in Charleston; many fatal cases have occurred.

—There are four millions of three cent pieces in circulation.

—A banking firm in San Francisco does a business of $30,000,000 per annum.

—A fire in Syracuse, Wednesday, destroyed property estimated at $60,000.

—Millions of acres will be sown with wheat in California this year.

—The number of deaths in New York city during the year 1852 was 21,558.

—The Democrat is the title of a paper just established at Le Roy, by Henry Todd.

—The deliveries of tea in London for the week ending December 11th, were 525,491 lbs.

—Fanny Wright Darusmont died recently in Cincinnati, worth, it is said, $150,000.

—The Geneva Gazette announces the death of Geo. Wilson, late Surrogate of Ontario Co.

—It is now pretty certain that Jerome Bonaparte will be appointed Viceroy of Algiers.

—The Atlantic is nearly four miles deep off Cape Hatteras, say the United States Coast Surveyors.

—Wm. Aspinwall and others, it is said, have offered to make the railroad to the Pacific on good terms.

—The subject of bridging the Hudson is again to be brought before the Legislature, says the Register.

—It is said that at least eighteen thousand persons go to the top of Bunker Hill Monument every year.

—A railroad from Washington county, Pa., to Pittsburg is among the enterprises about to be entered upon.

—Dr. David Long, an old resident of Darien, in Genesee county, died last week. He was 90 years of age.

—The complete works of Gov. Seward will soon be issued in three octavo volumes, from the press of J. S. Redfield, New York.

—The January term of the Court of Appeals commenced at Albany, on the 4th. There are 243 cases on the calendar.

—Catherine Hayes gave her first concert in San Francisco, on the 1st of December, and was triumphantly successful.

—Huntington, the artist, is engaged on a picture of "The Good Samaritan and the Man who fell among Thieves."

—A direct post railroad is projected between Washington and New York—an improvement very much needed.

—There is no improvement in the condition of Mr. King. He suffers with a distressing cough, has no appetite, and begins to despond.

—Congress Hall, in this city was sold this week, we understand, to D. S. Walbridge, proprietor of the Eagle, for $22,500.

—Frederick Douglass' Paper states that the receipts of the recent Anti-Slavery Festival in this city amounted to upwards of $100.

—The express train on the Hudson River Railroad makes the trip from New York to Albany and *vice versa* in less than four hours.

—The Government of Port Philip has offered £1,000 to the discoverer of one available coal field in that interesting district.

—Hon. John M. Clayton, of Delaware, is reported to be suffering under the preliminary symptoms of a serious disease.

—The gold coined in France, last year, was treble the amount of that coined in 1850, making the large sum of 254,580,022 francs.

—Mrs. Abigal Gailford died at Lynn, Mass., on the 29th ult., at the age of 88. At the time of her death she had 58 great grand children.

—Gerritt Smith says the story of his intending to introduce a bill in Congress for the purchase of Cuba, is rare news to him.

—Rev. Dr. Duffield, of Detroit, now in Europe, writes weekly letters to his congregation, which are read every Sabbath morning from the pulpit.

—A gentleman of New York city has collected a hundred and twenty sermons on the death of Webster. He has not read them, however.

—By the burning of the American Glass Works, at South Boston, it is said that four thousand men and boys are thrown out of employment.

—From the best estimates it appears that the population of Oregon will increase about twenty thousand souls the present season—mostly, of course, by immigration.

—In 1851, the total of the registered, enrolled and licensed tonnage of the United States was 3,772,439 tons, of which the steam tonnage was 583,607.

—The demand for turkies in this city was so great on the day before New Years, that one shilling per pound was paid, and about all the good ones in market were sold.

—By the Boston Directory it appears that there are 37,409 persons transacting business in that city, of which number about one-tenth, or 3 900 are non-residents of Boston.

—The Welland Canal is closed, and the receipts for the season are given as follows: For 1852, $242,000; for 1851, 204,000; showing an increase of $38,000.

—The last rail on the Baltimore and Ohio Railroad, between Baltimore and Wheeling, was laid about fourteen miles from Wheeling, on Christmas day.

—Mr. Wm. Lisle, of Newburgh, Ulster county, on Wednesday last slaughtered and dressed an ox in *seven minutes.* He won a wager of $300 by the operation.

—The first consignment of western produce, designed for the Baltimore and Ohio Railroad, has arrived at Wheeling from Louisville. It consists of 4,000 bbls. of flour.

—The aggregate amount of tolls received on all the canals of this State during the year 1852, was $3,117,607, in 1851, $3,329,727—showing a decrease of $212,120.

—The coal area, as far as known, gives for the United States 133,132 square miles; England and possessions in America, 29,850 do; Spain 3,408 do; France 1,719, and Belgium 518.

—The Rensselaer County Bank commenced business on the 1st of January, at Lansingburgh, N. Y., with a capital of 200,000. President, John S. Take; Cashier, Alpheus Warren.

—A great number of wolves have made their appearance in France, and particularly in Brittany. The woods near Paris have also been visited by these dangerous animals.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Jan. 6, 1853.

THE weather continues very fine with very little snow, and our streets wear a good business aspect. With the Railroads, Plank-roads and frozen ground, travel is very comfortable. The prominent feature in the street is dressed hogs, of which the supply this morning is very abundant

FLOUR.—No change to note during the week. Large quantities are going to New York by Railroad, particularly from the line of the Rochester and Niagara Falls road.

GRAIN.—Very little doing. Wheat is hardly as firm.—Other grain unchanged.

PROVISIONS.—Not much change. Butter and eggs are less firm, and in better supply.

DRESSED HOGS.—Supply abundant for which $7,25@7,50 and $8 are paid.

In other articles no material difference from last week.

### Rochester Wholesale Prices.

### NEW YORK MARKET.

NEW YORK, Jan. 4—3 P. M.

FLOUR—Market quiet. Holders of common descriptions are firm, and manifest no disposition to accept lower prices. Not much demand for export, but we notice a speculative enquiry. Sales 3,100 bbls, at $5,50 for good comm.on State; $5,56½@5,68¾ for common to good Ohio and mixed to fancy Michigan and Indiana. Corn meal nominally the same.

GRAIN—Wheat quiet. There is some demand for export, but buyers and sellers were wide apart in their views. Nothing doing in Barley. Less doing in corn but the market is a shade firmer. Sales 6,900 bu, at 69 for new white. Oats in moderate request, at 51@53 for State and western.

PROVISIONS—Pork dull, and prices favor buyer. Small sales, 19 for old mess, 19.50 for new do.; 16 for old prime, 16.50 for new do.

Lard selling 12 @ 12¼.

ASHES—Small sales old, 5.75 pearls; 4.56 pots.

### ALBANY MARKET.

ALBANY, Jan. 3.—The market this morning presents nothing of interest. There is only a moderate retail traffic going on in the flour market, while in grain there is nothing doing. The sale of barrel and cut meats are unimportant, being only of a retail character. The market is heavy and dull for dressed hogs—the recent arrivals have been large, and buyers are rather scarce. Some holders are not disposed to press sales, while others are asking $7,75@8,25 for inferior to choice lots. No sales of moment were made and the highest bid reported was $8 for a prime lot. Whiskey is scarce—no sales.

### NEW YORK CATTLE MARKET.

NEW YORK, Dec. 27.—At Washington Drove Yard—At market 2,200 Beeves (700 Southern, remainder from this State.)

Demand brisk; sales were made at rates ranging from 6 to 9c per lb—about 150 head left over unsold.

At Browning's—Offered 5,100 Sheep and Lambs, and all but 350 sold at from $2 to 5,00 for Sheep, and $1,50 to $3,50 for Lambs. 45 Cows and Calves offered and all sold at from $22,50@45,50.

At Chamberlain's—Offered 600 Beef Cattle: sales at from 6 to 8½c per lb. Extra $9 per cwt. 25 Cows and Calves offered—sales at $25, 35@45. All sold (Market brisk.) 6,000 Sheep and Lambs—Sales of Sheep at $2,50 to $4,00@5,50; Lambs $2,25, 3,50@4. All sold.

### ALBANY CATTLE MARKET.

ALBANY, Dec. 28.—Woolford's Bull's Head—At market 530 Beef Cattle. Prices extra, $6,50; 1st quality, $6; 2d do $5@5,50; 3d do. $4,00@4,50.

Cows and Calves—Prices, at from $25. 30@50.

Sheep and Lambs—1,400 in market—Prices of Sheep at $2.75@5. Lambs $2,to 3,50.

Swine—150 in market. Prices $5, 5,50@6,50.

### CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Dec. 29.—At market, 1,173 Cattle, about 1,000 Beeves, and 173 Stores, consisting of Working Oxen, Cows and Calves, yearlings 2 and 3 years old.

Prices—Market Beef—Extra, $6.50; 1st quality $6; 2d do $5,25@5,50; 3d do, $4@4,50; ordinary $3,50.

Hides—$5,00 per cwt. Tallow—$7,00@7,50 per cwt.

Pelts—$1@1,50 Calf Skins 10c per lb.

Veal Calves—$4, 5@7.

Barreling Cattle—$4@4,50.

Working Oxen—$75. 87, 96@102.

Cows and Calves—$19, 25, 2[illegible]@47.

Stores—Yearlings—$5. 5.50@7,50.

Two years old—$7, 8, 9@15.

Three years old—$17, 22, 31@40.

Sheep and Lambs—5,063 at market. Prices—Extra—$3, 4, 5@8; by lot, $1,50, 1.75, 2,[illegible]2.50@3.

Swine—217 at market—all fat hogs—wholesale 6¾c ₱ lb.

### BRIGHTON CATTLE MARKET.

BRIGHTON, Dec. 30.—At market 1,150 Beef Cattle, 150 Stores,—12 pairs Working Oxen,—58 Cows and Calves, 5,030 Sheep and Lambs, and 340 Swine.

Market Beef—Prices—extra, $6.25@6,50 ₱ cwt; 1st quality $5,75@6; 2d do, $5@5,50; 3d do. $4@4,50.

Stores—Yearlings $5, 6@7; two years old $7@11; three years old $20@31.

Working Oxen—$62, 75, 88, 95@115.

Cows and Calves—Sales $20, 31, to 40.

Sheep and Lambs—Sales $1,50, 1,88, 2,25@3; extra $3,75 4,50@7.

Swine—Stills 5¾c; corn fed 6¼@7c; shoats 5@5¼c; for sows 6@6¼c for barrows; at retail 7@8¼c.

**FARM FOR SALE.**

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

**VALENTINES,**

**For St. Valentine's Day, February 14, 1853.**

D. M. DEWEY, Rochester, N. Y., Wholesale and Retail dealer in Valentines, in order to supply distant customers by mail, and to accommodate the young ladies and gentlemen, has put up in a case a nice variety of Valentines, &c., called the VALENTINE CASKET, for one dollar, which contains—

| | |
|---|---|
| 1 Sentimental Valentine, | 38c. |
| 1 " " | 25c. |
| 1 " " | 13c. |
| 3 Sheets Lace, | 18c. |
| 4 Comic Valentines, | 25c. |
| 6 Fancy Envelopes, to match, | 25c. |
| 1 Valentine Writer, | 6c. |
| Box and Postage, | 20c. |

10 Valentines—Retail price for all, $1.70—all for $1.

Upon the receipt of $1 by mail, post-paid, I will mail the Casket to any part of the United States, free of postage. If $2 or $3 worth of Valentines are desired, I will select them and mail as above, so as to go safely and promptly.

Dealers supplied, for cash, with cases assorted as above, containing $5, $10, or $15 worth, at a discount of 40 per cent. from the retail price.

Address D. M. DEWEY,
Arcade Hall, Rochester, N. Y.

☞ The Valentines are now ready to send.
January, 1853. jan1-8feb5.

SPECIMEN number of the Rural New-Yorker, and of the Wool Grower and Stock Register, furnished on application.

THE AMERICAN PHRENOLOGICAL JOURNAL.—VOL. XVII., for 1853, devoted to Science, Literature, and General Intelligence. Published by FOWLERS AND WELLS, No. 131 Nassau-st, New York.

PHRENOLOGY, the science of MIND, includes in its wide domain a knowledge of all the faculties, passions and powers of the HUMAN SOUL; all the bodily organism over which the soul presides, with its structures and functions; and all the realm of nature to which man is related, and with which he should live in harmony. It includes a knowledge of man and its relations to God and to the universe. It is thus a general and comprehensive science, beginning with the CONSTITUTION OF MAN, and ending with all his possible relations, SPIRITUAL and MENTAL. It is thus that SELF-KNOWLEDGE is the base of all knowledge.

THE PHRENOLOGICAL JOURNAL, therefore, has a sphere that is universal. All philosophy, all science, all art, all the details of practical life, are legitimate subjects of discussion in its columns. The experience of twenty years has not been lost to us; nor amid the progress of this wonderful age, have we idly lagged behind. THE JOURNAL will endeavor to still be a little in advance of the age, and of its own former efforts.

PHRENOLOGY, the science which unfolds to man the laws of his own Physical, Moral and intellectual being, will still command our first attention; all other subjects being, in fact, but applications and illustrations of the principles of this science. We shall illustrate the varieties of cerebral development by spirited and truthful ENGRAVINGS of striking specimens of Human Nature, in its highest and lowest, its harmonious and discordant, its symmetrical and grotesque developments.

YOUNG MEN about launching forth upon the activities of life, and anxious to start right and understand their course, will find the Journal a friend and monitor to encourage them in virtue, shield them from vice, and to prepare them for usefulness and success in life. The various occupations will be discussed in the light of Phrenology and Physiology, so that nearly every one may know in what pursuit he would be most likely to succeed.

THE MECHANIC, the Farmer, the Professional Man, the Student, the Teacher, and the parent, will find each number of the Journal an instructive and valuable companion.

The Phrenological Journal is published on the first of each month, at ONE DOLLAR A YEAR. Now is the time to subscribe. Address all letters, postpaid, to

FOWLERS AND WELLS,
Clinton Hall, No. 131 Nassau-st., New York.

This Journal is doing more to benefit mankind than all the gold diggers in the two hemispheres. It is only $1 per year, and is worth ten times that in any family.—*Cleveland Commercial.*

Do you wish to acquire the most important knowledge to be learned in the world? Then know thyself. To do this, send for The Phrenological Journal and read it. No other work now published can be so useful to its readers, and especially the young men and young women.—*New Era.*

A journal containing such a mass of interesting matter, devoted to the highest happiness and interest of man, written in a clear and lively style of it is practiced Editors, and afforded at the "ridiculously low price" of One Dollar a Year, must succeed in running up its present large circulation to a much higher figure.—*New York Tribune.*

☞ Clubs may be made up and single subscriptions sent in to the publishers at once, for the New Volume.—AGENTS WANTED. 152-9t

**To Editors, and our Exchanges.**

OUR exchange and free list is already so large and expensive, that we are obliged to decline complying with many requests to exchange. We desire to accommodate all, yet cannot afford to send the RURAL to the political and other ournals not in our line, without some return,—and hence make our friends this proposition: Editors who give the annexed brief Prospectus one or two insertions—directing attention to the same editorally, and sending us a marked copy of paper—shall be entitled to the Rural for one year, (1853.) *without an exchange.* ☞ Those Editors who now receive the RURAL and wish it continued in exchange for their papers, have only to give an editorial notice, embracing the substance of our prospectus, terms, &c.,—or they can publish as above, and not send theirs in return.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME NEWSPAPER,

**Designed for both Country and Town Residents.**

THIS popular Journal is now permanently established,—its high reputation and extensive circulation rendering it *the standard in its sphere.* It embraces more Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and News Matter, interspersed with numerous Engravings, than any other periodical in the Union,—and *has no superior* as an AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

Its various Departments are so conducted as to render the contents of the whole paper *Useful, Pure and Entertaining.* The Fourth Volume, commencing January, 1853, will surpass either of its predecessors. As our motto is EXCELSIOR, we shall use all the essential requisites to fully sustain the acknowledged standing of the RURAL as the

**LEADING WEEKLY OF ITS CLASS!**

The high literary and moral tone of the paper, renders it a safe and desirable companion for the Young,—and one of its special objects is to Instruct, Entertain and Improve all members of the FAMILY CIRCLE. Each number embraces the latest and most important NEWS, briefly yet definitely stated—Reports of Grain, Provision and Cattle Markets, &c.

The NEW-YORKER is published in the best style. Each No. contains EIGHT DOUBLE QUARTO PAGES, (forty columns,) illustrated with handsome ENGRAVINGS. A Title Page, Index, &c., at the close of each volume, complete for binding.

**Terms**—IN ADVANCE:—*Two Dollars a year—$1 for six months. Three copies one year for $5; Six copies, and one to agent, for $10; Ten copies, and one to agent for $15; Twenty copies, for $25.* ☞ *Large Premiums for subscribers. Specimen Numbers, Premium Lists, &c., sent free to all post-paid applicants. Give us your address.*

SUBSCRIBE EARLY! if you wish to commence with the new year and volume. Subscription money, properly enclosed, may be mailed at our risk

Address D. D. T. MOORE,
December, 1852. ROCHESTER, N. Y.

MOORE'S RURAL NEW-YORKER, valuable for its illustrations, and for its fidelity as an organ of the country—its peculiar interests and pursuits. Mr. Moore ought to make a fortune out of his Journal, and we trust he will for he is helping to make the fortune of the country. We bid him "God Speed."—*Ohio Statesman.*

We think it a model paper for the farmer's family, and of a kind much more likely to be patronized, than those purely agricultural. If we were to start a periodical again, it would be in imitation of the RURAL NEW-YORKER.—*Am. Agriculturist.*

Its leading feature, perhaps is agricultural: but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

**THE EVERGREEN SWEET CORN.**

A FEW bushels of this new and valuable variety of corn from seed raised by Professor Mapes, for sale. Per bushel $10; half peck $2; quart $1. Sent by express to any part of the United States, on receipt of the money by mail. Seedsmen supplied. This is beyond all doubt the most prolific variety of sweet corn ever grown. No farmer should be without it. Address

ALFRED E. BEACH,
157-3t* White Plains, Westchester Co., N. Y.

**Important to Farmers**
**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

ROSS' IMPROVED PATENT CONICAL BURR MILL STONES.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable inventiou must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,

# Poetical.

## THE APPLE.

BY CLARENCE COOK.

I PICKED an apple from the ground,
A perfect apple, red and round;
Its flower-like perfume caught the sense
With guests of balm and frankincense,
Borne on the wind that lightly flew
Through the clear dome of cloudless blue.
A swarm of ants had found the prize
Before it met my wandering eyes,
And careless in their busy pleasure,
Ran o'er and o'er the fragrant treasure.
I blew them off, nor cared to know
Whither the luckless things might go.
So God, who holdeth in his hand
This perfect world on which we stand,
Blows us, nh whither, with his breath?
Our friends who miss us, call it Death.

[*N. Y. Tribune.*

# Rural Sketch Book.

Written expressly for Moore's Rural New-Yorker.

## THE UNYIELDING WIFE:
## OR, THE EFFECTS OF ILL-TEMPER.

BY A FARMER'S WIFE.

[BEFORE proceeding to the subject matter of this paper, allow me my young friends, to exhort you to pause long, and strive earnestly at self-culture and self-control, before taking a step which involves your all of earthly happiness, as well as that of the individual whom before Heaven, you promise to honor, love, and cherish during your sojourn in a state where mutual forbearance, mutual concessions, are constantly demanded. My female friends, though the chosen companion of your life may not be all you had in the ardor of your affection painted him, he is still the man whom you are bound to "love, honor, and obey," and to your keeping, in a great degree, is committed his reputation, his usefulness in life, his social tastes, and fireside enjoyments. Mutual improvement is undoubtedly one of the ends of the institution of marriage; but any attempt at correction or reproof should be mingled with kindness of manner — if the contrary course is adopted, the desired effect is worse than lost, and frequently the seeds of good already sown in the heart, are by harshness and severity stifled in the germ, and the nobler feelings which had begun to expand, are blasted by the heat of an ungoverned temper.]

Years ago, when in the freshness and buoyancy of girlhood, I was about to become the bride of him who has ever striven to make me happy, I received a letter from my mother's eldest sister, earnestly urging me to spend a few days with her, as she wished particularly to see me. Accordingly I went, and was cordially received by Aunt Clara and the family of her son, with whom she resided. One day during my visit, Aunt Clara told me she had heard of my intended marriage, and feeling a deep interest in my welfare, she had determined to give me a history of her own married life, believing it might convey a useful lesson. Whether she thought she discovered the same traits in my character that caused the shipwreck of her happiness, I cannot say, but let that pass. She said on account of the sad memories, and unhappy feelings it would necessarily awaken, she had reduced the narrative to writing, which I might peruse at leisure.

At an early day I availed myself of her kindness — her manuscript is here copied.

Being the eldest of six children, my parents had always been accustomed to rely on me for much assistance, which, had I been the only child, they would scarcely have considered me able to render. My mother's time was almost wholly occupied with household affairs, so that at sixteen years of age, the care of two little sisters and three brothers devolved almost entirely on me. Nature had endowed me with an indomitable will, and a passionate love of power, which required a stronger curb than the occasional reproofs which my ebullitions of temper called forth. Among my brothers and sisters, my word was law, and when I issued a command (and that was the form in which my wishes were expressed,) I exacted the strictest obedience. I do not think the children could have loved me very much, for my passionate inflictions must have engendered that fear which casteth out love.

At length a change came over me; a passion took possession of my heart, which for a time overpowered all baser passions—need I say that passion was love? My whole heart was devoted to an object worthy of a better disciplined one than I could bring him. As if to prove the assertion true, that every person loves his opposite, the object of my attachment was mild, with a disposition full of kindness and charity, always choosing to suffer wrong, rather than contend with an antagonist.

Intending to relieve my parents from providing some of the necessary articles for house-keeping, I engaged to take charge of a district school, which was managed by a board of trustees, who were authorized to employ and pay a teacher, the teacher being more or less controlled by them: their occasional interference was, to a temperament like mine, exceedingly irritating.

One day I returned from school in a very angry mood, asserting that I would neither submit to the dictates of the trustees or any one else, when my eldest sister said, with an arch smile, "What will you do when you are married? You will then have to 'love, honor, and obey.'" My temper was not in the least softened by the question, and I replied, very emphatically, that when I married it would be my husband's duty to make me happy, and if he did not conform to my wishes I should endeavor to make him.—Foolish, wayward girl, that I was, to resolve in my own mind that I would abide by so absurd a determination,—how little did I reflect how much influence, pride and obstinacy would exert in causing me to adhere to this expression of perverted will.

Joseph and I were at length married. It seemed to me I had ne'e been so happy before; weeks passed as days. Surrounded by an atmosphere of love and kindness, my faults were not called out, and Joseph in his mistaken fondness thought me all that his warm heart and noble nature could desire.

Soon after marriage we commenced housekeeping in a neat, pretty house, just suited to our wants; I was enabled nearly to furnish it with the avails of my year's teaching and the kind assistance of mother and sisters. Neatness and order were largely developed in my habits, and for some time nothing occurred to mar the happiness of our daily life. One evening I had to wait longer than usual for Joseph to come to his tea, and suffered a long suppressed feeling of impatience to betray itself in the peevish tones in which I exclaimed, as soon as he entered the dining-room, "the tea is all cold; why did you not come before?" "I could not, my dear, as there was no one to stay in the store," was the mild reply which should have put the subject to rest, as I knew that Joseph's business must necessarily occupy his whole time, he being head clerk in the establishment with which he was connected, expecting in the course of two or three years to be taken into partnership, therefore it was necessary for him to be active and attentive. All this I knew, but like too many wives, took little interest in business affairs, and would not consider that it had any claims paramount to my convenience.

Small matters like these should have been borne patiently, but in the absence of any greater trouble, I suffered a thousand trifling things to annoy and irritate me to that degree that I threatened to "turn over a new leaf," which was but another way of saying, unless I can have things my own way I shall give my husband a lesson. He bore my oft reiterated complaints about what appears to me now, to have been trifles light as air, without resentment, offering good reasons (excuses I called them,) for not complying with my wishes.

One day after I had reproached him with thinking more of his business than of his wife, he rose to go out and as he did so, he turned to me with a look that should have sent repentance to my heart, and fixing on me those liquid grey eyes, expressive more of sorrow than anger, "Clara" said he "if you find it so troublesome waiting for me, do not wait any more, but take your meals and clear away the things without regard to me. When he had gone the demon temper that should have been cast behind me, prompted me to take him at his word. Accordingly, when the time came, I prepared the evening meal, and after waiting a few moments, I sat down, ate alone, then cleared away the table and took up my sewing. In a few moments Joseph came in and without raising my eyes from my work, I told him in as unconcerned a manner as possible, that he need not come for his tea, I had cleared it away. Without saying a word he turned and left the house.

I know my friend, that when you read this you will bitterly reproach me for unkindness to one who loved me better than life; one too for whom at times I would have laid down my own life, and aught else save my will. His loss at that time would have broken my heart; but naturally impulsive, my intense love, that for a time controlled infirmities of temper, had become calmer, and I had suffered them to gain the ascendancy, thus dashing from our lips the cup of domestic happiness. I allowed myself to forget that the same guard over my conduct, and the same effort was necessary to preserve the affections of the husband that were employed to win and obtain the lover.

But to return. That night I set up late, but my husband did not come. Ah, thought I, he thinks to frighten me into submission by staying out late, (a thing he had never done before,) but he will find his mistake.—Finding he had taken the night-key I determined to sit up no longer. I retired, but could not sleep. The mild beams of the moon came softly stealing through the window filling the room with fantastic shapes of light and shade, bearing to my troubled mind a self-examination too long deferred. As the night deepened and my husband came not, I wept bitter tears of self-accusation, and in proportion to my fears for his safety did my repentance for the past and resolves for the future deepen and expand.

I know the store had closed some hours before, and we had few friends, indeed none with whom he could be spending the evening,—where can he be? was the constantly recurring question. Just as the clock struck one, I heard the click of the night key, and his step on the stairs. With my fears, vanished repentance from my volatile heart, and by the time he reached the room I was prepared to pour a storm of invective on his devoted head. He paused on the threshold, and as the moon shone full on his face, I perceived that he was pale and excited, and in the moonlight, exhibited a ghastliness that shocked me so much I sprang from the bed, exclaiming, "Joseph! Mr. Leland, what is the matter?" He stared at me an instant and in an excited tone replied, "Don't be a fool, Clara; go back to bed and let me alone." The truth flashed on my mind, and I indignantly and silently, again pressed my pillow, where I sought to fasten the blame on him rather than take any share to myself. The next day nothing was said of the occurences of the preceding day and night; in fact there were few words spoken on any subject; I felt injured and a gloom seemed to have settled on the countenance and manner of my husband.

It was not till years after, that I knew what I may as well mention now. When Mr. Leland left the store on that eventful night, he paused a moment on the threshhold uncertain whither to direct his steps, dreading, after the toils of the day to encounter the fretfulness of an arbitrary wife at home. Home!—home no longer to his peace-loving and gentle spirit. Just then an acquaintance passed, and accosting him gaily, invited him to go and partake of an oyster supper at a fashionable restaurant. Unhappily, his stomach prompted his mind to accept the invitation. That night the tempting wine cup was held to his lips; a second and third followed in rapid succession, and in what state he sought his chamber, we have already seen.

Following this, there came a succession of days and months fraught with the deepest misery to both of us. I will draw a veil over the recollections of this period, only mentioning that but a few months had elapsed before the hollow cheek and bloodshot eyes told a tale that none who saw him could fail to read. My husband's conduct and appearance at this time, instead of causing self-reproach, and exciting pity, led me to look upon myself as the most injured of wives, and my selfish and wicked heart, hardened towards him till I rarely spoke, save in tones of harshness and reproach.

We had now been married about two years. One morning Mr. Leland went to the store as usual but soon returned. On looking at him I caught my breath in astonishment; his eyes were wild and gleamed like hot coals, and as he staggered across the room, he would have fallen had he not grasped a chair into which he sank. He sat a moment as if collecting his thoughts, then in a voice firm and solemn, while I almost felt his burning gaze he said, "Clara, this day I am a ruined man—my employers have watched my steps, have lamented over my downward course, have expostulated with me; finding it all to no purpose, this day on which I should have been raised to an honorable and profitable position finds, me cast off, sick, broken-hearted, alone, without money and without friends. Trouble and disappointment drove me to the wine cup; then, to find oblivion for my sorrows, I neglected my business, became involved in debt, and this is the consequence. I fear that you have long since ceased to love or respect me, Clara, and think me too degraded to feel such an emotion,— but it is not so — God knows I love you, and it is the conviction that this love has been thrown back on my own heart, without any sympathy or return, that has made me what I am."

I felt that his words were true, alas! too true—and the thought of all my unkindness, my love and waywardness, came rushing on my heart with overwhelming power, that brought agonizing tears to my eyes. As my husband ceased speaking his head sank on his bosom; I sprang to his side and found he had fainted. Using such restoratives as were at hand, I placed him in bed and sent for a physician. For weeks he lingered on the verge of the grave. In the delirium of fever he uttered truths that his kind heart would have shrunk from inflicting on his erring wife. At length he began to recover, but before he rose from that couch of suffering, mutual confessions had been made, and I, the guilty aggressor, sought forgiveness of him whom I had so deeply wronged even as I had before asked it of our Heavenly Father, and together we prayed for delivery from temptation. Never shall I forget the light of love and hope that beamed from his eyes when the past was put out of remembrance. What cared we now if we were poor? we were rich in faith and love, and if health was given us we might yet be happy. To me the past had brought a useful lesson. At this time my parents and sisters exercised a kindness toward us that called forth our heartfelt gratitude. Joseph remained feeble a long time, and mother, to whom I had told all, took him to their pleasant home in the country, and nursed him carefully and tenderly, while I remained behind, sold off our things, and with the assistance of my kind father, every debt to the last farthing was paid. As Joseph was still unable to labor, my father proposed that we should remain at home, my husband keeping accounts and assisting in such light matters as he could do, while I assisted my mother. He said he had enough for us all. O how thankful I was, and how hard I tried to be good and kind to all.

About a year from this time, our little child was born, but my cup of joy at this event was doomed to be mingled with sorrow. Joseph began rapidly to decline—neither love or care could save him, and they laid him in a shady nook beneath the great willow in a corner of the farm, and the little brook that babbles by murmurs his requiem to this day. Just as his eyes were closing forever on this world, I knelt beside him with our boy in my arms; my husband placed one wasted hand on the head of the child and the other on mine, and said, "Clara, inasmuch as you love me, guard well the footsteps of this little one; I entrust his happiness to your keeping, believing our Heavenly Father will bless your endeavors—farewell—the God of love bless and keep you, my wife and child." I have considered this his dying trust a sacred one, and have endeavored to execute it, with what success the well ordered life of my son will attest. I remained at home till my son married: since then I have lived in the family. My mother has passed away, and there are now two graves beneath the willow. My father is an aged man, and resides with my eldest sister on the old homestead.

I am now an old woman, full of years and experience, but I trust that each successive year since I returned to my father's house has found me wiser and better; and if the knowledge of my bitter experience shall prevent your taking a single false step which will surely be followed by its appropriate punishment, the end in writing this confession will have been accomplished.

Nothing's so hard, but search will find it out."

## A GOBLET OF WATER UPSIDE DOWN.

THIS is an exceedingly good trick, when performed adroitly. Fill a goblet with water, lay a piece of paper on the top of it, place the palm of your left hand flat on the paper, and press it closely down; then take hold of the foot of the goblet with the right hand, and invert the position of the glass, still pressing the paper close with the left hand. Hold it in this manner for a minute or two, and then withdraw the left hand, when the paper will remain attached to the glass, as shown in the illustration; for the pressure of air underneath, acting against the paper with a superior weight to that of the water, is sufficent to retain it in its position, and consequently sustain the water in the goblet.

For the Rural New-Yorker.

## MUSICAL ENIGMA.

I am composed of 23 letters.
My 9, 17, 12, 18, 3, 22 is the name of a great composer of music.
My 11, 7, 17, 6, 6 music is written upon.
My 15, 4, 5, 6 is always used in music.
My 2, 1, 13, 16, 20, 12 is a musical instrument.
My 21, 10, 12, 8, 13 is a term used in music.
My 18, 17, 23, 19 is a mark of expression in music.
My 9, 3, 14, 1, 8, 7 is the name of a celebrated publisher of music.
My whole is the title of a very beautiful song,

Rochester, N. Y., 1853. SALLIE.

## ANSWER TO ENIGMA, &c., IN NO. 1.

Answer to Miscellaneous Enigma.—*The Stamp Act.*

Answer to Poetical Arithmatical Question.—25 *years.*

## TO AGENTS AND OTHERS.

ENCOURAGED by the brilliant success which has thus far attended the publication of MOORE'S RURAL NEW-YORKER, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* PREMIUMS. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the RURAL NEW-YORKER from any one town in *the State of New York*, IN PROPORTION TO ITS POPULATION, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of MAY, 1853.

2d. THIRTY DOLLARS, in BOOKS or AGRICULTURAL IMPLEMENTS, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Postmasters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($3,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the RURAL and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

MOORE'S RURAL NEW-YORKER is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The RURAL NEW-YORKER we can recommend, conscientiously, as pure, good, interesting, and useful—calculated to make every family into which it is introduced, both wiser and better.—*Arthur's Home Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

### TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the NEW-YORKER is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers.—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 3. ROCHESTER, N. Y.—SATURDAY, JANUARY 15, 1853. WHOLE NO. 159.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### FARM PLANS AND RECORDS.

PLANS for the future and records of the doings and occurences of the present, are to no class of business men of more value than to the Farmer. The success of Agricultural labor is as dependent on system, and a full understanding of the results which that labor may and should produce, as that of Commerce or Manufactures.—And we have sometimes thought, a higher wisdom and forethought might find full employment in the study of the wide and complicated range of influences here exerted. The Merchant and Mechanic deal with dead matter and lifeless organisms; but the Farmer has to do with active existences—with living, growing, food-consuming plants and animals; demanding constant provision for their wants, and a wide range of knowledge to enable him to turn their production and activity to the truest advantage. He, if any man, should know cost and result—should keep those records which would show all this—which would supply him with "facts and figures" whereon to found well-considered plans for the future.

All farmers should have some sort of a system of book-keeping. They should be able at the close of the season, "to strike a balance," showing how the account stands between themselves and farm; not by guess work, but the real statement in dollars and cents, pounds and bushels—disclosing the profit or loss of the business for the year. They cannot tell how they stand with the world; how each plan has resulted; how each crop and animal has repaid their labor and care without so doing, with any accuracy or detail. They may be losing money by that to which their chief attention is given, and making a good profit on another product which is considered as of minor consequence. A correct account of capital invested, the expenses of growth and culture, and the receipts or return from the products, would at once decide the whereabout and true policy of the farmer—his profits and losses, and from whence they flow.

Let us give a few hints on farm plans and records, which we hope, in some sort, will meet the views and adoption of many of our readers—that they will, if they do not already, employ some system by which they may know whether their labor has been "as water spilled on dry ground," or has gone to the increase of their means of usefulness and comfortable subsistence.

In planning the work of the present and future years, a map of the farm is very serviceable,—one showing every field, the character of the soil, the situation of buildings, streams, wood-lands, &c. This may be readily prepared, in most instances by the farmer himself, and at any rate at a trifling expense. The temporary divisions of the farm may be shown by pencil lines, that changes may be marked without difficulty or confusion. Each field should be numbered or named, and now, or before spring comes with its many demands for labor, let the purposes to which they shall be given be decided upon. Consider carefully the character of the soil; the manure which it needs and which you can furnish: the crop to which it is best adapted, and the prospects of the markets, and put in black and white the use to which it is devoted, that in the season for action, hesitation or calculation may not be felt or called for.

The Farmer should take now, dating at the opening of the year, an account of stock, implements, crops on the ground or in the barn; everything due him and every thing he owes; that he may have a definite stand point; showing his present condition—one he may compare with that of another year, to prove his progress or retrogression.—Every man and boy—every one who pays or receives money, should keep a cash account of receipts and expenditures, and in addition to this, when the season opens for active labor, let the farmer debit every crop with the expenses which occur in its production. The same should be done with every animal or class of animals. An apparatus for weighing will be found very useful, for without it one cannot know the cost of keeping and fattening animals. One cannot decide which is the most profitable kind of food unless he can tell with some accuracy which makes the most show in the stable, the dairy, and the larder.

And who, more than the Farmer, has incentives for keeping a journal or diary of the events of his labor and his life. To whom are lessons of experience and observation of greater value than to him, who in the very laboratory of Nature watches her operations and depends for wealth, comfort and subsistence upon her workings? The daily work of the farm; the planting, culture, and gathering of its fruits; the details and results of varied experiments and observations in the different departments of Agriculture—all furnish valuable materials worthy of recording—worthy of careful study as the ground whereon Practical Science shall plant the seed of many a golden harvest in the Future.

### AN ESSAY ON DRAINING.*

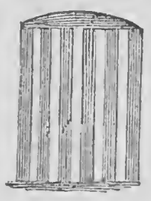
BY N. DAVIDSON REDPATH.

#### Tile Drains.

Drain-tiles are very simple in their construction. They usually measure from 12 to 14 inches in length, and when placed in the bottoms of drains form a conduit or channel 4 inches wide and 6 inches high.†

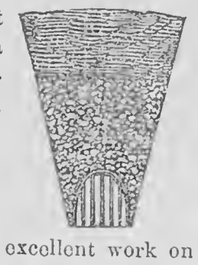
The drains for tiles are generally cut very narrow; a tributary 2 feet deep, 18 inches at the top and tapering down to 6 inches at the bottom would be considered perfectly sufficient. For this purpose a common spade, one a little narrower, and a third about 6 inches wide, are requisite for excavating these drains. Great care ought to be taken in examining the tiles, previous to their deposition in the drains, as one bad one (and there are many of that description) would stop the current of the water and render the work useless. Tiles, if made of good material, will last for thousands of years.‡

When the soil is a stiff retentive clay, a foot of stone, or gravel, where procurable, is placed over the tile, then a sod, as formerly explained, and the remainder of the drain filled up with surface earth. This will allow a sufficient depth of soil above for the operation of sub-soil plowing.—When stones or gravel, however, cannot be had the drain tile is used alone. The terminations of drains ought to be protected by a guard, to prevent the intrusion of field-mice, moles, and other vermin from making their nests therein. Even larger animals, as rabbits, ducks, &c., have been known, through fear, or otherwise, to penetrate into drains so far as to render their return impossible from the narrowness of the passage. Much trouble and expense have been caused to farmers from the stoppage of drains in this way, which might easily have been prevented, by the insertion of a drain guard between the two last tiles in the drain, that discharges its waters from the field. The tributary drains, which run into mains and sub-mains, do not require any guard, allowing the latter are protected at their terminations.



The annexed cut shows a plan for a Drain-tile guard which may be formed out of a piece of zinc, or sheet lead, by any farmer himself, without having recourse to a tradesman.—The same object may be attained by procuring stout wire and placing the pieces at such distances as to exclude the smallest vermin, or the guards could be made at a foundry, of cast metal, similar to the above plan; or, a whole tile could be cast of metal with the guards attached to its end. The cost in either case would be but little.

The operation of draining having been completed,—the treasure having been hid in the field,—an accurate plan or map of the whole, including tributaries, sub-mains and mains ought to be taken, and preserved for reference in case of accident. These will sometimes happen by tiles giving way, or by a lodgment of sand or mud.



The accompanying cut shows the section of a drain; the drain tile—the guard—the gravel, and surface soil above.

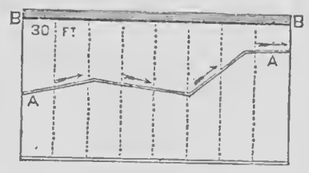
Draining may be avoided on some soils, and deep plowing, according to Mr. STEPHENS in his excellent work on Draining, advantageously substituted for it. 'I have seen," he says, "large tracts of clayey land, intermixed with whitish stones lying in the sub-soil perfectly impervious, effectually drained by means of trench-plowing, and keeping the furrows regularly deep from one end of the ridge to the other. If farmers, occupying clayey soils, would pay more attention to the formation of ridges and furrows, and keeping the open ditches and cross-furrows sufficiently deep to clear the surface of all stagnant water in the hollow parts of the field, there would be much less necessity for making drains for removing the surface water."

Indeed, it is fortunate for early settlers that new lands, in this country, in the majority of cases, do not require to be drained for a considerable number of years. The surface soil, in general, is loose and friable and the roots of the trees serve as so many conductors for conveying down the humidity into the strata beneath. As the roots of the trees, however, become decomposed, the pores of the sub-soil become closer and closer, and the frequency of plowing, and the washing of the finer mould downwards, adds to the evil, until the substratum becomes hard and impervious. The water, unable to escape by percolation, remains between the surface and the sub-soil, and imparts a sickly hue to the crops. The evil may be remedied by sub-soil plowing, (at least for some years,) and the liberal use of water-furrows, or open surface drains for carrying off the surplus water. Where this is not attended to it is no uncommon thing to see whole fields, nay whole farms, being converted into a general brick-field, which requires only the aid of the summer's sun to complete the process of brick-making.

There is scarcely any land, however poor, but would yield a fair return for the extra outlay of drainage. Yet there are some so parsimonious that they would begrudge the trifling outlay of a few hours labor in making cross-furrow drains for voiding the surface water from their valuable crops. Such men seem to forget that two and two do not always make four, and that a penny saved is not always a penny won. How different from these penny wise but pound foolish characters are the wise husbandmen, whose eyes are in their foreheads, who look prospectively, and therefore scatter that they may gather, and give that they may ultimately receive. They fully understand the riddle put forth by honest JOHN BUNYAN in his Pilgrim's Progress:

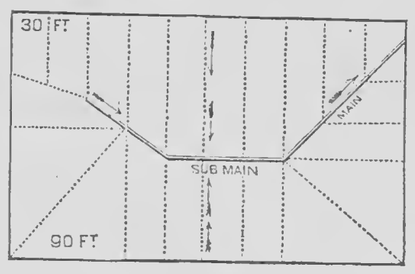
> "A man there was, though some did count him mad,
> The more he cast away, the more he had."

We conclude this part of the essay by presenting the plan of two fields;—the first undrained, but ridged and water-furrowed; the second, drained and exhibiting the tributaries, mains and sub-mains.



PLAN OF AN UNDRAINED FIELD.

A, A, water-furrow, 10 inches wide and 6 inches deep. B, B, water-furrow, bordering the field. The dotted lines show the ridge furrows 30 feet apart.



PLAN OF A DRAINED FIELD, WITH ITS TRIBUTARIES, SUB-MAIN AND MAIN DRAINS.

The dotted lines denote the tributaries, and the parallel lines, the main and sub-main drains. The tributaries are laid with horse-shoe tile 4 by 6 inches, without bottoms; the sub-main, with the same 4½ by 8½ inches; the main drain is constructed of stone, with an opening 9 by 18 inches. The distance of the tributary drains is shown in the plan. In mapping a drained field, the length and depth of each drain should be inserted, and the kind of drain tile employed, with their depth from the surface, graduated fall, &c., &c.

The advantages to be derived from a judicious system of drainage are very numerous. Draining removes all superfluous moisture from the soil and prevents all that acidity or sourness which proves so very injurious to the vegetable kingdom. It renders stiff clays soft and friable, and pulverizes the whole surface of the soil. It not only facilitates the operations of plowing, sowing, cleaning, and other kindred occupations, but, by instantly carrying off all excess of humidity from the soil, it enables the husbandman to re-commence his field operations in a very short time after the heaviest falls of rain, instead of waiting until the water has been carried away by the slow process of evaporation.

Thorough draining, too, reduces the soil to a more equable temperature, and prevents, or at least considerably modifies, the "heaving," or throwing out, as it is called, of winter wheat, so very annoying to farmers, especially on wet prairie soils.

By it the husbandman is enabled to continue his field works later in the fall, and to commence them earlier in the spring, than he otherwise could have done on undrained lands.

It is worthy of remark that the beneficial effects of draining are not confined to the vegetable, but extend their salutary influences to the animal kingdom. It is well known to graziers that all kinds of stock are maintained in sound and healthy condition when kept in dry and well drained pastures; that they escape the numerous diseases incident to those fed in wet and marshy places; that sound and generous food causes the animals to fatten quickly, and at the same time imparts a greater tenderness and finer flavor to the flesh. "The neglect of drainage" says an author well versed on this subject,* "is often attended with serious loss, from the unwholesome quality of the grass, which a superabundance of moisture produces. It is from the stagnant waters too on the soil, or confined under it, as well as from the bad herbage, that the rot and other diseases, to which many thousands of valuable animals fall victims every year, in a great measure, proceeds.

In the south of Scotland, particularly in the counties of Roxburgh, Berwick, Selkirk, and Peebles, a great proportion of the sheep farms have been drained; and the result has been, that the size, quality, and healthiness of the stock in these districts have been so much improved, as to be scarcely creditable by those who are unacquainted with the past and present conditions of the farms and flocks of these districts."

### JEFFERSON CO. AGRICULTURAL SOCIETY.

THE Annual Meeting of this Society took place at Watertown, Dec. 24, 1852; the President, JOHN A. SHERMAN, in the chair.—The Treasurer's report shows a prosperous state of the Society and some funds on hand. Premiums were awarded on field crops and winter fruit: also for an experiment in raising crops after subsoil plowing; a very judicious premium. The officers for the ensuing year are: President, JOHN WINSLOW, of Watertown; Treasurer, TALCOTT H. CAMP; Recording Secretary, EDWARD S. MASSEY; Corresponding Secretary, HIRAM HOLCOMB. Also ten Vice Presidents and an Executive Committee. A committee of twelve was appointed to attend the Annual Meeting of the State Society, or any other convention pertaining to agriculture.

Our northern friends are wide awake, and will be asking for the State Fair soon.—Watertown is well located for accommodating the State Society, with all volunteer and invited guests.

### SWAMP MUCK.—BOOK FARMING, &c.

FEW know the value of swamp muck; and probably the greatest reason why it is not turned to better account is because it is so very abundant, cheap and easily obtained. There is scarcely a farm in Western New York that has not enough and to spare, of this valuable fertilizer. An open winter like the present, is very favorable for throwing it up in localities easy of access, when sleighing comes. Then, let it be drawn out on hard land in heaps, or spread broadcast with a shovel on meadows and pastures, and in spring harrowed over with a light fine harrow or a heavy brush to pulverize and spread it evenly over the surface. By this process the writer is confident that the quantity of hay was increased 100 per cent on a clover and Timothy meadow of a gravelly loam soil. As a top dressing I have found it very valuable.

I have made no other experiments with it worthy of note. Many have used it on different crops and different soils, and in different ways, all of which, whatever the result, will be interesting to many of the readers of the RURAL. Fifty men may give us the result of fifty experiments in one year, each of which may be a valuable acquisition in the science of agriculture, while it would require half a century for an individual to obtain the same amount of experimental knowledge. Reader, can you not clearly see that there is something in "book farming" after all?

I was surprised the other day, when asking a neighbor to subscribe for the RURAL, that he should reply, "I would not give a fig for *any* agricultural paper." This same man owns and cultivates about three hundred acres of land, and we call him a pretty good farmer. His greatest objection was that, "These papers are written by men who know nothing about farming." I assured him that the RURAL was made up of everything that constituted a *farmer's paper*, and many articles were written by just such men as himself, the cultivators of the soil; and most were free from the "scientifics," to which he objected. Now, this is precisely the position of many good farmers, who will yet become subscribers to the RURAL, and consequently better farmers; and when they have learned that you mean what you say in relation to their sending in accounts of all valuable experiments, you will have more correspondents, more readers, and more thousands on your books.

---

* Concluded from page 13, last number.

† Four inches by six, inside measure, may be considered a good serviceable article. Tiles, however, are manufactured of various kinds; differing in size from 1 inch to many inches in diameter. Of the horse-shoe kind some are made with and others without soles or bottoms. Pipe-tiles are made both circular and eliptical.

‡ The writer has seen clay pipes constructed by the Romans while in Great Britain, taken up a few years ago, as sound and entire as when laid down by that ancient people.

* Johnston on Drainage.

I do not wish to be tedious, but before I close, allow me to inquire of your readers, what has been the result of their experiments in preserving the evergreen corn for winter eating. Mine has proved a failure. It was packed in a basket, and suspended by a cord from the roof of the cellar—the cellar was too damp, or the corn too closely packed, probably, as most of the corn was mouldy. Not so with the sweet potatoes; they are in a good state of preservation.

West Macedon, N. Y., 1852. I. W. B.

### POULTRY HOUSES,

A REMEDY FOR LICE ON CATTLE AND HORSES.

Eds. Rural:—I noticed in Vol. 3d of the Rural, a sketch from a correspondent relative to building hen houses contiguous to horse stables, or having hens roost near horses; which plan he disapproved of on account of his horse obtaining lice from the hens, and the difficulty he experienced in removing them. My experience convinces me that horses and cattle will become lousy in this way. In my barn, my fowls roosted where I stabled my colts and calves, and they soon became lousy, while in another barn where I stabled my work horses, not a louse could be found. I searched the Rural for a remedy, and found that the correspondent to whom I have referred, after trying various remedies, washed his horse with soap suds, and made an application of one gallon of rum. Not being much of a friend to rum, or any of the family, whether used internally or externally, I consulted the hens for a remedy and found that nature had furnished one, and that is by wallowing in the sand—in this way they rid themselves of these troublesome vermin. I therefore took a quantity of sand (which those rats I told you about, dug out from under my celler wall,) dried it thoroughly in a stove oven, then sprinkled it freely in among the hair two or three times a week, until the lice were removed. What particular effect it has upon them, I cannot say, but they don't seem to like having dust thrown into their eyes in this way, and they evacuate.

By the above any farmer can see the necessity of building a house on purpose for his fowls, and if they are properly cared for they will amply compensate the expense and trouble in eggs, and the guano which may be made from their droppings. While writing about fowls I will state another fact that has come under my observation, viz., that fowls will eat pumpkin seeds and it will have a singular effect upon them; they lose the use of their legs—tumble over backwards, and some will soon die, others, with proper care live. This has been the case with one of my neighbor's ducks, the same effect with the geese of another, the experience of "A Subscriber," to the contrary notwithstanding. S. Eaton.

Little Utica, Onondaga Co., N. Y., 1853.

### OHIO STATE AGRICULTURAL SOCIETY.

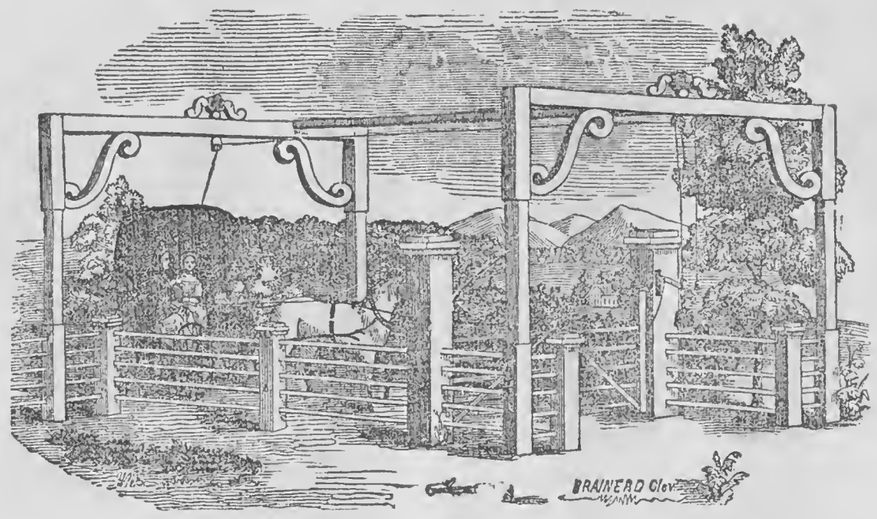
Eds. Rural:—I notice an article in your paper of the 1st inst., giving a review of the annual meeting of the Delegates with the Ohio State Board of Agriculture, held in this city on the 8th of December last. The writer of that article has fallen into an error in regard to the constitution of our State organization, which seems to call for correction. He says:—"The Ohio State Board consists of over fifty persons, to which may be added the President, or one delegate from each county society. These constitute the 'State Society.'"

Our State Board of Agriculture consists of *ten* persons—one-half chosen annually—holding their offices two years. *The Annual Meeting* of Delegates, consists of the President, or one Delegate from each county society—now over seventy. These delegates when so convened are an *advising* council, but have no executive power beyond the election of members to fill the vacancies which occur in the State Board. This latter body decides upon all questions relating to Premium Lists, time and place of holding State Fairs, finance, &c. The members of the State Board are judiciously chosen from the various sections of the State, and generally with a view of representing the several agricultural interests.

The last annual meeting was the largest ever held. Additional county societies will be in operation the next season; and with the spirit which is now aroused among us, we bid the Empire State take care that the Buckeye boys do not strip her of her ancient renown in the cause of Industrial Progress, Very truly, S. D. H.

Columbus, O., Jan. 3, 1853.

Milch cows, in winter, should be kept in dry, moderately warm but well ventilated quarters, be regularly fed and watered three times a day, salted twice or thrice a week, have clean beds, be curried daily, and in addition to their long provender, should receive succulent food, morning and evening. —*Exchange.*



IMPROVEMENT IN FARM GATES.

We have been furnished by Mr. Enoch Woolman, the inventor, who resides near Damascoville, Mahoning county, Ohio, with the accompanying engraving and description of his improvement in farm gates:

"The principal improvement consists in its being so constructed that a person in a carriage or on horseback, can pass through it without alighting. On approaching from either way, the person takes hold of a rope, which hangs over the centre of the road, and pulls gently for a short time, and the gate comes open and fastens itself; and then in driving a carriage or wagon thro', one of the wheels runs over a trigger fixed in the ground, which unfastens it, when it immediately shuts and fastens itself again. The only difference in passing a person on horseback is this:—In pulling the rope to open the gate, care must be taken not to pull it far enough to allow it to fasten itself; but by pulling it about two-thirds of the way open, the horseman can easily pass through before it shuts itself again. The machinery by which these movements are performed, is simple, and not liable to get out of repair, and the whole structure is substantial and durable, and will, no doubt, commend itself to the favorable notice of those for whose convenience it is intended. A model of this gate was presented for examination at the World's Fair in London, and received from the committee a very favorable notice."

### PUMPKIN SEEDS INJURIOUS TO FOWLS.

On page 385 of Vol. 3d of the Rural, further information is solicited on the subject of pumpkin seeds poisoning fowls. So far as my own observation goes, fowls will not commonly eat them, but when they do, they are attacked with giddiness and staggering, which, if they have eaten plentifully, ends in death. Why this is the effect the writer is unable to say.

When a lad, I remember two or three different seasons, when my father's hens took to eating the seeds that lay scattered on the ground where the cows had been fed. The biddies soon found themselves weak in the legs, and as unable to maintain a straightforward deportment as any unfeathered biped with a stomach too full of rum. The cause being suspected and removed, the fowls recovered with but a death or two.—Afterward, using more care, we were not troubled with a recurrence. In one or two other instances I have noticed similar results. So that for years I have considered it a fact that pumpkin seeds will cause injury and death to fowls if eaten by them.—Whether squash and other like seeds will produce the same effects I cannot say.

T. E. W.

### THE ALPACA IN MAINE.

Solomon says, "There is a time for all things," and the *Maine Farmer* thinks there is a time coming when the Alpaca will be bred in the mountains of that State. It is not yet, but this is none the less the time for *talking* about it. The Farmer thinks the general run of the climate very much alike in Maine and Peru, and that the Alpaca would prove a valuable addition to the domestic animals of Northern New England.

This animal has been bred in the mountainous parts of Ireland with good success. With the same fare as their cattle and sheep they appear as thrifty and healthy as the native sheep of the country. In Berks, England, in 1817, Mr. Bennet received a pair of Alpacas. He fed them as he did his sheep, on hay and turnips, and in a few years raised a flock of fifteen. An account is given of a few introduced into Scotland, which did well, and grew to weigh 175 lbs. A large yearly importation of Alpaca wool and skins is now made into this country, and it would be well worth while to make a trial of breeding and rearing them here.

Sulphur for Lice on Calves, &c.—The September number of the Stock Register, quoting from the Genesee Farmer, recommended sulphur fed to animals as death to all such vermin. I tried it on some calves, so covered with lice that the outer ends of their hairs were thick with them. Tobacco and other remedies, had but little effect. I fed in salt and meal, giving a spoonful to each calf about twice a week. In two weeks not a louse could be found. A neighbor who has often used this same remedy, on all kinds of animals with perfect success, assures me it should be given in fair weather or the animal housed, else there is a liability of taking cold and injury being done to the animal. T. E. W.

An ax costing two dollars, with which a laborer may cut fifty cords a month, is a cheaper tool than an ax costing but one dollar, and with which he cut but 40 cords.

### THE AGRICULTURAL PRESS.

Agricultural Periodicals have become a permanent, prominent and prosperous "institution" among us, and we are happy to take by the hand so many old and new laborers in the cause of Rural Improvement. Hereafter, one valuable feature of our paper will be a condensed "spirit" of the contents of Agricultural exchanges, wherein we shall present (with due acknowledgement of the source,) what seems to us, fresh, striking and noteworthy, and adapted to the design of the Rural and the wants of its readers. We have never attempted, and do not think it advisable, to make ours a strictly original paper. We can impart more of worth and interest to our columns, by filling a portion of their ample space with truly valuable information from other journals, and especially by the plan of condensing long articles into short ones, or selecting their *gist*, and omitting prefaces and perorations.

#### Agriculture has a Literature.

The *New England Farmer* speaks thus encouragingly and truthfully of the Literature and the profession of Agriculture:

Among the favorable changes which have taken place in the estimation in which farming is held, as an occupation, there is one of much importance, and which is calculated to draw it into many earnest and inquiring minds, and thus soon to produce distinguished men. It is, that *Agriculture now has a literature.* Some of the pleasantest books that have been issued for a few years past, have been upon the subject of agriculture and its kindred branches.—These works have required more patient research and more of the higher powers of the mind to produce them, than almost any other kind of literature. They certainly stand side by side with the best books on astronomy and geology, and as far surpass in merit and value the millions of volumes of the current literature, as the skilful cultivation of the earth is of more importance than the skilful playing of a game of football. * * * * * * One class of Agricultural books enters into the great laws and operations of Nature, showing us how to subdue the wilderness, gain fertile fields, and cover the hills with flocks; another analyzes these laws and illustrates the goodness and wisdom of God in the beautiful arrangements of His creation. These show *the poetry of the great art*; and to a mind untainted by morbid sensibilities, they have an inexpressible charm. They unravel a thousand mysteries in the grass of the field, or the trees of the forest,—in the drop of water that hangs and trembles on the petal of the flower, or the rugged rock on which it is soon to fall. They show that in agricultural employments there is room for the exercise of all the high and noble faculties of the mind. If the vocation has become one of drudgery, it is because the *mind* is slavish and dull, and not that the subject is not endowed with all the inherent qualities of beauty and grandeur. To the student, this class of literature will possess many pleasant attractions, more than compensate for the unpoetic part of farm work, and draw numbers away from the crowded professions. This is a feature full of encouragement.

We do not mean to say that heretofore agriculture has had *no* literature; for even among the ancients there were a few who seemed to embrace within their comprehensive grasp most that is known to us now. But that in this age the subject has been brought into well-defined scientific principles, which are becoming widely-diffused among the masses who are occupied in the cultivation of the earth. At no period has there probaly been more active minds engaged on any topic, than may now be found on the subject of farming, including all its various branches. For the next half century, at least, it promises to be *the* popular profession; and as our material safety and continuance depends on our being an agricultural people, producing within ourselves, as far as possible, the means of supplying our own wants, we are glad to see the young and zealous engaging in its healthy and ennobling pursuits.

#### Improvement of Dairy Stock.

The *Ohio Cultivator* prefixes a statement of a dozen or so of remarkable cows, with these words of caution and advice on the improvement of the Dairy Stock of the State:

What partiular breed of cows is best for dairy purposes, has never yet been decided; hence we shall not urge our readers to pay extravagant prices for Durham, Devon, Ayrshire, or any other particular breed; on the contrary we believe that as good dairy cows are to be found among our native or mixed breeds, as among the finest of the imported varietys; and it is certain that our farmers generally must rely on *natives* as the chief means of improvement, owing to the expense and time it would require to supply the country with other breeds. At the same time we doubt not that improvements may be effected by *crossing* the native or mixed cows with animals of pure breed—especially Durham and Ayrshire—provided these are selected with special reference to their dairy qualities, and not for that "perfection in form" which is only connected with fattening or *beef* qualities.

The great error of the amateurs of fine cattle, and of the judges at cattle shows, has been the adoption of the *beef and tallow* producing *form* as the standard of beauty or perfection in cattle generally, and requiring dairy stock to conform as nearly as possible to this standard. Whereas, it can be shown on physical principles that an animal cannot combine in the highest degree both fattening and milking qualities; nor can the same outward conformation of parts be manifested by both classes, although very good milch cows are occasionally found among Durham herds; and with a standard modified for the purpose, some of the very best milkers may be called handsome.

#### A Finality on Rats.

Rats are unmitigated scoundrels. Voracious, prolific, and omnipresent, they tax every man's purse and patience. Just think of the aggregate cost of their support—putting the less to each family at $2 a year, in the nation they destroy $10,000,000 worth. "Cement" in the *Journal of Agriculture*, proposes to "head them off," as follows:

To begin at the bottom of this subject, the cellar bottom must be laid with cement. Water lime, or cement, is now so cheap, that it is within reach of every man able to own a cellar. This lime, with sand and water, are all the articles needed to make a rock bottom to your cellar, proof against rats and all other vermin. The sand should be as pure silex as you can find, and coarse.—The more free it is from clay, loam and other impurities, other things being equal, the more solid will be the bottom. The proportion of lime to sand should be about one part to two. Less sand will make the mortar harden quicker, but it will be more expensive. More sand will make your floor longer in hardening, and not as strong.

Now then for doing the work. If you have the capital, and a mason near at hand, employ him to do it. If you are remote from the mason, and live where the division of labor is not fully carried out, and especially if you belong to the universal Yankee nation, do the work yourself. First prepare your bottom by making it level and ramming it so that it shall be as hard as a footpath. Then prepare a mortar bed, and put in two-thirds of a barrel of sand, and one third of a barrel of the water lime, and water enough to make it suitable for laying with a trowel. Mix thoroughly, put it down, and smooth it with a trowel, as rapidly as possible. The mortar hardens so soon, after it is mixed, that two men cannot lay more than one-third of a barrel at a time, to the best advantage.

The thickness of the coating of cement must depend somewhat upon the use you design to make of your cellar. For a common cellar, for storing roots, two inches is just as good as four or six. Our own cellar is but one inch, and there is a perfect understanding between our root crops and the rats, even at that. Where you use so thin a coating, it is well to dig a trench, four inches deep, by three broad, next to the cellar wall on every side, and fill it with the cement mortar. If, while the cement is plastic, you put into the trench with it a generous stock of gravel stones of one inch or less in diameter, it will make a surer defence. The point of danger in the cellar is by the wall, where the rats seek to enter. When their teeth bring up against the gravel stones, it rather blunts the edge of their voracity.

Think not, fellow farmer, that this is a small matter, unworthy of your attention. If it does but save you from the vexation, caused by these pests, and from the wear and tear of temper, and from an indulgence in hard words, applied to your enemy, it will be money well spent. The sight of goodly squashes perforated and ruined—of potato bins and turnip heaps, turned into rat lardors and rat dormitories—of meat casks and apple barrels gnawed through the heads—of chickens, ducklings, goslings, and young turkies, slaughtered by them,—is injurious to a man's peace of mind, as well as detrimental to his purse.

The barn, the pig stye, the hennery, the corn crib, may all be guarded by the same general method—by cement.

This is our finality on rats. Let a farmer try it thoroughly, and if it fails, he may set down the advice among the follies of book farming, and set down the author as a humbug.

#### Biography of a Bot.

The *Journal of Agriculture*, in an article on Bots in Horses, written in its usual racy style, gives us a biography of this name-sake of John Tyler's bed-fellow. He says:

The parents are called bot-flies, and belong to the family *Œestridæ*. The female, in the latter part of summer, deposits eggs on the hair of the horse, usually on the sides and fore-legs of the animal, *where they may easily be reached by his tongue.* Their eggs, or nits, appear like little hay seeds, and adhere to the hair because of a glutinous substance, with which they are surrounded. The horse licks the spot with his tongue, and the egg that contains our heroine is then carried into his mouth, where it is hatched by the warmth and moisture, almost immediately into a maggot, and thus swallowed, reaches the theatre of operations. You may hatch one of these eggs on the palm of your hand, with a little warm saliva from your mouth. Once in the stomach, it clings to the cuticle, or inner throat, by means of hook-like attachments on either side of its mouth, and feeds on the mucus, so long as there is any; when it attacks the coating of the stomach as above stated.—Usually, it is discharged in the early summer in the dung; it buries itself in the earth; becomes a chrysalis, or grub, and so remains for a few weeks when it bursts its bonds, issues forth in the form of a fly; and, if a female, becomes impregnated and deposits eggs on the horse; and, in this eternal round, lives, dies, and is born again.

#### The Osier or Basket Willow.

Watson G. Haynes, at Garreson's, Putnam Co., N. Y., gives in the *New York Agriculturist*, the following interesting information on the planting, culture, and gathering of the Basket Willow. He says:

The soil should be heavy, well plowed, sub-soiled, and smoothly harrowed; and if it can be overflowed once or twice during the summer, the location may be considered perfect.

The cuttings should be about ten inches long, planted in rows about one foot apart, and four feet between the rows; set perpendicular, firmly in the soil, and not left more than two inches above the surface.

The plants should be kept clear of grass, and weeds the two first years, and all the young shoots carefully cut off annually.

As soon as the crop is fit for cutting and market—which it will be the second year—it should be cut during winter, tied in bundles, and *stood up* in cold water until spring, when the shoots will begin to sprout, at which time the bark will readily peel off.—This is done by drawing each sprout thro' a piece of split iron, with half rounded edges on the inside, which is set in a bench. A man and three or four children ought to peel about four hundred weight in a day.

They are then dried in the sun, but should not be left out longer than from three to four hours; then weighed and bundled, and they are ready for the market, and worth from $120 to $140 per ton. The season for planting is any time from the 1st of September until the 1st of May.

#### Economy of Time and Provender.

"Saving is the golden precept never to be forgotten," says the *Farmer's Companion*, and applies it to the care of animals in Winter. As examples thereof, it gives the following:

Mr. Linus Cone has his stables divided off into apartments four or five feet wide, separated by high petitions, in which he keeps his cattle and manure the winter through.—These *boxes*, as the English term them, are kept well littered, by which a large amount of manure is made in each stall. A passage in front of the mangers enables him to carry feed through from the barn floor, with which it communicates, and to throw hay down from above. A great saving is effected here in three ways:—alacrity in putting up and letting out the animals; no time is spent as must be, according to the common mode, in cleaning out stables; and the manure possesses nearly twice the value of that exposed in yards. Mr. Cone likes this plan so well, that he is fitting up his stables in this manner, he informs us, more extensively the present winter. His mode of wintering sheep, by keeping them housed during the whole winter, affords a great saving in the amount and value of the manure, requires less trouble in taking care of them, and preserves in a superior degree, health and life.

Mr. F. V. Smith, the successful Devon cattle breeder, of Coldwater, has a well in his barn, in a convenient though out of the way place, and a trough made of inch and a half plank, running the whole length of the stable, placed near the floor between the feet of the cattle and the manger, into which he conveys water from the well.—Here he can supply all his cattle in as little time as would be required to get them out of the stable, and with far greater comfort. A lid is attached to the side opposite the animals, and is made to project a little on the side next to them, so that they may raise it with the nose when they want to drink. This, he says, they readily learned to do; and after drinking, the lid falls to its place again. A very cheap, yet tasteful building, serves as a hog pen, a place for boiling food, for a corn-crib and store-room; and is situated directly on the way from the house to the barn, so that the hogs may be fed in half the time spent in reaching the pen, when situated far out of the way as is usually the case.

### TO EXTIRPATE SORREL.

An exchange gives the following directions:

The presence of sorrel indicates an acid soil. It is a sour plant, and thrives only on such lands as are destitute of calcareous matters; consequently the application of the latter in sufficient quantities to correct the acidity suggests itself as the most effectual method of getting rid of it, and rendering the soil fit for profitable cultivation in other and more desirable crops. Yet the quantity of soil on which this plant is naturally produced precludes the hope that it will ever be entirely eradicated, and it hence becomes a part of farming to know in what manner it can be most successfully economized, and rendered valuable as an article of animal sustenance or food.

There are, indeed, but few vegetables, however mean or valueless they may be considered, which do not possess some quality capable of redeeming them from the hasty yet common charge of utter worthlessness. and of this order we regard sorrel. As food for horses and sheep, it not only possesses considerable value, but if chaffed and mixed with meal, it will fatten them as readily, perhaps, as English hay prepared in the same manner. Fed to these animals in its natural state, and without any accompaniment, it is found to retain them in health and heart, and the seed, ground and made into "mush," is said by those who have had experience in feeding it to be equal to Indian corn. Yet no farmer will ever cultivate sorrel as a farm product. It is exhausting in the extreme, and it is only when it obtrudes itself on him spontaneously that he should endeavor to render it of any account.

The only effectual method of extirpating it is to sweeten the soil by liming, or to increase the staple to a degree that will promote the development of a more valuable herbage, and cleanse the soil thoroughly by a succession of manured crops, such as corn, potatoes, or some other vegetable which is cultivated exclusively with the hoe. The seed of the sorrel is not abundant, but it is invested in an integument, or horny involucre, which possesses the power of preserving the vital power unimpaired for years, when placed by circumstances so deep in the soil as to be beyond the influence of those vitalizing principles upon which germination is found mainly to depend.

This peculiarity of the seed explains why sorrel so often appears after long pasturage, and the disappearance of the plant from the surface of the soil where it has previously grown.

### LAYING OUT SURFACES.

A few simple rules are oftentimes convenient to those who are not conversant with surveying operations, and a writer in the Western Horticultural Review, has communicated to that work some very good ones, some of which we copy, and to which we add a few others.

*To lay out an acre in a circle.*—First fix a centre, and with a rope as a radius, seven rods, three links and three-eighths long, one end attached to the centre, and kept uniformly stretched, the sweep of it at the other end will lay out the acre.

For one quarter of an acre, a rope three rods and fourteen links will be the right length.

For one-eighth of an acre, a rope two rods and thirteen links will be enough.

*Triangles.*—If you wish a triangle to contain just an acre, make each side nineteen rods, five and a half links long.

A triangle whose sides are six rods and twenty links long each, will contain one-eighth of an acre.

*To lay out an ellipse or oval.*—Set three stakes in a triangular position. Around these stretch a rope. Take away the stake at the apex of the triangle, which will be where the side of the oval is to come—move the stake along against the rope, keeping it tight, and it will trace out the oval.

A square, to contain an acre, or just one hundred and sixty rods, should have each of its sides just twelve rods, ten feet and seven-tenths long.

*To draw an oval of a given size.*—The long and the short diameter being given—say twenty feet for the shorter, and one hundred for the longer—divide the short diameter into any number of equal parts—say ten—and from each point draw a line parallel to the long diameter; then divide the long diameter into the same number of equal parts, (ten) and from each point draw a line parallel to the short diameter. Then draw a line from point to point where each corresponding line cuts the other, on the outside, and this connecting mark will describe the oval or ellipse required.—*Maine Farmer.*

New York Tobacco.—The Syracuse Journal states that about 1,600 acres of tobacco were grown in Onondaga county the past season, and that the average crop is about 1,400 pounds per acre, though 2,000 pounds are often produced. The entire crop of the county is estimated at 2,240,000 pounds, which at ten cents makes the snug sum of $224,000 gained by the cultivators, but totally lost, wasted and thrown away by the consumers. Last year the best quality, known as seed leaf, brought fifteen cents per pound. At present rates, or even six or seven cents, it is considered a profitable crop.

Clovering.—Never spare the seed when you sow clover. Four quarts are not enough to the acre; put on not less than six, and be not frightened if you scatter a peck! The great superiority of thickly sown clover fields over others for feed and manure, is too manifest to need demonstration.

# Orchard and Garden.

### KEEPING GRAPES FOR WINTER.

Grapes having become abundant in most parts of Western New York, as they will soon be in all the Western States, it is a matter of some importance to be able to put them down so as to preserve them as nearly fresh as possible, for winter use.

The method most practiced is to put them down with cotton batting in alternate layers, but many object to this method, as the grapes often taste of the cotton, particularly if an inferior or unclean article is used. We have seen grapes put down in turners' chips, but from our experience little could be said in its favor. The chips adhere to the bunches, and give them a soiled appearance. If the bunches are first wrapped in a sheet of clean paper, before being laid down in either batting or chips, it will be found an improvement. White printing paper, or a thin white wrapping paper is best for this use. The batting and chips should be thoroughly dried before using, and the grapes be as dry and clean as practicable.

From what we learn, there is no doubt but white wadding is better than batting.—Cut it in sheets of a size to fit the box designed for packing, dry it thoroughly, and put the grapes down in layers. If first wrapped in paper as before stated, we have little doubt they will keep until spring without injury. During winter they should stand in a dry place and be kept as cool as practicable, without freezing. They are a luxury few would be willing to dispense with, after having enjoyed them a few winter evenings. †

### GARDEN WORK FOR JANUARY.

Orchard.—Grape vines and fruit trees may be pruned. Apples, &c., may be root-grafted. Caterpillers' eggs may be cut off from the ends of twigs and burned.

Apply guano around the roots of choice trees, which did not fruit well last year, and dig the guano slightly under the surface.—The rains and melting snows will carry it into the ground before Spring, whilst its dilution will prevent it from injuring the young spongiolos when they start in the Spring. Mulch around sluggish trees, and lime old apple trees which fruited badly last season.

Kitchen Garden.—Attend to collecting a full supply of fertilizing materials. Look to the hot-bed frames that they are in good order. Prepare tan, leaves, and horse manure for hot-beds, turning the mass sufficiently often to have it in proper condition for the beds in time.

Look well to lettuce, parsley, &c., growing in frames; attend to cabbage, cauliflower, broccoli, and other plants, in cold frames for early Spring planting. Procure a full supply of seeds for Spring use. Mulch the ground you intend using earliest in the Spring.

The Flower Garden.—General pruning should be postponed until March 1st, for if done now, the severe frosts will render its repetition necessary in Spring. The more hardy shrubs may be pruned now, such as cratœgus, serbus, spirea, and even althea in the middle States. (The double white althea is very tender.) If the snow be heavy, shake it off from these shrubs which would be injured in shape by its weight. Prepare tallies and stakes for Spring and Summer use.—*Working Farmer.*

### PEACH BORER PLASTERED UP.

Having in my garden a very vigorous peach tree, and observing that it was very much affected by borers, especialy in the forks of its limbs, I began to cut them out. Still I was afaid that this operation, to be performed in many places, might injure the tree, and as I had some very fine, almost pure white clay prepared, I plastered the limbs of the tree with it, and closed, when the plastering cracked in becoming dry, the cracks by rubbing them over with a painter's brush dipped in water.

The plastering became hard enough to withstand the effects of rain for several weeks, after the elapse of which all the borers were dead. The wound caused by them, healed qhickly over, and the tree is as healthy as it can be.

This experiment corroborates the fact, relating to the destruction of the apple borer, before communicated in the New England Farmer.

Hints to Lovers of Flowers.—A most beautiful and easily attained show of evergreens may be had by a very simple plan, which has been found to answer remarkably well on a small scale. If geranium branches taken from luxuriant trees just before the winter sets in, be cut as for slips and immersed in soap water, they will, after drooping for a few days shed their leaves, put forth fresh ones, and continue in the finest vigor all the winter. By placing a number of bottles thus filled in a flower-basket, with moss to conceal the bottles, a show of evergreens is easily insured for the whole season. They require no fresh water.

Four hundred years have elapsed since the invention of printing, yet books are not in circulation all over the globe; while the use of tobacco became universal within fifty years of its discovery.

### ECONOMICAL GREEN HOUSE.

Much of the produce of the green house may be procured at half the expense, by the use of the pit, which requires no other glass than the sashes which form its roof. The amusement and the products which such a pit, in the hands of an ingenious amateur, is calculated to afford, are almost without end. Small salading may be produced in it throughout the whole winter. Chickory roots (though this may be accomplished in a common cellar,) may be made to throw out their blanched leaves, which form the most delightful of all winter salads; tart, rhubarb, or sea-kale, may be forced in pots; as may be parsley, mint and other herbs.—Bulbs may be forced, and a bloom of China-roses may be kept up throughout the winter. But, perhaps, the most important use to which such a pit can be applied, in a small suburban garden, is to preserve throughout the winter, and to bring forward in spring—fuschias, salvias, verbenas and other fine exotic flowers; and also half-hardy and tender annuals, for turning out into the flower-garden or in the miscellaneous border, in the beginning of summer.—*Exchange.*

### STAKING FRUIT TREES.

We have for years practiced but one method of supporting young fruit trees, and like the way so well, we shall continue it till we see something better than has yet come to our notice. We drive a stake, which we usually make of a strip of board or plank, strong enough to support the tree, but elastic to allow it considerable motion, about six or eight inches from the tree, on the south or west side, and fasten the tree to it by a strip of waste leather, forming a single loop, so as to allow the tree to move a little in the wind, fastening the ends of the leather on top of the stake by a shingle nail.—By this method the young tree has sufficient play to induce it to throw down its roots, which it will very soon, and stand erect without any support. This never mars or prevents the growth of the tree by stopping the circulation of the sap, and is the cheapest manner a tree can be staved up. During the summer months, it is well to cast off this leather, letting the tree depend upon its own energies, which will thus be greatly increased, replacing it in fall after driving the stake firmly, or changing its position as may be required to train up the tree in the way it should grow.—*Jefferson Farmer.*

Rapid Growth of Apple Trees.—Four trees, planted in soil of moderate fertility in Massachusetts, measured, when three years old from the bud, at one foot above the ground, fifteen inches each in circumference. This was owing to care in saving all the small roots in transplanting, good tillage, mulching, and washing with ley.

# Domestic Economy.

### CURE FOR DIARRHŒA.

Various experiments detailed in an exchange, go to prove that this troublesome disease may be effectually cured by the use of strawberry leaves. In the most severe cases, and after other well tried remedies have failed, a tea of strawberry leaves has checked the disease in a few hours and restored the patient to health. For light attacks instead of calling a physician, let the patients eat a few green leaves of the strawberry plant, and cure themselves.

Substitute for Yeast.—A patent was granted in England, to Mr. Richard Tyler Blunt for his new invented composition to be used instead of Yeast. The substance of the specification, according to the Reperatory of Arts, is as follows:

To make a Yeast gallon of the above mentioned composition, containing eight beer quarts, boil in common water eight pounds of potatoes as for eating: bruise them perfectly smooth, and mix with them two ounces of honey, or any other sweet substance; and one quart (being the eighth part of a gallon of yeast) of common yeast. And, for making bread, mix three beer pints of the above composition with a bushel of flour, using warm water in making the bread; the water to be warmed in winter, and the composition to be used in a few hours after it is made; and as soon as the sponge [the mixture of the composition, with the flour] begins to fall the first time, the bread should be made, and put into the oven.

Butter.—The following is given as an improved method of preventing the bitter taste which butter has from cattle feeding on turnips, cabbages, leaves of trees, &c. Boil two ounces of saltpetre in a quart of water, and put two or more spoonfuls according to the quantity of milk, into a pail before milking; if this is done constantly, it will prevent the taste of turnips, but it will not be effected if even once neglected. This has been proved by twenty years experience, and if it does not succeed the farmers may rest assured that the fault arises from the neglect of their dairy maid.—*Am. Farmer.*

Recipe for Joining Glass.—Melt a little isinglass in spirits of wine, and add a small quantity of water. Warm the mixture gently over a moderate fire. When mixed by thoroughly melting, it will form glue perfectly transparent, and which will unite broken glass so nicely and firmly that the joining will scarcely be perceptible to the most critical eye. Lime mixed with the white of an egg forms a very strong cement for glass, porcelain, &c., but must be done neatly, as, when hard, the superfluous part cannot easily be smoothed down or taken off.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending December 28, 1852.

Daniel S. Bayles, of Brooklyn, N. Y., for improved parrel for yards of vessels.

M. A. Bertolet, L. Kirk and A. M. De Hart, of Reading, Pa., for improvements in the method of obtaining gold, etc., by amalgamation.

Samuel Carrby, of Ellicott's Mills, Md., for improvement in winnowing machines.

Geo. Danre, Pascal Nicolas and Felix Lopez, of Marseilles, France, for improvement in the process of making illuminating gas. Patented in France, Sept. 27, 1851.

Elihu & Warren W. Dutcher, of North Bennington, Vt., for improvement in temples for looms.

John P. Farnam, of Andover, Mass., assignor to himself, Jacob Jenkins and Chas. B. Clark, of the same place, for improvement in cutting paper.

Pierre Saulnier, of New York. N. Y., assignor to John T. Bruen, of same place, for improved mode of mounting the cutters of machines for planing metals, etc.

Royal E. House, of New York, N. Y., for improvement in magnetic printing telegraph.

Edward Paye, of Albany, N. Y., for machinery for heading bolts, etc.

Wm. Tucker, of Blackstone, Mass., for improvement in shuttles for looms.

Wm. E. Ward, of Port Chester, N. Y., for improved method of heading screw blanks, rivets, etc.

Henry Waterman, of Williamsburgh, N. Y., for improved safety apparatus for steam boilers.

John F. Winslow and John Snyder, of Troy, N. Y., for machinery for making railroad chairs.

Wm. Yarnall, of Newark, Ohio, for improvement in daguerreotyping.

DESIGN.

Robert E. Dietz, of New York, N. Y., for design for a girandole.

### ONE OF THE WONDERS OF THE AGE.

We are informed that a large number of workmen are employed in completing the Suspension Bridge across Niagara River, at Bellevue. To an eye unskilled in science, the gulf there seems impassable, yet the frame-work to be suspended between the heavens and the surging billows below, will sustain the weight of over a thousand tons. Imagine a span 800 feet in length, forming a straight hollow beam 20 feet wide, and about 18 feet deep, with top, bottom and sides. There will be an upper floor to support the railroad and cars, 20 feet wide between the railings, and suspended by two wire cables, assisted by stays.

The lower floor, 19 feet wide and 15 feet high in the clear, is connected to the upper floor by vertical trusses. The cohesion of good iron wire, when properly united into cables, or ropes, is found to be from 90,000 to 130,000 lbs. per square inch, according to quality. The limestone used in constructing the *towers*, will bear a pressure of fifty tons upon every foot square. These towers are 60 feet high, 15 feet square at the base, and 8 at the top. When this bridge is covered with a train of cars the whole length, it will sustain a pressure of not less than 405 tons. The speed is supposed to add 15 per cent. to the pressure, equal to 61 tons. The weight of the superstructure added, estimated at 782 tons, makes the total aggregate weight sustained, 1,273 tons.

Assuming 2,000 tons as the greatest tension to which the cables can be subjected, it is considered safe to allow five times the regular strength, and providing for a weight of 10,000. For this 15,000 miles of wire are required. The number of wires in one cable is 3,390. The diameter of cable 9¼ inches. This bridge, we believe, is the longest between the points of support in the world.—*Lockport Journal.*

### PLASTERING MACHINE.

A machine for the purpose of superseding manual labor in the operation of plastering walls, has been invented by Isaac Hussey, of Harveysburgh, Ohio, who has taken measures to secure a patent. It consists of a movable frame upon rollers that can be adjusted to suit any height, and of a smaller frame sliding within it. The latter serves to support a mortar box containing the trowel, which is raised and lowered by means of a drum and endless chain. When in operation the trowel is supplied with mortar by a rod and follower, which are worked by a lever, the quantity being regulated or shut off, as required, by a slide that covers the opening in the box. For plastering ceiling it is only requisite to raise the mortar box to the top of the frame, and for side walls it is adjusted accordingly by turning it to a proper position. For this last-named operation the box is shifted by the sliding frame, which is moved back and forth for that purpose by means of the already-mentioned lever. There are also various cords and pulleys attached to the machine for facilitating the operations of the different parts, which are included in the invention and form a part of it.

A New Wheel for Railroad Cars.—Mr. James C. Bell, of Albany, has taken out a patent for a new *wrought iron wheel* for railroad cars and engines, which is said to be very ingenious. As a large portion of the accidents on railroads are caused by the breaking of cast iron wheels, particularly in frosty weather, it is to be hoped engineers will look at this invention, and if valuable, adopt it at once, without regard to cost. What is value of a few dollars in the cost of a set of wheels to a car, when the lives of a hundred citizens are in joopardy?

### MACHINERY FOR DRESSING FLAX.

E. L. Norfolk, of Salem, Mass., has taken measures to secure a patent for various improvements in machinery for dressing flax. To effect the operation of separating, cleaning, and drawing out the fibres, the inventor uses one or more toothed cylinders similar to the breaking or heckling cylinders used in flax mills. They are placed singly between a pair of feeding and a pair of drawing rollers and are made to revolve at a greater speed than the former; they are, moreover, so arranged that their teeth will draw the fibres forward in the direction of these same feed rollers. It is possible to employ this combination of cylinders and rollers so multiplied and arranged that "doubling" may be performed repeatedly in the same machine, and the operations of drawing and heckling practiced after every doubling.

The mechanism employed effects the various requisite processes with an extraordinary degree of perfection and rapidity, especially by seperating the feed which supplies the machine in the first instance, and then by drawing and afterwards doubling repeatedly. The "silver" thus produced is comparatively uniform as to thickness, but to make it more perfect, it is necessary to equalize as much as possible the feed from each set of rollers, which end is attained by attaching a trunk to each set, which is placed in close proximity before the rollers, and open the back and front, to allow a free passage to the flax. A movable mouthpiece is attached to each trunk, and the whole is so arranged that any increase or decrease in the quantity of feed will cause an inversely corresponding decrease or increase in the distance of the said movements.—*Scientific American.*

### VARNISH FOR IRON WORK.

Locksmiths and others working at the forge are accustomed to blacken the articles intended for railroads by making them red hot and burning on them some linseed oil. This plan, which is practiced to improve the appearance of the articles, and to protect them from rusting, is not economical nor always successful, it fails when the combustion of the oil has been to great.

By the following process a varnish is made without the above disadvantages, and which gives too articles a better appearance:

Dissolve, in about 2 lbs. of tar oil, something more than half a pound of asphaltum and a like quantity of pounded rosin; the mixing is performed hot in an iron kettle, care being taken to prevent any contact with the flame. When cold the varnish is poured into a vessel and kept for use.—Those varnishes are for out-door wood and iron work, not for japanning, leather, or cloth. Oil varnishes are used for patent leather; and copal for japanning metal.

### NEW GRAIN REAPER.

A machine has been invented by Mr. John H. Smith, of New York city, which the Evening Post thinks is superior to any now in use. The grain is cut by the same kind of a stroke made with a hand-cradle. Four scythes, each with a cradle-frame, are fastened to the rim of a drum or cylinder, having a vertical or rotary motion. The scythe and cradle fingers are so arranged that every revolution simultaneously cuts and lodges the grain in a standing gravel inside the drum whence those who tend the machine can conveniently bind, and dispose of the bundles of grain, wholly dispensing with raking. The machine is light, and can be operated with a single horse, cutting twenty-five acres per day, and more than that if two horses are used, and the speed increased. It is supported on a single pair of truck wheels, that may be disconnected and used for other farm purposes.

An English barber claims to have invented a new touch in the hair restorative art. Not any of your lotions, &c., but a real true blue mechanical operation. It consists of a machine containing combs and brushes, so arranged and constructed as to produce a galvanic current when used. The teeth of the comb are made of copper and zinc, alternately, and continued back to a chamber in the hind part of the comb, in which is placed a flannel saturated with salt water as an excitant. The object of the invention is to excite an electric current when the combs or brushes are used. The brushes are made of fine copper and zinc in place of bristles.

New Varnish.—A majority of varnishes are composed of gum and water colors.—Made in this manner they are easily changed by water. The following does not possess this inconvenience. It is composed of water, potash, and gum lac in the following proportions:—Water 3 quarts, gum lac 2 lbs., potash mixed with lime 4 ounces. If desired, other resinous bodies less expensive may be substituted for the gum lac.

At Nottingham, England, the great centre of the lace manufacture, they are now manufacturing a most beautiful fabric of lace for window curtains, bed curtains, etc., of iron wire. Iron houses, iron ships, and now iron capes for the ladies! Won't they attract the lightning, and shan't we have women of metal for our wives?

Theodore S. Minnis, of Meadville, Pa., has recently taken out a patent for a new Lubricating machine, which bids fair to supercede everything of a like character. It is designed to effectually do away with *friction* upon all kinds of axles and spindles, and its applicability is almost unlimited.

It is believed, from observations made by the Craig telescope, that the rings of Saturn are not what they have been supposed; but that they are *arches of the most perfect geometrical formation.*

# Educational.

LANGUAGE.—No. 1.

While reading in the "Rural," (No. 36, Vol. 3,) an interesting article entitled "Results from Language," from the pen of Prof. C. Dewey, of Rochester, the following inquiries suggested themselves:

1st. What was the original language of man?

2d. Was it his own invention, or the gift of the Creator?

3d. Into how many branches was it divided by the "confusion of tongues" at the building of Babel?

4th. Whence the great number and variety of languages now existing?

On each of these I propose to offer a few remarks. And

1st. What was the original language of man?

In the earlier investigations on this subject, the credit of originality was generally conceded to the Hebrews. Later Philologists, however, appear to have decided differently. Not being acquainted with their arguments, nor able to refer to them directly, I am not prepared to judge of their merits. My present opinion is, that the Hebrew was the original language. I reason thus:

Moses though "learned in all the wisdom of Egypt," was a Hebrew, and wrote in the Hebrew language. This was the language of the Israelites, and came from Abraham through the Patriarchs, Isaac, Jacob, and his posterity, who carried it with them into Egypt. Here, on account of the mutual jealousies that existed between them and the Egyptians, they retained it unmixed with that of their neighbors.

The language of Abraham, then, was the Hebrew—whence did he obtain it? I answer, from Noah. Nimrod was a descendant of Ham, and "the beginning of his kingdom was Babel in the land of Shinar." It was by the ambitious descendants of Ham, therefore, that the building of Babel was undertaken. Abraham was a descendant of Shem, who, being a good man, would by no means have engaged in the ambitious schemes of Nimrod, although he was living at the time, for he lived to see above 500 years after the flood, even beyond the time of Abraham, who was born within 300 years and died within 500, after that event.—Hence Abraham, during his whole life, was cotemporary with Shem.

Shem would by no means have engaged in the ambitious schemes of Nimrod. I infer this from what we know of his character. He was doubtless a good man, (see *Gen.* ix, 23–7,) had seen the judgment of God upon the sins of the antedeluvians, and was probably the Melchizedek of Moses. This is probable, both from the fact that Shem and Abraham were cotemporaries, that Abraham and Melchizedeck spoke the same language, and that their meeting appeared to be that of persons well acquainted with each other.

Again, Noah lived till Abraham was nearly sixty years old. Now it can hardly be conceived that a man of Abraham's standing in the world, could have lived till that age without having frequent intercourse with his venerable ancestor. Or, if the silence of the sacred historian is to be construed into an evidence that the two never saw, or had any intercourse with each other, the mere proximity of the time in which they lived, would go far to prove the sameness of their language, especially under the existing circumstances.

Further,—Nimrod was the great-grandson of Noah by Ham, and, allowing the descendants of Ham to have succeeded each other at the same rate, or with the same rapidity with those of Shem, the building of Babel must have been commenced before the death of Noah; and it is more than probable that he outlived the "confusion of tongues" and the subsequent "dispersion" of the inhabitants. Would he have countenanced the unhallowed project? Certainly not. The judgment of God upon it proves it to have been an unrighteous measure, and he had seen the fearful consequences of sin too recently, to allow of his encouraging such a scheme. Since, therefore, the "confusion" was inflicted *upon the builders of Babel*, since neither Noah nor Shem, (both of whom were living at the time,) would have encouraged the the work, and since Abraham, a descendant of Shem, lived in the time of his venerable ancestors, I conclude that the language of Abraham was the same with that of Noah. Now if it can be shown that the language of Noah was the same with that of Adam, it will follow that the Hebrew was the original language of man.

It will not be denied that the language of a people has frequently undergone great changes in a comparatively short time.—Such changes however, have always resulted from some foreign cause; as invasion, intermixture by colonization, &c. There is no evidence of any such interruption in the antedeluvian language. On the contrary, there is evidence of uninterrupted succession. The line of Patriarchs given in Genesis (ch. v.) is unbroken. Add to this the fact that Methuselah, who died in the year of the flood, was in his youth, cotemporary with Adam, (243 years,) and in after life with Noah, (600 years,) and it will appear that whatever changes may have taken place in the original language, or whatever dialects may have been formed among distant colonies, it is hardly possible that the language of Noah could have differed essentially from that of Adam. Hence I infer that Hebrew was the first language of man.

Down East, 1852. H.

GENESEE MODEL SCHOOL FOR BOYS.

We have received the circular of "The Genesee Model School for Boys," an Institution recently established at Lima, N. Y., for the purpose of putting into practice that system of general education, combining Physical, Intellectual and Moral training, which has been theoretically sanctioned throughout this country and Europe, as the only means of developing all the faculties of the man. Whatever the condition of the pupil when admitted, it is proposed "so to treat him in all the attributes of his threefold nature, as to make the most that can be made of him, during the period of his residence at school, and to direct him on the way, towards the utmost development of himself attainable in after life."

The proprietors and associate Principals of the School, are Rev. Wm. H. DePuy, and Rev. Wm. B. Slaughter, gentlemen of enterprise and ability, who have made the most ample preparations in the way of elegant buildings and grounds, competent instructors, and every requisite and convenience which can be desired. They have engaged in this enterprise after years of experience in the personal instruction of youth, with a thorough conviction of its utility and feasibility. Many prominent friends of Education give it earnest commendation, and it is to be hoped that it will meet with the success which its importance deserves. The pupils are limited to forty, and the whole charges for the year, including board, tuition, &c., are $250.

THE DISTRICT SCHOOL.

We always take a deep interest in all efforts to promote common school education. The cause is one of the noblest ever engaged in. Its objects reach far away into the future and take hold of the stability, character and permanency of all our free institutions.

The improvement in the public mind in relation to this matter, is most gratifying.—Yet there is a wide space for still farther activity in the promotion of interests so vitally important to society. Such interests should receive the earnest and unfaltering support of every member of the community. To many, the matter of common school education presents but the dull routine of mechanical operations—the monotonous exercises of reading, writing, ciphering and spelling. And yet under such slow process, human mind is developing and maturing, and impressions given which shall mould character for eternity. The vibrations of the school-room give tone to a life time.—Indeed, the teacher of youth occupies one of the most responsible positions on earth.

School-rooms are cheaper than court-rooms—teachers cheaper than sheriffs and judges—education in youth, cheaper than State prison and the scaffold in manhood.—Gen. Harrison once said to a man who was about to build a high fence to keep the boys from stealing his fruit on the Sabbath, "Are not Sabbath Schools cheaper?" The thought embodied a world of truth.

Were we to select a spot for a residence, we should look well first to the character of the community in the matter of schools.—We should first look at the school-house and into it. We should attend a school meeting and see the people together, and learn the extent and liberality of their views, and the quality of teachers employed.

We would shun the niggardly—the penny skinning community. Such communities esteem an old shell on the bleak hill, thro' every side of which the wintry wind whistles "Hail Columbia," a fit place for their children; the man who can set copies and do "sums" in rule of three and flog children that ought to be flogged at home, a competent teacher; and the education which consists in mechanical parsing, dull reading and wretched writing, a sufficient education. The age moves on while such communities are slumbering in a half bushel.

But in the wide waste of old, weather-beaten and crumbling school-houses and Districts where the light of knowledge hardly makes the general darkness visible, there are thousands of bright spots. Light expands. The importance of a right system of common school education, is felt. There are liberal views and generous appropriations. Neat and commodious school buildings are erected, competent teachers employed, and necessary apparatus furnished. Let the home seeker turn aside to such communities, and help to move on its enlightened and grievous efforts. Don't stop to feed the horse where the school-house looks so much like desolation.—*Cayuga Chief.*

SOME THOUGHTS ON BIRDS.

I have recently been very much interested in reading an English work entitled "Country Rambles in England, or Journal of a Naturalist." It has just been republished by Messrs. Phinney & Co., a highly reputable publishing house of Buffalo, and the American edition is materially enhanced in value by the editorial labors of Miss Cooper, author of "Rural Hours." She has appended nearly a hundred pages of notes, explaining the difference between several species of birds in Great Britain and this country, having the same name, and commenting upon other topics of interest, tending to enlighten the reader. The work is very full on ornithology, and the few tho'ts I have to offer were suggested or disinterred by reading that division.

What I have to say at this time, is on the habits of birds: and, first, as it regards their rising. I have sometimes thought that, in this respect, they set us wiser (?) and featherless animals a good example. I have a canary whose cage hangs before a window in my sleeping room, and which leaves its roost and begins to nibble at its breakfast as soon as day dawns. It serves as an admirable substitute for an alarm clock during the summer solstice. It pours its little snatches of song long before the sun is up; and thus, to borrow a beautiful thought from Mrs. Sigourney, pays in advance its rent in music for the day. In addition to this, by filling the ears of each member of the household with melody before the din of the world has crowded its way in, we are all put in a cheerful mood to begin the toils and to encounter the perplexities of the day. Among other early rising birds, I recollect distinctly the pigeon, from the circumstance that, when a little, dozy-headed boy, I used to be waked up before day-light by my father in "pigeon time," in order that we might get the net set and ourselves concealed in the bower-house before the prating birds approached the "stand." I used to luxuriate in seeing the net fly over the pigeon-paved bed, though I hated to rise so early to participate in the sport. I thought then that if these birds would keep their roosts till the sun was an hour or two high, they would oblige me very much and perfect my happiness in seeing them caught. I am now older than I was in those days, and have lived to commend pigeons for this habit of witnessing what Jeremy Taylor called "the preparation which the sun makes, when he is coming forth from his chambers of the east."

Poets have got the start of me in mentioning that the lark is an early riser; but I may mention, among the many birds thus virtuously addicted, the loquacious blackbird; the restless wren, which leaves its ivy-bed before man can scarcely discern its wee form; and the full-eyed, chatty and pugnacious robin,—chatty in the spring and summer, and pugnacious the year round. In countries which the rook inhabits, *he* leads the feathered tribe through the gray of the dawn. Breakfasting on such worms as bathe in the dew and flee downward at the approach of day, he has to dispatch his meal and apply the napkin to his bill before the sun shines, just as man lays it *while* that orb hangs out in sight. Without calling other sylvan minstrels by name, it is enough to say that all of them are up as soon as they can see comfortably to work, and that even in the shortest days, it is safe to follow their example. "Up with the lark," in June, is respectable rising, and nothing more.

Birds are industrious. Not only do all of them rise early, but they generally go to work at once: and nothing can exceed their diligence when they have a family to support. All tribes, save, perhaps, the piscivorous, are then busy almost incessantly throughout the longest days. In obtaining nourishment for their young, some of them go a great ways, and return at long intervals; nevertheless they are in constant and most eager pursuit of food; others are obliged to go but a short distance from the nest, and return the quicker. Mr. Knapp, author of the work to which I have referred, mentions birds of the *parus* tribe (*parus cæruleus*) whose visits to their nest of young ones, average one a minute for thirteen or fourteen consecutive hours! I have sat in a barn, and watched a pair of swallows for hours while they were feeding their brood; and have observed with delight the frequency and clock-like regularity with which they made their returns with insect-laden bills, one darting out in pursuit of game as the other, successful in the brief chase, entered. While thus observing these industrious and innocent little creatures, I have thought that if all *men* were as assiduous in their endeavors to support their families, there would be a great reduction of the number of paupers.

But while pointing out some of the good habits of birds, it may be hinted, by the sagacious reader, that some of these eulogised gentry of the forest and field, have *bad* habits. This I grant, and these latter habits I would recommend no man to copy, as I would have him avoid imitating what is vicious in a being of his own species.

But birds, permit me humbly to say, are not so depraved as the foggy reason of finite man, in its hasty conclusions, sometimes infers. Many of these hated visitants of the garden and the grain-growing field—marauders denominated, and hunted often as a curse—are blessings in disguise. The birds which do slight mischief, in many instances destroy insects which, living, would do far greater. It is not until we have sounded the great deep of Nature's economy, that we are prepared, in every case, to distinguish between the blessing and the curse.

Buffalo, Dec., 1852. J. C.

WEARING SUSPENDERS.

It is the prevailing fashion, especially in cities, for men to dispense with suspenders, and support their pantaloons by having them made to button tightly around the person above the hips.

It is our settled conviction, that this practice is decidedly detrimental to health.—Much has been justly said against tight lacing, as applied to females; and of suspending heavy skirts to the hips, by fastening them tightly around the waist or loins, where there are no ribs or other bony frame-work to resist the compressive power. The changes have been rung upon the heat caused by this close bandaging the abomen, the evils of thus cramping that part of the vital apparatus—the system—which nature intends to be free and unrestricted as to room and action, and would that these tones could have been heeded in time to prevent the frequent death-knoll which such practices have rendered necessary; but who ever thought of sounding the alarm to men against a similar practice in respect to their dress?

We admit that half a dozen skirts weighing many pounds, are worse for the constitution of the wearer than the drawers and pantaloons as worn by men, but worse only because the quantity is greater, and the pressure necessary to sustain them is more. The principle is the same. Females should support their skirts mainly by the shoulders.

The hips of boys and men are constitutionally narrower than those of the female; and therefore, the clothing thus worn requires to be tighter, to prevent slipping down.

As we walk the streets of our city, we see scores of boys, from twelve to sixteen years old, with their pants buckled very tight around their diminutive hips, preventing growth at this rapidly growing age, and the result is, a generation of slim-shanked, narrow-hipped, gaunt-waisted, dyspeptic, pale-faced, puny apologies for men.

It is evident to every reflecting mind, that the process of digestion cannot be properly performed, when the region of the stomach and intestines is cramped by tight dressing. This soft compressible part of the body should be left as nature has left it—unrestrained—untrammeled.

Tie up the bowels of a horse, and how long could he work; to say nothing of covering him with barrel staves instead of whalebone, and lacing him up with a cart rope from shoulder to hips. What respectable horse would not balk at the manifest infringement of his liberty and the laws of his nature? and is man an exception to physical law?

But, say the ladies, "our dresses do not feel tight." Neither would a ring placed on a child's finger, and allowed to remain there until the child was full grown; but there would be a groove in that child's finger, and in the very bone within it, so that there would be no room between the ring and the bone for the circulation of the blood.

We become accustomed to tight dressing, and the soft parts of the body will not grow against hard pressure,—therefore the dress may not feel tight. A melon or pumpkin will grow between two rocks and not mar its rind. It approaches so as to touch the stones, and then extends each way in growth to its full size, but it is flattened in the middle, and half cut in two, like an hour-glass, and yet its confinement thus does not "feel tight."

But, say men and boys, "We suffer no inconvenience from wearing our pants tight around our hips." To this I reply as above. They say, too, that "they feel more free in action without than with suspenders." So they may around the shoulders, but let the pantaloons be loose enough to move as the person bends, and let the suspenders be made elastic, and no special want of freedom will be experienced.

Around the waist and hips, the very place where freedom of action and expansion should, of all the other parts of the trunk, be enjoyed, there is a tightness, compression and a destructive lack of freedom. If it be not felt as a serious physical inconvenience, it is because custom, like the taste of tobacco to its user, has made it a second nature.—Its functional effects on growth, digestion, and health, however, are not the less real.

We plant ourselves on this point, and claim that our position cannot be disturbed, viz;—the animal economy, from head to foot, should never be dressed in such a manner, as in the least degree to cramp the freedom of any action of the body or limbs. Let this be the rule with all, and one-half of our doctors might be spared to cultivate the soil.—*Phrenological Journal.*

For the New-Yorker.

THE CHILD'S PRAYER.

'Twas breathed at twilights holy hour
Beneath the greenwood shade,
Where 'mid the tall and branching trees
The fading sunlight played.
'Twas borne on high by angel wings
That, viewless hovered near,
And from his throne our Father bent
That trusting voice to hear.

O, prayer is sweet, e'en from a heart
That's steeped in guilt and woe,
A heart that's drank the deepest cup
Of grief that earth may know.
And holy is the tear that dews
The wanderer's glistening eye,
When earthly visions fade away
And Heaven is drawing nigh.

But childhood's fervent, trusting prayer,—
O, what on earth so pure?
Ne'er dreaming of the countless woes
Earth's children must endure,—
Childhood's sweet orisons arise
Unfearing earthly harm,
While leaning with a holy trust
Upon a Father's arm.

Jenny.

Written for the Rural New-Yorker.

THOUGHTS ON A CITY FUNERAL.

A few days since, while picking my way along the crowded walk I met the remains of one, who, perhaps but a short time before had been, like myself at that moment, an individual of the living tide so characteristic of an American city. A minute after, and the pall, the bearers, and those following the corpse to its last resting place, were gone, hidden from sight in the hurrying crowd. During the remainder of my walk as if suggested by this frequent occurrence, serious thoughts of life and death came unbidden to my mind, but not sad nor unwelcome. I thought how he had trodden the thronged pavement as I was now doing; how he too had longed for immortality; how diligently he had labored to leave his impress on the world. But he was gone, and as one who walks along the sea-shore at the ebbing tide looks in vain for traces of those who trod the same sands a few short hours before; so I looked in vain for something to tell of him who would pass that way no more. The busy crowd rushed on, as if those composing it were never to be borne, like him, for the last time along the noisy street, as if they were never, like him, to go from the jostling throng to the silent grave. They too, as I, were seeking to render ineffaceable their "foot-marks on the sands of time;" yet the next wave of death would leave nothing by which the eye of him who should come next could learn who had gone before.

Would I, too, be so soon forgotten?—Could I leave behind me nothing to tell the world I had ever been? My friends would bear me to my grave, beside which they would soon lie down. The wind and rain and frost would deface the stone by which loving hearts might seek to prolong my memory, and in a few short years the curious passer-by would step upon my grave, unconscious that the remains of one once as full of life as himself lay under the green turf on which he walked.

Then arose the question, "What is immortal?" Can I make my name perpetual among my fellows? Can I leave "foot-marks on the sands of time?" No; those sands are as an ivory tablet from which the pencil marks I made are soon washed by death that it be ready for him who follows me. Yet I am immortal, and transient as may appear my impress on the world, it lasts long enough for the Eternal to take from it a cast to meet me at the great day of account. Life is the form from which an impression is taken for the archives of the Most High. We are soon gone from the memory of the world; but a single gentle look, or word of love, may prove the origin of a train of events to characterize an age. How often has a smile nerved a drooping heart for noblest deeds? One kind act may turn a brother from vice and be one in a train of events to reform a nation. Thus may I be immortal, still working in the results of my labors when my name has long been forgotten on earth.

"They that be wise shall shine as the brightness of the firmament, and they that turn many to righteousness as the stars forever and ever." Scissac.

A Happy World.—Many think themselves to be truly God-fearing, when they call the world a valley of tears. But I believe they would be more so, if they called it a happy valley. God is more pleased with those who think everything right in the world, than with those who think nothing right. With so many thousand joys, is it not black ingratitude to call the world a place of sorrow and torment?—*Richter.*

It is in the power of every man to preserve his probity; but no man living has it in his power to say, that he can preserve his reputation, while there are so many evil tongues in the world ready to blast the fairest character; and so many open ears ready to receive their reports.

# Miscellaneous.

## THE POPULAR CREED.

BY CHARLES P. SHIRRAS.

Dimes and dollars! dollars and dimes!
An empty pocket's the worst of crimes!
If a man is down, give him a thrust—
Trample the beggar into the dust!
Presumptous poverty's quite appalling—
Knock him over! kick him for falling!
If a man's up, Oh! lift him higher!
Your soul's for sale and he's a buyer.—
Dimes and dollars! dollars and dimes!
An empty pocket's the worst of crimes!

I know a poor, but a worthy youth,
Whose hopes are built on a maiden's truth;
But the maiden will break her vows with ease,
For a wooer cometh, whose claims are these—
A hollow heart and an empty head,
A face well tinged with the brandy red,
A soul well trained in villany's school—
And Cash!—sweet Cash!—he knoweth the rule:
Dimes and dollars, dollars and dimes!
An empty pocket's the worst of crimes!

I know a bold and an honest man
Who strives to live on the Christian plan,
But poor he is, and poor will be,
A scorned and a hated wretch is he—
At home he meeteth a starving wife,
Abroad he leadeth the lepers life—
They struggle against a fearful odds,
Who will not bow to the people's gods!
Dimes and dollars! dollars and dimes!
An empty pocket's the worst of crimes!

So get ye wealth, no matter how!
"No questions asked" of the rich I trow—
Steal by night, and steal by day,
(Doing it all in a legal way,)
Join the church and never forsake her,
Learn to cant and insult your Maker;
Be hypocrite, liar, knave and fool;
But don't be poor!—remember the rule:
Dimes and dollars! dollars and dimes!
An empty pocket's the worst of crimes!

For the Rural New-Yorker.

## THE FELICITIES OF ILLNESS.

Were you ever ill; so ill that your friends feared to inquire for you, lest they might be told you were gone from their midst forever? No!

Then you know nothing of that state which is capable of affording, more than any other, unalloyed gratification to the senses. True, the illness is a rather serious affair, and withal not over agreeable; but then the recovery! The weakness when the crisis is passed, forbidding all mental exertion, which might hinder the perception of those indescribable sensations, known only to him who even yet seems suspended over the yawning abyss,—and needing but a breath to usher him into eternity. The feeling that you are loved with an earnestness, for which you dared not hope. The consciousness that warm, loving hearts are praising God for this unhoped for change, and asking in the name of the Nazarene for your entire recovery. To feel your head, which yourself have not strength to turn upon the pillow, raised by one gentle hand, while the other, unwearied through the long watchings by your bed, brings the life-giving cup to your lips; and then as your head is returned to its place, to feel smiling lips pressed softly to your own, and hear low whispered words of true, christian love, breathed close to your ear! And all this continued day after day,—during your long convalescence—with the outbursts of joy at every exhibition of returning strength, the watchfulness to anticipate your every desire,—your own childish gladness expressed in laughter, which you are unable to control—the consciousness of how very necessary you are to the happiness of those around you, more flattering than any words.

To know—to *feel* all this is enough to pay for all one suffers in the severest sickness. Words can not describe it. It is known only to those who have drawn very near the grave, and been recalled by loving prayers and gentle hands, to life.

It is enough to repay all yourself may endure; but what will repay the suffering, the agony of others, whose pain exceeds your own? And then, how many have no friends to watch beside their couch, and support their trembling limbs in the first attempt to walk!

It is *very* pleasant to recover; but many would willingly forego that pleasure and save their friends from the anxiety attendant on the preparatory steps to that most blissful portion of life. Suissac.

Friendship.—There is true enjoyment in that friendship which has its source in the innocence and uprightness of a true heart. Such pleasures do greatly sweeten life, easing it from many a bitter burden. A sympathizing heart finds an echo in sympathizing bosoms that brings back cheering music to the spirit of the loveliest. Be all honor, then, to true friendship, and may it gather yet more fragrant blossoms from the dew-bathed meadows of social intercourse to spread their aroma along the toil-worn road of life. T. E. W.

If ever you were dangerously ill, what fault or folly lay heaviest upon your mind? Take care to root it out, without delay, and without mercy.

## COMPLIMENTARY TO THE COUNTRY.

The Newark Advertiser discourses thus upon the influence which place has upon character:

Did you ever notice in the course of your travels, how people change in coming from the country to the city, only in the course of a single day? It was more observable in the times when stage coaches were the vehicles for travelers [illegible] now. Starting on a beautiful, serene morning from the quiet, cozy, country village, where it had been calling round from house to house for passengers, every inmate of the coach felt introduced to one another by the simple circumstance of such accidental position; or from belonging to the same vicinity, or town, at least for the time. On these easy and companionable terms they jogged along from town to town, occasionally taking in a passenger, and then again letting one out; but still keeping the number good, as the principal ones continued in company, for they were going to the great city.

But when they arrived within a dozen miles or so of the metropolis, a new face began gradually to creep over the company, or rather a new expression over their faces. Till then, no difference was perceptible between the city and the country bred. All were equal, and sympathetic. Now they silently laid aside by degrees their sweet, natural companionship, and resumed the old conventional badges of distinction, which had been forgotten among the mountains.—The hard and disagreeable characteristics of social castes begin to darken; and the late chatting, charming party, which set out together in the morning, and made each other happy throughout the day, has disappeared like the morning dew, and other very different actors have taken their places. It is a shocking metamorphosis to those who experience it for the first time. But it is so common to many now, such as visitors to watering places and the like, that they soon cease to mind it. The effect which *place* has on persons, brings to mind a homely comparison, and as it really resembles the operation that rennet has on milk souring, and resolving it into substances of very unlike qualities and appearance, we see no reason why the likeness, though vulgar, shall not be noticed.

This deterioration of character in persons approaching the city from rural scenes of more equal and sociable intercourse, has in some respects a parallel in the mountain stream. Issuing from lofty recesses, the water at first is delightfully soft and pure. Soon it becomes a river from little tributary accretions along its banks, continued to be marked by the same qualities, till it nears the ocean. Then it gradually acquires the impurities of a dense population, and the hard, brackish character of the mighty reservoir of waters, and at last mingles with its waves and loses its sweetness and softness forever.

## NOTHING IS IMPOSSIBLE.

Nothing is impossible. Strike out a new path—court honor, fame, glory, wealth.—All shall be yours, if you so will. But with the will there must be energy, courage, foresight, prudence. The heart must be steeled either to bear the shafts of envy, or to hear unmoved the sigh of the widow and the fatherless. In many cases the sweet joys of home must be foregone, and the wife considered an appendage, worth the money she saves; the children as only so many incentives to lay up the gold that perishes in the using.

Ask you for fame? Nothing is easier obtained. Turn your hat inside out, wear a shoe on one foot and a boot on the other; make yourself known by your oddities; get "posted up" about town; you are a marked man—the property of the public; you are famous, do what you will.

Ask you for wealth? Begin your search early. Sleep on your pallet of straw—toil till after the midnight hour—breakfast on a crust—eat no dinners—never allow yourself the luxury of a warm supper. Tie yourself to a penny, and be the bond slave of a dollar. Deny yourself the pleasure of a book—consider a newspaper a nuisance—forget that you have a soul; turn a deaf ear to distress—time for benevolence when you get rich; then you may set down with the pious reflection that your deeds are honest—for, good man, have you ever demanded more than your due?

What if your brother perishes in destitution and misery—art thou thy brother's keeper? What if that poor debtor died in a prison-house—was not his debt a lawful one? Was your demand more than the strictest justice might warrant?

Then you can take your gilded Bible, turn over its embellished pages, and its clear, beautiful print, rejoice the sight of thine eyes. But, what, if unthinkingly, they should rest upon the following passage:

"Thou hast sent widows away empty, and the arms of the fatherless have been broken. Therefore, snares are around about thee, and sudden fear troubleth thee."

Never think to get away from the justice of that sentence. Hedge thyself in with golden thorns as thou wilt, snares are round about thee, and sudden fear troubleth thee. —*Boston Olive Branch.*

When Anaxagoras was told of the death of his son, he only said, *I knew he was mortal.* So we, in all casualties of life, should say, I know my riches were uncertain, that my friend was but a man. Such considerations would soon pacify us, because all our troubles proceed from their being unexpected.

There is hardly any bodily blemish which a winning behavior will not conceal or make tolerable; and there is no external grace which ill-nature or affectation will not deform.

## FACTS ABOUT TEA.

In the ninth century certain Arabian doctors mentioned a fragrant and fascinating Chinese beverage, prepared from a plant called schah. After the lapse of some six hundred years—in 1633—Olearius discovered that tea was domesticated as a luxury among the higher ranks of society in Persia. Now, all through the wastes of Central Asia, the Calmucks, the Baschkiri, &c., tea is supreme. But their use of it is according to their condition. With them it is no drink, but a solid nourishment. It has no appearance of delicately rolled leaves, but sticks and stalks of the plant are made into heavy, stone-like cakes, of the color of tan-balls, and of the consistency of iron bolts. This is moistened and baked with the water of the steppes, mixed with the blood of animals, and enriched with the fat of beef, or mutton, and it is then eaten with spoons like a thick soup.

"It is poison," said an old woman to Dr. Johnson. "Madam, it may be poison, but I have been seventy years dying of it," said he, draining his sixth evening bowl.

In eight years the leaves of the tea plant are fully charged with their peculiarities.—In the ninth year they begin to lose them. Yet the plants are stripped sometimes to the eleventh and twelfth year—and hence the endless varieties of tea. Each year there are four harvests, of which that of February is the least in quantity and the best in quality. The April harvest is a kind of rowen, the second cutting of the best. That of June yields mainly large leaves, and that of August is of the inferior quality. A careful bath completes the preparation for picking, and then, with gloved hands, the work is commenced. An industrious workman may collect from ten to fifteen pounds in a day. But on the same day he must strew them upon a heated platter, and on the same evening wrap them in a cloth, and dip them for some moments in hot water. After they have dripped during the night, they are spread the next morning in hot iron pans, in which they are constantly stirred. They are laid upon mats, rolled with the open hand, completely cooled with large fans during the process, then skilfully packed in chests.

## POLITENESS.

Coming down Broadway last evening, wondering what some rowdy would knock us down for—for every man's turn has to come sooner or later, to be maltreated by rowdies and rioters in New York—before we knew it, we had run into a stout fellow whose presence obstructed the side-walk and knocked ourselves as far out of balance as we knocked him. With our blandest smile, we asked his pardon, and hoped we had not hurt him. "I'll thank you to look where you are going next time, Sir,—running into a man in that style," was his surly reply. "Pardon us, Sir, we answered, for apologising to a brute. We mistook you for a gentleman. Please keep out of the way next time," and traveled on thinking all the while what a surly crew managed matters in this world, growing fiercer with every block, and getting quite indignant at last with the cross world in general. Suddenly, darting aside to avoid three young sprigs who were pursuing their way, arm-in-arm, we came plump against a pleasant-looking gentleman who must have suffered some from the concussion, unless we received the lion's share of it. Again we asked pardon, not caring a straw, however, whether it was granted or not. "No consequence, Sir,—accidents will happen," said the gentleman with a bow that put us in good humor with him at once, and with all the world beside. There are a great many clever fellows around, thought we, and it is worth one's while to live a little longer just to get a glimpse of their smiling countenances and hear their pleasant words as we meet them. They go about sowing kind, charitable thoughts unawares. It is not necessary to invoke a blessing on the head of the truly polite man—every child in the street blesses him. But the churl—may heaven bless him, for nobody needs it more. —*N. Y. Times.*

## BEAUTIFUL IMAGE.

Mr. Webster possessed the poetic or imaginative faculty to a much greater extent than is generally supposed, or than one would infer from a perusal of his solid and argumentative speeches. One of the most beautiful and poetic images to be found in the range of English composition, is that employed by him in his speech on the Protest, in reference to the territorial power and conquests of Great Britain. He spoke of her as—"a power which has dotted over the surface of the whole globe with her possessions and military posts, *whose morning drum beat, following the sun and keeping company with the hours, circles the earth with one continuous and unbroken strain of the martial airs of England.*"

This image, Mr. Webster once said, occurred to him while he was one morning witnessing the parade at sunrise in Quebec. Mr. Edward Curtis, of New-York, was standing by his side, and when the drum beat, Mr. W. turned to him and gave utterance to the idea which several years afterwards he clothed in the beautiful language above quoted from his speech.

Be true and courageous.—There is nothing like courage in misfortune; next to faith in God, and in His overruling providence, a man's faith in himself is his salvation. It is the secret of all power and success. It is the secret of all good luck—so called.—It makes a man strong as the pillared iron, or elastic as the springing steel. And while others bow to chance and accident, he makes chance and accident bow to him; and he moulds them to his purpose, and harnesses them to the car of his fortune.

## THE HUSBAND'S NEW YEAR'S GIFT.

BY KATE WOODLAND.

It was not a casket of jewels rare,
To clasp on her neck and arm.
It was not pearls for her soft brown hair,
Or robes for her graceful form,
It was not rings for the gentle hand
That was pledged to him through life,
Nor the curious and rich of a foreign land,
Which the husband gave his wife.

But his step was light on that New Year's eve,
And his face wore a happy smile,
And "Mary," he said, "the children leave
To themselves and their play awhile,
And get your bonnet and shawl and walk
With me a little way to-night,
And together we'll have a pleasant talk,
'Neath the pale moon's silver light."

And slowly they walked o'er the little hill,
'Neath the beam of the lighted sky,
And he spake of the evening so bright and still,
And the starry lamps on high,
And the time when they sat 'till the night had sped
To gaze on their glorious tide,
Long, long ago when they first were wed,
And she was his fair young bride.

Then he talked of the home they had loved so well,
Of the home that was theirs no more,
Of the maple trees with their swing for Nell,
And the lilac beside the door,
Of the garden and spring where the roses grew,
And of every thing bright and fair,
Of all the joy and the bliss they knew,
Ere the bowl spread its fatal snare.

Then he paused, for the hand he held in his own
Was trembling, and cold, and weak;
And a glittering tear in the moon-light shone
As it rested upon her cheek:
And his voice was low when he spake again,
Of the tempter and the fall,
How the wine had fired his heart and brain
'Till he staked, and lost his all.

"And oh," said he, "on that New Year's night,
When I found that my home was gone,
I vowed that when next the sun should light
With his beam, a New Year's dawn,
My hand should restore the ruin I'd wrought,
And my promise hath not been vain,
Nor my toil and labor gone for naught,
For the cottage is mine again.

We have reached it, Mary, 'tis sad and lone;
Thine eyes to behold it lift,
And take it Mary, 'tis all thine own,
'Tis thy husband's New Year's gift:"
Her hands round his neck were tightly pressed,
Bright tears to her soft eyes crept,
And she laid her head on her husband's breast,
And he kissed her tears as she wept.

Carlton, N. Y., January, 1853.

For Moore's Rural New-Yorker.

## NEW YORK TO COUNTRY EYES.

BY ANNIE LINWOOD.

Dear Rural:—In obedience to the impulse of an undefined, yet irresistable longing to speak to some dear old friend, I write to you this chill December night. It is a long, long time since I held converse with your friendly pages, and my heart so yearns for communion with some congenial spirit, that I have ventured to intrude upon your patience. I cannot talk to the people by whom I am surrounded; they cannot understand me,—they never want what I do, so of course, cannot meet my wants. I have just as little sympathy with the world now around me, as *it* has with my tastes and feelings.

Poor silly thing that I was, to think a winter in New York would be something worth while—something I should enjoy—(or perhaps something to tell of in after time.) I ought not to have come, expecting to stay so long among the bustling, hurrying, jostling world, collected in this metropolis of our land. Oh! how I have already wearied of gay, uncongenial scenes, and longed for old familiar ones: dearer by far, to me, are the broad green fields of the summer time, and the white robed ones of winter, than all the fine things displayed in Broadway, from the Battery to Bulls-Head.

When one is far away from home, the next best thing to seeing friends, is to write to them; but I dare not take my pen to write home, for, surely as I do, all my pent-up, homesick feelings will break forth, and those I love, and who think me happy, will be distressed, and summon me home. And then the friends with whom I'm staying will open wide their worldly eyes,—and wonder: for they think life is *nothing*, out of New York; and I can give no reason for the step, only, that their society does not suit me, and that would'nt be just the thing.

But while I write, the night waxes later, and the wind rises higher; and with its roaring, as it comes sweeping from off old Ocean's troubled brow, over the Islands, through the narrows, up the river, and round about the house;—with the distant melody of Trinity Church bells' chiming, and the watchman's rattle—comes the soul's pining for home. Oh! how the feeling of utter loneliness comes over me, now and in the midst of the densest crowd, as well as when alone; making my poor heart ache, and throb, and swell as though 'twould break like the tenth wave of Ocean on the barren shore; and mine eyelids have closed nervously over unbidden tears, remanding them back to their fountain as unwelcome tale-bearers of the state of things within. And not only thus is it with tears, but cheerful, happy, independent thoughts and feelings, for fear of misapprehension, are all sent back to their source, there to congeal and form a bulwark of ice-bergs around a once happy, confiding heart. It is a pity ever to be obliged to take a lesson in deceit.—this wearing a smiling face, when the heart is like a tempest-tost vessel, agrees but sadly with my code of practice.

There is a something,—an air of repulsion, or a lack of sympathy about those by whom I am surrounded, that makes me *feel* my isolation; and doubly drear is it sometimes thoughtlessly made to me, until the full heart can bear no more, and scalding tears melt down the icy wall of reason and self-retreat. I know not what I should do without this safety-valve for pent-up feelings. In the retirement of my own room, I summon to my spirit's presence, father, mother, sister and brother: with them, again I tread the halls of my childhood's home, again I visit every favorite haunt: now my head is lying on my mother's lap, listening to her admonitions and loving counsel; now I am reading something to my father, or helping him form plans for gardening and farming, (for I confess to a decided partiality for things earthy.) and anon I see his looks of gratified pride and affection, as I accomplish some feat in housewifery, gardening, or horsemanship;—now a sisters arms are round about me, and her loving eyes are reading thoughts in mine, ere words can form them; and now a little brother's griefs and cares, hopes and joys, are laid open for my sympathy and approval. Once again, I am sitting in my accustomed seat in church and hear from the lips of the pastor I so much love, the words of peace and promise, of warning and rebuke.

All these scenes and joys I see and taste with a keener relish, when the world is still around me, and the pure bright stars, "the forget-me-nots of the angels," are keeping their ceaseless watch on high: and imagination sees the white robed angels going up and down, on silver ladders wreathed with flowers, from the "illimitable gardens" where those forget-me-nots do bloom, to this earth of ours, bearing good gifts to thankless, fallen man.

It is this very thanklessness, I fear, that makes me feel oft-times so wretched in the midst of so much abundance; but where is the affluence and luxury among strangers, even though they style themselves, "dear friends," that can compare with the poorest of home-comforts, surrounded by loving, trusting hearts?

Last Sabbath I attended Dr. Beecher's church, in Brooklyn, and, if the audience a man draws can be taken as any token of his talent, or merit, then indeed does Dr. Beecher occupy an enviable position. Such a crowded house of eager listeners, I never saw before; I've not seen any thing like it in New York: he seems to be as much beloved and listened to as his sister, Mrs. Stowe, in "Uncle Tom's Cabin."

He says *evil* is a gouty old monster, and could never stand, were it not that good comes along, putting a helping hand to each shoulder, raising him upon his crutches, helping him to stalk abroad over the land. And were it not that some good, respectable men, uphold license, and the liquor traffic, 'twould die for want of support. He thinks the temperance question ought to be made a matter of serious business consideration; taken separately from church and political affairs, and every man be known to be either in favor of, or opposed to drunkenness.

New York, December, 1852.

[*Concluded next week.*]

## GRIEF.

It is true that sore affliction maketh the heart sad, but time will at length restore joy and serenity. As cheerfulness promotes health and adds length to days, how important, if grief must at any time be indulged, that the proper remedy be applied to assuage it.

We find one sitting in solitude whose tearful eye and sad expression, bespeak the heart under sore oppression, from grief.—The hand of sympathy is extended, but it is not recognized, and is therefore of no avail. We pass on, and again meet the individual. Time has not mellowed his anguish, and taken the cloud from his brow, and in place is a calmness and serenity that speak of different feelings in the heart. What remedy is there for grief so effectual as Time? E. H. W.

Love of the Beautiful.—Women have a much nicer sense of the beautiful than men. They are, by far, the safer umpires in matters of propriety and grace. A mere school-girl will be thinking and writing about the beauty of birds and flowers, while her brother is robbing the nests and destroying the flowers. Herein is a great natural law, that the sexes have their relative excellencies and deficiencies, in the harmonious union of which lies all the wealth of domestic happiness. There is no better test of moral excellence, ordinarily, than the keenness of ones senses, and the depth of ones love of all that is beautiful.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JANUARY 15, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ THOSE who are forming large clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 30 cts. a copy, which is the lowest club price.

☞ SEE Terms, Premium List, &c., on last page.

### The Agricultural Press Advancing.

SINCE the advent of the new year, our "specs" have been greeted many a time with new features and attractions in the representatives of agricultural journalism. Many old, familiar friends have dressed up wonderfully, and appear almost as spruce and beautiful as—as—well, as our favorite, the RURAL! Nearly all seem prosperous—the hebdominals, semi-monthlies, and monthlies, alike bearing external and internal evidence of "Progress and Improvement." This is as it should be. The country owes the Rural Press a heavy debt for the vast work it has already performed, and the good it is accomplishing. One well conducted and widely circulated agricultural journal is of more real benefit to the masses—does more to enhance the true interests and prosperity of the country—than all the merely *party* prints in Christendom. Political papers are proper and necessary to a certain extent; but we hold that periodicals devoted mainly to the promotion of the Industrial Interests and Progress of the country, have the strongest claims upon the American people—upon a Nation of Farmers and Artizans,—and that they should be cordially and generously sustained by those whose interests they advocate and enhance. Hence we truly rejoice at the signal prosperity of our cotemporaries all over the land—that those who are doing so much to make the fortune of Country, are liberally sustained by a right-thinking and appreciative community.

—At present we have neither time nor space to particularize, but shall ere long pay our respects to exchanges which announce new editors or publishers, or have made other noteworthy changes—not omitting mention of such new recruits to the ranks of agricultural literature as may come under our observation.

### To Agents and New Subscribers.

PREMIUMS.—Agents and others interested are informed that, in consequence of the unusual and unexpected demand for the RURAL during the past three weeks, we have been unable to mail all the papers ordered, and also send promptly such books, &c., as have been designated as Premiums In all or most cases in which extra copies of the RURAL, or volumes of the Wool Grower and Stock Register, have been selected, we have forwarded according to request,—but have not had time to attend to mailing books, or forwarding other articles. We shall endeavor to comply with the wishes of our friends in a satisfactory manner, and with as little delay as possible.

In compliance with our offer (see Premium List on last page,) we forward the present, or a back volume of the Wool Grower and Stock Register (or a volume of the Farmer,) to *every person* who sends us $2 for a single copy of the RURAL. Hence all new subscribers who receive our monthly will understand that it is sent free, or as a premium,—and *not remit payment* as some have done. Those who do not wish the monthly, or prefer to have it addressed to a third person, will please advise us accordingly.

Those entitled to cash premiums will please retain the amount—for their *safety* and our *convenience*. They will thus be sure of the money, and save us the trouble (or deprive us of the pleasure) of remitting. Persons entitled to special premiums will oblige us by designating the books or articles wanted, and how they wish them forwarded.

Speaking of Premiums, we invite the attention of new subscribers and friends to our list on last page. It is not too late to form clubs, and we shall probably be able to supply back numbers of this volume for some weeks—and those who prefer can commence with this or any future number. We hope our new friends, as well as former ones, will see what may be done for the RURAL in their respective neighborhoods.

ADDITIONS TO CLUBS—Are now in order. After a club for the year is formed, any number of copies may be added at the club price. Agents, and those wanting the RURAL, will please bear this in mind, and govern themselves accordingly.

THE JACKSON STATUE.—On the 8th inst. the Brouze Equestrian Statue of JACKSON, was erected in Washington with appropriate ceremonies.—Hon. S. A. DOUGLAS delivered an eloquent oration, and then introduced the self-taught artist, CLARK MILLS, who spoke no word, but simply waved his hand, when the curtain was drawn back, and one of the finest bronze statues ever made was disclosed. It is self-poised, differing in this respect from all former works of the kind, It is now proposed to erect another to WASHINGTON, to be the largest in the world.

### Monroe Co. Agricultural Society.

THE following circular which comes from the Mouroe Co. Agricultural Society introduces a subject especially interesting to our readers in this vicinity:

At the Annual Meeting of the Monroe County Agricultural Society, it was decided to hold two Fairs for the exhibition of stock, implements, &c., the present year,—one upon each side of the river, to be held in the town furnishing the largest list of members previous to the June meeting. The premium list at each fair will be the same, and from present appearances, will be unusually liberal. Members upon one side of the river will not be allowed to compete for premiums upon the opposite side, without the payment of an extra fee of one dollar, but no charge will be made for exhibition only. Two Plowing Matches will be held during the year, one on each side of the river, to be located in the town which enters the largest number of teams for plowing, subject to the regulation mentioned above. An exhibition of household goods, butter, cheese, vegetables, manufactured articles, specimens of the fine arts, and fruit, will be held during the fall, as usual, at some commodious place in the city, at which liberal premiums will be offered.

This plan has been decided upon after much discussion and mature thought, with a view to awaken an increased interest in the agricultural resources and capabilities of the county, and to enable all more fully to participate in the premiums offered by the Society. The Executive Committee will use their best endeavors to have the fairs got up and conducted in a judicious, equitable and satisfactory manner, and ask for the hearty co-operation and assistance of every farmer in the county. By promoting a generous spirit of rivalry and emulation, by awakening the spirit of inquiry, it is expected much will be done for the cause of improvement. It is not expected that good farmers compete for the premiums merely for the sake of obtaining the small sum offered, but rather with a view to compare the products of their labor with that of their neighbors, enabling each other by a free interchange of opinion, and a discussion of practice, to adopt the best methods of tillage and culture. To accomplish an object so very desirable, we invite the attention of every farmer in the county.

To carry out the objects expressed, a committee of two in each town has been appointed to solicit members, and otherwise promote the object and aims of the Society. The Secretary will be prepared to furnish them all needed information, and tickets of membership will be supplied on application to him at the office of "Moore's Rural New-Yorker." H. C. WHITE, *Sec'y.*

F. P. ROOT, *Pres't.*

### The Rural not a Dollar Paper.

FOR the information of all concerned we again state that the RURAL NEW-YORKER is not, and cannot be, furnished at $1 a year. We do not supply it in large clubs, even where a hundred copies or more are taken at one post-office, for less than $1,25 per yearly copy,—and certainly cannot afford it to single subscribers at a less figure. Hence it is useless for any person to forward $1 in the expectation of receiving the paper a full year therefor. Of late we have received several dollar letters, with request to send the paper one year, or return the money—and the money has been returned. In future, however, we propose to retain the money in such cases, and send the paper as long as the amount received pays for it according to terms. This course will save us trouble, and, we trust, benefit those particularly interested.

Having heretofore fully explained *why* the RURAL cannot be afforded at $1—or as low as papers which are re-prints of daily and other journals—we consider it unnecessary to discuss the subject at length in this connection. The RURAL is made *exclusively* for its subscribers—not composed of matter which has been read and paid for by a different class of readers. Those who prefer papers simply because they are cheap, without regard to the quality or adaptation of the reading furnished, are referred to the political and literary weeklies published elsewhere. We cannot honestly furnish such a paper as the RURAL for one dollar—though *larger* papers may be obtained for that money.

THE RURAL AND THE MAILS.—Our paper will hereafter be mailed on Wednesday and Thursday, and should reach all its subscribers on the principal mail routes in this and adjoining States on or before Saturday—the day of its date. We are endeavoring to arrange our books, and time of mailing to different sections, so that the paper will reach the great majority of its subscribers as early as the day of its publication. Agents or subscribers who receive their papers at offices which have only one or two mails a week, and do not get their papers promptly will please notify us, and we will endeavor to facilitate matters at this end of the line, by mailing their packages early. Post-Masters will oblige us by communicating any suggestions which will promote, the desired object. With the aid of P. M.'s and Mail Agents, we hope to transmit the RURAL with unusual promptness and regularity,—and will cheerfully correct any errors or omissions on notification.

THE WEATHER.—On Wednesday of last week, the temperature changed to a milder type—on Thursday it was warmer—Friday and Saturday delightful days—Sunday cloudy, some appearance of rain—Monday cloudy and a little rainy—Tuesday morning, cloudy and warm—mud in abundance. The winter still continues of a very unusual mildness. Colds and influenzas are quite prevalent among the citizens of this place.—w.

☞ Bills on the Fulton Bank, Washington, D. C., are in circulation. There is no such bank.

## Literary Notices.

BENEDICT'S TREATISE: Containing a summary of the Jurisdiction, Powers and Duties of Justices of the Peace in the State of New York, adapted to the Code of Procedure in Civil Cases: Also, a Practical Treatise on their Jurisdiction, Duties and Authority in Criminal Cases, together with a great variety of Forms. By J. BENEDICT, Counseller at Law, Utica. Third edition, greatly enlarged and carefully corrected. Rochester: Wanzer, Beardsley & Co. 1852.

Judge HUMPHREY speaks thus of it:—"I have examined with some care the last edition of Benedict's Treatise, adapted to the Code, I think it is a valuable work. It also contains a very valuable summary of the powers, duties, &c., of Overseers of the Highways, and the proceedings and forms in the opening and closing Highways, together with a complete appendix of forms for Justices and others, in both civil and criminal proceedings. To all whose duties render a knowledge of the law and its practice in any of the matters above mentioned necessary, the work will be found a useful and most desirable companion."

The publishers will send a copy of the above work by mail or otherwise, to any one who will remit $3,50.

ANNUAL REPORT of the Board of Directors of the Rochester Athenæum and Mechanics Association, for 1852.

THE Report of this Institution appeared in the daily papers of this city the past week. From it we gather the following statistics:—The number of members is 1,509; the receipts into the Treasury for the year were $2,306 85; paid out $1,923 03; balance in Treasury, and Association free of debt, $383 83; expenditures for library for the year, in books and binding, $620 05; number of volumes in the Library 7,005; number of names on the Librariau's Register 1,325; newspapers kept on file 55; reviews and periodicals 20; cost of papers last year $142 50; periodicals $54 10; value of the Library $7,190 00; other property $1,070 00; total value $8,070 00; net proceeds from lectures last year $526 16. These figures show the prosperity of the Associatiou.

THE LADIES' REPOSITORY commences a new volume with the January number. It presents three steel engravings, and the magazine is enlarged to 48 pages. Among the contents of this number are articles by Bishop MORRIS, Dr. THOMPSON, Professors WELLS, LARRABEE and LIPPITT, ERWIN HOUSE, UPHAM, LONGFELLOW, ALICE CAREY, &c. The next number will appear under the supervision of the new editor, Rev. D. W. CLARK. Cincinnati: Swormstedt & Poe. Monthly $2, per annum.

THE "RAGGED-SCHOOL REPORTER" is the title of the organ of the new movement in New York, which looks to the physical and moral salvation of the outcasts of that metropolis. It is very neatly printed, for 50 cents a year. Orders can be sent to the "Central Secretary of the Society of the Iron Man, 49 Chamber st., New York."—The movement which this paper advocates is an important one. Industrial Schools for Children are yet to become the great practical physical regeneration of the embryo criminals of our cities.

THE WATER-CURE JOURNAL commences its 15th volume with the present year. The January number is a still farther improvement on one of the most beautiful publications of the day. The matter is worthy of universal attention, and the hints it contains, will save many an illness and doctor's bill, if heeded. New York: Fowlers & Wells.—Monthly, $1 per year with a large reduction to clubs. D. M. DEWEY, agent, Rochester.

THE NEW YORK RECORDER is an excellent Religious and Family Newspaper. It is ably conducted by Prof. ANDERSON, and worthy the patronage of the religious community generally—especially of members of the Baptist denomination, whose principles it zealously advocates. See prospectus on next page.

THE YOUTH'S CASKET.—We again commend this attractive and excellent magazine to attention and patronage. It ranks among the best publications of its class—is ably edited and beautifully illustrated—and deserves an extensive circulation. For terms, &c., see anvortisement.

### Albany Correspondence

ALBANY, January 8th, 1853.

EXCELLENT RURAL:—The Legislature is duly organized and the Government all in motion.—The Governor's Message you have received long ago, and the reports of the several branches of the Executive Departments, are nearly all in, and in course of printing.

From present indications, there will be some very interesting subjects of Legislation. Among them the improving of our public works will probably rank highest. It is of very great importance that the Canals should be speedily enlarged, and judging from what I hear said on all sides, there is a disposition to so proceed with the work.

Legislation will have little of interest, however, until the Committees are organized, and have made reports. This usually takes about four weeks. Six weeks more are spent in talking, and about two weeks in preparing bills. The result is a vast amount of very hasty legislation. There is more danger of two much than to too little law making.

More at another time. RUSTIC.

☞ We learn from the Albany papers that a Convention of Stove Makers from all parts of the State, has lately been held in that city, and that it was agreed to raise the price of stoves 25 or 30 per cent. This movement is rendered necessary by the large advance in iron. The past year was a very successful one, and stove makers have made very comfortable profits.

## Congressional.

### Synopsis of Proceedings.

TUESDAY, Jan. 4.—*Senate.*—After various resolutions and petitions, the Senate passed a bill appropriating $19,500 to discharge the judgment obtained against Col. FREMONT in England, for liabilities incurred in California, while acting in a military capacity in the service of United States, and another granting pensions to the widows of the soldiers of the war of 1812.

*House.*—A rambling debate was held in the house on Cuba, the Lieutenant Generalship, &c., and the West Point Military Academy bill passed.

WEDNESDAY, Jan. 5.—*Senate.*—The reading of the correspondence relative to the Tripartite Treaty respecting Cuba, occupied the most of the session. Mr. EVERETT'S part in the correspondence is an able paper.

*House.*—A pension was voted the widow of Gen. WORTH. Nothing else done of much interest.

THURSDAY, Jan, 6.—*Senate.*—The proceedings were of no general interest. Adjourned until Monday.

*House.*—Speeches were made on the old Gardiner claim and the Cuba question. The Deficiency bill, properly before the House, was not favored with even a passing mention.

FRIDAY, Jan. 7.—*House.*—The House passed thirty-four private bills, including one to relinquish to Ohio the unfinished portion of the Cumberland road in that State, Adj. to Monday.

MONDAY, Jan. 10.—*Senate.*—The session was devoted to a discussion of the CLAYTON and BULWER treaty, about which there seems to have been a misunderstanding.

*House.*—The House did but little, and that of no general interest.

## Legislature of New York.

### Synopsis of Proceedings.

WEDNESDAY, Jan. 5.—*Senate.*—Notices of eight bills were given, a resolution offered, and a report received on claims. The President announced that the Standing Committees would be the same as those of last Session.

*Assembly.*—Notice of some thirty bills were given in the House, two or three resolutions adopted, and Reports received from the Superintendent of the Bank Department and the State Engineer.

THURSDAY, Jan. 6.—*Senate.*—Six of the bills noticed yesterday were introduced. [When bills pass, we shall give their titles or subjects.]

*Assembly.*—Notices of ten more bills were given. The Messago was made the special order for Thursday week.

FRIDAY, Jan. 7.—*Senate.*—Various petitions were presented, referred bills reported, and bills introduced and noticed. The resolution for a Joint Select Committee on Canals after some debate was laid on the table. Adj. to Monday.

*Assembly.*—Notices were given of fourteen bills, and nine previously noticed. Adj. to Monday.

MONDAY, Jan. 10.—*Senate.*—Notices and reports of various bills were made, and several resolutions were offered which lie over under the rule.

*Assembly.*—Notices of eleven bills were given, four were introduced, and several resolutions offered and petitions presented and referred. The consideration of the Governor's Message was postponed until Friday.

### State Government for 1853.

Democrats in Roman; Whigs in *Italic.*

EXECUTIVE.

Governor,.....Horatio Seymour.
Lieutenant Governor,.....Sanford E. Church.
Secretary of State,.....Henry S. Randall.
Comptroller,.....John C. Wright.
Treasurer,.....Benjamin Welch, Jr.
Attorney General,.....Levi S. Chatfield.
Engineer and Surveyor,.....Wm. J. McAlpine.

CANAL COMMISSIONERS.

John C. Mather,.....Term expires Jan. 1, 1854
*Henry Fitzhugh*,..... do " 1855
Frederick Follett,..... do " 1856

The salary of the Secretary of State and Comptroller is $2 500 each; Treasurer, $1,500; Attorney General $2,000; Engineer $2,400; Canal Commissioner, $1,700; Inspector of State Prisons, $1,600 per annum.

JUDICIARY.

*Court of Appeals for* 1853.

C. H. Ruggles, Chief Judge. John W. Edmonds,
Addison Gardiner, Malbone Watson,
Freeborn G Jewett, Philo Gridley,
Alexander S. Johnson, *Henry Welles.*
Charles S. Benton, Clerk.

*Judges of Supreme Court.*

| First District. | Fifth District. |
|---|---|
| John W. Edmonds, N. York. | Philo Gridley, Utica. |
| Henry P. Edwards, do | William F. Allen, Oswego. |
| *William Mitchell*, do | F. W. Hubbard, Watertown. |
| James I Rosevelt, do | Daniel Pratt, Syracuse. |

| A. C. Hand, Elizabethtown. | *R. P. Marvin*, Jamestown. |
| *Daniel Cady*, Johnstown. | |
| Cornelius L. Allen, Salem. | *James Mallett*, Buffalo. |

ANOTHER ARCTIC EXPEDITION.—Dr. Kane's plan of a new Arctic Expedition is an overland route, founded upon the hypothesis that beyond the icy barrier which shuts out communication with the North Pole by water, there is an open sea, or basin. The course proposed to travel is a due northern line. This is a highly important expedition, and its results will be looked forward to with deep interest by the people of the United States, and by scientific men of all countries.

ANOTHER LARGE BOSTON BANK.—It is in contemplation by several prominent merchants to petition the Massachusetts Legislature for a bank charter, with a capital of $3,000,000, to be located on State street, Boston. This is the present amount of capital of the Merchant's Bank, which is the largest in that State.

## News Brebities.

—— There are one thousand one hundred banks in the United States.

—— On Monday last the Troy Budget entered upon its sixty-first year.

—— The name of the Kennedyville Post-office, Steuben Co., has been changed to Kanona.

—— Georgia flour of superior quality is becoming an article of merchandize in Charleston, S. C.

—— At last accounts, the small pox was raging frightfully at Havana.

—— A movement is in progress in Philadelphia to establish an Asylum for decayed merchants.

—— Thanksgiving was observed on the 18th of November, in the Sandwich Islands.

—— A new Post-office has been established at Pearl Creek, Wyoming Co. T. P. Miller, P. M.

—— The Bain line of telegraph, in this State, is now in the hands of the company owning the Morse line.

—— Hon. Thomas J. Marviu, of Saratoga, died at Havana on the 29th of December, aged about 50 years.

—— It is stated that the American Whig Review, has sold its subscription list to "Putnam's Mouthly."

—— Nearly 8,500 copies of Webster's Unabridged Dictionary have been purchased in this State for the use of school districts.

—— West Brighton is the name of a new Post Office just established in this county. William Luther, P. M.

—— A gentleman of Cincinnati, is engaged in preparing a complete descriptive catalogue of the botanical productions of Ohio.

—— A Mormon organ, called the Seer, has been started in Washington, by Mr. Orson Pratt, one of the prophets or elders of the Latter Day Saints.

—— On each of the three main avennes thro' Oswego, there is a toll-gate, of which the passers complain very justly.

—— During the month of December, property to the amount of a quarter of a million was destroyed by fire in Boston.

—— There is very good sleighing in Vermont and New Hampshire, and as far south as Greenfield, on the Connecticut river.

—— The Canandaigua and Niagara Falls Railroad in announced in the Batavia papers as to be opened (to-day,) the 15th inst.

—— The people of Kenduskeag (formerly part of Levant) are about building a plank road to Bangor, which will be the first one in Maine.

—— The Express Train, with five cars, ran over the Utica and Schenectady Railroad, (78 miles) in one hour and thirty-five minutes!

—— It is affirmed that by a law of Connecticut, now in force, railroad trains are prohibited from running during daylight on Sunday.

—— A fat ox, weighing over 2,000 pounds was killed in New York last week—said to be the largest ever slaughtered in that city.

—— The amount on deposit in the Government Depositories, subject to draft, is $13,165,945 of which $5,618,410 is in Philadelphia Mint.

—— The Christmas collection for the Catholic Cathedral, taken up by the clergy of Buffalo, amounted to $614,80.

—— The entire earnings of the Michigan Central Railroad for 1852, were $1,025,516; being an increase on the previous year of $5,534.

—— On New Year's day, Com. Gregory gave the men at the navy yard their time for the afternoon. The men gave him three hearty cheers.

—— The Salem fishermen are catching a species of fish which they call "Christmas fish." They resemble flounders, but are much better flavored.

—— Fifty bushels of flint wheat from Watervliet sold at Albany for ten shillings per bushel. Wheat raising was long since abandoned in that county.

—— Two steamers of 325 feet in length, and two of 330 feet in length, are in process of construction at Buffalo, intended for service next season.

——A gentleman who has kept a careful record of the amount of hard coal received in Boston and vicinity during the past year, reports the amount to be 384,371 tons.

—— The Directors of the Syracuse and Binghamton Railroad, contemplate putting berths in their cars, which, it says, can readily be done if the six foot guage is adopted.

—— The Raleigh Register says:—"It is stated in several papers that Hon. Edward Stanly designs to move to California, where he proposes to practice his profession."

—— During the past year 49 persons died at Boston upward of 80 years, of whom 33 were females. Last year the number was 47, of whom a large majority were also females.

—— A new Post-office has been established in Burke, Franklin county. The office is at the railroad station near "Burke Hollow"—and is called Andrusville. John E. Day, P. M.

—— Mr. Andrew Russell, of Washington Co., Va., was a member of the Electoral College from 1800 to 1836, and voted for Jefferson, Madison, Monroe, Crawford, Jackson, and Van Buren.

—— The Bedford (Ill.) Times states, that at the recent Horticultural Show in that town, the judges decided that a bundle of *white carrots* were the best *parsnips*, and gave the prize accordingly.

—— The number of deaths in Chicago for the last year, was 1,656, being just about double the number of 1852, and only 300 more than in 1850, and less than a hundred more than 1849.

—— The recent earthquake at Cruces laid one-half of the town in ruins. The loss is estimated at from $400,000 to $500,000. Four lives were lost, and several persons were injured.

—— There is some talk in England of introducing the Maine Liquor Law. In England 130,000 houses are opened for the sale of intoxicating drinks, at a cost of 65,000,000 pounds annually.

—— The steamship Pacific, at New York from Liverpool, brought a large consignment of butter, which is now rather dull of sale as well in this market as in that of New York.

—— Hon. Wm. R. King resigned his seat as U. S. Senator on the 3d inst., in consequence of continued ill health. It is rumored that the Governor will appoint Benjamin Fitzpatrick to fill the vacancy.

—— According to the census taken in 1851, there were of the "Six Nations" remaining in the State: Senecas, 2,679; Tuscaroras, 290; Cayugas, 139; Onondagas, 457; Oneidas, 213; Mohawks, 1. Total, 3,779.

—— The Pearl left Detroit for Sandusky on the 3d, but encountered ice so firmly lodged at the mouth of the bay that she could not make her way in. She was to leave for Port Huron on the 4th inst.

# News Paragraphs.

☞ The caloric ship Ericsson, left Williamsburg between the hours of 9 and 10 o'clock, A. M., on Tuesday. She passed the flag staff on Governor's Island at 9 56, and was abreast of Fort Diamond at 10,30.30, being a distance of 7⅞ miles, in 34 minutes and 30 seconds; ran down the bay, and rounded to below Spit buoy, at 11,-21, where the pilot anchored her, on account of the thick weather—and yesterday she returned to town. Her consumption of coal, including her firing up, was at the rate of six tons in 24 hours. Those most interested were perfectly satisfied with her success.

☞ The New York Tribune gives a table showing the mortality in the city of New York, and the diseases for 1852. The grand result is 21,558, viz:—Men, 4,612; women, 2,042; boys, 7,263; girls, 5,636. Of these, 13,781 were natives of the United States. Of the whole, 2,462 died of consumption; 882 of dropsy in the head; 770 of dysentery; 649 of apoplexy; 609 of scarlet fever; 652 of inflammation of the lungs; 563 of diarrhœa, and 498 of small pox.

☞ It is stated that the late Amos Lawrence has, for several years past, given away in charity, more than his income. He was busily engaged for several days before his death, in packing up clothing and other necessaries for poor and deserving objects. Within a few weeks he inclosed $100 to a young clergyman of limited means, who had lost his wife, and whom he supposed to be in straitened circumstances.

☞ Some of the friends of the venerable Dr. Beecher, have purchased an annuity of five hundred dollars a year, and presented it to him on New Year's day as a token of respect for his long and faithful services in the cause of religion and good morals. The letter accompanying the same is signed by John Tappan, Samuel H. Walley, Enoch Train, George W. Crockett, and S. C. Proctor.

☞ The last advices from England, quoting iron rails at £9 10@£10 per ton on board, which being a large advance on previous rates, will in its effect have an important bearing upon the construction of new lines in this country. At these rates rails will cost, laid down in this country, about $70 per ton, being an advance of over $30 within the past five months.

☞ The Cleveland Herald learns by letter from Sault St. Marie, that during the month of December there were two weeks of Indian Summer weather there, hazy, mild and temperate. The propellor Napoleon made a trip on Lake Superior, carrying supplies to the miners in the upper country, and returned in safety.

☞ The Attica Atlas states that a wolf was killed near that village last week. Not long since a fox was taken in the village. These animals are not supposed to have escaped from any private menagerie, but were remnants of the animal tribes that formerly ruled in the forests thereabouts.

☞ One of the tunnels on the Pennsylvania Railroad, now constructing, is to be 3,570 feet in length. Its area, at the widest space within the lines of the masonry will be about 21 feet, and the spring of the arch will begin 16 feet from the crown of the arch. About 400 men are employed upon it.

☞ James Smith, of Philadelphia, recently made a donation of $10,000 to Leicester Academy, Worcester county, Mass., on condition that $5,000 should be sub cribed by other parties before the first day of January, 1853. The condition was complied with.

☞ Gov. Seymour, in his Message, recommends the establishment of an asylum for the Insane in Western New York. The two State asylums are now filled, and yet less than a third of this unfortunate class of persons in the State are provided for.

☞ No less than 2,000 hogs reached Chicago in a single day by railroad. What a waste of time, labor and capital would have been expended, had these been brought to the city by team. How can we overrate the value of railroads?

☞ There are at present twelve Americans pursuing their studies at the University of Gottingen," eight of whom are engaged in chemistry. Of all the students in the Laboratory, it is said they are the most promising.

☞ Rev. Lyman Beecher has been presented with a life annuity of $500, by Messrs. John Tappan, S. H. Walley, Enoch Train, George W. Crockett and John C. Proctor. Dr. Beecher is 75 years of age.

---

Another Veteran Gone.—We learn with regret of the death of Geo. W. Willey, of Ogden, in this county. He was bron in East Haddam, Ct., and came to this county in 1804. He was about 85 years old at the time of his death. In 1849, he was awarded the medal of the Pioneer Society, he then being the oldest settler present at their meeting. The medal is now in the hands of Col. Newton, Secretary of the Society, and was last voted to Dr. Azel Ensworth, who is now about 94 years of age, and like Mr. Willey, was a native of Connecticut.—*Rock. Daily Union.*

---

The Poor.—By the report of Mr. McKay, Overseer of the city poor, we learn that he assisted in December, 1852, 195 families, consisting of 744 persons, at an expense of $517 31. The expenditure for December, 1851, was over $900. The mildness of the weather during the past month has doubtless materially lessened the expense.—*Rock. Daily Union.*

---

Butter Trade.—The Wooster (O.) Democrat states that Mr. Patrick has closed up his purchases of butter at that point for the season, but will commence again about the first of May. His total shipments were 80,088 pounds, for which the farmers received in cash $10,963. Probably 10,000 pounds was refused in consequence of its inferior quality. This butter is purchased for shipment to California. Next year it is expected that the amount exported will be largely increased. Dairymen will take notice that the article will probably be in great demand and act accordingly.

---

Present to Hobart Free College.—We learn tha Bishop DeLancey, has presented this Institution a beautiful Solar and Lucern Compound Microscope, valued at about $300. Prof. Fowler, pronounces it an instrument of a superior kind, and one worthy of being presented by the Bishop to the Institution.—*Geneva Courier.*

---

Robust Old Age.—Lewis Cass and Thomas H. Benton are two of the most robust and healthy men to be seen in Washington. Both are and have been remarkably temperate from boyhood. Gen. Cass has ever been a cold water man, and looks as if he would last a score of years yet.—Benton appears fresh and energetic as ever.

# California News.

## Arrival of the Northern Light.

The steamer Northern Light, from San Juan de Nicaragua, arrived at New York, Jan. 9, with San Francisco dates to the 15th ult.

The whole passage from San Francisco to New York only occupied 24 days.

The Northern Light brings 200 passengers.

The Sonora Herald is out in favor of the removal of the capital to that place.

At French's and Beadman's Gulch, the miners have been doing well. A rich lead mine had been discovered.

A petition for the adoption of the Maine Liquor Law is in circulation; also petitions for a better observance of the Sabbath.

The roads throughout a portion of the State are so bad that the stages have been abandoned.

The rainy season had commenced in good earnest throughout California, at the date of the departure of this steamer. The floods had risen to such an extent as to render many of the roads impassable. The rain, however, had not interfered much with the miners.

The market for nearly every description of produce had largely advanced since the steamer of the 1st. The greatest advance that had been realized was in the price of flour, which commanded figures never heard of since the discovery of the State.

Provisions were very scarce, and held at rates too high to admit of operations, except for the supply of actual wants. The general feeling in the markets was, in consequence of their rapid advance, quite animated.

Flour was selling at Columbia, Oregon, at $80 per barrel.

The first legal execution took place at San Francisco on the 10th ult.

A small portion of the city of Shasta was destroyed on the 28th of Nov. by fire. The total loss was about $100,000.

Catharine Hayes was achieving immense triumphs. The first choice seat, at auction sale, realized $1,100 premium.

# Foreign Intelligence.

## Arrival of the America.

The America arrived at Halifax, Jan. 9, with one week's later news from Europe.

Cotton market firm. Sales of the week 33,000 bales.

Liverpool Grain Market.—The Liverpool grain market was quiet at last week's prices.

Brown, Shipley & Co., quote western canal flour at 28s 6d; Philadelphia, Ohio and Baltimore 29s; Canadian 26@29s; sour 24@26s.

White wheat 7s 4d@7s 10d; red, 6s 6d.

Corn—White, 36s; yellow, 34s 6d; mixed, 34s.

There will be but little business doing till after Christmas.

Liverpool Provision Market.—New beef in firm request. Holders ask an advance on last quoted prices which have not generally been conceded. Pork again dearer, with an upward tendency.

The English ministry is not yet completed under the Premiership of the Earl of Aberdeen.—He is at the head of the Government, with the concurrence of Lord Lansdowne. It is expected, (though it does not seem likely,) that Lord John Russell will consent to take the Foreign Office, and Lord Palmerston the Home. Both Houses met on the 20th, when Earl Derby officially announced the resignation, and entered into the statement of the causes. D'Israeli, in the Commons, made a similar announcement.

A Peace Convention is to be held at Manchester, on the 27th and 28th of January.

It is said that Mr. Russell, M. P., for Limerick, is forming a company for a line of steamers between Limerick and America.

The news from the Continent is of no account. France is unusually quiet, even to dullness. Louis Napoleon had enjoyed a momentary conflict with the Senate, but it amounted to nothing save the backing out of the Senators.

In Spain a new Ministry is just organized under Roncali; nothing has come of it.

The Sclavic Insurrection in Turkey is increasing, finances are in a snarl, and serious trouble is threatened.

There are favorable accounts from the Cape of Good Hope, with regard to the rebellious Kaffirs; and also from Australia, stating that mining and agriculture promise rich rewards.

---

Death of Judge Carpenter.—Hon. Powell Carpenter, died on Wednesday afternoon, the 5th inst., at his residence in Scottsville. He had been riding in a sleigh, and having returned to his house a little after noon, ate his dinner as usual. Almost immediately afterwards he expired while sitting in his chair! Judge Carpenter was a veneradle and highly respected citizen. We are not able to state his age with accuracy, but think it must have been near eighty. He was among the earliest settlers of the southern portion of this county, participating largely in the privations which attended those who first cleared away the forest, and enjoying during a residence of nearly half a century, the unqualifisd respect, esteem and attachment of his neighbors.—*Daily American.*

---

Sad Accident.—The President elect had a very narrow escape, and met a very sad bereavement on the 6th inst., upon the railroad near Andover, Mass. Returning with his family from Boston, whither they had been in attendance upon the funeral of Mr. Lawrence, the car in which they were seated was thrown down a steep bank some twenty feet high, rolling over and over in its progress, and seriously injuring a number of the passengers. Gen. Pierce and Mrs. Pierce were but slightly hurt; but, on taking up their only son, a lad twelve years old, his father found that he had been instantly killed. What deep shadows fall, from this bereavement upon the high and brilliant path of public service into which Gen. Pierce is so soon to enter!

---

Peanuts.—Since the first of October, the farmers of the Isle of Wight county, Va., have sold at Norfolk, upwards of 15,000 bushels of peanuts, which averaged ninety cents per bushel, and the crop is not half exhausted. It is estimated that this county alone, though not remarkable for the productiveness of its soil, realized by its sales in Norfolk, quite $250,000.

---

Singular Coincidence.—Johnstown, in Fulton county, N. Y., is a steady whig "settlement."—Its Whig majority on the electoral ticket at the three last Presidential elections was as follows: 1844, Clay 383 majority; 1848, Taylor 384 majority; 1852, Scott 383 majority. Differing but a single vote in eight years.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Jan. 12, 1853.

The mild weather and consequent state of the roads has prevented arrivals from the country, and caused a slight decline of business and prices.

Flour.—Flour is still firm and without change. Of good Genesee, small sales to the trade have been made at $5,25@5,50, and extras, in which very little is doing, have ranged 50 cents higher.

Grain.—Wheat is less firm, the last foreign news having a depressing tendency. What little comes in sells at $1,18¾c per pushel. Oats in demand at 32@41c. Other grains unchanged.

Provisions.—Dressed hogs, owing to the warm weather, are not plenty. The few brought sell at $7 per cwt. Eggs are plenty and sell at 12½@13c per doz. Butter has fallen to 16@18c. per lb.

Hay has declined and rates at $8@13 per ton.

### Rochester Wholesale Prices.

| | | | |

**Farm Implements for California.**

BURRALL'S Prize Reapers, Mowers, Threshers and Separators, Clod-Crushers, Field-Rollers, Cultivators, Horse Powers, &c., &c. All *warranted* of the best material and workmanship—strong, compact and reliable—expressly for that market.

Made and sold cheap for cash by

THOMAS D. BURRALL.

Geneva, Ontario Co., N. Y. 159-8w.

**FARM FOR SALE.**

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

JOSEPH ARMSTRONG.

Pittsford, Monroe Co., N. Y., Jan. 7, 1853 152-tf

**VALENTINES,**

Address D. M. DEWEY,
Arcade Hall, Rochester, N. Y.

☞ The Valentines are now ready to send.

January, 1853. jan1-8feb5.

**THE EVERGREEN SWEET CORN.**

A FEW bushels of this new and valuable variety of corn from seed raised by Professor Mapes, for sale. Per bushel $10; half peck $2; quart $1. Sent by express to any part of the United States, on receipt of the money by mail. Seedsmen supplied. This is beyond all doubt the most prolific variety of sweet corn ever grown. No farmer should be without it. Address

ALFRED E. BEACH,

157-3t* White Plains, Westchester Co., N. Y.

**THE NEW YORK RECORDER:**

**A RELIGIOUS AND FAMILY NEWSPAPER,**

Published weekly by James S. Dickerson & Co., No. 122 Nassau St., New York. Edited by M. B. Anderson.

THE NEW YORK RECORDER has been so long before the public, that its character for enterprise, sound principles, and literary ability is well known; and the proprietors renew their pledges that they will spare no labor or expense to maintain the high character which the paper now bears, and to carry it forward in the same ratio of improvement that has marked its course for the many years that it has been before the public.

The place of publishing, at the Commercial Emporium of the Western Continent, gives the Proprietors facilities for making a newspaper, of which they will avail themselves to the fullest extent.

They have consummated arrangements for securing regular contributions and correspondence from various parts of our own country and Europe.

Special care will be given to the collection of Religious and Literary Intelligence, and to short Reviews of New Works as they are published. The department of secular news is under the care of an eminently competent person, and the Proprietors are able to give the news up to the latest hour of going to press.

The size of the paper has recently been increased to that of the largest religious journals, while its mechanical execution is in the first style of the art.

The best endeavors of the Editor and Proprietors will be put forth to make all departments of the paper subservient to the advancement of General Intelligence, Sound Morality, and Evangelical Religion.

**Terms, $2,00 a Year, in Advance.**

**Opinions of the Press.**

The New-York Recorder.—The prince of Baptist journals comes to us this week enlarged and improved.—It is determined to keep up with the "progressive spirit" of the age. It will, no doubt, command a circulation commensurate with the enterprise and energy of its conductors.—*Southern Baptist.*

The New-York Recorder.—For a number of years, we have regularly read this paper, and our interest in it has increased, instead of diminished. It has been very ably conducted, and has reached a good degree of prosperity. It was our privilege a few days ago to see the present editor, Mr. Anderson. The impression made on our mind during a short interview with him was decidedly favorable on his part. We doubt not that his readers will be pleased with him, and that the excellence of the paper at the head of which he has taken his station will be well sustained.—*Wilmington Intelligencer.*

New-York Recorder.—This excellent paper is published by James S. Dickerson & Co., and edited by Professor M. B. Anderson, late of Waterville College. Mr. Dickerson is a liberal-minded, warm-hearted Christian, "diligent in business," with the advantages of a thorough education. Professor Anderson is well known as a man of eminent talents and piety. We have reason to expect "great things," of the New-York Recorder.—*New York Chronicle.*

New-York Recorder.—Professor M. B. Anderson, late of Waterville College, has taken the editorial charge of the New-York Recorder, a large weekly paper in this city.—Although a young man, he is said to be a person of great learning and fine powers as a writer. The few specimens of the Recorder that we have seen give evidence of the ability of the new editor.—*New York Tribune.*

The New-York Recorder.—This paper has recently passed into the hands of James S. Dickerson & Co. Mr. Dickerson is an energetic business man, and not unacquainted with literature. The firm have ample pecuniary resources, and will undoubtedly carry forward the publishing of this valuable periodical with vigor and success.—Professor Anderson is one of our strongest writers, and we have no doubt that, for sound and vigorous thought, good judgment, industry, imagination and vivacity, he will not be surpassed by any editor in the city.—*Baptist Memorial.*

Professor Anderson, of Waterville, Me., succeeds the late editor, and brings to the duties assumed a reputation ripe in scholastic attainments, and eminent in moral science.—*New York Express.*

The Recorder has been a leading organ of the Baptist denomination; but we look to see its influence, as well as its circulation extended in the hands of Mr. Anderson, its present editor. We congratulate the friends and patrons of that paper, as well as the denomination generally, on having secured to its agency so strong and vigorous a mind; a man whose learning, talent, and energy, and sound common sense withal, promise to make him well known in the broad field to which he has devoted himself.—*Eastern Mail.*

New-York Recorder.—This excellent journal occupies a conspicuous position in the front rank of the religious press. Mr. Anderson is said to be a ripe scholar, a zealous Christian and an energetic man; and the highest anticipations are indulged with respect to the future career of the Recorder.—*Baltimore True Union.*

---

The American Phrenological Journal.—Vol. XVII., for 1853, devoted to Science, Literature, and General Intelligence. Published by Fowlers and Wells, No. 131 Nassau-st, New York.

Phrenology, the science of mind, includes in its wide domain a knowledge of all the faculties, passions and powers of the human soul; all the bodily organism over which the soul presides, with its structures and functions; and all the realm of nature to which man is related, and with which he should live in harmony. It includes a knowledge of man and its relations to God and to the universe. It is thus a central and comprehensive science, beginning with the constitution of man, and ending with all his possible relations, spiritual and mental. It is thus that self-knowledge is the base of all knowledge.

The Phrenological Journal, therefore, has a sphere that is universal. All philosophy, all science, all art, all the details of practical life, are legitimate subjects of discussion in its columns. The experience of twenty years has not been lost to us; nor amid the progress of this wonderful age, have we idly lagged behind. The Journal will endeavor to still be a little in advance of the age, and of its own former efforts.

Phrenology, the science which unfolds to man the laws of his own Physical, Moral and intellectual being, will still command our first attention; all other subjects being, in fact, but applications and illustrations of the principles of this science. We shall illustrate the varieties of cerebral development by spirited and truthful engravings of striking specimens of Human Nature, in its highest and lowest, its harmonious and discordant, its symmetrical and grotesque developments.

Young Men about launching forth upon the activities of life, and anxious to start right and understand their course, will find the Journal a friend and monitor to encourage them in virtue, shield them from vice, and to prepare them for usefulness and success in life. The various occupations will be discussed in the light of Phrenology and Physiology, so that nearly every one may know in what pursuit he would be most likely to succeed.

The Mechanic, the Farmer, the Professional Man, the Student, the Teacher, and the parent, will find each number of the Journal an instructive and valuable companion.

The Phrenological Journal is published on the first of each month, at One Dollar a Year. Now is the time to subscribe. Address all letters, postpaid, to

FOWLERS and WELLS,

Clinton Hall, No. 131 Nassau-st., New York.

This Journal is doing more to benefit mankind than all the gold-diggers in the two hemispheres. It is only $1 per year, and is worth ten times that in any family.—*Cleveland Commercial.*

Do you wish to acquire the most important knowledge to be learned in the world? Then know thyself. To do this, send for The Phrenological Journal and read it. No other work now published can be so useful to its readers, and especially the young men and young women.—*New Era.*

A journal containing such a mass of interesting matter, devoted to the highest happiness and interest of man, written in a clear and lively style of its practiced Editors, and afforded at the "ridiculously low price" of One Dollar a Year, must succeed in running up its present large circulation to a much higher figure.—*New York Tribune.*

☞ Clubs may be made up and single subscriptions sent in to the publishers at once, for the New Volume.—

Agents Wanted. 158-2t

**MARSHALL'S BOOK BINDERY,**

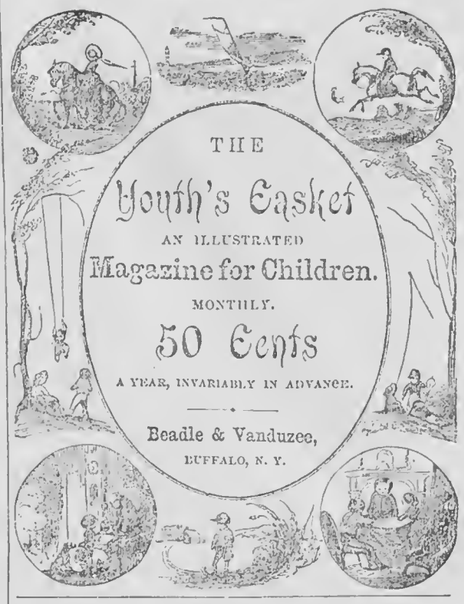
April, 1852. [128-tf] F. H. MARSHALL.



YOUTH'S CASKET FOR 1853,

**Improved and Enlarged!**

The second volume of the Youth's Casket will commence with the year 1853, and instead of sixteen pages to each number, as heretofore, there will be twenty-four pages; making an *addition of eight pages to each number*, and of ninety-six pages to the Volume, which will consist of nearly

300 LARGE MAGAZINE PAGES,

and all for the original low price of Fifty cents a year in advance.

We trust that our friends will bear in mind that this is one of the most beautiful, and *decidedly* the

**Cheapest Juvenile Magazine in the World.**

It is especially adapted to the tastes of the young, and comprises, in the range of its contributions, all the various branches of useful and entertaining knowledge, sports and pastimes: constantly embellished with the

MOST BEAUTIFUL ILLUSTRATIONS.

We would say, particularly, to all parents and guardians, that we shall be *untiring in our vigilance* that nothing of an immoral or inamiable tendency shall ever mar our pages, of which, indeed, we feel confident we have given ample assurance, by the manner in which we have conducted the Casket hitherto.

**Terms to Clubs.—Invariably in Advance.**

| | |
|---|---|
| One copy one year | ,50 |
| Seven copies one year, | 3,00 |
| Fifteen copies one year, | 6,00 |
| Twenty-four copies one year, | 9,00 |

In order that new subscribers may commence with the first Volume, we are induced to offer, in addition to the above, the following

EXTRAORDINARY INDUCEMENT!!!

☞ *To any person who will send us ONE DOLLAR free of postage, we will regularly mail the CASKET for 1853, and send them, POSTAGE PAID, the volume for 1852 neatly bound in cloth, with gilt back.*

**Our First Volume.**

☞ Bound copies of the first volumo of the Casket can be had as early as the first of December, for *seventy-five cents*, delivered to any post-office within three thousand miles.

Postage on the Casket within the United States, when paid quarterly or yearly in advance, is *only half a cent a month, or six cents a year.*

AGENTS WANTED.—Respectable and responsible persons wanted to canvass for subscribers for the Casket, in *every town in the United States and the Canadas*, to whom a liberal percentage will be paid. Specimen numbers for vol. II. 1853, will be ready the first of December, and supplied free of postage to any person wishing to act as Agent, or to persons desirous to help it along.

Certificates of Agency.—No persons are authorized to receive subscriptions for the Casket but such as have printed certificates signed by the publishers.

☞ Postage Stamps.—Subscribers and Postmasters who wish to send us fractional parts of a dollar by mail, can do so by means of postage stamps, which are always to be had at the post-offices, and they will be taken by us at all times at their full value if sent *post-paid.*

Address Beadle & Vanduzee, Publishers,
*Buffalo, N. Y.*

**To Editors, and our Exchanges.**

Our exchange and free list is already so large and expensive, that we are obliged to decline complying with many requests to exchange. We desire to accommodate all, yet cannot afford to send the Rural to the political and other ournals not in our line, without some return,—and hence make our friends this propositiou: Editors who give the annexed brief Prospectus one or two insertions—directing attention to the same editorally, and sending us a marked copy of paper—shall he entitled to the Rural for one year, (1853,) *without an exchange.* ☞ Those Editors who now receive the Rural and wish it continued in exchange for their papers, have only to give an editorial notice, embracing the substance of our prospectus, terms, &c.,—or they can publish as above, and not send theirs in return.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME NEWSPAPER,

**Designed for both Country and Town Residents.**

This popular Journal is now permanently established,—its high reputation and extensive circulatiou rendering it *the standard in its sphere.* It embraces more Agricultural, Horticultural, Mechanical, Scientific, Educational, Literary and News Matter, interspersed with numerous Engravings, than any other periodical in the Union,—and *has no superior* as an Agricultural, Literary and Family Newspaper.

Its various Departments are so conducted as to render the contents of the whole paper *Useful, Pure and Entertaining.* The Fourth Volume, commencing January, 1853, will surpass either of its predecessors. As our motto is Excelsior, we shall use all the essential requisites to fully sustain the acknowledged standing of the Rural as the

**LEADING WEEKLY OF ITS CLASS!**

The high literary and moral tone of the paper, renders it a safe and desirable companion for the Young,—and one of its special objects is to Instruct, Entertain and Improve all members of the Family Circle. Each number embraces the latest and most important News, briefly yet definitely stated—Reports of Grain, Provisiou and Cattle Markets, &c.

The New-Yorker is published in the best style. Each No. contains Eight Double Quarto Pages, (forty columns,) illustrated with handsome Engravings. A Title Page, Index, &c., at the close of each volume, complete for binding.

**Terms**—In Advance:—*Two Dollars a year—$1 for six months. Three copies one year for $5; Six copies, and one to agent, for $10; Ten copies, and one to agent, for $15; Twenty copies, for $25.* ☞ *Large Premiums for subscribers. Specimen Numbers, Premium Lists, &c., sent free to all post-paid applicants. Give us your address.*

Subscribe Early! if you wish to commence with the new year and volume. Subscription money, properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
December, 1852. Rochester, N. Y.

Moore's Rural New-Yorker, valuable for its illustrations, and for its fidelity as an organ of the country—its peculiar interests and pursuits. Mr. Moore ought to make a fortune out of his Journal, and we trust he will for he is helping to make the fortune of the country. We bid him "God Speed."—*Ohio Statesman.*

We think it a model paper for the farmer's family, and of a kind much more likely to be patronized, than those purely agricultural. If we were to start a periodical again, it would be in imitation of the Rural New-Yorker.—*Am. Agriculturist.*

Its leading feature, perhaps is agricultural: but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Chris. Herald.*

Moore's Rural New-Yorker is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in its extracts and subjects for editorials, and opens rich, like a honey comb, —having sweets in every cell.—*New England Farmer.*

The Rural New-Yorker, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

Specimen number of the Rural New-Yorker, and of the Wool Grower and Stock Register, furnished on application.

# Poetical.

## AN AMERICAN EAGLE.

BY CHAS. H. PEABODY.

I.

I saw an eagle in the sky—
I watched it with a steady eye,
'Till it mounted up so high,
'Twas lost to sight.
But presently it came again
'Mid thunder, lightning and the rain,
A thing of might!

II.

I saw it sailing slowly round,
Regardless of the thunders' sound,
While joy within that storm is found,
Or else why there?
I gaz'd and gaz'd, enraptur'd then,
To think how high that bird had been,
Nor lightning scare!

III.

I thought if this my soul might go
As calmly through this world of wo,
And mounting upward, once might know
The scenes of Heaven—
How happy then that soul might rest,
Once taken in amongst the blest,
Its sins forgiven!

# Rural Sketch Book.

## THE BOY ARTIST.

BUY IMAGES.

"IMAGES! buy Images!"

Such was the cry of an Italian image-seller, as he proceeded on his way down one of the narrow ill-paved streets of a little town in the Potteries.

"Who'll buy images? Vill you buy one, sir?"

The words were addressed to a little ill-clad boy, who gazed wistfully up at the miniature sculpture gallery on the head of the Italian vender. The collection was made up of old and modern statues, mixed up with Prince Alberts, Wellingtons, and Napoleons crossing the Alps. There were some of Pradier's lovely representations of soft and delicate women, Canova's dancing girls, Venus, Isis, Apollo, Belvidere, and a beautiful cast of the boy extracting a thorn.

"Vill you buy one?" repeated the dark-eyed Italian to the boy, who still followed, gazing eagerly at the miniature statuary aloft on the man's head.

The boy turned away with a sigh:

At that instant, a gentleman alighted from his horse, at the gateway of a large pottery of the little town, and looked about him for some one to hold his horse. He caught the eye of the boy, and beckoned to him with his finger.

"Come here my boy, and hold this horse for an instant; I'll be back presently."

The boy at once ran up, and took the reins of the horse to hold it, but still he gazed after the receding Italian as he paced slowly down the street, echoing his cry of "Images! buy images!"

Nearly an hour passed, and the gentleman at last issued from the gateway.

"Come my boy," said he, "I have kept you longer than I meant to. Here's a shilling for you. Will that do?"

"O yes, sir, and thank you sir! thank you indeed, sir!"

The boy was quite fervent in his repetitions of gratitude.

"You are a good little boy. What is your name? Where do you live?"

"In Back Lane, sir. My name's Aleck Williams. I want work, sir, if I can get it, for we are very poor."

"Why, we want boys now. Here, Davis," calling to a man who had gone out of the gate-way after the gentleman; "here's a boy wants work. See if you can't take him in. I like the look of the lad. Find out who his mother is, and let me know to-morrow. Yes, my boy, you can come back here to-morrow. Davis will try and find some work for you."

"Thanks, sir, many thanks," said the boy; "I should like nothing better than to get set to work in the Pottery."

"Very well." And the gentleman rode away: Davis retired within the gates again; and the boy remained standing in the street, looking at the bright shilling in his hand.—A thought seemed to strike him, and he darted off down the street after the image seller.

He was nowhere to be seen. The boy peeped into the public house door; there were no images there. He glanced along the back lanes; the image seller with his precious load had disappeared. He had, doubtless, proceeded along the highway toward the next town. Away went the eager boy after him.

"He cannot have gone so far," said the boy to himself; and I shall soon make up to him. Those beautiful images."

A sharp turn of the road, which he had now reached, showed that he was right in his surmise. The Italian rested under a hedge, which shaded him from the hot sun; and his miniature treasures of art were laid on the grass beside him. They looked still more beautiful than before, their dazzling white relieved against the fresh green of the hedge-row and the grass. The sun, which here and there streamed through the open foliage of the hedge, fell upon the figures, and brought out their beauties in glorious light and shade.

The Italian lifted a small square box from his tray, and taking therefrom a pair of medallions, he held them up before the boy.—They were a pair of copies from Thorwaldsen's "Night" and "Morning"—two small circular medallion tablets, perhaps fuller of grace and beauty than any tablets of equal compass can display. Look at "Morning," bounding from her eastern gorgeous chamber, scattering roses on her way; her sweet lips half-opened, as if humming praises to the spirit of All Good. You can almost fancy the air filled with sweet sounds—the song of the lark, the hum of bees, the lowing of cattle, the chitter of insects, rising up with a thousand voices to herald the morning on her way. And then the unutterable grace, repose, sweetness, and quiet joy of that radiant Queen of the Day, floating in soft drapery, with the glad babe in her loving arms—borne onward in light and love through the sweet air. The second tablet represents the "Night," with drooping head—the child nestling in the mother's breast, while the owl flits abroad with its "Tu-wit, too-hoo!" and the weary sons of earth, sink to rest after the toils of the day. Never before, in so small a compass, did the youth gaze on so large a treasure of beauty. He bowed his head over these pictures in plaster, and almost wept for joy.

What would buy them? Alas! here was but his poor sixpence, and he had already pledged it for the Boy and Thorn. And the other sixpence he would keep sacred.—That, at least, must be taken home to his poor mother, with whom sixpences were so scarce. He yielded up the medallions to the image seller, with the remark from the depth of his soul—"O, how beautiful!"

The boy had almost run himself out of breath, and he slowly approached the place where the Italian lay eating his bread and cheese. The man looked up and smiled.

"Vat then, leetle boy; you vant to buy images? very beautiful images."

"Oh, they are, indeed," said the boy; "but I'm afraid they are too dear, and I am very poor."

"Vat you got? how mooch?"

"Only sixpence to spend," said the boy, "the other sixpence is for mother."

"Oh! you got von shilling! I give you beautiful cast for von shilling."

"I cannot spend it all," said the boy: "but if you can let me have this"—pointing to the Boy and the Thorn,—"for sixpence I'll give it you."

"Too leetle! It's worth two shillin'."

"Ah!" sighed the boy, "then I can't buy."

"But stop," said the Italian, as he seemed to be turning away, "you poor lad—me poor man too; but you love fine casts; you ver good taste—yes, ver good. Dat cast is after de antique."

"And what may that be?" asked Aleck.

"Ancient art—the old stationary of my noble and glorious country—Italia, Rome! Hundreds of years—perhaps a thousand years ago, de bronze statue of that body stood in de Roman Capitol.—"

The man shaded his eyes as he spoke.—Perhaps thoughts of home, and of the bright sunny south, the land of his birth, flashed across his brain. He sighed and continued—

"You see de beautiful proportions—so simple, so graceful and true. Ah! de old artists knew how to vork de grand statues! But look you here, boy; you love beautiful little casts. See dere, now."

The Italian seemed to be moved with the boy's reverent admiration of his treasures. You cannot buy them? he asked.

"No," said the boy, "I cannot. There is the sixpence for the cast; it's all I can spend now. Some other day if I should ever see you again—"

"I'll tell you vat," said the Italian, "you love art, my good boy; and as here is von of my 'Mornings' vid a damage in her, I'll give it you. Dere, good boy! take her!"

The boy's eyes glistened with delight.—He grasped the hand of the Italian, whose eyes glistened too. He overpowered him with his thanks; and the cast-seller was more than repaid by the joy with which he had filled the heart of that ardent youth.—Indeed, there is no luxury experienced by the poor equal to that which they feel when doing a kindness to one another.

The boy then prepared to set out home with his treasures, and the Italian to proceed upon his journey. They parted, after a tender leave-taking; for a friendship had already sprung up between these two—tho' born on soils separate from each other—through their common love of art, which, like a touch of nature, makes the whole world kin.

"And what is that you have brought home with you, Aleck?" asked the mother, after the boy had told his story of the morning's adventure with the pottery lord, and placed the reserved sixpence in her hand.

"It is a beautiful cast, which I bought for only sixpence," said he; "and then look at this beauty!" holding up the medallion of "Morning," as he spoke.

"I see nothing in them," she coldly observed, "they are only bits of stucco. And you gave sixpence for such things! Well!" And in mute astonishment the mother held up her hands.

How often is it that the object which possesses so much beauty for one is so much dead matter to another. Here, the boy's whole soul had been moved, his very nature transformed and quickened into new life by the objects which to his mother were only so much stucco! Thus, to some, the great creation of Raphael is only so much canvas, spoilt by colored earths spread upon it in oil; and grand old abbeys have not unfrequently been pulled down to build barns with—they were only so much misused stone and lime! Only the true artist sees a meaning in beautiful forms; and Aleck Williams had the temperament of a true artist, though but a boy.

But the prospect of his being taken in at the works was a thing which the mother could appreciate, for it meant bread and meat, and clothes, and firing; and though the sixpence had been thrown away by her boy upon the "stucco things," she rejoiced in the good fortune which had otherwise befallen him.

In good time, Davis called at her house—found Mrs. Williams to be very poor, but a frugal and cleanly woman, who bore a good character for industry and honesty among her neighbors. In fact the boy could not have had a better. His mother was unexceptionable. So he was taken into the pottery, and set to work, at first in the lowest department, that of driving the lathe-wheel.

The boy conducted himself well, and was gradually advanced to higher departments. But we must mention the circumstance that led to his first decided rise.

One day, the master of the works who exercised a kindly supervision over the boys, when passing the place where Aleck labored, during the hour of rest, while the other boys were playing or lounging about, found Aleck silently occupied in a corner. What could the boy be about?—He walked up to him and glanced over his shoulder. The boy had picked up some waste clay from about the lathe, and was busy modeling a clay figure after his cast of the Boy and the Thorn. Here was the first fruit of "Buy images."

"What, my boy," asked the master, "do you model? That is really very well done! Where have you learned this? That back is admirable! How is it you know anything of this sort?"

The boy rose up blushing scarlet. He could scarcely speak at first, caught as he had been in the act.

"I have only practised a little at home, sir. I like it, and I have a cast of this, which I am trying to copy. It's very badly done."

"Not at all. Davis come here. Do you see that? The boy has a genius for that sort of thing. You must put him in the designing shop. He is too good for the wheel. The boy is an artist by nature."

"Very well, sir," said Davis; "I am glad you like the boy. He is a very diligent, well-conducted youth; and we havn't one in the place who is steadier or more attentive at his work."

"Good—good," observed the kind master; "go on as you have begun, boy, and we'll soon make a man of you."

The boy had, however, the right stuff in him to make a man of himself. But a word of kindly encouragement, and a little help from an employer, at the right time is worth untold gold to a diligent youth; and Aleck Williams was acutely sensitive to every word of praise or censure, though he was always most careful to avoid the latter by his steady good conduct.

At home, usually, by the fireside, Aleck busied himself in drawing his model boy.—Occasionally, he would bring from the pottery a spoilt pattern sheet, and labor to copy it with his pencil. The art of modeling deer, and holly-trees, shepherds and shepherdesses, birds and beasts, on the exterior of jugs and bowls, was then in its infancy. Still he labored to acquire this art. He was not satisfied with this, but attempted new designs, and even aspired to model his favorite "Morning," as a design for a water jug.

Such efforts are never without their results. The mother often thought her boy was but wasting his time, and was even disposed to scold him because he did not run about and play like other boys. But Aleck's attraction was among his models, to which he was now able to add, by the expenditure of a sixpence or a shilling from time to time—though his mother wondered at his passion for these "rubbish of stucco images." Indeed, Aleck sometimes feared lest they should be swept to the door.—Nevertheless, he went on persevering, and aiming at excellence, though he knew it not.

Aleck was taken into the modeling shop, and to the astonishment of his fellows of much greater age and longer standing than himself, he at once took rank as one of the best workmen. He was encouraged to design new patterns—the business of many of the best houses depending upon their superiority in this respect. He was left to follow his own tastes; and now his early models—his much despised "stucco things"—stood by him in good stead. They had cultivated his taste, and educated him in the art. He strove to model in the same style, and the sight of them, and of similarly pure designs, never failed to stimulate him to fresh efforts. He endeavored to design and to draw patterns in the same style, and he succeeded. The house became celebrated for its classical designs. They were even publicly praised. Orders flowed in; and the success of Aleck as a designer was decided. He distanced all his competitors.

The young man's foot was now on the ladder of fortune; but of fortune he had never thought. He but followed earnestly and purely the bent of his own genius.—His whole happiness was concentrated in art. He lived, thinking of it by night, and laboring at it by day. His designs were generally after the antique, by which he obtained, from day to day, increased means of studying; but many of his own original, designs, especially of cupids and children at play, with which he adorned the exterior of water jugs, were often extremely beautiful.

As he grew older, and came occasionally into contact with artists and men of influence, the advice was occasionally given him to "turn artist, and devote himself to modeling and sculpture in their highest forms."

But his modest answer was—"No! I am satisfied if I can bring Art, through means of the articles in daily use, into the homes of the people, even the poorest. Let me design an object of beauty, which infinitely multiplied, may gladden thousands of eyes in all dwellings—which may teach beauty and grace from every tradesman's tea-table, and every parlor chimney-piece, and every poor house-wife's plate-rack. I would rather labor to make art a familiar thing in the dwellings of the poor, than to cultivate it as a sickly exotic for the sculpture galleries of the rich."

In fact Aleck had resolved to popularize art, and extend its influence among the people; and with this end he went on laboring in a high and noble spirit.

It would take too much space to detail the various stages of his progress. In all worldly respects he prospered. He removed his mother from Back Lane to a comfortable house on the outskirts of the town, whither he had all his early casts and models removed—including his favorite "Boy with the Thorn," and the chipped medallion of "Morning." He had long since been enabled to purchase more costly specimens—but these comparatively shabby casts were dear to him, as they had first awakened in him his intense admiration of the beautiful in art. His mother, growing old, learned to admire the character and tastes of her noble son; and she no longer spoke a word in disparagement of his "stucco things."

When Aleck heard the cry of "Buy Images," now, he never failed to recall to mind his past encounter with the kindly Italian; and he peered in the faces of all the image men in the hope of recognizing him. But he never had the good fortune again to meet with his first helper in the art.

In due time, Aleck Williams' name was joined to his master's in the business which he had so greatly contributed to extend, and in a large measure to create. The works were much enlarged, and many hundreds of additional hands were maintained in regular employment through his instrumentality. He established a school of design and modeling in connection with the works, together with evening classes and libraries for the use of the workmen—remembering the difficulties which he had himself encountered in the earlier part of his career for want of such facilities.

In conclusion, it may be added, that at this day, the porcelain Parian statuettes, and the china and stone ware articles, manufactured by the firm of which the subject of this sketch is now the active head, are universally acknowledged to be unequalled for their beauty and purity of design, as well as for more substantial and useful qualities. Nor did and article exhibited at the the Great Exhibition of 1851, command more general admiration than those displayed at their table.

When any poor Italian, then, in future cries "Buy Images!" along the street, let the kind reader recall to mind the features of this little story.

---

A NON SEQUITUR.—Our Binghamton friend, (H. R. B.) has certainly "got us" handsomely. As thus:—"In your 'Knick-Knacks' I see the question, 'Can there be a rule without an exception?' Yes; the nasal organ is indispensable to a comely human countenance. 'How beautiful is the face of nature;' yet we look in vain for a nose!' "Wrong there, Knick; to wit:—ANTHONY'S NOSE. I have seen it!" The "argument" is a *non sequitur*; and we "confess the soft impeachment."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

## THE SMOKE-SNAKE.

To construct this pretty little toy, take a square piece of stiff card, or sheet copper or brass, about two-and-a-half or three inches in diameter, and cut it out spirally, so as to resemble a snake, as in the engraving. Then paint the body on each side of the card the colors of a snake; take it by the two ends, and draw out the spiral till the distance from head to tail be six or seven inches, as in the figure. Next, provide a slender piece of wood on a stand, and fix a sharp needle at its summit; push the rod up through the spiral, and let the end of the spiral rest upon the summit of the needle. Now place the apparatus as nearly as possible to the edge of the mantle-shelf above the fire, and the snake will begin to revolve in the direction of its head; and if the fire be strong, or the current of heated air which ascends from it be made powerful, by two or three persons coming near it, so as to concentrate the current, the snake will revolve very rapidly. The rod should be painted so as to resemble a tree, which the snake will appear to climb; or the snake may be suspended by a thread from the ceiling, over the current of air from a lamp. Two snakes may be made to turn round in opposite directions, by merely drawing out the spiral of one from the upper side, and of the other from the under side of the figure; and fixing them, of course, on separate rods.

For the Rural New-Yorker.

## ALGEBRAICAL PROBLEM.

WHILST chatting with a youthful maid,
Said I, "your age I'd like to know;"
"If you will solve, kind sir," she said,
"A question I will ask,—'twill show."

"If to my age there added be
A certain number minus three,
And to his sum you add its square,
'Twill ten times sixty-five declare—
Then to the square root of my age
Itself you add,—and I'll engage
Five-sixths the sum of twice—you'll see,
This certain number,—it will be."

Now unto me the answer show
In just a week or less;
And how you do it, I would know,
For 'twill not do to guess.

East Bergen, N. Y., 1853. T. M.

## ANSWER TO ENIGMA, &c., IN NO. 2.

Answer to Musical Enigma.—*"I've left the snow clad hills."*

## TO AGENTS AND OTHERS.

ENCOURAGED by the brilliant success which has thus far attended the publication of MOORE'S RURAL NEW-YORKER, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* PREMIUMS. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the RURAL NEW-YORKER from any one town in *the State of New York*, IN PROPORTION TO ITS POPULATION, (according to the U. S. census of 1850.) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in BOOKS or AGRICULTURAL IMPLEMENTS, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the RURAL and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

---

MOORE'S RURAL NEW-YORKER is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The RURAL NEW-YORKER we can recommend, conscientiously, as pure, good, interesting, and useful—calculated to make every family into which it is introduced, both wiser and better.—*Arthur's Home Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the NEW-YORKER is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers.—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 4. ROCHESTER, N. Y.—SATURDAY, JANUARY 22, 1853. WHOLE NO. 160.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper,**

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### MEADOWS AND PERMANENT PASTURES.

PROMINENT among the productive interests of our State, are those of Grazing and the Dairy. The hills and valleys, the pure streams and fresh air, of our more mountainous counties, are peculiarly adapted to the feeding of cattle, sheep and horses, and to the profitable results of well-ordered dairying. This branch of farming has there obtained a preference, and, though statistics show a decrease, in some instances, of the number of domestic animals, they also show an increase in some of their products,—indicating improvement in breeding and better care in feeding and management.

Rich and permanent pastures for feeding, and productive meadows and well cultivated fields for hay and fodder, are here of primary importance. Properly speaking, meadows are fields of *cultivated grass*, and a system should be adopted and practiced to make them really such. We sow Clover seed, which runs out in two years; or Timothy, which alone, though yielding a nutritious hay, gives but little aftermath, and hence cannot create good pasture grounds. These characteristics of the grasses in common use, show that neither of them are fit for *permanent* pastures; and that we must seek for plants not only possessing the most nutritive elements, but also best adapted to our soil and climate.

The nutritive elements of grass are owing chiefly to the sugar which they contain; as these are in different degrees, it forms another characteristic to guide us in the choice of pasture and meadow grasses. Again, some grasses ripen their seed as early as June, others in July, and others in August. It is well known, also, that certain classes of wild grasses are the natural occupants of our fields—and upon examination their variety is found so numerous, that every month, nay, every fortnight, brings some particular class to maturity; hence the rich supply of herbage for a long portion of the season. It is known further, that some grasses do not mature until the second year, while others give an early profusion of leaves, with a straw of little value.

But soils, also, must be consulted in the choice of grasses for meadow or permanent pasture. The plants which occupy the low lands and moist grounds, will not thrive on the mountain's rocky slopes and summit.—For a medium soil and situation, it is found, after careful consideration and experiment, that a mixture of 5 lbs. each of Timothy and Red-top; 4 lbs. each of Red clover and Orchard grass, with 2 lbs. of White clover, making 20 lbs. for an acre, is an excellent proportion for seeding pasture grounds.—If a few pounds of the sweet vernal grass are added, it will give its rich fragrance to the herbage. On meadows for hay, an addition of red-top or orchard grass, will give a thicker bottom, and add largely to the value of the product.

The views above presented were suggested by one of our most intelligent and prominent farmers. They are worthy of careful consideration, and will furnish a fruitful theme for discussion by Farmers' Clubs or at the fireside of the Grazier and Dairyman, when, as now, plans for the busier seasons are "in order."

### THE DIGNITY OF LABOR.

THERE is now and then an individual, who, by his actions seems to say that his fellow who gains his livelihood by the sweat of his face, is lowered in the scale of society, and is not, therefore, prepared to sustain the true dignity of manhood. Such forget the judgment of GOD to ADAM and his posterity. They forget that GOD gave to man a physical frame, endowed with mental and moral powers in such manner that they are best developed by labor. They forget, in fact, that this life is but a state of preparation for the future, and that every thing proves the Universe to have been planned as if with direct reference to the training of man for a higher state of existence and enjoyment.

But a casual glance is necessary to satisfy the thoughtful that exercise is absolutely necessary for the right development of our physical organization. Notice the growth of the infant. How objectless, apparently, are all its tiny efforts. Yet it "must act out nature," and its muscles harden and acquire strength and growth, till the will is enabled to hold command over their actions. The development ceases not, from boyhood upward to manhood,—and we frequently notice that some particular organ is more fully developed than its fellows, because it has more exercise. Thus the hand or foot is made to exercise greater agility of motion and perform acts out of the ordinary line. So the ear may be trained to more acuteness of hearing, and the eye to a quicker and readier perception of minute objects. Again we see that if any organ be deprived of due exercise it dwindles and becomes weak and effeminate. So, too, it must follow, that, if exercising any organ develops it more fully, and exercising it at the expense of others, develops it at their expense also, then will the true exercise of all the parts of the system, develop that system as it should be.

As the mind is an inhabitant of the physical frame, and is intimately connected with it in the mysteriousness of its life, it cannot be otherwise than that it should be greatly influenced by the condition of that physical frame; that is, if the body has received a proper development, the results of it will flow in upon the mind. Hence the development of our mental organization depends much upon exercise or toil.

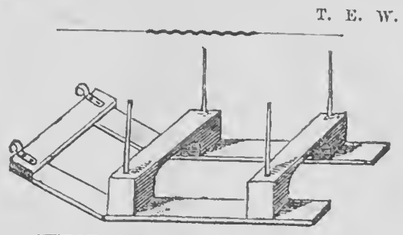
If we look upon the inhabited earth, we shall see that GOD has impressed the idea of Labor upon all his works in ineffaceable characters. He has not planted our sustenance to grow spontaneously. Nor has He given us habitations ready constructed for our shelter from pelting storms, nor built us ships and carriages for purposes of locomotion from place to place. No. But He has given us grains and fruits that increase in quantity and quality by cultivation, but which without, degenerate and become worthless. He has fixed in the soil elements of life that are yielded first to the plant for its sustenance, and thence to the animal for its support. But He has fixed a limit to these principles, as a stimulus to so cultivate our lands, that we shall judiciously draw therefrom the greatest amount of food without exhausting the soil. He has covered the fields with blooming flowers that their gentle influence may cheer and lighten the hours of toil. He has spread around us materials that need only the moulding hand of art to supply our every want, whether fancied or real; and, that we may avail ourselves of them and mingle the beauty of Art with that of Nature. He has implanted within our mind desires for their use.

If GOD ordained labor for man's best good, and constructed the physical world for the furtherance of such design, then is it possessed of an inherent and surpassing dignity. Consequently we find that Holy Writ throws its sacred shield about it. GOD in the decalogue directly commands, "Six days shalt thou labor;" the seventh He ordained for rest and holy worship. As a reward, peace, happiness, a contented mind, sound sleep and true enjoyment are the fruits. The ancient Proverbialist, observing this, declares, that, "The sleep of a laboring man is sweet, whether he eat little or much."

Labor, too, gives employment to the mind; hence, the adage that "an idle mind is the Devil's work-shop." The mind must busy itself upon something. If we have no occupation, no labor to absorb its attention and turn its workings into useful channels of thought, then will the baser passions rouse up, hold their revels in its innermost temple and push it on to the commission of vice and crime. Search the criminal calendars, penetrate the darksome danks of the dungeon, and, tracing effects to causes mark how great a proportion of all the misery you meet, has its incipiency in idleness. Labor gives vigor to the mind by keeping the physical organization in a healthy state and thereby imparting a healthy stimulus to the brain.

It gives to the individual a more lofty, manlike bearing. Whilst he is improving the talents entrusted to his care, he is surrounding himself with conveniences and luxuries, that he can the more sweetly enjoy because earned by his own toil. In his allwise beneficence, GOD fitted the earth and the things therein, that every diversity of taste should find employment. The deep is not filled, especially as a great regulator in the economy of the earth, but also, as a means that man's skill and power may be exercised in traversing its trackless waves in search of the comforts and luxuries of foreign climes and the treasures below its surface, whilst for allurements and conveniences the isles were planted in its midst.—The various minerals are not so deeply buried but they are readily excavated, nor are their substances so unmanageable but they are readily fashioned to such implements or wrought to such uses as the varied wants of mankind may demand. We see, therefore, that GOD, in creating man with wants, placed him in the world and surrounded him with abundant means to gratify them, and in so doing to improve the condition, physically, mentally and morally. We conclude therefore that there is an all powerful necessity for labor—that it is endowed with true nobility, and more, that the wisdom and beneficence of the Omnipotent are displayed in its ordering and distribution.

T. E. W.



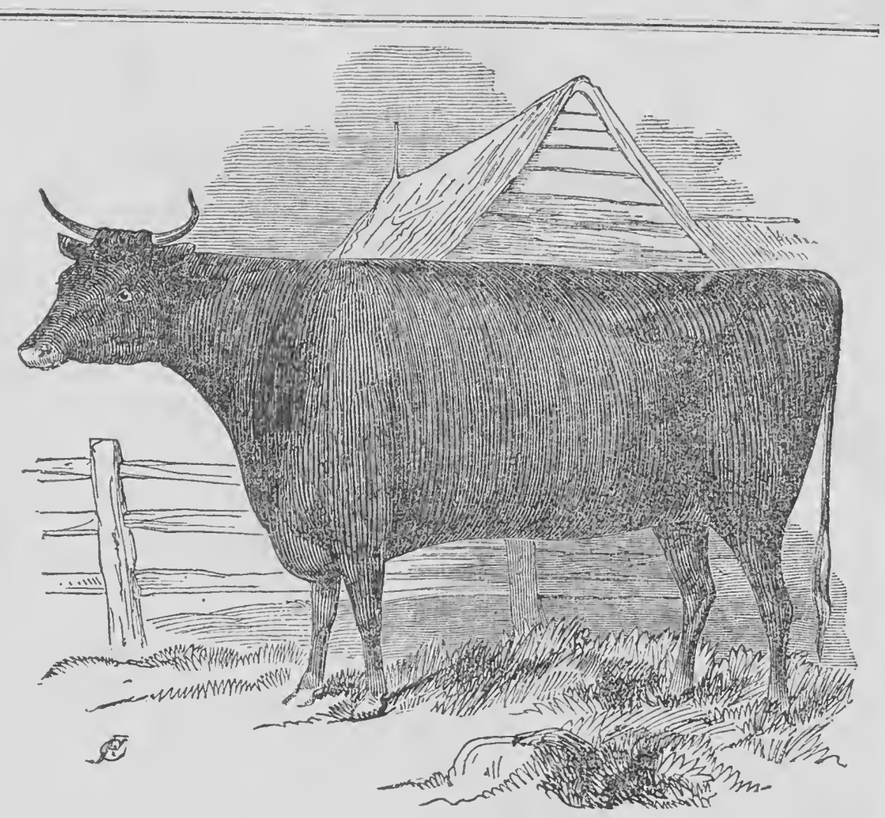
CHEAP AND CONVENIENT SLED.

THE above figure represents a very cheap and convenient sled for drawing logs, wood, &c., from the woods, and various other purposes, and it possesses advantages over the common sled which are sufficient to induce me to present it to the readers of the RURAL. It is somewhat novel, at least in this vicinity, and I am of the opinion that its adoption will greatly facilitate the laborious operation of loading logs, &c. Its construction is very simple; a single glance at the above will enable any farmer who has the necessary tools, to make one.

The runners are common stone-boat plank, about eight inches wide. The beams are fastened to the runners with spikes driven from the under side through the plank into the beams. A tongue is to be attached to the cross-piece in front by means of straps, which is omitted above for want of room. Two strips of old wagon tire spiked on to each runner will answer for shoes. Its advantages will be readily perceived: the runners being wide, it does not sink into the untrodden snow, consequently the draft is much less; there are no raves to bother while loading; the hand-spike can be placed under the log and raised without interfering with anything. Its cheapness and durability is another important consideration; for it will not cost half as much, and I think that it is as strong and durable as the common sled.

H. A. B.

Pekin, Niagara Co., N. Y., Jan., 1853.



MR. REMINGTON'S PREMIUM DEVON HEIFER.

ABOVE we present our readers with a portrait of "Red Lady," a two year old Devon heifer, owned by M. C. REMINGTON, Esq., of Sennett, Cayuga Co. This fine animal was awarded the first premium in her class at the late State Fair at Utica.—We have before remarked upon the merits and characteristics of the Devons, which rank high among the improved breeds of cattle.

### OHIO STATE AGRICULTURAL SOCIETY.

SOME errors seem to have found a place in our notice of the Annual Meeting of this Society. We were led into the error in regard to the number composing the State Board, from the fact that at the April meeting, 1846, the board cast lots to determine the time the different members should serve, when it appeared that *twenty-seven* of them were to serve the balance of that year, and an equal number to serve one year longer, making nearly two years.

At the meeting of Dec. 9, 1846, the Board elected *twenty-six* members to serve for the term of two years, but we did not then observe that a resolution was adopted to reduce the number composing the Board to one from each Congressional district. As this is the only report of the doings of the Board we have ever seen, it was hardly hardly possible to speak "true to the book."

From the letter of our correspondent, (published last week,) it appears there is no such organization as a State Society, which appears to us an unusual feature considering this Board, with one delegate from each county society, meet and consult together, elect officers and pass resolves once each year. Whatever the organization in the Buckeye State may be named, it has given evidence of vitality and well directed efforts, promoting the cause of improvement to an extent equal to that done by any similar body in the country, and what is quite essential, possesses the confidence and support of the people. †

WATER LIME FOR LAYING STONE DRAINS.—Mr. A. WILLSON, of Marcellus, says he has used water lime with good success in laying stone drains. He took up one where the stone had been filled in with turf, straw, or shavings, and then filled in, (which had become a harbor for mice, moles, &c.,) and relaid it—filling in the crevices with mortar, and has seen marks of mice since. He used one bushel of water lime to five of sand, applying it after laying the whole drain.—This quantity was sufficient for 12 or 15 rods.

DEEP TILLAGE *vs.* DROUTH.—The past remarkably dry season in many localities, has furnished additional evidence on this question, which we hope those who have observed will allow us to give to the public.—The system of thorough draining, as far as it acts to deepen the soil, has also been tested. Both subjects are of great importance to the farmer, even if they confer but a tithe of the benefits claimed for them.

### THE TRANSACTIONS FOR 1851.

IN mentioning the reception of Vol. XI of the "Transactions of the New York State Agricultural Society" a few weeks since, we said it was our purpose thereafter to extract from its 777 pages such matters as were appropriate to the scope and design of the RURAL, and also to glean therefrom those items of general interest and value, which the hurried or desultory reader would be likely to pass unnoticed, in glancing over the Reports, Addresses, Awards of Premiums, Statements, Essays, Surveys and Statistics, which go to make up this valuable but bulky volume. We now take it up to do so, and shall from time to time continue our drafts upon its pages.

Following the Report of the Executive Committee and the Annual Address, we have the Awards and Reports of the Judges for the Fair of the year, held, as all will remember, in this city. A portion of these Reports are of permanent value on the matters to which they refer, while others, with the lapse of time, have lost their interest to the general reader. But enough of preface.

#### Progress of the Dairy Interest.

THE statistics of commerce—of our imports and exports—and also, those given in the Seventh Census, of the Productions of the country, furnish materials for an interesting exhibition of the "rise and progress" of various Agricultural and Manufacturing interests. From the first of these sources, Mr. E. C. ADAMS, of Syracuse—of the Committee on Cheese—has gathered some interesting information which is embodied in his report, occupying some ten pages of the Transactions.

The first exports of cheese were made in 1789, but from that period until 1840, the extent of this commerce abroad was very trifling. In the latter year it reached only the amount of 723,217 lbs. Nine years later—in 1849—the Treasury Report shows an export of 17,433,682 lbs., about *twenty-three* times as much as in 1840. This advance in production and export is a most remarkable one. To some extent it may be attributed to the improvement which has taken place in the quality of the article, and in the manner of fitting it for transportation, securing its improved appearance in market. The increase in population, and the improvement of dairy stock and farming lands, has also added to the production. But the great cause lies in the impetus given by better and speedier means of marketing, and the improved demand which a good ar-

ticle, when once introduced, will always create.

The rapid improvement and extension of the railway system exerts a most favorable influence upon the dairy interest, in this and the western States. In the words of the report, "it brings competition within the reach of all and competition compels to excellence." The price of butter and cheese is affected by the condition of the packages in which they reach the market. A slow mode of transportation, and frequent transfers from one mode of conveyance to another, can but injure both the appearance and real value of an article of this nature. But when Ohio and western New-York have equal facilities for market with Orange, Herkimer and Goshen, then competition will be stimulated, and the productions of all these localities, will be brought up to "high water mark" by the operation of the law of self-interest, and the influences of increased knowledge and enterprise in this and all classes of productive industry.

In another part of the volume, we find a paper on the Agricultural Statistics of New York, by the Hon. JOHN DELAFIELD, of Seneca county. To this we shall refer hereafter, but would remark in this connection, that the production of Cheese in this State is shown to have increased in five years, from 1845 to 1850, 12,691,437 lbs., reaching at the time of the 7th consus, the sum total of 49,741,413 lbs. The production of Butter for the same year was 79,766,094,—an increase over that of 1845, of 9,264,361 lbs.

### Thorough Bred Horses.

THE folllowing "remarks of a general character" are prefixed to the award of premiums by judges in this class of Horses, Messrs. WHEELER of Vt., DENISON of C. W., and BOWIE of Md.:

What is a horse wanted for? What are the duties he is required to perform? He is wanted for speed on the road, and for conveying heavy loads quickly. For speed he has no competitor, among our domestic animals—for draught, none but the ox. He is more expensive to keep than the ox; is kept at greater risk, and requires more constant care. He compensates his owner solely by his speed. The speed upon the road and celerity of movement with a load, sum up, in a word, the peculiar duties of the horse.

This attribute of speed depends upon a peculiar anatomical conformation, the more prominent characteristics of which are bones small in size, but fine in texture and hard: muscles tense and firm, *separately* round and prominent; an indisposition to accumulate fat, the secretives depositing muscle instead; vital organs large and powerful; limbs wide, clear, and sinewy; every muscle and tendon clearly defined; the joints clean and firmly knit; the hoofs of medium size, hard and tough; the shoulder slanting, giving ease of motion, and much more extended motion than the upright shoulder, and well wrapped with tense ropelike muscles; the rump straight, or nearly so; the stifle deep and full; the chest deep rather than wide,—thus giving the most room for the motion of the lungs and the action of the heart; the flank deep, that the digestive organs may not crowd upon the lungs and heart.

The movements of the horse are all in accordance with mechanical laws, and the superiority of one form over another, so far as ease of action is concerned, depends solely upon the perfection of the mechanical relations of the bones and muscles. The angles, the centers of motion, on which the most depends, are those of the shoulder and thigh. They should be acute. The more obtuse, the greater the loss of power. Horses have been bred, for many generations, with a particular reference to such an anatomical development, as hinted at above, resulting in great speed, combined with great powers of endurance and are known as blood or thorough bred horses. They have excelled, in speed and bottom, all other horses.

The nervous system of the blood horse has been disproportionately developed in some families, perhaps in the whole class. But, at present, the error, if error it is, stands, in a great measure, corrected, and those horses, in this class, which now stand the highest, are more tractable and docile than former generations, yet, at the same time retaining the speed, bottom and fire, when fully aroused, of their progenitors.

Now, since in the blood horse, is found the peculiar attribute of the horse, in its highest perfection, too much can hardly be said of the importance of a liberal dash of blood in all grades of horses. On the road it is necessary, and at the plow or the truck it will tell wonderfully. The farmer, with half or three quarter bloods, can plow his half acre a day more than with common farm horses. He can safely reckon that his *blood* will haul his load some miles further in a day than a common team. This is so. Theory points to it, and experience has proved it; and if the farmer can actually increase the value and efficiency of his motive power, without increasing the number of animals or expense in rearing and keeping, is it not as much a matter of good policy and good husbandry so to do, as to improve his land and raise larger crops by extra manure and extra tillage? Certainly it is; and while it is expensive at the outset to improve land, it costs no more to raise a good horse than a poor one.

In selecting animals for breeding, the first thing to be settled, is the kind of horse to be produced. This should be clearly determined in the mind of the breeder. He should know what he wants, or rather what he needs, and then should seek to produce it. The law, that "like produces like" is true, and will prove true, no less in regard to good animals and qualities, than bad ones. The anatomical structure of the horse and mare should be carefully studied and compared, before they are brought together, always keeping in mind the fact, that bad qualities are as easily and as surely perpetuated as good ones.

Rules without number might be given, by which breeders should be chosen. But the rules to be of any benefit, must be understood, and to be rightly understood, requires a thorough acquaintance with the anatomy of the horse. Then each one, who would breed good horses, should seek a full and intimate acquaintance with the anatomy of the horse, and when that knowledge is obtained, the rules for breeding will be of easy deduction. The importance of a full and complete pedigree is great to the breeder. He ought to know the history of his stock. He ought to know whether or not the animals have been bred, so long and with such care, that the perfections or imperfections, as the case may be, of the animal before him, have become fixed.

### LEAKS TO BE STOPPED.—NO. 1.

MESSRS. EDITORS:—No doubt during your perambulations through the country, you have noticed (especially if these travels took place in the spring of the year,) many leaks to the "farmers' gold mine," the barn yard and manure heap. You will see, go in what direction you please, yards so situated that the heavy rains in March, or the first part of April, together with the rapid melting away of the snow, causes the better part of the manure to run off in golden, odorous streams into the highway, and along said highway to some rivulet, thence to some pond, or spread over lands where it is least required.

I have seen farmers (our big farmers, too, if acres will merit the appellation,) permit their stock to go one-fourth of a mile or more to get their daily supply of water, and this too, in the highway, thereby losing much manure which should be left in the yard. And, another difficulty; cattle will become very thirsty, many times, before they will go for water, on account of the severity of the weather, and when they do go, they will drink until they are chilled and uncomfortable. A remedy for this has been heretofore suggested in the RURAL, and many have provided themselves with it; and many have not, and perhaps never will. If self-interest and the attribute of mercy, (for "a merciful man is merciful to his beast,") and line upon line, and precept upon precept will not do it, what will?

The folly of all this waste, is apparent to any provident farmer. For, from this *mine* flows all his wealth; and if properly worked, many are the blessings consequent thereon; if neglected and permitted to run to waste, he will soon find his ship in a perilous condition, and his hide-bound pocket-book crying with the empty belly-ache. What would be thought of the commander of a ship, who, having discovered a leak, should neglect to stop it when a little effort would do so, and thus save both crew and cargo? To all thus improvident, I say, *stop that leak*. Imitate the example of brave PERRY, on Lake Erie, who discovered a leak, and as the song has it,

"He off with his coat, and plugged up the boat,
And away through sulphur and fire did steer."

If you cannot stop it by mason work and absorbents, such as straw, leaves from the forest, muck, &c., change the site of your yard. By all means, *stop that leak*.

Little Utica, Jan., 1853. S. EATON.

### EXHIBITION OF FOWLS AT ALBANY.

WE have received a note from B. P. JOHNSON, Esq., Secretary of the State Ag. Society, stating that at the request of many breeders, it had been determined to have an exhibition of fowls at the time of the annual meeting and winter show, the second Wednesday of February. No premiums will be offered, but it is presumed those who have choice fowls will embrace the opportunity of bringing them before the public. A safe and comfortable place will be provided, and contributions are invited from all parts of the country.

PROFITABLE SHEEP.—A correspondent writing from LeRoy, N. Y., says, "ALBERT HILL, residing in the north part of Pavilion, sheared in 1851, from his flock of 186 fine wooled sheep—consisting of yearlings, breeding ewes and wethers—778½ lbs. of wool, and sold the same for 45 cts. per lb. In 1852, from his flock of 203 sheep, he sheared over 900 lbs., which sold for 40 cts. His present flock of 200, will be offered for sale on and after the 25th inst."

YOUNG stock should be moderately fed with grain in winter, and receive generous supplies of long provender, it being essential to keep them in fair condition, in order that the formation of muscle, bones, &c., may be encouraged and continuously carriod on.

### BYFIELD SWINE.—INQUIRY.

EDS. RURAL:—I wish to make a few inquiries through the medium of your columns, in relation to the Byfield breed of hogs. Will they fat readily while young? What is their weight at full age, when fat? Can you, or any of your readers, inform me through the RURAL where I can obtain a pair of pigs of this breed, either now or in the spring? C.

Greece, Monroe Co. N. Y., Jan., 1853.

REMARKS.—The most recent information we can come at on this subject is derived from SANFORD HOWARD, Esq., Editor of the Boston Cultivator, who states that the Byfield or Newbury-white Breed, originated, or first became noted, about forty years ago in Byfield, Mass. It is said to have sprung from a cross with some African or Chinese breed, which had a great tendency to fatten. No vestige of it is to be seen at the present time. What was called the "Grass Breed" was probably derived from some mixture of the Byfield.

In ALLEN'S Domestic Animals, the Byfields are described as "white, with fine curley hair, well made, and compact, moderate in size and length, with broad backs, and at fifteen months of age, attaining some 300 to 330 lbs., net."

If any of our readers can furnish us additional information they will greatly oblige us.—ED.

COWS WORTH HAVING.—Under this head we published a short time since, a notice of two cows, owned by Mr. BILLINGS, of La Grange, N. Y., with the added remark of the Clinton Co. Whig—the editor of which thinks his cow can beat Mr. B's. Mr. D. B. WESTFALL, of Lyons, N. Y., says his father has a cow, from the cream of whose milk, 12 lbs. of butter was made in six days—her only food being good pasture. Mr. WESTFALL says he offers the editor of the Whig $50 for his cow, if she will give milk enough to make 12 lbs. of butter a week, for three months.

### UNITED STATES AGRICULTURAL SOCIETY.

*To the Friends of Agriculture:*—The undersigned, President and Secretary of the United States Agricultural Society, in behalf of said body, respectfully invite the Friends of Agriculture, in all the States and Territories, to join their National organization. Its objects are to embody in one central Association, the valuable information already obtained by various local Societies, and to establish a more intimate connection between them; to correspond with foreign Societies, and to diffuse a knowledge of their most important Agricultural improvements and discoveries; and, in the various ways, as set forth, in the first number of the Journal of the Society, to aid the promotion of this noble art.

It is not by isolated and individual exertion, but by united and associated action, that rapid progress is to be made and a general interest awakened. Measures of a wise and efficient character should be taken to increase our knowledge of rural arts and sciences, as well as to communicate to every tiller of the earth such professional information and individual experience as the best farmers and planters are able to impart.

Friends of Agriculture! In what terms shall we address you, to secure a practical recognition of the advantages of co-operation in a scheme that embraces every State and Territory in the Union, and is eminently calculated, as we believe, to elevate and advance the great farming interest?

The plan of operations that has been adopted, is indicated by the Constitution of the United States Society, which is printed on this sheet, and to which your attention is specially invited. [We gave the Constitution of the Society in Vol. III, page 234, July 22d, 1852, and hence need not repeat it here.]

It is obvious that this Association cannot be useful to the country, unless many persons join it, existing Agricultural Societies give it their confidence and support, and Government extend to it her fostering hand. No officer of the Society is paid for his services, and it is believed that the members will receive in its Quarterly Journal, seeds, plants, etc., a full equivalent for the amount of their annual subscription.

The fee for membership has been fixed at the moderate price sf two dollars per annum, or twenty-five dollars for Life membership, in order to multiply the number of members, and make the Society co-extensive with the country, and to enable it to put into the hands of each subscriber a quarterly Journal, or an annual volume, valuable to himself and creditable to the Association and to American Agriculture.

A united and general effort to maintain a National Agricultural Society should no longer be delayed. Come, Brother Farmers! Let us engage in this worthy enterpriso. Let us unite our strength and wisdom, and thus secure numerous and efficient representations in this Association, from all the States and Territories, and from all the local Agricultural Societies and kindred organizations throughout our country.

MARSHALL P. WILDER, *President.*
DANIEL LEE, *Cor. Secretary.*
Washington, January 1, 1853.

MR. J. R. TAYLOR, of Covington, has raised the past year, from one bean, 52 pods, containing 198 beans; from another bean, 48 pods, containing 145 beans—or, from the two, a product of 343 beans.

## THE AGRICULTURAL PRESS.

### How to Start a Farmers' Club.

QUOTING a passage from our hints on "Farmers' Clubs" in a recent number, the *Farmers' Companion* adds the following capital suggestions. We hope many a neighborhood will put them in practice, both in New York and Michigan, and wherever the RURAL or *Companion* may carry them. It says:

BY Farmers' Clubs the mind is improved; social feelings are encouraged; information is both imparted and acquired; the habit of close thinking and easy speaking are learnt; above all, combining the pleasure of a party, or the excitement of a political meeting, there is *general improvement*, which cannot always be said of the others. Get all arranged, select your best speaker to begin, have supper over, and the things washed up, harness up the team, and away with all the family to the school-house. By all means take your wife and daughters with you as listeners, they will add to the enjoyment, keep everything quiet, and above all, give life to the club, for what the ladies are not allowed to enjoy will not continue long.—When it is over, drive home through the clear, sparkling, frosty air, in the light of the full moon, and you will sleep the sounder, wake happier, realize that your neighbors are worthy of your regard, and prosper all the more.

If knowledge is power, union is its twin sister. Or if the number of members of the Club is not great, appoint the meetings in the afternoon, at each other's houses; view the farm, the cattle, &c.; discuss the merits of every plan, and then adjourn to the parlor, to hot tea, light biscuits, and the best kept apples or grapes of the season. What is the use of having a good farm, good buildings, and good stock, if nobody sees them, or a good housekeeper for a wife, if no one ever tries her skill? We never know how much information we possess, till we talk over the subject with others, nor can we ascertain the depth of our ignorance.

### Advantages of Farm Accounts.

THE *New England Farmer* has a report of a recent meeting of the Concord Farmers' Club, when this question was up for discussion. We copy the remarks of two of the members:

Dr. Reynolds said, every farmer would find his advantage in keeping a debt and credit account, not only with his male and female help, but with his cows, oxen, horses, hogs and sheep. He should charge each animal, or each lot of animals, with their cost, the expense of keeping, losses by disease, injury and death; credit them with their increase, milk, butter, cheese, labor, wool, mutton, pork, beef, product of sales when sold alive, &c. In the same way he should keep an account with each field, charging it with its value, taxes, manures, and labor expended upon it, and giving credit for crops and improvements. Thus he would know his profit or loss from year to year; what crops and what animals are most profitable; would benefit by his experience, and might have accurate information for his neighbors.

Simon Brown said such accounts might easily be kept; all that was wanting was an effort to begin. He hoped they would all begin on the first of January. Each one might keep such a journal as he pleased.—He has for years kept a journal in which he not only kept his accounts with his help and his neighbors, but in which he has noted the time when the birds appear and depart, when the blossoms open, when he planted his ground, how much seed he sowed, and a variety of incidents of domestic as well as of a philosophical nature. We are creatures of habit; if we once get into the way of keeping such a record we shall find it easy and pleasant. He also spoke of the moral effect. It would make a man not only a better farmer, but a better man and better citizen. He would know *himself* better, as well as the state of his affairs, and would have more courage to engage in the conflicts of life.

Another member spoke of the ease with which the habit of writing could be acquired, and of the benefit it would prove to the young farmer. The amount and mode of cultivation of every crop was matter worthy of record, and would prove of permanent value and interest.

### "A Fifty Acre Farmer."

THE *Country Gentleman* gives an interesting contrast between a "four hundred acre" and a "fifty acre farmer"—the one commencing with large capital and little practical go-ahead-itiveness; the other, in debt for his little farm, but full of energy and "bound" to succeed. We copy a few paragraphs:

He began by examining closely what improvements could be made, of whatever character and kind, whether cheap or expensive. Among these he was compelled to select first the cheap improvements, or those which promised the largest profits for the smallest outlay. One of the first of these was the draining of a three acre alder swamp, a large portion of which he did with his own hands in autumn, between seeding and husking. He had read of Judge Buel's success with *brush drains;* he constructed all the side or secondary channels by filling them at the bottom with the bushes cut from the ground, which enabled him to accomplish the work at less than half the usual price. These brush drains have now stood many years, and the brush being wholly excluded from the external air, has not decayed, and they carry off the little water required, being numerous, and at regular intervals. Now, observe the result: the alder swamp would not have sold originally for five dollars an acre; it now brings crops of corn, broom-corn and meadow grass, more than paying the interest on a hundred and fifty dollars per acre, besides all expenses. He doubled his manure by drawing from the most peaty portion of this drained swamp, large quantities of muck to his farm-yard, where it was kept comparatively dry till wanted, under a cheap slab and straw shed.

By paying a small sum yearly, he was enabled to improve immensely the breed of his cattle, sheep, and swine, and which he thinks has returned the money thus expended at least twenty fold. The same keen attention to his business in other points enabled him to effect many additional improvements, among which we may briefly mention a cheap and simple horse-power of his own construction, consisting of a rope running on the ends of radiating arms, which enabled him by means of one or two horses, as necessity required, to thrash his grain, saw his wood, drive his churn, turn his grindstone, and slit picket-lath. It is true, he has now thrown this rude machine aside for the greatly improved endless chain power, but it answered his purpose for the time, before the days of improved machinery.

But among all his outlays for the sake of economy, there is none which he thinks has repaid him equal to the subscription money applied in taking two agricultural periodicals, costing him a dollar and a half yearly besides postage, and which, in connection with his own experience and good judgment, have been the chief guides in most of his great improvements. He has been enabled to add sixty more acres to his land, and the whole presents a beautiful specimen of neat, finished, and profitable farming. None of this is fiction. It was gradually accomplished by years of constant, steady, intelligent perseverance.

### Care of Cows in Winter.

THE *Farmer's Companion* gives the following seasonable hints:

Indian meal is injurious to cows which are with calf,—its heating nature is very apt, if much is given, to produce inflammation, especially if they are in a high condition. If they are in milk and expected to calve in spring, it must be remembered that for the double duty of furnishing milk and of affording nutriment to the growing fœtus, they require a plenty of good wholesome food; otherwise it cannot be expected they will produce a strong, healthy offspring, or afford much nourishment to the calf after it is dropped. For a period of three months or more, before calving, (and the same course should be adopted in the treatment of all animals in a state of pregnancy,) cows should be supplied with those kinds of food which contain much nutriment in a small bulk; for if they are allowed to distend their enormous stomachs with masses of innutritious food, the pressure upon the womb may be productime of the most injurious and sometimes fatal consequences. The bowels should be kept in a moderately open state, by a daily feed of roots, or "slop" made of wheat bran. One of the best articles for feeding last spring's calves, we have ever used, is the meal of the corn and cob ground fine. It preserves the bowels in excellent condition, and gives them a sleek and thrifty look.

### The Farmer's Tribute.

WASTE and losses from neglect, levy large taxes on many a farmer—often larger than County and State together. Our friend, WM. H. GARDNER, gives the following condensed hints on this subject in the *Northern Farmer:*

"Millions for defence, but not one cent for tribute." How vast is the aggregate amount of money paid as tribute by the farmers of our State! Most certainly it is immense. Not under the head of cash contributions, direct from the pocket, but tribute from wastes which might have been easily and profitably avoided. The crops are not well secured by good fences. Cattle get in, and thus is paid a tribute in waste. Watering troughs are not provided. Deep snows fall, and the cattle are obliged to drink from a spring, rendered a well by accumulation of ice and snow. A weak one falls in, dies, and thus is paid a tribute. A board, or shingle gets off the barn, rain and snow drive in—perhaps damaging hay, or grain, and hastening decay. Thus another tribute is paid. In short, by how many thousand ways does the farmer pay tribute in losses by neglect. Loss of time, loss of property, and all finally as direct losses, as if paid by him direct from the pocket, and the causes remaining unheeded.

### The Later Architecture.

THE *Prairie Farmer* has an article on the changes which the last fifteen years has witnessed in the domestic architecture of the country, from which we copy the closing paragraph:

We have gained all that is implied in the first steps of improvement. The stupid and unvarying Grecians with that same gable to the street, has yielded, in the first place to —variety. The American is a mixed character, and personal independence is no where else so insisted on. It is, therefore, becoming that this truth should be expressed in our Architecture. We can tolerate uniformity in nothing else; why should we be condemned to dwellings of one particular cut and pattern? But we have got beyond that, and buildings of a simple and intelligent beauty, are appearing in almost every district of the country—buildings expressive of the uses to which they are put, and har-

monizing with the beautiful in the surrounding scenery. These things perhaps carry to the mind of the unitiated, an idea of a greatly enhanced expense; but such is not by any necessity the fact in regard to them. The change is made by an alteration of a very few particulars. One is the overhanging eave with its attendant bracket, which now is thought essential in almost every house of any pretentious, where the innovator has penetrated. Another is the style of the veranda, with its supports. These, instead of the huge and unsightly columns so ambitiously coveted in former years, consist now of simple standards of some neat and lightly wrought patterns. Another is the style of the windows with their frames; another is the frequent and expressive use of gables breaking up the monotony and furnishing occasion for more or less of ornament, when it can best be used; another, is the change of color. From the uniform and glaring white, we have traveled thro' a sea of dingy browns and hideous brindles, till we have at least got among quiet neutral hews, which all are bound to love as soon as we come to know them. That the subject will now take care of itself, with the hold it has on the public mind, we have no doubt.

### The Merino, a distinct species of Sheep.

THE *Wool Grower and Stock Register* for January, has "A few Words on Sheep Breeding" from Mr. PETERS, which we commend to the attention of every farmer interested in the subject:

THERE is a great diversity of opinion on the subject of stock breeding, and the practice of sheep breeders is as various as their opinions. It has been my endeavor through the WOOL GROWER to get up a system in this country that would eventuate to the good of all. As a people we are too prone to depend upon our own notions, without searching to find whether they are right or wrong. And there being no concert of action among ourselves we are more often wrong than right.

I have always contended that the Merino sheep is a distinct species, and that it has existed for more than two thousand years, as a fine wooled sheep, possessing certain distinct characteristics which do not exist in any other breed, and cannot be transmitted to any other by any length of breeding which is like to be followed in this or any other country. Attempts have been made at different periods, and in various countries, to improve native flocks by an infusion of the Merino blood, but there is no record to show that there has ever been a permanent and valuable improvement made. On the contrary, the result of all such attempts has been disappointment. And any man who has well and carefully studied the habits and characters of the Merino and its history, cannot well be deceived in the sheep when shown to him.

Incalculable mischief has been done in this country by an attempt to improve Merinos by crossing with other breeds. The mischief will be more apparent years hence than now. And the time will come when the few who are now breasting the popular delusion and keeping their flocks pure and uncontaminated, will reap a rich reward, not only in the sale of their sheep, but in the thanks of the country. I am very glad that there are a few men who are above all mercenary considerations, and who have the heart to practice what their good sense teaches them is natural, even at a present loss.

There can be no real and permanent improvement made in crossing the Merino with the French Merino, or with any other breeds. If you wish to prosper with your sheep, keep the breeds as pure as possible, and keep breeding from and to the best. If the French Merino be a valuable breed, keep it pure; do not cross it with any other. That it is a pure Merino is not claimed by any person who knows the sheep and its history. That it may be a most useful sheep for this country time must determine. It is not for me to say aught on the subject. What I most wish to urge upon sheep breeders, is the very great importance of keeping their breeds separate. If you have good Merinos, keep them so by careful breeding. If you have good French Merinos, keep them pure; do not mix them. If you put the breeds together you will get a breed partaking of the bad qualities of each,—a *hybrid* which will depart wider and wider from the good points of each breed by each remove.

The importance of pure blood is felt now all over the Union; and any man who can show a clean pedigree from the HUMPHREY or JARVIS importations, would find a ready sale for all his sheep at very high prices. I very much doubt whether there be any such in the Union. There may be purer blood in some localities than others, but there is none that has not been mingled with some other than pure Merino. The Saxon cross when the blood was pure, was not so detrimental as where the cross has been made out of the race; for the Saxon is a Merino, and crossing does not contaminate the blood by introducing coarse or native blood along with it.

The next few years are to be of great importance in sheep breeding, and I am most anxious that progress should be made in perfecting our best breeds in the manner which I have herein indicated. P.

CARBON.—Carbonaceous matter in some form is necessary in all soils. In some it arises from the decay of green crops; for the result is carbon, (charcoal) as thoroughly as if burned in a close vessel. Part of the results of decaying manures exist in soils as carbon. Old charcoal hearths, charcoal dust from locomotives, and all other sources, are valuable to supply this desideratum to the soil. Soils are retentive of manures, only from the presence of carbon or alumina.—*Working Farmer.*

# Orchard and Garden.

### PLUMS FOR GENERAL CULTIVATION.

THE American Pomological Convention at their last annual session in Philadelphia, held some interesting discussions on the different varieties of fruit and their adaptation to different sections of the country. We have already named the pears, and now give a list of the plums recommended for general cultivation.

The "McLaughlin" plum was highly recommended by several gentlemen from Maine, as almost an improvement on the "Green Gage;" being larger in size, easily raised, and a thrifty and regular grower. It is, however, not as delicate and fine flavored, and was left on the list of plums that promise well.

"Prince's Yellow Gage," an early, large, sweet, but not juicy plum was recommended for general cultivation, as also "Lawrence's Favorito" a plum of excellent flavor, the trees good bearers and growers. The "Early Morocco" was mentioned as a very large plum, and a New York gentleman recommended the "Imperial Ottoman," the "Hudson Gage," "Coe's late Red," and the "Blue Imperatrice."

In the revised list of "Fruits worthy of general cultivation" we find in addition to the above the "Bleecker's," "Frost," "Purple" and "Green Gages" and the "Jefferson," the "Washington," and the "Purple Favorite."

### NOTES FOR JANUARY.

THE Horticulturist can do something in January and what he can do, he should do early as possible. Have you protected half-hardy plants, and shut out mice and rabbits? If not, it may not yet be too late; the sun kills, not the frost, that is only the proximate cause of death—the sudden thawing being the acting and immediate cause; and mice and rabbits will not gnaw trees, and eat plants as long as they can get better food.

Of all out door protection to tender plants and shrubs, evergreen boughs of the resinous conifers, are the safest and the best, because they neither heat nor mold nor smother the plants by packing too closely, nor afford an agreeable shelter to vermin. Plants must have air, as well as animals. Dry leaves are also a tolerable protection, but perhaps dry rotten wood is better, and swamp moss better than either. Prairie grass of the coarser kinds, may be thrown over all, to keep out the rain, where broad boards, or barrels, tubs, or boxes are not at hand.

A fruit tree, whose fruit buds are apt to winter kill, can be protected by a very thin screen of long straw, or mats, or boards, &c. Try it with your apricots, nectarines, and peaches—rest assured it will do, if timely, and perhaps yet. Leave an occasional shock of corn, or place a few ears, under hay or straw in the garden, nursery, and orchard, and you will have all the mice at command; but there is no need of your feeding them all winter, and we need not tell you how to treat them, when snug in their dry warm quarters.

Rabbits travel miles, and a rabbit-tight board or picket fence is the surest protection, but if you keep a dog, teach him to hunt them. Boys, as well as dogs, like this sport, and rabbits are nice wholesome food. A cone of earth, piled around the stem of an orchard tree, is a good protection oftentimes, and the early removeal in the fall, of grass and weeds, and litter, is positively a necessity, where mice and rabbits are plentiful—they both like the bark of fruit trees, and the stems and evergreen foligae of many plants.

Get out and clean and label any seeds you may have gathered and left in the rough. Look at your dahlia tubers, if in the root house or cellar, and cut away any portion of the tuber that has began to rot. Remember that the new shoots of the dahlia come from the CROWN or point of junction between the NECK of the tuber itself.—Dahlia roots should be kept as DRY as consistent, and at an even temperature, if possible, and always above the freezing point.

Take cuttings of hardy shrubs whenever you can get them, and choice scions too, though it is best to cut them in mild weather, to avoid injuring the parent tree, or shrub. Bury your cuttings in dry earth, in the cellar, or pack them in a close box, with damp (not wet,) moss from the swamp, or in sawdust.

Be very careful to tie up firmly, and label instantly and plainly, every lot of scions as they are cut, and you will thus avoid mistakes and disappointments. Nurserymen in particular, cannot be too careful in this connection; a great share of the misnomers, so common among us, have grown out of negligence, and carelessness in labeling and securing scions, though every nurseryman OUGHT to be able to tell nearly every variety by the wood and foliage, and general habit of growth. But as very few are sufficiently educated and observing for this, great exactness must be observed in cutting, securing, labeling, and working, and growing varieties in the nursery.—*Prairie Farmer.*

THERE is a plant in the Island of Sumatra, the circumference of whose fully expanded flower is nine feet; its nectarium is calculated to hold nine pints; the pistils are as large as a cow' shorns; and the whole weight of the blossom is computed to be fifteen pounds!

### PRESERVATION OF LIFE IN SEEDS.

THE preservation of life in seeds and other organisms, when in a state of passive vitality, is a good instance of this power to resist the action of physical agents. Dr. Lindley says, in his "Introduction of Botany," I have at this moment three plants or raspberries before me which have been raised in the garden of the Horticultural Society, from seeds taken from the stomach of a man, whose skeleton was found thirty feet below the surface of the earth, at the bottom of a barrow which was opened near Dorchester. He had been buried with some coins of the Emperor Hadrain, and it is therefore probable that the seeds were sixteen or seventeen hundred years old. How vigorous must be that vital energy by which they could resist the process of digestion in the stomach of the man, as well as entombment in the earth for so many ages, and preserve their germinating power unimpaired.—*Anonymous.*

THE *Jardin des Plantes* at Paris is at present the object of great attraction; there is a very remarkable phenomenon of vegetation in its rich conservatory. On the fourteenth of October, a bamboo put forth a stem, which has already reached the enormous height of nineteen feet, having grown seven or eight inches each day during a month. What is also equally admired by the numerous visitors who frequent the garden, is a superb *earica papaya*, laden with fruit, of which some has arrived at maturity; and a *plumeria*, covered with blossoms, which will flower toward the end of the winter.

TAN-BARK.—I see in the November number of your valuable Review, an article from "Veritas," adverse to the use of "Old Tan" upon strawberry beds. Veritas gives his experience. Permit me to give you mine. Three years since I put out my plants, twelve by eighteen inches, and covered the intermediate spaces to the depth of two or three inches, with old tan-bark.—They have borne finely since, and have required no work, except pulling off the runners, for the reason that neither grass nor weeds penetrate the tan. The runners readily strike root through this substance. —*Western Horticultural Review.*

WHEN shrubs or dwarf fruit trees, produce an abundance of foliage, but no flowers or fruit, either move them to a poorer soil, or cut through some of the principal roots.

# Domestic Economy.

TO PRESERVE BEEF.—A correspondent says, "I give you here a recipe for preserving beef almost fresh for several months time. Take one quart of salt, one quart of good brown sugar, half an ounce of saltpetre and mix it well. With this rub well 100 lbs of beef—let it stand in the tub ten days, then cover it with cold water and set it in a cool place. You will have a fresh and sweet article, as I have proved by repeated and successful trials."

GUM ARABIC STARCH.—Get two ounces of fine white gum arabic, and pound it to powder. Next put it into a pitcher, and pour on it a pint or more of boiling water (according to the degree of strength you desire,) and then having covered it let it set all night. In the morning, pour it carefully from the dregs into a clean bottle, cork it, and keep it for use. A tablespoonful of gum water stirred into a pint of starch that has been made in the usual manner, will give to lawns (either white or printed) a look of newness to which nothing else can restore them after washing. It is also good (much diluted) for thin white muslin and bobbinet.

TO MEND BROKEN EARTHENWARE.—Moisten each edge with white paint, (white lead,) press it firmly together and fasten it with a cord. Let it remain in a dry place a month, when it may be used. I have a tureen that I have used for more than a year with various kinds of hot liquids and meats for the table, which, to all appearance is as sound as ever and the seam just as delicate; whereas the cement hawked about by pedlars makes a dirty looking seam, and will not stand the test of hot water.

TO MAKE CRISP PASTE FOR TARTS.—Take one pound of fine flour, mixed with one ounce of loaf sugar beat and sifted; make into a stiff paste with boiling cream, and three ounces of butter in it, work it well and roll it very thin. When you have made your tarts, beat the white of an egg a little, rub it over them with a feather, sift a little refined sugar over them, and bake them in a moderate oven.

ECONOMY OF CARPETS.—To preserve expensive carpets, it is well to completely cover the floor beneath them with drugget, or coarse matting, which is a much better plan than to spread a layer of straw between the floor and carpet; the straw (besides the difficulty of spreading it perfectly smooth and even) accumulating much dust, that works up through the carpet.

RECIPE TO MAKE INDELIBLE INK.—Two drachms of caustic dissolved in two table spoons full of water, one tea spoon full of brandy, half a tea spoon full of brown sugar; wet the cloth large enough for writing with strong pearlash water, and dry with a hot flat iron, then apply the writing and dry with the same.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending January 4, 1853.

JAMES P. ARNOLD, of Louisville, Ky., for improvement in machines for heckling flax and hemp.

Jno. T. Bruen and James G. Wilson, of Hastings, N. Y., for improvement in machines for sawing stone.

James J. Clark, of Philadelphia, Pa., for improvement in self-winding telegraph registers.

Jno. D. Dale, of Philadelphia, Pa., for improvement in machines for planing moldings.

Geo. Feaga and Geo. W. Feaga, of Frederick, Md., for improvement in grain Washers.

Jno. S. Gallaher, Jr., or Washington, D. C., for improvement in crutches.

Jno. C. Bidwell and Jno. Hall, of Pittsburgh, Pa., Executors of Samuel Hall, deceased, for improvement in hill-side plows.

Richd. Hollings, of Boston, Mass., for improvement in hose pipes.

Benj. F. Jenkins and Luke L. Knight, of Barre, Mass., for improvement in lathes for turning irregular forms.

Merritt Peckham and Lucius O. Palmer, of Utica, N. Y., for improvements in ore washers.

Francis C. Schaffer, of Brooklyn, N. Y., for improvement in potato diggers.

Wm. Watson, of Chicago, Ill., for improvement in tonguing and grooving machines.

Jeptha A. Wilkinson, of Fireplace, N. Y., for improvement in printing presses. Patented in England, Sept, 23, 1842.

Rudolph Kreter, of New York, N. Y., Assignor to Robert Nunns and Jno. Clark, of same place, for improvement in covering piano-forte hammers.

Walter Hunt, of New-York, Assignor to Chas. T. Kipp, of same place, for improvement in bottle stoppers.

For the week ending January 11, 1853.

Thomas Baylis and Daniel Williams, of Tecumseh, Mich., for improvement in rakes to harvesters.

Mathew Chapin, of New York, N. Y., for improvement in lathes for turning interior and exterior surfaces.

Moses G. Farmer, of Salem, Mass., for improvement in porous cells for galvanic batteries.

Pinckney Frost, of Springfield, Vt., for improvement in scythe fastenings.

Ammi M. George, of Nashua, N. H., for improvement in mode of operating circular saws.

John L. Gilliland, of Brooklyn, N. Y., for improvement in fire polishing glass.

Peter P. R. Hayden, of New York, N. Y., for improvement in buckles.

Silas A. Hedges of Lancaster, Ohio, for improvement in manure spreaders.

Wm. Mann, of Philadelphia, Pa., for improvement in manufacturing copying paper. Antedated July 11, 1844.

Andrew Mayer, of Philadelphia, Pa., for improvement in screw-cutting dies.

Richard Montgomery, of New York, N. Y., for improved method of connecting the sheets of shut flue and water space steam boilers.

Dan. Pease, Jr., of Floyd, N. Y., for improvement in smut machines.

### THE CALORIC SHIP ERICSSON.

THE introduction of a new motive power into the economy of life is an event of far more importance to the world, than any political incident, however startling, or however vast the interests it may seem to involve. Changes of dynasties,—the transformation of civil governments,—the rearing or razing of empires, are transitory and trifling in the interests they affect, compared to the discovery of a new Power, and its successful introduction, as an ally and an agent in that great war which it is the mission of Man evermore to wage with Nature. We look, therefore, upon the result of the experimental trip with the caloric ship Ericsson, as announcing a more important fact than has been brought before the world since the discovery of Steam;—the fact, namely, that the trial was entirely satisfactory,—the experiment perfectly successful, and that *Heated Air* stands by the side of *Evaporated Water*, among the active forces by which man is hereafter to subdue nature to his uses and his will.

If this were the expression of an *opinion* upon a scientific subject, it might justly be deemed arrogant and worthless. Comparatively few men are competent to pronounce such judgments upon such topics; and those are the very men who would do it with cautious hesitation. But our task is simply to record *a fact*—as patent and unmistakeable as the rising of the sun; and that fact involves the whole case. When Fulton saw the wheel of his small ship turned around by steam, he know, and all who saw it with him know, that Steam as a ship-propelling power was established. How costly it would prove, how fast it would drive a vessel, how dangerous it might be—these were minor considerations to be settled afterwards.—The fact of its power, and of its applicability to the work of driving ships, was the great fact just then of paramount importance to the world. Heated Air has passed through that same ordeal—and has achieved at least an equal triumph. Forty or fifty gentlemen—intelligent, disinterested, unprejudiced—were invited on board the Ericsson—not to give scientific opinions, nor to pronounce judgment upon scientific theories; but to look at an engine driven by Heated Air, and to observe as a matter of fact, *whether it went or not.* And it *did* most unquestionably go! That immense ship was driven against wind and tide, by machinery far from complete or perfect in its construction, at a steady rate of ten miles an hour; and without referring at all to any thing farther, in that fact alone the principle finds its complete and triumphant vindication. The use of Caloric as a propelling power is no longer a theory—no longer an experiment; it is a *fixed fact.*

And yet that fact, transcendant as it is, includes but a small part of the advantages and merits of the invention. Unless we are very greatly deceived, there can be no doubt whatever, that heated air thus applied, will be found far *cheaper*, and infinitely *safer*, than steam. On board the Ericsson the air is heated to a temperature of 450 degrees, giving a working power of twelve pounds to the square inch. This degree of heat is maintained by the use of six tons of coal a day—without unduly heating the metal of the cylinders or furnaces—leaving the fireman's room, amply ventilated as it is, cool and comfortable; and with cylinders fourteen feet in diameter, giving a power equal to that of the largest and swiftest steamer afloat. Capt. Ericsson, therefore, proposes never to seek a higher degree of heat;—but the *power* of the engine can be infinitely augmented by *increasing the dimensions of the cylender*—the power being in proportion to the square of the cylinder's diameter. It has been pronounced impossible to construct a cylinder 14 feet across:—but as it has been *done*, the objection loses weight: and Messrs. HOGG & DELAMATER, the builders of these engines, declare their readiness to make, and to warrant, as many as may be ordered *twenty feet* in diameter. Any desirable increase of power, therefore, may readily be attained by the easy process of increasing the size of the cylinder: and that is done at comparatively slight cost without greatly increasing the space occupied, and at a very trifling addition to the working expenses.

There are very many persons whose *interests* will be injuriously affected by the introduction of this new agent. It is natural that they should be reluctant to believe in its feasibility; that they should be fertile in objections, distrustful of evidence, and obstinate in unbelief. But they cannot alter *the fact.* And they will most effectually protect at once their interests and their reputation, by adjusting themselves to the new Power and the changes it must effect, rather than by quarreling with it, and disputing its existence. Caloric Ships will very soon take larger cargoes, at less freight, with lower rates of insurance, than Steamers; and that process once commenced, the inevitable result will be close at hand. For one thing alone, if there were no other to recommend it, every man living should hail the advent of this new power, with sincere rejoicing. *It is free from danger.*—Explosions are impossible. No human life can be lost through its agency. It is as harmless as the air we breathe. In this fact, aside from its economical advantages, the world may find abundant reason to welcome its introduction as one of the greatest boons ever conferred on the human race.—*N. Y. Times.*

### STEAM FIRE ENGINE.

THE Cincinnati Steam Fire Engine, which we have spoken of before, was publicly tried again in that city on the 1st inst., and the best fire engine in the city was brought out, strongly manned, to compete with it. In ten minutes the steam was up and the engine in operation. The firemen went to work with the ordinary engine, confident of beating the new fangled affair. The signal was given—puff! puff! went the steam engine, and away spirted the water. The fireman bore down and up in quick succession, and strained every nerve, but gave up exhausted. The steam engine continued unceasingly for half an hour to throw a vast body in a solid stream of *two hundred and twenty-four feet.* It then threw two streams of water for half an hour longer, to show its power to keep up steam; and finally to prove that fire may be extinguished in confined places by *steam* alone, without deluging a building with water, a section of India rubber hose was attached to the boiler, and steam passed off through it. It sent forth a vast volume of steam, sufficient to saturate the air and penetrate into every crevice where fire could possibly lodge, completely extinguishing fire. The machine ran up hill, down hill, and was perfectly manageable in every respect. A few engines of this kind in Philadelphia, with half a dozen men to attend them, would do as much service as our sixty fire engines and hoses, with six or eight thousand firemen to attend them. So thinks the *Public Ledger*, and *we* have not a doubt of the fact.

### IMPROVED WRENCH.

MEASURES to secure a patent for the above have been taken by George B. Read, of New York City. All mechanics have had too much practical experience of the difficulty of keeping adjustable wrenches properly fixed, so that they may not slip around the nut instead of firmly grasping it. The inventor has hit upon a happy device to attain this desideratum by the following plan. One jaw which is attached to the wrench stock by a pivot has a recess through it, in which slides the shank of the other jaw, which is therefore adjustable, and its shank is provided with a rack into which catches a pawl attached to the stock and hold in position by a spring. By this construction, as the handle of the wrench is turned, the two jaws are forced against the sides of the nut, more especially grasping the outer corners of it, the failure to do which is the cause of the slipping so common in other wrenches. —*Scientific American.*

RICHTER enumerates 600 distinct species of disease in the eye.

# Educational.

## SCHOOL DISCIPLINE.

The head and the heart of the teacher have often been deeply tried, in determining the amount of discipline to be employed. Some restraint is always necessary, if it is desired to have a well ordered and profitable school room. Scholars left to their own will, become noisy,—playing and talking in school hours, regardless of the effect it must have upon their recitations. Few teachers have sufficient patience and forbearance not to be frequently put out of humor by the waywardness and insubordination of their pupils. It is at such times, if at all, that discipline and punishment is applied, and it is quite as likely to fall upon those least as upon those most in fault. Such a course diminishes the self-respect of the teacher, and also the respect felt for him and his authority by the pupils. Uniformity, as far as possible, and in every respect divested of severity, should mark the discipline of a teacher. Kindness, and an earnest effort for the advancement of the pupils under his charge, with a frank and firm avowal of the object of such discipline as it may be necessary to employ, will be far more certain of accomplishing the end desired, than hasty, severe and unusual punishment. The minds of the young are susceptible of easy cultivation, and may as readily be taught obedience to all reasonable regulations as any other lesson. If they have not been properly trained at home, the task will be harder but not a hopeless one.

## BE PATIENT WITH CHILDREN.

"*Ye have need of patience!*" Nothing can be more true than this, and nothing is more applicable to those who have to do with boys and girls. There are so many provocations which demand endurance, so many faults which require correction, so much carelessness which provokes rebuke, and so much perverseness which calls for firmness and control, that "teachers of babes," if not of a temper absolutely angelic, need to have "line upon line, precept upon precept," to aid in the work which has fallen to their lot. There are so many temptations accessories to impatience, too. It is so easy and so natural for the strong to tyrannize over the weak! Absolute power is too frequently abused; and the power which a parent or a teacher exercises over the child, is so far absolute that immediate resistance can be rendered unavailing.—True, the parent has parental tenderness and love, to restrain the impetuosity of impatience, but the teacher has not; and if parents are often, in spite of natural barriers, impetuous, what wonder that teachers are so too.

It is less trouble, so far as the present time is concerned, to blame and scold, and punish a child for negligence, stupidity, or misconduct, than to explain, reason, and instruct. It takes less time to box a boy's ears for being mischievous, or to push a girl into a bedroom "all by herself," for being idle, or talkative, or troublesome, than it does to investigate intentions and motives, or to inquire into causes; and we do not wonder that the patience of the most patient sometimes gives way. But it is not the less to be deplored when it does give way. In one hour—in less time than this—in *one minute*, evil may be wrought which will undo the work of months, or which years of judicious treatment will not obliterate.

Do we say then, that children should be indulged and pampered, and their faults overlooked? No; this seems easier to the indulgent and self-indulgent teacher, than the wearying work of constant watchfulness and wise circumspection. But patience is as much required in the avoidance of false indulgence, as in the banishment of undue or injudicious severity. It is easier, for the moment, to yield to the wishes and dispositions of children, than to oppose or regulate them. But notwithstanding this, "patience" should "have her perfect work." O ye teachers of the young, "ye have need of patience." And not patience only. In the proper exercises of discipline, discrimination and keen perception must be united with it or even patience will fail. Perhaps no two children in any given number are precisely alike in formation of mind, disposition, and general capacity. One will be timid, another bold; one sensitive, another obtuse; one quick, another slow. In indifferent things, and at different times, the same boy or girl may exhibit almost contradictory qualities, and yet there shall be nothing in all this that ought to be constructed into a fault, or that should call for even a rebuke. Patience here will be lost in a maze, to which discrimination alone can furnish the clue.—And that not always, for we have the word of Inspiration to assure us that "the heart is deceitful above all things;" but in general, perhaps, the heart of a child may be pretty correctly read by those who do not, idly or contemptuously, neglect this study.

At all events, it is better to be credulous than incredulous—better that a child should ten times escape the just punishment of a fault through an excess of patience, than be once unjustly punished through want of discrimination. The memory of the injustice will rankle in the soul, and produce worse fruits there, tenfold, in after years, than will spring from the consciousness of having committed faults innumerable with impunity.

Teachers or parents never will or can deal wisely with a child, unless they dispense with impulse, and scrutinize in every possible way, what appears worthy of condemnation; and the best way to follow out this scrutiny is mentally to change places with the offender—to be a child again—to divest one's-self of all but a childish judgment and capacity—to throw back one's-self upon childish views and feelings—and to submit to be guided by childish reasonings, and then after all, if there be a doubt to give the child the benefit of that doubt.

"But, what a deal of trouble is all this?"

Very well,——, we are not thinking about your trouble, but about the child's good.—Though as to trouble, the best way of doing anything, is the least troublesome in the end. But by trouble you mean pains-taking, time and attention, and regard to the ultimate object. Now, can anything in the world, worth doing, be well and properly accomplished without these? Can a pudding be made, or a pig be fed, or a beard be shaven without these?

Trouble! Shame upon those who, under the selfish, but vain plea of saving themselves trouble—present trouble—make it for others in after years! Let them do anything, be anything rather than teachers of the young.

This is an inexhaustible subject—the right training of children; we may have written about it before, and we may have occasion to revert to it again and again. Meanwhile, as illustrative of the foregoing remarks, we quote an instructive passage from the work on "Private Education."

"How can you be so stupid?" said a governess to her pupil; "why do you not do your sum properly? It is very easy and you don't try to do it well."

"My sum was right at first, and now I have done it over so many times, I really cannot understand it," replied the child.

"I shall make you finish it," said the governess "and not allow you to have any recreation till it is correct."

The child burst into tears, saying she did not know how it was, but she felt so stupid. She, however, sat down, and at once began the sum; but, this time, every figure was wrong.

The governess grew very angry, and said, the naughty girl should not only begin it again, but do two more as a punishment for such obstinacy.

The child made another attempt, and was desired to do it aloud.

"Four farthings make a shilling," said the child.

"What!" exclaimed the governess; "four farthings make a shilling! How dare you be so stupid? You do it on purpose. I shall certainly complain to your mamma."

"Indeed, indeed," sobbed the child, "I will try to do it properly; I see I am wrong, very wrong; I mean to say, twelve farthings make a penny."

The governess could bear it no longer; she rose and was about to threaten some severe punishment, when the mother entered the room, and seeing the child in tears, said,

"What is the matter with my little Emma?—Seven o'clock and lessons not finished! I am going to dinner, and you will not be ready for dessert."

"I am not going down stairs this evening," replied the weeping child; "I cannot do my sum."

The governess, till then silent, confirmed this—"I cannot allow Miss Emma any recreation," she said; and drawing out her watch, added, "it is now seven o'clock; she has been five hours with a slate in her hand, and has not yet done her sum. I am sorry to say she is very obstinate, and persists in asserting that four farthings make a shilling, and that twelve farthings make a penny!"

The child stared vacantly, and did not contradict her governess, but looked as if not conscious of the mistake she had made. The mother, evidently suffering at seeing her child's swollen eyes, and convinced of the mismanagement, merely said,

"I am sorry to find Emma has given cause for displeasure, and beg she may be sent to bed immediately; to-morrow, I trust she will endeavor to be more attentive."

The child obeyed, sobbing "Good night, mamma."

As soon as she was gone, Mrs. Y., an excellent and judicious parent, pointed out, in gentle language, the error committed—

"You will probably think, Miss H., that a mother's feelings misled me; but I must candidly say, I do not think Emma has been so much to blame. You have shown ill-judged severity in keeping her so long at the same lesson. I give you credit for your good intentions, but believe me, you are mistaken. The attention, fixed for such a length of time loses its power; and I am persuaded that Emma will do her sum right to-morrow morning, provided no threats are made; and if her thoughts be occupied with the punishment she has to dread, it is not probable she can give undivided attention to any study, much less to arithmetic, which admits of no error. I do not think Emma deserved to be punished; she had no power of doing better. It is evident from her saying that four farthings make a shilling, and twelve farthings make a penny, that she was much puzzled; and I beg that another time, under similar circumstances, she may be made to leave off her lesson. When I sent her to bed, and appeared displeased, it was to uphold your authority; I should not have had the courage to inflict any other punishment; but the child was so fatigued, I tho't it could do her no harm, and hope she is already asleep, as I fear she has been overexerted."

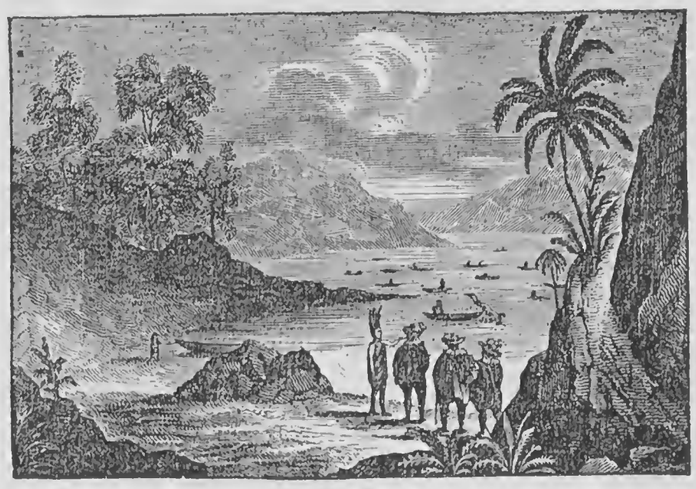
The governess made no reply; she felt the truth of the observations, and was grateful for the manner in which they had been conveyed.

The following morning the little girl, refreshed by sleep, and recovering the use of her faculties, did her sum without a single mistake, and begged as a reward, that she might be allowed to go and show it to her mamma.

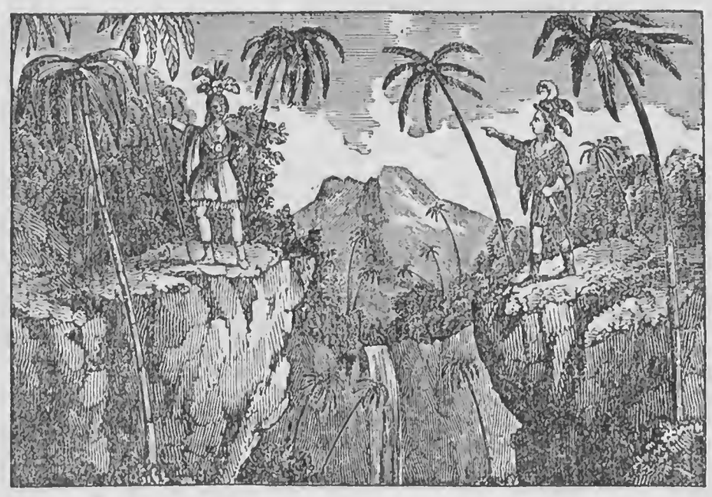
# For the Young.

## SOUTH AMERICAN SCENERY.

Our young readers, in the study of geography and history, have met with accounts of Peru in South America, and its conquest, some three hundred years ago, by the renowned Pizarro. The native inhabitants, who were a race of half-civilized Indians, were subdued and treated with great cruelty by their conquerors. We find—descriptive of Peruvian history and scenery—the following in the Youth's Casket, a Buffalo juvenile periodical:



There is in South America, in the tropical climate, much beautiful and sublime scenery. The flowers, the plumage of the birds, the leaves of the trees, possess a brilliancy of coloring unknown up here in our cold latitude, where we have frost and snow nearly one-half of the year. Look on the picture. It presents a most lovely scene. See that little lake, nestled far up among the mountains, and covered with the light canoes of the Indians, and its borders overspread with trees and flowering shrubs which are in prepetual bloom. The vine and olive, the pomegranate, famed for its pleasant sweetness, the plantain, the banana, the guava, extensive groves of oranges, lemons, limes, nectarines, grannadillas, figs, pineapples, chinernoyas, besides peaches, and apricots and melons, are found in Peru in great abundance. I wish I had time to describe for you all this beautiful fruit—to tell how the different kinds look, and how they taste; but as I have not, you must get some book which will tell you all about them. It will tell you too of the beautiful birds, and flowers which grow in the forests and in the fields all over the southern country. You will be much interested in reading of all these things; and besides you will gain much valuble information by the research. This lake, as I before said, is away up in the mountains, a great many hundred feet above the level of the sea. The natives resort to it on their holidays, and have great sport with their light canoes, which they paddle through the water with great rapidity. But here is another picture.



There are beautiful trees, and high and ragged rocks, and through a chasm dashes and foams a mountain water-fall. It is, I suppose, the outlet of the little lake we see in the other picture. How graceful those tall trees, with their long, branchless trunks, and their broad leaves. These shrubs, too, are covered with flowers, only we cannot see them, as the black ink which the printer uses does not make the bright colors which a tropical sun produces.

On one side of this mountain torrent, high up on the rocks, there is a man, who, by his dress, appears to be a Spaniard.—He has a sword by his side, and a cloak such as the Spanish cavaliers in old times used to wear. He is pointing with his hand across the chasm, upon the other side of which there is an Indian, or native Peruvian, leaning upon his spear. He seems to listen to what the Spaniard is saying.

The Spaniard is one of the invaders straying from the camp; he lost his way among the mountains, and wandered for several days, subsisting upon such wild fruit as came in his way. He at length arrived at this unpassable gulf, with the rapid torrent whirling and foaming and tumbling over the rocks far beneath. He was bewildered, and knew not which way to move. At length the Peruvian comes up on the opposite bank, and he is endeavoring by signs to make himself understood.—But, as the story goes, he did not succeed, and was compelled to set out again, alone, in search of the camp. Pondering upon the matter, he came to the very sensible conclusion that rivers run from the mountains down towards the sea, and he therefore concluded that his best course was to follow the stream until he came to the level country. After many days of weary wandering, during which he was compelled to rely on his cross-bow for game, he descried in the distance, what he took to be a flag waving in the breeze. As he came nearer to it, he was quite overjoyed to find that it was the banner borne by his own company; and it was not long before he was in their midst—glad to be with his countrymen, notwithstanding the beauty of the scenery, and of the birds and flowers in the country through which he had wandered.—*Youth's Casket.*

## AN EVENING BY A COUNTRY FIRESIDE.

The tea-table having been removed, the family draw around the bright and cheerful fireside; the father takes up a newspaper, the mother her sewing, the older children have their books,—some of them with difficult problems in mathematics to solve—while the younger ones amuse themselves with their slates in trying to see who will draw the prettiest and most correct pictures to show their mother.

Now and then in their earnestness they get to talking pretty loud, and one says we must not make so much noise when others are studying. By and by one of them going to father's knee says, didn't father promise to tell us about Joseph this evening? Father assents and lays down his paper, when the little ones gather round and listen attentively while he tells them in simple language who Joseph was, and how he went to seek his brethren, and when he spoke of their selling him to the Ishmaelites, they exclaim, their little bosoms heaving with pity—O! how cruel!

Soon the clock tells the hour of the children's retiring, and they get a promise from their father to renew and finish the story the next evening. One of the sons then reads a chapter from the sacred page, they all unite in singing an evening hymn, and after giving thanks to God for his mercies and kindness through the day, and imploring his protection during the night, they bid all a good night and go to their couches with light hearts, little thinking of the care and anxiety which their parents have, in watching over their youthful moments, and in striving to guide their feet in the good paths that shall bring them to peace, joy and happiness, both here and hereafter. E. H. W.

## SNAKE KILLING BIRD.

In Texas there is a peculiar bird, called the "pisano," which is deemed of great value by the Mexicans and Indians on account of its hostility to the serpent tribe. It is larger and taller than the chachalacha, delicately and beautifully formed, black and white speckled in color, and can run as fast as a fleet dog. Whenever one of them discovers a rattlesnake, or any other serpent, no matter how large, it commences a fierce cry, which summons to its aid all the pisanos within hearing. They begin to run and fly about the snake in a circle, crying and chattering all the time till their victim becomes confused, when, quick as the lightning's flash, one of them, and immediately others, make a dash at the eyes of the snake, and with their sharp, unerring beaks, he is blinded in a moment. He then falls an easy prey to their united prowess.—These battles are of frequent occurrence, and are described by spectators as interesting in the extreme.

No man is master of himself so long as he is a slave to anything else.

It is the basest of passions to like what we have not, and slight what we possess.

## GUARDIAN ANGELS.

Mourning mother, bowed in anguish
For thy dear one fled,
For thy loved and only treasure
Sleeping with the dead;
Mourn not, for his angel spirit
Ever near thee'll stand,
Will forever guide thy footsteps
To the spirit land.

Brother "why that look of sadness
Why that downcast eye,"
Why mourn o'er thy sister's absence,
She is now on high:
And her gentle spirit's near thee
In the silent night,
She is now thy guardian angel
Clothed in robes of light.

Orphan, weeping o'er thy sorrows
O'er thy mother's bier,
Change thy sorrow into gladness
Dry each lonely tear;
She it is that o'er thee watches,
Guards o'er thee with love,
And still points thy youthful footsteps
To thy God above. Fannie.

## DEATH OF GEN. PIERCE'S SON.

Many hearts will be touched by the sad intelligence, that the President elect has been bereaved of his only son. All have learned before this the particulars of that distressing casualty, which brought sorrow to so many homes. Mrs. Pierce, it is said, was almost frantic with agony, as she beheld the body of her child crushed before her eyes, and was only prevented from sharing his fate, in an attempt to effect his rescue, by the kindly interposition of a fellow passenger.

To our mind, there is something in this allwise providence, worthy of note and reflection. It is true, that railroad accidents are of almost daily occurrence, that myriads of families are suffering from similar losses, and that the blight of disappointment and death is none the less severe when it falls on the poor and humble, than when it visits the rich and great. But this providence, from the position of the sufferers, will arrest the attention of the nation. It may, therefore, teach an important lesson to multitudes who greatly need the instruction it conveys. It may serve to remind us, of what we should so often be reminded, that *there is no condition in human life exempt from its sorrows.*

Mr. and Mrs. Pierce will soon take up their abode in the Presidential mansion, but they will enter it with bruised and bleeding affections. The voice of public approval will not stir the heart, as did that voice now hushed forever. No form of beauty or grandeur will excite and ravish the soul, as did that loved form now hidden in the silent grave. All the emoluments and honors of their elevated position will not banish from their aching breasts the memory of their irreparable loss. Vain is human dignity and glory to one upon whose threshold the shadow of death has fallen? The voice of fame is unheeded, when the sacred altar of the heart is covered with the smouldering ashes of consumed affections. And the most brilliant and exalted pathway is darkened by fearful clouds to one from whose bosom gery and ghastly death has torn an object of love, of hope, and of fond expectation.

The young are apt to suppose, that happiness invariably attends upon wealth and distinction, and always dwells upon the mountain peaks of greatness and glory—peaks illumined by the glow of their own new-born ambition. But the truth is, her domain lies close around us, in home and friends—in loving and being loved. And when Death invades that narrow circle, and wrenches from our embrace the kindred and friends we love and cherish, there is left us no consolation, but in that animating doctrine of life and immortality, which is bro't to light in the Gospel. "There is no union here of hearts that finds not here an end;" but let the mourning soul be comforted;

"There is a world above,
Where parting is unknown;
A whole eternity of love
Formed for the good alone:
And faith beholds the dying here
Translated to that happier sphere."

Rochester, Jan. 10, 1853. A. C. G.

Blessings of Peace.—We may be shorn of every possession that the world holds dear and valuable,—gold, health, friends, home, and everything we strive to obtain and retain; and yet, under these losses and privations, it is possible to experience that internal satisfaction which is inseparable from a resigned and subdued, if not a happy mind. But when this mental quietude is wanting, one stern blow of destiny annihilates every thing without and within us, and no matter how the world may be to others, to us it is a cheerless solitude, a desolate wilderness, an excruciating and torturing Gehenna.

Longfellow, in his prose tale of "Kavanagh," calls Sunday the "golden clasp which binds together the volume of the week."

## THE UPWARD FLIGHT.

BY WM. EDWARD KNOWLES.

O, IT is a joy to me,
In this dreamy world below,
To be striving earnestly,
For the truths that great men know:
To be climbing unknown heights,
On the ladder-rounds of mind;
Kindling up the beacon lights,
For those following behind.

There the spirit longs to dwell,
Counting oft its treasures o'er,
By the pearl-drops at the well,
That is filled from wisdom's store.
There the great hills, stern and white,
Seem the pillars to the sky;
While the sudden glory-light,
Tells that we to heaven are nigh.

Freedom singeth there her lay,
In the holy, chastened light,
Cheering on, at night and day,
The lone pilgrim up the height.
In his dreams she wafts the vision,
Of the justly great and good,
Till the earth, and fields elysian,
Seem but one, twin-sisterhood.

There to tread the untrod plains,
High above the dreamy vales:
Striving earnest for the gains,
Which come not to him who quails.
Other footsteps may come on,
Mingling with those seen before:
But the fame be mine alone,
First to tread the far-off shore.

First to plant the way-marks there,
Which shall guide the follower's feet:
Heeding not the stormy air,
Tempests, rain, or snow, or sleet.
Delving at the flush of Spring,—
Delving in the Autumn's glow;
High above the clouds' grey wing,
Spreading o'er the vales below!

For it is a joy to me,
In this dreamy world below,
To be striving earnestly,
For the truths that great men know;
To be climbing unknown heights,
On the ladder-rounds of mind,—
Kindling up the beacon lights,
For the followers behind.

## THE LOST LAMBKIN.

BY AUGUSTUS DUGANNE.

WAS there ever a sweeter creature than dear little golden-haired Flora Campbell, with her light, fairy footsteps, and rosy cheeks, and violet eyes? How lovely she looked, as she bounded over the green braes in the morning, or lingered by the lochside at the quiet gloaming? Her heart was all sunshine, and her thoughts pure and fresh as the flowers she twined in her shining tresses.

It is a beautiful story they tell in Scottish valleys, of a poor idiot, ("innocent," as they call him,) who, when a sunbeam fell athwart his sight, as he sat in the church, threw his cloak across it—and the mantle hung upon the shining motes. They tell us that Faith worked the miracle—for Heaven would not disappoint the idiot's trust.

Sweet Flora Campbell! She might have thrown her mantle over the sunbeam; ay, and walked the glittering path with her delicate feet, till she reached the bright heavens above—for her young heart was all Faith and Hope and Charity. She prattled with the flowers and the streamlets and the birds; and her clear, ringing voice was heard at daybreak amid the heather, when the shepherds led forth their flocks. O, sunny and joyful, and happy as the day is long, was dear little Flora Campbell.

All loved the gentle child—and why should they not? Did not her tender hands bring fresh flowers to the sick wife of Robert the plowman? And did not her low voice tremble softly in prayer, at the bedside of old Elspie, the blind beggar-woman? O, who would not love the angel-hearted little maiden.

But where is Flora? Twilight is falling over the mountains, and shutting in the vales like a grey curtain. One by one, the bright stars steal up into the summer sky, and twinkle amid the fleecy evening clouds. The tinkling sheep-bell sounds nearer and nearer, as the flocks return to their mountain pastures, and the lowing of the kine in the farm yard tells that the labors of the day are over. But where is golden-haired Flora Campbell?

She was not used to linger so long from her grandfather's dwelling—for now the evening meal was spread, and the cottage lamps lighted. The aged man clasped his hands together and murmured a short prayer, while his daughter, the mother of Flora, looked anxiously out of the window, yearning for her child's return.

But Flora came not.

The shadows crept faster and faster around the valley. The old peasants sat at their cottage-doors, and the young men and maidens gathered upon the village green, some to walk, and some to talk of love under the broad chesnut tree—some to play the pipe, or dance to its merry music, and some to hurl the quoit, or wrestle in the ring.

But all was hushed when Gaffer Campbell came hurriedly from his cottage, inquiring of the villagers if they had seen his grand-child. Yes, indeed, had they.

One had beheld her far up in the mountains, plucking wild flowers, and weaving them into a garland of heather; another had met her in the path to the Moss Glen, sitting by the wayside, and plaiting a willow basket for her grandsire; and a third had received some forest fruit from her hands, as he saw her seated with her basket of flowers, near the head of the loch.

"Ah, we must seek Flora," cried the youths, immediately. "The dear child—no harm can surely come to her."

"Ah me, Gaffer Campbell," said a white haired old shepherd, shaking his head, "I feared something—for the youngest lambkin of my flock was lost to-day, and it is a bad sign, they say."

"Heaven grant that *my* poor lambkin be safe!" said Gaffer Campbell, solemnly.

"Amen!" murmured the white-haired peasant.

The villagers now dispersed in various paths leading to the mountain, the forest, and the loch; and soon torches gleamed upon the hights, and glimmered among the trees, and flashed brightly over the water. Up and down, along the stream, and thro' the woods, went the young men, calling upon the name of "Flora! Flora!"

But no Flora answered.

Gaffer Campbell leaned upon his staff, and spoke no word. He could not weep, for a heavy weight was on his heart. But the mother of Flora was loud in her grief. She wept, and beat her breast, and called aloud the name of her child.

The aged pastor now approached. He had heard, at the manse, of Flora's disappearance; for every house had been searched within the hour; and he now came to comfort the bereaved ones. "Fear not, daughter," he said—"Flora will return."

"Ah, she is lost—she is lost to me," cried the mother.

"He who tempereth the wind to the shorn lamb will protect our sweet child," answered the old pastor—"Fear not!"

And as the reverend man spoke, the loud barking of a dog was heard from the depths of Moss Glen, and lights appeared passing quickly down the valley.

"Trust in heaven!" said the minister—"Let us seek, and we shall find the child."

With trembling, yet hurried steps, the pastor and Gaffer Campbell took their way to the deep glen. But the mother of Flora passed them, and ran wildly down the narrow path. Louder and louder sounded the bay of the dog from the thick gloom in which the vale was shrouded.

They reached the brink of a wide ravine or chasm, commonly known as the "Deer's Mouth," and passed near a group of villagers, who, with torches in their hands, were listening eagerly to catch the baying of the hound. Again it came, low and deep, seemingly from the gulf beneath them. They bent their torches over the edge of the precipice, and strove to look down; but all was dark, and silent, save alone the barking of the dog, now quick and sharp.

"We must descend," cried a young man, pressing forward. "That's Luath's bark, and Luath knows Flora as well as I do.—Run, Donald, for ropes."

A half dozen lads started together, at this bidding, and soon stout ropes were brought and held by strong men, while the youth prepared to descend.

"Take heed, Christie," said the white haired old shepherd—"Remember the omen, my lad—the youngest lambkin of my flock was lost to-day, and I fear more evil."

"Fear nothing for me, father," cried the young peasant, swinging himself into the dark gulf from the edge of the rock; while again the loud bark of the dog sounded from the chasm.

Down, down, the youth was lowered, startling the wild birds from their nests under the cliffs, and brushing the twining ivy leaves from the sides of the rock. At last he reached the bottom, and the noble dog Luath sprang upon him, barking loud and joyfully.

The glare of the torch which the young man held, flashed around, and lit up every object. There, upon a thick bed of wild heather, lay sweet Flora Campbell, holding, in her white arms, and close to her bosom, a young lamb.

Christie stooped, and gazed at her. She breathed calmly, and he knew that she was sleeping. He glanced at the little lamb, and saw that one of its legs was bandaged with ribbons from the child's hat. Then he looked up, and shouted aloud—"She is safe."

The shout was echoed so loudly and gladly, that it woke the young maiden from her slumber. She glanced around with a bewildered gaze, and recognized the youth. "Dear Christie," she said, in her sweet simplicity, "I am so glad you have come! Now we will save your father's lamb."

Christie and the villagers soon learned all. How Flora had beheld the young lambkin, where it had fallen, at the bottom of the "Deer's Mouth," and saw that one of its delicate limbs was broken; how she had descended from ledge to ledge of the chasm side, clinging to the ivy, and thinking not of danger; how she had bound up the lambkin's broken limb with her bonnet ribbons, and held the mute sufferer in her arms; and how, at last, weary with her exertion, she had fallen asleep upon the bed of heather, and slumbered on till Christie's shout awoke her.

Joyful and happy the villagers were, when assured of Flora's safety; and the white haired peasant, Christie's father, blessed the fair child, and gave to her the little lambkin she had rescued. And often afterwards might Flora be seen, bounding over the braes, with her pet frisking beside her. And whenever she appeared the old villagers would smile and say—"God bless the bonnie child!"

---

WE are apt to consider London as a considerable city, and New Yorkers regard their village as an immense municipality. But if the Mayors of Nineveh and Babylon could revisit the earth, they would laugh at the pretensions of the moderns. The area of Babylon was two hundred and twenty-five square miles, and that of Nineveh two hundred and sixteen square miles, while that of London and its environs is but one hundred and fourteen square miles.

## QUIDDLING.

WE once knew a gentleman, whose favorite interrogatory phrase was, "How goes the enemy?" meaning time. And in fact, that precious friend of man is treated, as if he were the worst of enemies, to be abused, killed, got rid of in some way, by some artifice or deception. Among the ingenious contrivances to this effect, one of the most successful hitherto discovered, is undoubtedly that known by the name of Quiddling.—If "Procrastination is the thief of Time," Quiddling is its assassin. Where a man only puts off the performance of something for an hour or a day, there is still more opportunity left to do some other act in the meanwhile. He may be said to treat time politely, as an acquaintance or a companion, according to the world's fashion, which exacts only the semblance, not the substance of a benefaction. But the Quiddler cannot, by any body's ethics, be taken for a friend of time. He kills him. For, while Madam or Sir is annihilating the golden moments by a destructive mixture of worthless alloy, they cannot, like the procastinator, be doing any thing else.

And what is quiddling, pray? "I don't remember," says one, "to have heard it enumerated among the mortal sins, as you make it, when you charge the offender to be guilty of murder." We will tell you what it is. It is spending five minutes in doing a thing "just so," when the variation of a hair's breadth would make no difference. It is waiting a quarter of an hour before the glass to adjust a curl, or give a graceful turn or color to a mustache. It is the consumption of a whole forenoon to dress for a walk, or of an entire afternoon to get ready for an evening party. This consumption of time can boast of more victims than the more talked-of one of the lungs. He who is forever getting ready to do something, and never does it, is a quiddler. Life, as some live it, is an enormous preface to a meager work not finished, sometimes not begun.

If this matter were viewed as seriously as it ought, there might be a pathetic song written on quiddle, quiddle, quiddle, as on "work, work, work." A poor laborer is waiting for his breakfast; how lamentably the good house-wife spins round and round, cutting all manner of figures, but not cutting up the bread nor ham. Here is a pretty fellow, who takes a quarter of an hour to tie his cravat, a quarter to put on his coat, double that time to brush his hair, pull on his gloves, and so on. If he has a letter to dispatch, he is so tedious in selecting the paper and pen, and so shockingly nice and prosy in its composition, and so curiously particular and slow in affixing an appropriate, but ten to one a mistaken and fantastic seal, that the mail starts off without it.

This habit is very costly in more ways than one. None, therefore, but rich people can afford to be quiddlers. It is a luxury, which, like the dyspepsia and gout, poor folks must not think of enjoying, any more than the privilege of lying abed till nine or ten: then toying an hour, as some hygienists recommend, over breakfast, two hours over dinner, another over a third and perhaps a fourth meal; thus reducing the definition of a human being to one who spends all his time in eating, sleeping and dressing; and the remainder in drinking.

It is a sad misfortune to an author, or an artist, if the spirit of quiddling once insinuates itself. We cannot stop to relate its mischiefs now—how it injured *Akenside's Pleasures of the Imagination*, and drove *Allston* to paint half a dozen *Belshazzar's Feasts*, one over the other, some worse and some better than the fragment finally left, which was made the fragment it is by quiddling.

If husband and wife are sinners in this respect alike, time ambles smoothly enough, but to no purpose. If one alone is guilty, the yoke is carried unevenly, and trouble ensues. It has been said already that quiddling is an expensive pleasure. One instance must suffice, and conclude this dissertation. A few weeks ago the following scene occurred:—"Are you coming, my dear, I shall be late?" "Yes, husband, I shall be ready in a minute. I have only my hat to put on." That was true; it had been equally true, for full twenty minutes since she began to do it. Again the husband, "Come, come, wife, really I must go."—"Almost ready," blandly replied the lady, in the quietest tones. "Jeanette, positively, I'll go, can't stop another second," and the front door was heard to open, before which the carriage had been waiting five and forty minutes, during most of which time the lady had been hard at work in drawing on her gloves and adjusting her bonnet, for all the rest of her rig was completed before. On hearing the opening of the door, she was aware the case was pressing, so began to move down stairs gently, looking extremely nice, but not so tastefully in some of her arrangements, as they were thirty minutes before she had altered them for the worse. At length they were off, and arrived in Wall-st. just in time for the husband to learn that the subscription book for a certain stock, which we shall not mention, had been closed pursuant to previous notice, just six minutes and a half.—Yesterday, he might have sold the shares reserved for him to the last moment, at two thousand dollars advance. A costly hat, and an expensive wearer of it! But the wealthy have indulgences that others know not of, "and don't want to," somebody, looking over my shoulder, says.—*Newark Advertiser.*

---

WHAT is the whole creation, but one great library; every volume in which, and every page in these volumes, are impressed with radiant characters of infinite wisdom; and all the perfections of the universe are contracted with such inimitable art in man, that he needs no other book but himself to make him a complete philosopher.

# For the Ladies.

## THE WIFE.

"She flung her white arms around him—'Thou art all that this poor heart can cling to.'"

I could have stemmed misfortune's tide,
And borne the rich one's sneer—
Have braved the haughty glance of pride,
Nor shed a single tear.
I could have smiled on every blow
From Life's full quiver thrown,
While I might gaze on thee and know
I should not be "alone."

I could—I think I could—have brooked
E'en for a time, that thou
Upon my fading face had looked,
With less of love than now;
For then I should at least have felt
The sweet hope still my own,
To win thee back—and whilst I dwelt
On earth, not been "alone."

But this to see from day to day,
Thy bright'ning eye and cheek,
And watch thy life-sands wash away,
Unnumbered, slowly, meek;
To meet thy smile of tenderness,
And catch thy feeble tone
Of kindness, ever breathed to bless,
And feel I'd be "alone."

To mark thy strength each hour decay,
And yet thy hopes grow stronger,
As, filled with heavenward trust, they say,
Earth may not know thee longer;—
Nay, dearest, 'tis too much—this heart
Must break when thou art gone;
It must not be—we may not part,
I could not live "alone."

---

Written for Moore's Rural New-Yorker.

## NEW YORK TO COUNTRY EYES.

[*Concluded from last week's paper.*]

DEAR RURAL:—Could every woman in the land see what I saw one morning on the Battery, and feel as I felt, there would be no more sipping of wine by themselves, or countenancing it in others; they would no longer dare, with winning words, and witching smile, to offer the tempting poison to a fellow mortal. I had often thought there could be nothing more degrading than begging—the going from house to house, asking alms—until I came to this overgrown monster of a place. The first thing that riveted my attention, and set me to moralizing, the morning of my arrival, was the occupation of several old women and young girls, as they passed through the streets, fishing from out ash-barrels, with their little hooks, paper-rags, and bits of meat and bread; but these had a straight-forward, business-like air, that spoke of an industrious independence, although it was revolting to my country eyes. Then, too, there was nothing very gratifying to me, to see poorly clad women, of a frosty, windy morning, at the corners of the streets, spreading their little tables of apples, candies, nuts and cakes; still, I became tolerably reconciled to these branches of business, when I tho't they were trying to earn something for self-support, and did that which was within their reach;—but when one morning as I was walking on the Battery, I saw a little before me, stretched on the cold damp earth, the form of some person apparently dead, the police-men and others had gathered round, and as I came nearer, I saw it was a woman and *dead drunk*—my heart died within me. Oh! what a feeling of shame and disgust crept over me; for days I could not shut out the sickening sight, though I wished all traces of it erased from my memory, unless the recollection of it could prompt to some word or deed, that should make woman feel the necessity there is of her example, influence and exertion, in eradicating this evil that lies so near every hearth-stone, spreading desolation wherever it obtains a foothold.

DEC. 31st.—I find on looking over the above, I have written little else beside the sorrows of a homesick child,—one who is seldom far from home, and when away, always wishes herself back again. Christmas has indeed come, and gone, since I last took up my pen, but not like the old "Merry Christmas" times of my own home. It is true there were numberless sumptous dinners, cooked and eaten, among the inhabitants of this busy place, many churches were wreathed with evergreens and illuminated, stores and shops closed, giving the drilled clerks a day of rest; but to me, it was very like any other day: the pomp and ceremony here, must all be saved for New Year's.

I have not yet grown one day too old, or one inch too tall, to enjoy to the full, with younger brothers and sisters, the placing all around the great kitchen fire-place, those receptacles for "Santa Claus" favors,—our stockings. Those of us who had the misfortune to have small feet, ransacked the family stocking-basket, and the largest were forth-coming: so implicit was our faith in the dear old Saint's generosity, well knowing that, however large, they would be filled. Then the joyous roar and riot, that roused the soberer portion of the family, long before daylight; as sundry little white-robed figures glided round in the darkness, firmly grasping their well-filled stockings, shouting at the top of their voices, as often as they could clear their throats of nuts and candy, "I wish you 'Merry Christmas,' father—I wish you 'Merry Christmas' Mother,—'Merry Christmas' all."

But we have felt a little crest-fallen sometimes, when we've all met around the kitchen fire, examined our presents, kept *wondrous still*, and agreed to go *en masse* to our parents room, to get the start of them in good wishes, and joyous congratulations, to have our father exclaim, just as we were pushing the door noiselessly open, "a 'Merry Christmas' children, a 'Merry Christmas' to all." We older ones could do no more than thank him, and thanking our mother as much, for keeping still, and giving us a chance to salute her with our good wishes; but the youngest of the flock, the baby, the pet, would, crying, mount the bed with, "Why could'nt you have waited, father?" then to his inquiry, "What did 'Santa Claus' bring you my darling?" the tears were dried, and the contents of the stocking rehearsed, and the probabilites of how they came there, and by whom, duly discussed, always ending with, "should you think he could get down the chimney, father?"

I could this Christmas, even, have joined the ceremonies attendant upon the burning of the "Yule-log,"—I believe I could have gone with the little ones into the corner, to beseech the good Sprite to remember our wants with substantial tokens of remembrance—that they might even be found underneath the brands of the burning log, when we should return to the fire. For my own part, I much prefer the Christmas-tree, with its burden of loving gifts, and its sweet Christ-kind-chen to distribute them, to the formal, ceremonious, uncongenial, and finally wicked practice of making calls on New Year's. I suppose I shall be set down as an oddity, for disapproving of New Year's calls—it is not the *calling* I consider wrong, but the pernicious habit of passing "strong drink" to those who drop in, to pass the compliments of the season.

After the family have all retired, I find my time to hold communion with absent friends;—the old year is fast retreating, and were I at home, the whole house would soon echo, and re-echo, with, "a Happy New Year," for I believe we never slept on Christmas and New Year's eves, at any rate, until after twelve o'clock. Wishing you very many "Happy New Year's," dear RURAL, I remain, Ever yours,

ANNIE LINWOOD.

New York, December 31, 1852.

## READING ROOMS FOR LADIES

"FANNY" thinks—and we agree with her—that the women do not have their full share of privileges at our hotels. Here is part of what she writes to *The Republican*, of St Louis:

Can you tell me why it is, that in all the large hotels reading-rooms should be furnished exclusively for the benefit of the gentlemen?—why gentlemen must be found a special room for smoking, chewing and drinking?—why the gentleman who pays two dollars a day should have every privilege allowed him that is granted a lady for the same money, and all these extras besides, with the right of perfuming the whole house, even to the room she has paid for her own private use, with the oder of his selfish gratification?—the privilege of annoying her by spitting upon the hall floor, the stairs, the carpets, and filling the spittoons of the ladies' parlor with the nauseous offal of his gross indulgence? If his *superior* manly nature *must* have all these physical enjoyments, certainly it is no more than fair that the ladies should share a small proportion of his mental pleasures, and that a few newspapers should be laid on the table of the ladies' parlor, to break the idle monotony of a boarding-life—to quicken thought, stimulate interest, and help to break the ice of cold conventionalism, prompt acquaintanceship or interchange of feeling and sentiment among those who are so frequently thrown together at our great hotels. This want is felt, and this injustice understood and spoken of by large numbers of intelligent women from Boston to St. Louis.

Would not a well-regulated and well-selected reading-room for ladies be a desirable place of resort for fathers, husbands, sons and brothers, who would fain escape (if they could get news any where else) from those haunts

"Where the dark fume clothes all the room,"

and where a young man loses, ere he is aware, the holy influence that his mother and sisters have hitherto held upon him?

---

SILENCE.—There are three kinds of silence. The silence of peace and joy; the silence of submission and resignation; and the silence of desolation and despair.—Lovely are they whose delight is in the first; miserable are those who are driven to the second; and most wretched and miserable all those who are doomed to the last.—Domitian made a solitude and called it peace.

---

THE SEXES.—There are men-tormenting women, and women-tormenting men in the world, both of them expert in the armature of men-craft and women-craft. And there are times when it is the easiest thing imaginable for the sexes to be enamored of one another; and other times when it is the hardest of all tasks to tolerate their caprices, infirmities, and contradictions.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JANUARY 22, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ THOSE who are forming large clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ SEE Terms, Premium List, &c., on last page,—and notice to Agents and others on next page.

## The U. S. Agricultural Society.

ATTENTION is directed to a Circular from the officers of the United States Agricultural Society, addressed to the Friends of Agriculture, published on our second page. The Constitution of the Society has heretofore been given in the pages of the RURAL, and hence its repetition is considered unnecessary.

The U. S. Ag. Society was organized last year, and embraces some excellent features. Could the general plan be perfected and carried out, the result would undoubtedly prove largely beneficial to Agriculturists and the Agricultural Interest.—But the political wrangling in the Convention called for the organization of the Society was unfortunate and disreputable, and imparted to the public an unfavorable impression. Though attended by many sincere and ardent friends of Rural Improvement, the Convention was cursed with the presence and interference of political place-holders and seekers, and men of chameleon-like principles whenever power or popularity are in the scales. From the first we have feared that the attempt to sustain the organization, with its head-quarters at Washington, would prove futile; for the very atmosphere of our Nation's Capital is apparently tainted with selfishness and corruption.

As we have said, however, the plan of the Society embraces some excellent features, which may be perfected. Were its head-quarters at Cincinnati—away from political influence and official malfeasance, and near the centre of the great Agricultural Interest of the Country—we should have much greater hopes of its success; and as it is, we are not prepared to say the Society will not prove beneficial, or even eminently successful. Much will depend upon the capability, integrity and efficiency of those on whom may be conferred its future management. No theorists or visionaries will answer—no changlings or place-seekers are fit for its responsible duties. Its prinipal officers—those who transact its local business, correspondence, &c.,—should be as pure as Cæsar's wife; and not only above suspicion of improper action and motives, but men of industry, enlarged views and extensive practical as well as scientific information. The Journal of the Society ought to be the ablest and best in the land—each number forming a reliable Text-Book on the subjects discussed. The initial number, we regret to say, is not such an one as might have been produced, or as the public expected. Though valuable it is not calculated to rank high at home or abroad, as an exponent and indicator of the Progress of American Agriculture.

But our object in the outset was rather to direct attention to the Society, than to criticize its past, or offer any suggestions relative to its future management. We are in favor of any and every judicious measure to promote Rural Progress and Improvement, or calculated to elevate the standing of American Agriculturists,—but we are heartily disgusted with the action of demagogues on this subject. And it is time for the Rural Population—those who feed the Nation and furnish the lubricating oil to the wheels of Government—to look to their interests individually and collectively; to accomplish something in their own behalf, and if necessary upon their own action and responsibility. It is next to useless to expect much aid from Government,—or at least through the Patent Office. Time was when some benefit resulted to the country from the Agricultural Department of the Patent Office. Under the administration of the affairs of that office by Mr. ELLSWORTH, an excellent beginning was made in the right direction; but instead of advancing with the country, or perfecting any important measures to benefit the Agricultural Community, Mr. E.'s successors, and their under officers, seem to have been retrogating—and recent developments exhibit a lamentable lack of judgement, and fidelity to the country, on the part of those who have been called to Washington to attend to the Agricultural Interests of the Nation. Personal animosities, and an o'erweening desire to retain place and spoils, seem to have taken precedence to proper efforts to augment the knowledge and prosperity of the Agricultural Community. We trust the recent raising of the curtain will prove beneficial, by directing the attention of intelligent, thinking, unselfish men to the importance of establishing a distinct Agricultural Bureau, and of sustaining, also, some such organization as the United States Agricultural Society. The "Agricultural Farce" which has been playing at the Patent Office for the past few years is unworthy of further representation on governmental boards, and should be discontinued altogether,—or at least, not repeated during the present century.

☞ We are indebted to friend PETERS, of the Assembly, for Annual Report of the Comptroller, and other valuable documents.

## Ithaca and Geneva Railroad.

IT may not be generally known to the readers of the RURAL NEW-YORKER, that a Railroad is about to be built from Ithaca, in Tompkins, to Geneva, in Ontario county, and passing through portions of Tompkins and Seneca counties. The route has been surveyed, articles of Association adopted, and the books opened for subscriptions. It is designed to connect this road with the one now in course of construction from Great Sodus Bay to Vienna, on the north, and on the south to unite it with roads already built from Ithaca to Scranton and the coal mines in Pennsylvania.—The length of the Ithaca and Geneva road, according to the survey, is a fraction less than forty-one miles. It is an easy grade, and passes thro' a rich and fertile region, which is now, as it were, shut in from the "outer world," by the Seneca and Cayuga Lakes; for, since the completion of the Jefferson and Canandaigua Railroad, and consequent suspension of the boats on Seneca Lake, this fair portion of our country has no adequate communication with the great thoroughfares on either side. This road, therefore, becomes of great importance to those who may have homes and property in this sequestered region; while it offers most liberal inducements to capitalists abroad. It is the most direct and natural outlet for the coal mines of Pennsylvania, to the northern markets, that has been, or can be surveyed; indeed no one, who is at all acquainted with the geography of this section, and the vast increasing demand for coal in the vicinities of Rochester and Buffalo, the great Lakes and the Candas, (which markets can be supplied at much lower rates by this, than by any other road,) can for a moment doubt the feasibility of the route, or the payability of the stock.

The portion of country through which the road will pass, is one of the healthiest and most productive in the Empire State—and while the road would thus receive a liberal and healthful patronage *at home*, it would at the same time secure a large proportion of the coal trade of the north and west, and no small share of the mercantile business carried on between our inland waters and the metropolis of the State.

Forty-one thousand dollars is required to be subscribed, ten per cent of which to be paid in, before the Charter can be obtained. This, it is believed, from present indications, will soon be accomplished, and a work so desirable—so fraught with benefits to the present and future generations—will certainly be performed. Let the stock be taken up—and let the road be built. We have no surer safeguards of our Republic—no more efficient bonds of UNION—no mightier conservative of internal peace and national prosperity, than these iron girders which unite our States, and bring in closer, and still closer communion, the extremities of our vast domain. Then multiply the means of intercommunication, and let the iron horse traverse the country from all points of the compass—let his shrill whistle be heard above the elements of political discord; that he may watch over the welfare of our nation with his omniscient eye, and everywhere crush the efforts of disunionists by his mighty power. Every mile of railroad forms a link in the great national chain—every spike that is driven becomes a rivet in the breast-plate of Freedom, and every Engine an eloquent pleader for the cause of LIBERTY AND UNION.

S. FURMAN.

Romulus Centre, N. Y., Jan., 1853.

## Albany Correspondence.

ALBANY, January 18, 1853.

DEAR RURAL:—Legislation drags its slow length along. The Committees have been appointed, and are gradually preparing and digesting matters for the action of the House. At least two weeks more will pass before any amount of labor will be commenced. To all appearance to the *outsiders*, a month is lost in legislation. But it is not so. All business must pass through a standing, or special committee, and the labor performed by members in their several committees is very arduous, the most so probably of any other place. These reports come up for discussion in the House, and often give rise to lengthy debate. The subject now upon which there is a prospect of considerable speaking is the reference of the canal.

When the Governor's Message has been duly dissected, its various subjects are referred to the appropriate committees. Upon this occasion it is not uncommon for members to give their views, not only upon the subject, but upon matters and things generally. It is usually the tub to the whale. Just now the canals, form the tub for that interesting gentleman. What the result may be is beyond even a guess by the shrewdest observer.

The society in Albany is decidedly pleasant.—Not a little of its geniality is derived from the very pleasant and agreeable manners of the Governor and his wife. They are both very natural and friendly, and make us country fellows feel very much at home whenever brought into their company. The Executive mansion is made pretty free quarters.

RUSTIC.

THE WEATHER.—On Tuesday evening the 11th, it became cooler, and before morning snow began to fall, and it continued to snow on Wednesday, when snow enough had fallen to bring out the sleighs—not that sleighing was good, but tolerably so in the city and on plank roads. The weather continued cool until Saturday, when it became quite mild, so that the snow melted rapidly, until toward evening, when it began to grow cold, and Sunday morning was one of the coldest of the season—wind N. W.—a very cold and squally day—cold night—continued cold on Monday—sleighing quite good for the small quantity of snow. Tuesday morning, at the time of writing, continues cool, though milder than yesterday, with some appearance of more snow.—W.

## Literary Notices.

THE AUSTRALIAN CAPTIVE; or, an Authentic Narrative of fifteen years in the life of William Jackman. Including, with other appendices, Australia and its Gold, from the latest and best authorities. Edited by Rev. I. CHAMBERLAYNE. Auburn: Derby & Miller. 1853.

This a neat volume of some 400 pages, containing a new chapter in the history of adventure; the hero being the first civilized man who ever returned from a forced and lengthened residence among the anthropophagi of New Holland, and told the story of what he saw and suffered. Much valuable information is added in the notes, of the present condition of Australia and its harvest of gold, which, thus far, goes beyond California's most astonishing products. Sold at DEWEY'S, Arcade Hall.

THE HEROINES OF HISTORY. By JOHN S. JENKINS. Rochester: Wanzer, Beardsley & Co. 1853.

This elegant volume contains Biographical and Historical sketches of ten remarkable female characters, with fine steel-engraved portraits of CLEOPATRA, JOAN OF ARC, JOSEPHINE, Queen ELIZABETH, MARY Queen of Scots, and MARIE ANTOINETTE. ISABELLA of Castile, MARIA THERESA, CATHERINE of Russia, and Madame ROLAND, are the remaining characters of the volume, which with such subjects, can but command the interest and attention of the reading public. WILBUR M. HAYWARD, 4 Burns' Block, is the only Agent for this city.

THE ILLUSTRATED MAGAZINE OF ART, is a new monthly periodical, commenced with the year, by ALEX. MONTGOMERY, 17 Spruce St., New York.—It is beautifully and appropriately illustrated with wood engravings of more than usual merit, while the letter-press is of a character to commend the work to tasteful readers. The sketches of the poets CHAUCER and GOLDSMITH will be read with pleasure. W. M. HAYWARD, 4 Burns' Block, has the agency. $3 a year; 25 cents a number. †

MERRY'S MUSEUM and Parley's Magazine, Edited by S. G. GOODRICH, the original Peter Parley, commences the twenty-fifth volume with the January number. The Museum furnishes the juveniles a great variety of useful information on a great many subjects, and is deserving the patronage of every family where there are children to read it. New York: S. T. Allen & Co. $1, per annum, 4 copies for $3; 7 for $5, and 15 for $10. D. M. DEWEY, agent, Rochester.

## Legislature of New York.

### Synopsis of Proceedings.

TUESDAY, Jan. 11.—*Senate.*—The original resolution of Mr. COOLEY, to refer the subject of the enlargement of the canals mentioned in the Governor's Message, to a joint select Committee, was passed after some discussion.

*Assembly.*—In the Assembly the Committees were announced,—Mr. LOOMIS, Chairman of the Committee on Ways and Means; D. B. TAYLOR on Commerce; WEST on canals; GILLMORE on Railroads; R. SMITH on Banks; PATTERSON on Colleges, and J. H. WEEKS on the Judiciary. The Committee on Agriculture is composed of Messrs. S. S. SMITH, CROCKER, STREETER, PETERS, BEMAN.

WEDNESDAY, Jan. 12.—*Senate.*—The routine of introducing bills, presenting petitions, &c., was varied a little yesterday by taking up the bill to incorporate the Atlantic and Pacific railway, in Committee, and a short discussion upon it.

*Assembly.*—Among the bills noticed and introduced we see one imposing tolls on freight carried by railroads, another to regulate the fare of passengers, and another to increase the tax on emigrants to $2.

THURSDAY, Jan. 13.—*Senate.*—A bill was reported to authorize the consolidation of railroad companies. The Senate was in Committee on Savings' Banks, &c.

*Assembly.*—Notices, introductions and reports of bills and resolutions were the order of the day.

FRIDAY, Jan. 11.—*Senate.*—Three private bills were passed and the Senate adj. to Monday.

*Assembly.*—The House Committee took up the Governor's Message, and after a speech from Mr. BURROUGHS, adj. to Monday.

MONDAY, Jan. 17.—*Senate.*—The Senate were busily engaged with petitions, reports, bills and resolutions, but completed nothing of importance.

*Assembly.*—After the usual routine of notices, resolutions, &c., Mr. BURROUGHS resumed his speech of last week, but did not conclude it.

ACKNOWLEDGMENTS.—We are indebted to Mr. WM. R. BOOTH, of Gates, near this city, for specimens of twenty varieties of Apples, all grown in his own orchard. The assortment was very fine, and most of the varieties well grown—indicating good judgment in both selection and culture.

—To Mr. J. MERRITT, of Penfield, for excellent specimens of the Kingsley, Jonathan, Peck's Pleasant, and Northern Spy—among the best varieties of apples grown in this section.

GRAPES—Are a luxury at this season; and hence we are under particular obligations to Mr. H. B. BURLEIGH, of Albion, who recently favored us with more than a taste of his fine-flavored Isabellas. Friend B. knows how to produce and preserve the article in perfection—and, better still, where to find a proper tasting committee!

SWEET AND BEAUTIFUL—The box of Honey just "laid on our table" by, and with the compliments of, Gen. R. HARMON, of Wheatland. The General is known far and near as a cultivator of superior wheat—(samples of thirty-five varieties grown by him, in one season, were exhibited at the World's Fair, London, and awarded a prize medal,)—but it appears he is at home in producing the sweets, as well as the staff, of life.

## Congressional.

### Synopsis of Proceedings.

TUESDAY, Jan. 11.—*Senate.*—A large number of petitions were presented. The House bill ceding to Ohio the unfinished portion of the Cumberland Road lying in that State, was passed, also several private bills. Iowa put in another claim for more land for railroads. The applications of this State in this line are already greater than those of any other State. After various unimportant business, the Senate went into Executive Session, and therein the injunction of secrecy was removed on the proceedings touching the Clayton and Bulwer Treaty.

*House.*—The House adopted a resolution ordering the printing of 100,000 extra copies of the Census Report, to cost $5,600. Mr. Corwin was attacked and defended, and the bill, relative to the circulation of small bills in the District of Columbia, discussed.

WEDNESDAY, Jan. 12.—*Senate.*—The Senate adopted a resolution directing inquiry into the propriety of appropriating $100,000 to be used by Government in investigating frauds and perjuries against the government, and bringing offenders to punishment. The naval pension bill for 1854 was passed. A resolution of Mr. CASS, calling for information on the SQUIER treaty with Nicaragua, was laid over. Mr. SOULE then addressed the Senate at length, other Senators taking part in the discussion on the CLAYTON treaty.—He made a statement of Mr. KING's explanations.

*House.*—The House discussed the subject o frauds on the Treasry, and small bills in the District, but took no action on either.

THURSDAY, Jan. 13.—*Senate.*—The only topic of interest was Mr. GWIN's project for a railroad to the Pacific, which called forth, in addition to Mr. G.'s own speech, favorable ones from several distinguished members, Mr. SEWARD among them, and counter projects from Messrs. HAMLIN and RUSK. Without taking any action in the premises the Senate adjourned.

*House.*—There was a long discussion on the bill to prevent frauds on the Treasury (by the prosecution of private claims against the government,) and the bill was read a third time, but before question was taken on its passage the House adjourned.

FRIDAY, Jan. 14.—*Senate.*—Various resolutions were offered and private bills passed. The announcement of the death of Senator UPHAM caused an adjourument.

*House.*—In the House, the bill to prevent frauds upon the Treasury passed by a vote of 134 to 23 The small note bill was again up for discussion.

SATURDAY, Jan. 15.—*Senate.*—Mr. FOOT, of Vt., announced the death of his colleague Mr. UPHAM, and gave a brief sketch of his public life and past services. Mr. SEWARD followed. Adjourned.

*House*—Took up private bills which were heretofore reported from the Committee of the Whole, and passed several of them. The death of Senator UPHAM was announced, and with the customary resolutions the House adjourned.

MONDAY, Jan. 17.—*Senate.*—The Pacific Railroad bill was the principal matter before the Senate. An executive session was held.

*House.*—A bill was introduced appropriating $50,000 for an Equestrian Statute of Gen. WASHINGTON, by Mr. MILLS. Several private bills passed.

### News Clippings.

☞ The Lewiston Railroad is in a state of rapid progress. The track will follow the bank of the river most of the way affording to passengers a most delightful view of the whirlpool and all the river scenery.

☞ The returns of the New York City Banks, as far as at present published, show a great decrease of about a million of loans since September, and a considerable increase in deposits, circulation and specie.

☞ The Pope has ordered the construction of four new bridges over the Tiber, in the city of Rome. A company has been organized for this purpose, at the head of which is the Duke of Braschi.

☞ A Presidential Elector in the State of New York represents fourteen thousand nine hundred and twenty-eight voters, while in Florida he represents only two thousand three hundred and eighty-one.

☞ Professor Silliman stated, in a recent lecture, that the average difference between the British mail steamers and the Collins line, was eight hours on each trip in favor of the American ships.

☞ The enlargement of the Buffalo Gas Works is complete. The gasometers will hold 260,000 cubic feet of gas. Ten miles of pipe were laid last season, making in all twenty miles now in use.

☞ During the past year there were 681 deaths in Boston from consumption, which is over 400 more than by any other disease, and 12 more than during the year preceding.

☞ Among the late issues by the American Tract Society is a pocket-book entitled a "Three-fold Cord," containing a Promise, Precept and Prayer for every day in the year.

☞ Appleton's Mechanics' Magazine says that there are 10,854 miles of telegraph wire connected with one office at Cincinnati. Nearly enough to go half around the world.

☞ Uncle Tom's Cabin has been translated into French, Italian and Spanish, and is advertised in Danish, Swedish, Polish and Prussian.

THE WHALE FISHERY.—The Boston Post learns that the number of ships and barks engaged in the whale fishery, belonging to the United States was, on the 1st of January, 1853, 599; brigs, 30; schooners, 32; aggregate tonnage, 206,286. The past year there has been an addition of 41 ships and barks and 3 brigs, to the whaling business, and a dimunition of 3 schooners, and an increase in the aggregate tonnage of 12,276 tons. Of these, 307 ships and barks, 3 brigs and 1 schooner, tonnage 104,005, are owned in Boston, and 49 of the former, tonnage 16,542, in Fair Haven.

## News Brebities.

—— The Rhine has overflowed its banks for the fourth time since May last.

—— A new Bank is to be established at Albany, and another at Glenn's Fall.

—— Itinerating village libraries are being established at Yorkshire, England.

—— At Sandwich, England. the curfew has been tolled every evening for 700 years.

—— Members of the Scottish clans are entitled to wear two eagle's feathers in the bonnet.

—— In 1804 there was not a single public baker in the city of Manchester, England.

—— In England they have a mode of carbonizing gutta percha and applying it to a razor strop.

—— The Astor Opera House has been purchased for the New York Mercantile Library Association.

—— Good butter is selling in New York at 18 ¾ cents a pound—so says the National Democrat.

—— Dr. Robinson, of Cincinnati, has accepted the Theological Chair in the Rochester University.

—— The latest gold discoveries are on the Baraboo, Saute county, Wis. Silver, too, is obtained there.

—— The increase of the produce of the wheat crop in England, it is stated, has been trebled, at least, since 1727.

—— The Pacha of Egypt has sent a beautiful Arab mare, as a present to the Emperor Louis Napoleon.

—— The Society of Friends in the United States numbers 715 churches, and 283,023 members.

—— Hon. J. M. Clayton has been elected by the Delaware Legislature U. S. Senator for the term of six years.

—— The Professors of the London University derive their incomes principally from the fees paid by their pupils.

—— The coldest day ever known in England was Dec. 25th, 1796, when the thermometer was 16 degrees below zero.

—— Midnight mass was celebrated in all the churches in Paris, on Christmas eve, for the first time in twenty years past.

—— The auction duties paid into the State Treasury of Pennsylvania during the last year, amounted to $57,110 76.

—— Geo. Gillett, of Hebron, Ct., has recently made his *fifty-eighth* annual subscription to the Hartford Courant.

—— A good fat sheep may be had in Mexico for twenty-five cents; but it is not easy to get twenty-five cents in that country.

—— The Legislature of Iowa have re-elected Hon. Geo. W. Jones to the U. S. Senate for a full term from the 4th of March, 1853.

—— A manuscript catalogue of the music in the library of the British Museum has been completed, and fills 57 folio volumes.

—— The Posen Gazette says the Emperor of Russia intends to restrict the punishment of the Knout to military delinquents only.

—— A piece of land was sold recently in the neighborhood of the Royal Exchange, London, at the rate of £800,000 per acre.

—— Orasmus Turner, Esq., for several years a resident of Rochester, has returned to his former place of residence in Lockport.

—— The fees of Coroner Ives, of New York, who has just retired from public life, amounted to nearly $14,000 the past year.

—— Rev. C. G. Finney, is holding a series of nightly meetings, in the Congregational Church, Syracuse.

—— The health of Vice President King continues to fail. He can scarcely speak audibly, even in a whisper.

—— In Albany, a young lady has started a "Ragged School," in which she now has forty or fifty children picked up in the streets.

—— A firm in Baltimore has paid the Post-Office over $7,000 the last year for postage on newspapers containing its advertisements.

—— During the year 1852, 72 persons were killed by accident in Boston; 26 were drowned, and 20 were burned or scalded to death.

—— Last week the Western Railroad carried from Albany to Boston, 29,300 barrels of flour, being nearly 5,000 per day.

—— It is estimated that the aggregate Government Stock and Railway indebtedness of this country in Europe is $600,000,000.

—— The establishment or increased endowment of eleven Old School Presbyterian Colleges at the West is in contemplation.

—— Ralph Waldo Emerson, it is said, is sometimes struck with an idea in the middle of the night and immediately rises and records it.

—— John Petit has been elected U. S. Senator by the Indiana Legislature, to fill the unexpired term of James Whitcomb, deceased.

—— The recently prepared prepaid postage envelopes have been rejected by the Department; the contractors are to furnish better specimens by the 1st of February.

—— The telegraph wires were broken in *seventy-five* places between Springfield and Boston, on Saturday last, principally by the accumulation of ice.

—— There are now upwards of four hundred human beings confined within the walls of the N. Y. Tombs, City Prison, awaiting trials and examinations.

—— The Bank of the Capitol with $300,000 capital, the Merchant's Bank, $250,000, and a private Bank, $500,000, are all about to go into operation in Albany.

—— A printer named Matthew Langdon committed suicide at New York, Friday afternoon, under the influence of the "spiritual rapping" delusion.

—— The widow of Alexander Hamilton is still living in Washington, and has reached her 94th year. She is literally "standing in the midst of posterity."

—— A Free Democratic paper is about to be started at Lockport, N. Y. That will make seven distinctive Free Soil papers in the State of New York.

—— The friends of Temperance in Illinois, are preparing to have a grand Convention at Springfield in favor of the Maine Law. They are very confident of success.

—— A rich vein of lead has been discovered in Campville, Tioga Co., N. Y. The editor of the Owego Gazette has been shown specimens of the ore yielding 90 per cent.

—— Omnibuses, in considerable numbers, are exported from New York to Cuba; likewise the horses which draw them, the native horses being inferior to ours in size and strength.

# News Paragraphs.

☞ The Louisville Courier publishes a list of disasters on the Western waters during the year 1852. It is a formidable one, embracing 78 steamboats, 4 barges, 73 coal boats, 32 salt boats, and 4 others flat boats. It appears that 48 boats were lost by being snagged, 16 by explosions, 4 were burnt, and the others lost by collision and other mishaps. The greater number of the flat-boats were destroyed by the breaking up of the ice last winter. The greatest number of lives lost by one disaster was the explosion of the Saluda, 100.—The total loss of life exceeds 400 persons.

☞ The mildness of the present winter is noticeable even in New Hampshire, where the wintry season is usually long and severe. We learn that Lake Winnepisseogee has not yet been frozen over. This Lake is generally closed by ice by the first of December, and by the first of January or earlier, it is so thick that all communication between the towns situated on opposite sides of the Lake, is had by crossing on the ice. The trout and perch, which are caught in great abundance in this Lake by fishing through the ice, have not yet been taken in quantities.

☞ Nearly every year since the discovery of gold in California, the shipments from New York to foreign countries have been quite large. In 1848 the aggregate was $11,034,786; in 1849, $4,803,150; 1850, $9,952,948; 1851, $13,733,209, and in 1852, $15,096,255, making a total of $94,-639,048 in six years, averaging $15,771,775 each year. When it is considered that the early importations from California were quite limited, it will be seen that a very large per cent of the receipts of California gold has passed through our hands into those of foreigners.

☞ Gov. Bigler, of Pennsylvania, delivered his first message to the Legislature on Wednesday.—He reports an actual balance in the Treasury on the first of December, of $671,000, estimates the receipts of the opening year at $4,626,500, and the expenditures at $4,028,670, and gives $10,-000,000 as the amount of public debt; $497,039,-649, as the assessed value of all the real and personal estate in the State. The receipts from the public works during the last year amounted to $1,896,811 42, and the expenditures to $1,029,-341 23.

☞ The Hon. Henry Barnard, of Connecticut, is delivering a course of lectures before the Smithsonian Institution, at Washington, on Popular Education. This distinguished gentleman, it will be remembered, has had the advantage of a very extensive travel in Europe, in the course of which he made himself familiar with the public school system of Prussia and other countries. He was also for several years, Superintendent of public schools in Connecticut.

☞ A writer in the Delaware Republican, calls attention to an unusually large spot on the sun, which may be seen through smoked or colored glass. The writer adds:—"By a rough measurement of the present spot, I found its diameter to be about thirty-three thousand miles, consequently occupying an area on the sun's surface of eight hundred millions of square miles, equal to four times the superficial contents of the earth."

☞ It is stated that $1,500 was paid the late J. Fenimore Cooper, by Graham's Magazine, for the "Islet of the Gulf," and $1,000 for ten Naval Biographies, besides $1,200 for twelve other articles. It is said that during the last three years Sartain's Magazine has paid $16,000 for literary articles. Godey's Lady's Book has also expended large sums in the same way.

☞ A. G. Benson, of New York, has undertaken to construct a marine railway at Honolulu.—The Hawaiian goverament has granted him a large piece of ground, in fee simple, for the site. Benson gives a bond, as a guaranty on his part that the work shall be completed within two years, and the government gives him an exclusive privilege for twenty years.

☞ According to the accounts from Oregon, immense numbers of emigrants continued to pour into that territory, the beneficial effects of which were observable in every department of life.—The forests were fast disappearing from before the husbandmen, tradesmen were over-run with business, and bachelors had been rendered happy by the influx of females.

☞ The production of beet root sugar is increasing in France. The factories at work on the 1st of December, 1852, numbered 335, an increase of 81. The quantity of sugar made in 1851 was ten millions of pounds, whilst that of 1852 will not be far from thirty-seven millions of pounds. The best quality retails at sixteen cents a pound.

☞ The Rochester and Syracuse Straight Line Railroad is now nearly completed. The rails are all laid down, and a locomotive passed over it, bearing a number of the officers on the 1st inst. The work of graveling the track is not yet completed, but it is being distributed along the line, and will be placed on the road in the spring.

☞ The total cost of the New York and Erie Railroad up to the 20th of September, it is officially stated, was $27,551,205 71—which has been provided for as follows:—Stock paid up, $7,766,-991 17; funded debt, $18,003,863 90; floating $1,323,653 55. Receipts of the road for past month of December, $352,138 33.

☞ The message of Gov. French, of Illinois, states that the finances of that State are in a very prosperous condition, and intimate they will soon be in a situation to meet all their liabilities, and pay annually the interest on all her debts, without any increase of taxation.

☞ A part of the pews in the Plymouth church at Brooklyn, which is under the pastoral charge of Rev. Henry Ward Beecher, were rented, a few days since for $9 300. There remain 125 pews yet unrented, which will raise the aggregate to some $12,000 or $13,000.

☞ Hon. William Upham, U. S. Senator from Vermont, died on the 14th inst., at Washington, aged about 60. He has been nearly ten years a Senator, having first taken his seat in 1843. He had two years from the 4th of March next to serve of his second term.

☞ The Albany Evening Journal of Wednesday says:—One hundred and twenty-five of the disappointed applicants for the eight or ten offices at the disposal of the Assembly, went home yesterday, and the remainder will leave to day or tomorrow.

☞ Two prizes, of $1,000 each, are offered by the French government for the two best dictionaries of the Arabic language. Two years are allowed for the completion of the work, beginning with the first of January, 1853.

☞ We understand that nearly one hundred thousand dollars has been contributed towards the enlargement of the City Hospital, and that Wm. B. Astor has contributed $20,000 towards this most benevolent enterprise.

# Foreign Intelligence.

## Arrival of the Arabia.

The new Cunard Steamer Arabia arrived at New York on the 16th inst. Her news is only three days later than was received by the Baltic, and is of very little importance. The Christmas holidays are always a dull season for news.

The new British Ministry has taken possession of its official quarters.

The French Legislative Corps is convoked on the 14th of February, and the new Constitution in the name of the Empire has been promulged. The provisions of this instrument are mainly as follows: The Emperor is invested with powers to pardon and grant amnesties, and may preside at choice over the Senate and the Council of State. Public works are to be ordered by Imperial decree. Successors to the throne to be French Princes; the Emperor's eldest son to take the title of Prince Imperial. The number of Senators nominated directly by the Emperor not to exceed 150; each member to have an annual dotation of 30,000f. for life. The Budget of expenses to be voted by Ministries, after presentation to the Legislative Corps. The last section abrogates nine articles of the Constitution of January 14, 1852.

The death of the mother of Kossuth has given rise to explanations. The Belgian Government, it is stated, were willing to grant permission of a visit to Kossuth, on the condition that he should submit to be accompanied by a police officer,—a requirement which was refused.

The same intelligence from India as ever. The troops and natives have skirmishes and counter-skirmishes, without any definite results.

---

Australian Gold Fields.—Among the most interesting items brought by the Baltic are the accounts, in the London papers, of the progress of gold gathering in Australia, brought down to the 11th of October. The ship Marco Polo had made the voyage from Sidney in 70 days, anticipating the steamship Australian, which left Melbourne 28th October with 220.000 ounces of Gold Dust; the ship Phœnician with 48,959 ounces, and the Calphurnea with 56,170 ounces. These three shipments, and the amount on the Marco Polo, are worth SEVEN MILLIONS OF DOLLARS! The week the Marco left, the Government and other escorts brought from the Mount Alexander, Ballarat and Victoria mines, 80,784 ounces, equal to $1,615,680. A nugget of Gold, weighing 340 ounces, of the value of $6,800, had been taken out, and arrived at London by this opportunity, a present to Queen Victoria.—*Daily Times.*

---

Sheep Killing.—It was stated at the town meeting on Tuesday, by gentlemen from West Hartford, that two thousand dollars worth of sheep have been killed by dogs in West Hartford, the past two or three years, and that the farmers of that region are abandoning their flocks on account of the great losses they are obliged to sustain by the onset of dogs upon the sheep. They state that the dogs do their mischief in the night, and sometimes they destroy a whole flock in the course of a night. The dogs are sly and cunning, and they have reason to believe that they come from great distances for their prey. It is intended to bring the matter to the attention of the Legislature next May.—*Hartford Times.*

---

California Fires.—The total loss of property by fires in California during the past three years, is estimated at sixty-six millions of dollars. An explanation of the amazing rapidity and extent of the California conflagrations, may be found in the following sentence in the Sacramento Union:—"In building as a substitute for plaster and lathing, cotton fabrics have been used, which at the simple touch of a lighted candle, flash up and burn like powder." The California rooms are partitioned from one another, and ceiled with cotton sheeting! The consequence is that a first class hotel is all in ashes in fifteen minutes after it takes fire.

---

Coal in this State.—The Buffalo Commercial Advertiser says:—"We have seen at the office of W. W. Mann, Esq., of this city, a specimen of the coal of this State, taken from the direct route of the proposed Buffalo and Pittsburgh Railroad.—The specimen is of a superior quality, bituminous, and some portion clean cannel coal. It was taken from Cattaraugus county, and puts geologists at fault. Great quantities exist in the same locality."

---

Steam on Canals.—It seems that steam has been used on our Schuylkill canal as well as on the Chesapeake and Ohio. We learn from the Pottsville Mining Register that there is a steam canal boat on the Navigation works, which, a short time since, performed a trip to New York, carrying 150 tons of coal, traveling at the rate of six miles per hour.

---

## To Agents and New Subscribers.

In compliance with our offer (see Premium List on last page,) we forward the present, or a back volume of the Wool Grower and Stock Register (or a volume of the Farmer,) to *every person* who sends us $2 for a single copy of the Rural. Hence all new subscribers who receive our monthly will understand that it is sent free, or as a premium,—and *not remit payment* as some have done. Those who do not wish the monthly, or prefer to have it addressed to a third person, will please advise us accordingly.

Those entitled to cash premiums, will please retain the amount—for their *safety* and our *convenience*. They will thus be sure of the money, and save us the trouble (or deprive us of the pleasure) of remitting. Persons entitled to special premiums will oblige us by designating the books or articles wanted, and how they wish them forwarded.

Speaking of Premiums, we invite the attention of new subscribers and friends to our list on last page. It is not too late to form clubs, and we shall probably be able to supply back numbers of this volume for some weeks—and those who prefer can commence with this or any future number. We hope our new friends, as well as former ones, will see what may be done for the Rural in their respective neighborhoods.

---

Additions to Clubs—Are now in order. After a club for the year is formed, any number of copies may be added at the club price. Agents, and those wanting the Rural, will please bear this in mind, and govern themselves accordingly.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Jan. 19, 1853.

The recent snow and touch of sleighing has a favorable tendency, though the severity of the weather has limited out door operations. A little more snow would make excellent traveling, and produce a rush city-ward. As it is business is improving.

Flour.—The market remains unchanged, while the shipments by railroad continue large.

Grain.—Wheat is in good demand, and better prices are paid. Good samples bring $1,20, and extra lots command a higher figure. Other grains remain nearly unchanged.

Seeds.—The market opens favorably for producers.—Clover seed is in demand at $6,50; a lot of 200 bush. sold yesterday at that figure. Timothy is scarce, and commands $2,50@3, according to quality. No Flax seed in market.

Provisions.—No change in price of Pork, and but little coming to market. The trade is about over, so far as purchases for the East is concerned. Beef is a trifle higher, a good article commanding $5 per cwt. in the street.—Mutton carcasses sell at from 3 to 4@5c. per lb. Poultry comes in freely, but prices are maintained.

Hay has advanced. Best quality brings $15. The market is pretty well supplied.

# Marriages.

In East Penfield, on the 29th ult., by the Rev. S. S. Ainsworth, Mr. ALBERT WHITNEY, of Fairport, and Miss JENNETT MATTISON of the former place.

At Riga Center, on the 13th inst., by Rev. C. Jerome, Mr. LEANDER T. HUNTLEY, of Royalton, Niagara Co., and Miss ELIZA C., eldest daughter of Asa Adams, Esq., of the former place.

# Deaths.

In Detroit, on Sunday, 9th inst, SARAH A., wife of Mr. J. Milton Holbrook, aged 30 years and 11 days.

**FARMERS, LOOK HERE!**

**The Great Difficulty Surmounted.**

T. S. Steadman's Clover and Grass-Seed Reaper.

It has long been a question among Farmers why there could not be a machine constructed for the purpose of gathering Clover seed, that should gather the heads only, and leave the stalks upon the ground where they should be, thereby saving a vast amount of labor and time in transporting the stalks to the barn and out again to the field for manuring purposes.

The subscriber would respectfully announce to the farming community that *he has* removed all the obstacles which have hitherto prevented a machine of this kind from doing the work satisfactorily, and now offers his Reaper to the public, in the firm belief that it will give entire satisfaction. The machine will gather from eight to ten acres daily, gathering only the heads, and doing it in the finest order. Only one horse is used—moving it with perfect ease through the stoutest clover.

For farther testimonials in regard to my Machine, I would respectfully refer you to the following gentlemen: Hiram Frisbie, Holley; L. J. Waters, Buffalo: Wm. Hatch, Holley; Sylvester King, do.; Martin G. King, do.; John Berry, do; Nelson Hatch, do.

T. S. STEADMAN,
Holley, Orleans Co., N. Y. 153-4t-lau*

The Rural New-Yorker, published at Rochester, N. Y., we consider the very best agricultural newspaper in America.—*Ladie's Repository, (Cincinnati.)*

**THE FAITHFUL SLAVE.**

**A $500 TALE!**

BY ROBERT MORRIS, K. T.

Author of Sketches by a Traveling Naturalist; Lectures to a Norual Class; Lights and Shadows of Freemasonry; School Dialogues, &c.

MR. MORRIS is a resident of Louisville, Ky., and being a candid, unprejudiced judge, and a careful, scrutinizing observer of the institution of Slavery, he has produced a *Tale from Real Life*, which, for deep pathos, thrilling interest, and dramatic power and effect, is absolutely superior to Mrs. Stowe's late work, entitled "Uncle Tom's Cabin." This Story is entitled *THE FAITHFUL SLAVE*, and commencing in the first number of the

**Sixth Volume of Dodge's Literary Museum,**

which begins on the 11th of December, 1852, it will be continued during eight weeks.

While this Thrilling Story is in course of publication, each number of the Museum will contain a SPLENDID ENGRAVING, illustrating the mosst striking scenes in this admirable Tale.

**New Attractions for the New Volume.**

To add still more to the beauty of the Literary Museum, the best Artists in America have been engaged to produce, *without regard to expense, the most Magnificent Vignette* that has ever graced the pages of a Newspaper.

**NOTICE TO NEWS DEALERS.**

To enable us to supply the increasing demands of Newsmen, we shall print twenty thousand extra Copies of the Literary Museum from the commencement of the New Story and of the new Volume.

TERMS,—Invariably in Advance.—One copy, one year, by carrier, $2,50; One copy, one year, by mail, $2; One volume, by mail, $1; Four copies, one year, by mail, $6.

All above four copies at the same rate. Single copies to be had at all Periodical Stores in the civilized world.

All letters whatever, respecting the business management or editorial department, to be addressed to

OSSIAN E. DODGE,
No. 12 School Street, Boston, Mass.

To our Personal Friends.—All letters not relating in any manner to the business of the paper, and intended for *our eye alone*, should be marked "private."

☞ Persons wishing the direction of their papers changed should inform us of the post-offices to which they are *now* sent.

Moore's Rural New-Yorker is a capital paper. It is published at Rochester, one of the most beautiful cities in the country, is printed well, is judicious in its extracts and subjects for editorials, and opens rich, like a honey comb, —having sweets in every cell.—*New England Farmer.*

**FARM FOR SALE.**

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

JOSEPH ARMSTRONG.
Pittsford, Monroe Co., N. Y., Jan. 7, 1853 158-tf

**Farm Implements for California.**

BURRALL'S Prize Reapers, Mowers, Threshers and Separators, Clod-Crushers, Field-Rollers, Cultivators, Horse Powers, &c., &c. All *warranted* of the best material and workmanship—strong, compact and reliable—expressly for that market.

Made and sold cheap for cash by

THOMAS D. BURRALL.
Geneva, Ontario Co., N. Y. 159-5w.

**Emery's Patent First Premium 1852,**
**RAILROAD HORSE POWER,**
Threshing Machines, Separators, &c., Western New York Agency.

**E. D. Hallock, Agricultural Warehouse,**
**No. 50 State St., Rochester, N. Y.**

THE Subscriber, late from the Albany Agricultural works Warehouse and Seed Store, where he has been engaged for the past six years, has secured the sole Agency for the sale of Emery's Patent Railroad Horse Power for Rochester and vicinity, so widely and favorably known throughout the country, and which has without exception, taken every highest premium awarded in the States of Ohio, Michigan, and in New York, for the best Railroad Horse Powers in 1850, 1851, and again in 1852, also at the Provincincial Fair of Canada, recently held at Toronto, was awarded a Diploma and £2, of which the judges highly commend the principle and workmanship of this Power, now offer them at manufacturer's prices, with the transportation added, and subject to the warrantee as follows:

"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded."

For further particulars see Circulars and Catalogues, which are furnished gratis on application to the subscriber.

The attention of the Farming public is solicited, and a careful investigation into the construction of this Power and its comparative merits, as well as price, is requested before purchasing elsewhere.

The Wheeler power is also offered *ten* dollars cheaper than heretofore by any other agency, and subject to same warrantee as given by others for the same kinds. Samples will be kept constantly on hand, and to insure promptness and avoid disappointments in supplying them, farmers are requested to send in their orders at as early a date as possible.

He will keep for sale, Emery's Seed Planters, the best in use; Circular and Cross Cut Saw Mills, Feed Mills, Corn Stalk and Hay Cutters, Corn Shellers, Churning fixtures, &c., adapted to the Power.

Also, Reapers, Mowing Machines, Grain Drills, Plows, Harrows, Cultivators, Corn Shellers, Hay Cutters, Fan Mills, and Agricultural and Horticultural Implements generally. He will be prepared to furnish dealers with Dunn and Taylor's well known Scythes; also, Manure, Straw and Hay Forks, Snaths, Rifles, and other haying tools, at manufacurers' prices, wholesale and retail.

Particular attention is called to A NEW PLOW, which is believed to be the best cast-iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any plow heretofore sold in this vicinity, while the price is less than for any other equally well finished.

The "uniform one-price, cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time will allow. Farmers and others are invited to call and examine the stock of Machines and Implements,—and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

E. D. HALLOCK, 50 State street, Rochester.
Oct. 5, 1852. [145-tf]

**Manny's Patent Adjustable Northern Illinois**
**REAPER AND MOWER.**

First Premium Machine for 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in compe tition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a lever at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. Harmon Wheatland, Monroe Co., N. Y.

149-tf. R. HARMON, Agent.

**Important to Farmers**
**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

Ross' Improved Patent Conical Burr Mill Stones.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Pheuix Building, Aqueduct-st.,
154-tf opposite the Arcade, Rochester, N. Y.

**CARY'S ROTARY FIRE ENGINE PUMP.**

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.

No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.

76-tf. CARY & BRAINARD.

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a Stereotype Foundry in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

## HONOR TO THE PLOW.

Though clouds o'ercast our native sky,
And seem to dim the sun,
We will not down in languor lie,
Or deem the day is done;
The rural arts we loved before,
No less we'll cherish now;
And crown the banquet as of yore,
With Honor to the Plow.

In these fair fields, whose peaceful spoil
To faith and hope are given,
We'll seek the prize with honest toil,
And leave the rest to Heaven.
We'll gird us to the work like men
Who own a holy vow,
And if in joy we meet again,
Give Honor to the Plow.

Let Art, arrayed in magic power,
With labor, hand in hand,
Go forth, and now, in peril's hour,
Sustain a sinking land.
Let never sloth unnerve the arm,
Or fear the spirit cow,
These words alone should work a charm,—
All Honor to the Plow.

The heath redress, the meadow drain,
The latent swamp explore,
And o'er the long expecting plain
Diffuse the quickening store!
Then fearless urge the furrow deep,
Up to the mountain's brow,
And, when the rich results you reap,
Give Honor to the Plow.

So still shall health by pastures green
And nodding harvest roam,
And still behind her rustic screen
Shall virtue find a home;
And while their bower the Muses build
Beneath the neighboring bough,
Shall many a grateful verse be filled,
With Honor to the Plow.

[Written for Moore's Rural New-Yorker.]

## THE WESTERN FEVER.

BY W. H. GARDNER.

A few years since a fever of a strange description broke out in this vicinity, and being very contagious, it spread with alarming rapidity. Son was affected by father, and father by son, friend by friend, and neighborhood, by neighborhood, until the greater part of our agricultural population were stricken by the disease, and many—in some cases, whole families at a time—were carried off by it. Farms were sold, improvements ceased, business closed, and and all things became deranged by this affliction. My present object is not to follow and describe the general course of the disease, but to narrate its effects upon a single family—to give one case from among the many of my acquaintance, all very similar in character.

Upon the rugged but fertile hills of Steuben, lived a family consisting of the husband, wife, and three interesting children. The father was a farmer in good circumstances, and surrounded by long-loved objects pertaining to his calling as a tiller of the soil. His farm had been wrested by him from the rugged wilderness—by him had been deprived of its original covering of gigantic forest trees, and as one by one the sturdy maples, beeches, and hemlocks were made to tremble in the air, and finally fall crashing to the earth, a love was created in his heart and strengthened by his labor, for his home, that, it would seem, no time could efface. And when, with the aid of fire, he had cleared broad fertile acres of their original growth, and saw reflecting the bright sunlight, wide fields of luxuriant grain and grass, is it not natural that he should pride himself over his conquest, and glory in the victory his hands had won?—And thus it was; he labored cheerfully, and plenty was the reward of his industry. The love of his farm and his home deepened in his heart, while, almost unnoticed by him,—nature and art assisting—they grew in value and beauty. The same hand of nature, the same sunshine and rain, which warmed, nourished and stimulated the growth of his grains and grasses, also gave luxuriance to his fruit and ornamental trees.

Thus situated was our hero, and thus boundless was his comfort, both present and prospective, when the western fever, of which I have spoken, broke out in his neighborhood. From a brother near by, (who was suddenly carried off by it,) he caught the infection, and though not immediate in its workings, it continued to rankle in his breast, producing a continued feeling of discontent, apparently impossible to overcome. No longer did his eye dwell with the same satisfaction as formerly, upon the improvements which nature and art were achieving around him. His pride of conquest was gone, and his abundant crops were looked upon as pigmy productions of the soil, when seen through a scale graduated by the imagined fertility of the prairies at the west, of exceeding luxuriance and ease of tillage.

"Then fancy her magical pinions spread wide—"

seeing nought inviting at home, but away, far away, showing plainly the most unexampled prosperity—the most unequaled beauty, and a home, where happiness more than earthly, was went to dwell. Thus, ere its victim dreamed of such a calamity, had the fever seized upon him and gained possession, paralyzing his resolves of farm improvement, and leaving him in peace only, when, after counseling with his companion, who had also become afflicted with the disease, he decided to sell his farm—dispose of his personal property, and help to build up this mighty republic by extending its cultivated domain in the far west.

This decision once arrived at, and our hero was far from retracting, even if the resolve had been made unaided by a highly excited mind, such as was his at the time; for his fever was raging with renewed and constantly increasing strength. Letters of inquiry were dispatched, and the answers received rendered still stronger his disease, and more feeble the hope of his recovery. Friends visited and advised, but no good was effected, and every idle tale or high wrought descriptive advertisement of western lands, which at other times would scarce be credited, were now believed and dwelt upon with interest.

Thus passed his time away, "long months of torture," while waiting to effect his purpose. Finally a sale of his farm was made, and a transient gleam of happiness—the first for months—entered his heart. His plans for a removal were now rapidly completed, but as one article after another was disposed of, and removed from him, and his old home began to wear a desolate look, a feeling of home-sickness came over him. Thought, too, was busy—sober thought—the fever which had now so nearly done its work, had spent its force, leaving its victim in a state of deplorable weakness. The beautiful green hill tops in view of his long loved home—the many familiar objects, and the privileges of which he was about to deprive himself and his loved ones, were now clearly seen. Old friends, too, were thought of, and the wonder expressed in the heart, whether they should find as kind ones in their new home. All these thoughts were busy, and a thousand unseen griefs were braved, of which they had not dreamed, and which had not been taken into the calculation when resolving to remove.

But time sped on—only a week remained to them—farewell visits were given, and this time was nearly gone. The day—the hour of their departure was fixed—Oh! how strong voices trembled then, and big tears gathered in the eye, and wishful regrets in the heart—as to their more distant friends the parting hand was extended—the farewell spoken—the last look given.—But time sped on, and only a narrow circle of friends remained to be seen—the packing of goods in progress was completed—leaving about the old farm house no look of home—no show of comfort.

I was young then, but how well can I remember,—the old dog, finding no place of quiet for repose, walked restlessly about—the children stood ready with caps, hood, and cloaks on, for a start. Finally all were ready, and they passed—some of them, at least—out, through that well known door for the last time. The children were thoughtlessly sad—the mother, oh, how deep her feelings as she wended her way to the wagon and seated herself with her husband. She had passed through many trials in parting from loved objects since their decision of removal, but this last parting from her home was the most severe. For the last time she casts her eye about the yard, upon the many plants which she has cared for, and watered, and then, giving a last look—a last look, too, forever, at the old home, she sinks low in her seat and is relieved by tears.

The father who until now had been busied in seeing that all was right, looked about, and at a glance, his eye took in so many of the beauties—so many of the loved objects of his home, that despite his resolve to bid it good bye with a light heart, his voice trembled, his chin quivered, and his eyes filled with tears. And why should not this be so?—were they more heartless than the brute creation, that they could leave an old home and not be affected? The house of a sister received them, where they stopped until the following Monday, the day appointed for starting. The Sabbath, as usual, they attended church, and for the last time gazed upon long familiar faces—parting adieus were again spoken, perhaps never to be repeated.

Monday morning came—the stage which was to convey them a short distance on their way, stood at the door, and they must start. Two families are beside the old coach, that are dear to each other, and farewells are spoken from eldest to youngest. Again the silent representative of grief is in the eye—even sobs are heard—they are seated in in the stage and it bears them away. For miles each object is recognized—each face is familiar, but at length the last well-known hill top is crossed—the last view of their native town enjoyed, and they are on their way to the distant west, the land of their choice.

Days passed, of wearying travel, by them rejoiced over when gone, for pleasure was not their object. At length they arrived at their long dreamed of home. They settled, as they anticipated, on the rich and boundless prairies of the west; but they soon found that there, even there, they were not removed from privations or vexatious cares, and each loved object or old convenience of their deserted home was magnified in their sight. For a while there was an eastern fever, as comfortless in its effects as that before experienced. But time passed on—months and years passed with them as with you and I; their fever left them—left them only as they learned that contentment was the real avenue to happiness—that locality could not decide or destroy our felicity.

Hornby, N. Y., Jan., 1853.

CONCEALED HOPE.—The mystery of most persons lives consists in the concealed hope which is the main spring and impeling principle of their thoughts and actions, and which is carefully suppressed from view, and which the possessor himself would be afraid to acknowledge to any one else. "Hope tells a flattering tale," but whispers it in no other ears but our own. This is nothing more than the bean ideal of our taste and fancy, to the accomplishment of which we devote all our powers of activity, and in pursuing which we are led into many apparent inconsistencies and absurdities, since we are always judged by actions which others see, and not by motives which they cannot know.

# Wit and Humor.

## A BULL FIGHT AND A MORAL.

"RALPHO" tells the following tale in the Halifax Nova Scotian. It solves the long mooted question of, "Who pushed the bull off the bridge?"

I remember, when a lad at school, of once seeing a fight between two bullocks, I never shall forget, although I could not have been more than eight years old at the time. It happened in this wise:

Close by the school house—a very unpretending edifice it was—run a deep and rapid river. Across it had been thrown a high wooden bridge, the hand-railings of which, time, and the winds, and the weather had entirely destroyed. It was one bright summer day—I remember it as if it were yesterday—the hour of noon had arrived, and a frolicsome, romping, fun-loving company of lads were let loose for an hour's recreation. The land on the opposite sides of the river was owned by different persons, and farmed by them respectively. The bellowing and roaring of two bulls that had broken out of the enclosures on each side of the river, and were approaching each other along the highway, at a rate which would cause them to meet about the centre of the high bridge, beneath which, at some thirty feet, ran a deep and sluggish stream between high and deep banks, attracted our attention.

The more daring of us gathered near the bridge lining the fences to see the fight, and we were not disappointed. Nearer and nearer approached the proud, pawing combatants to each other, and Bashan never produced two fiercer looking brutes than those I now describe. They tore the ground with their feet—they kneeled down occasionally, trying to gore the earth with their horns; they lashed their sides fiercely with their tails, but unobservedly of each other, for the high bridge obstructed their view. Presently as they simultaneously ascended the respective abutments, they came in full sight of one another. The roar was mutual, and actually tremendous. Every urchin of us sprang into the field and ran; but gathering courage in finding we were not pursued, we as hastily retraced our steps, and they were both of them front to front, their horns locked together, fighting *as bulls only can fight!* It seemed to be an even match. Now one would press back his opponent a few paces, and his adversary would be pressed back in return. The struggle was hard, was long, was *savage*.

They began to wheel—in another moment they were faced at right angles with the old bridge, which shook, and creaked, and rocked again with their trampling, and the effects of the terrible strife.

It was the work of a single moment—one of the beasts—I never could tell which of them did it—one of them, however, as if conscious of his position, made a desperate, a terrible lunge forward—he pressed his antagonist back—back—back—there was but another step of plank behind him—between him and nothing—back still further, he was pressed, and over he went headlong. Such a sight I never saw—I never again shall see—a bull off a bridge, falling at least thirty feet over and over. He turned once or twice probably—I thought he turned over fifty times. There seemed so much horns, and feet, and tail flying through the air—but down he went, the water was deep, and he disappeared.

The other bull didn't laugh, merely because bulls, as I supposed, could not. But we laughed. There he stood, looking directly down into the deep abyss below, and into which he had hurled his unlucky foe. He stood, however, but a moment as if frightened at the prospect before him. He commenced to step backward—back—back—back—back—with his head in the same pugnacious attitude as when in combat—back another step, and over he too went, on the opposite side of the bridge, performing just as many and exactly as ludicrous somersets as his adversary had done a minute before. It beat all I ever saw.

In about five minutes both bulls might be seen, their tails trailing in the sand, dripping wet, and scratching up the steep, gravelly banks, each on his own side of the river.

"*Them are bulls won't never fight no more,*" said a boy behind me. I turned around, it was red-haired Bob, as we used to call him, and every hair on Bobby's naked head looked as if it was in spasms. But Bobby was right.

There are two political parties in Nova Scotia; I wish they had seen that fight as I saw it—that is all I have to say for the present.

THE ADVANTAGES OF PRINTING.—Mr. B., a well known metropolitan printer, once told us that on one occasion an old woman from the country came into his printing office with an old Bible in her hand. "I want" said she, "that you should print it over ag'in. Its gettin' a leettle blurred, sort of, and my eyes is not wot they wos. How much do you ax?" "Fifty cents." "Can you have it done in half an hour? wish you would, want to be gittin' home, live good ways out of town." "Certainly." When the old lady went out, he sent round to the office of the American Bible Society and purchased a copy for fifty cents. "Lor sakes a massy!" exclaimed the old lady when she came to look at it, "how good you've fixed it! it's e'en a most as good as new! I never see nothing so curious as what printers is."—*Knickerbocker.*

CIPHERING.—How do you get on with your Arithmetic and Catechism!" asked a father of his little boy the other night;" "how far have you got?" "I've ciphered through Addison, Substraction, Justification, Sanctification and Adoption!" answered the little fellow. It used to puzzle us a good deal, we remember when a boy to "cipher out" the meaning of several of those last named sums.—*Knickerbocker.*

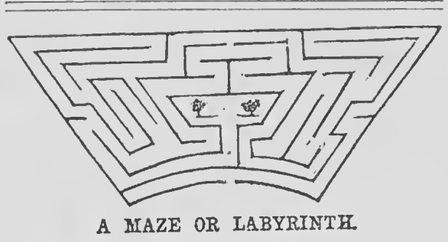
"Is that animal a biped or a quadruped?" asked one of the visitors at a circus, one day, of a by-stander.

"I think, sir," said an evident student of Natural History, with bulging eyes, and spectacles, "that the gentleman who shows the animals called it a *kangarooped!*"

Mr. BURKE remarked, "Strip majesty of its exteriors, (the first and last letters,) and it becomes *a jest.*"

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."



## A MAZE OR LABYRINTH.

This maze is a correct ground plan of one in the gardens of the Palace of Hampton Court.—No legendary tale is attached to it, of which we are aware, but its labyrinthine walks occasion much amusement to the numerous holyday parties who frequent the palace grounds. The partitions between the walks are hedges of clipped hornbeam, and are about five feet in height. The puzzle is to get into the centre, where seats are placed under two lofty trees; and many are the disappointments experienced before the end is attained: and even then, the trouble is not over, it being quite as difficult to get *out* as to get *in*.

For the Rural New-Yorker.

## AGRICULTURAL ENIGMA.

I am composed of 21 letters.
My 1, 5, 3, 6, 4 is a very useful animal.
My 16, 14, 8, 18 is the main product of the West.
My 1, 17, 10, 4, 9, 20, 7 is a valuable stock of horses for farmers use.
My 13, 14, 8, 9, 6 is an animal not always appreciated.
My 10, 3, 8, 11, 21, 20 is a choice breed of sheep.
My 4, 14, 12, 17, 19, 20, 6 is a vegetable.
My 15, 17, 8, 10, 3, 8 is a praiseworthy vocation.
My 2, 6, 10, 4, 3, 8, 17, 21, 16, 6 is essential to the farmer's success and happiness.
My whole is the name of a prominent stock dealer in Illinois.

For the Rural New-Yorker.

## CHARADE.

My first, an article of dress,
Is often worn by many a Miss;
My last a number does proclaim,
Three letters likewise spell the same.
My whole a gent does often wear
To shield him from inclement air.

Answer to Algebraical Problem.—*Age,* 16.—*Number,* 12.

## TO AGENTS AND OTHERS.

ENCOURAGED by the brilliant success which has thus far attended the publication of MOORE'S RURAL NEW-YORKER, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* PREMIUMS. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

## SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the RURAL NEW-YORKER from any one town in *the State of New York,* IN PROPORTION TO ITS POPULATION, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York,* on like conditions, we will send the paper another year, as above specified, FREE.

## GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in BOOKS or AGRICULTURAL IMPLEMENTS, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

## SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of GEN. FARMER for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

## TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the RURAL and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

MOORE'S RURAL NEW-YORKER is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The RURAL NEW-YORKER, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the NEW-YORKER is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 5. ROCHESTER, N. Y.—SATURDAY, JANUARY 29, 1853. WHOLE NO. 161.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### THE LIFE OF A FARMER.

HEALTHFUL and pleasant is the life of a farmer. All statistics prove that it is conducive to longevity, and recent facts drawn from the Massachusetts Registry of births, deaths, &c., for 1851, shew that agriculturists stand much the highest chance of attaining a good old age. Their lives exceed by twelve years the general average, and go nearly nineteen years above that of the common laborer, and eighteen above the average ago at death, of those engaged in mechanical pursuits. There seems to exist a healthful influence in the employment, in its varied nature and its fresh and suggestive surroundings. So the young man, to whom a long life seems desirable, may choose the occupation of a farmer, with the greatest likelihood of seeing the fullness of the allotted years of man. For other countries and other years—whenever and wherever such statistics have been gathered—also show facts which confirm the healthfulness and longevity of the tillers of the soil.

Pleasant is the life of the farmer. This, at least, seems the opinion of the great mass of those outside the employment, if their professions are to be believed. A city writer, some of whose suggestions are amplified in the present article, says, "The man is active business in other departments, pictures to himself for his retirement, a rural home 'a little farm well tilled,' and on that he hopes to end his days. Ambitious men who have drunk deeply of fame, are at a stand when the tide of their affairs are at a turn, whether to make new and more earnest efforts to struggle upwards, or to buy a farm and in the peaceful labors it requires, to enjoy a tranquil close of life." Merchants, lawyers, and physicians, when most rapidly accumulating fortunes, often stop to consider whether a competence and a snug farm, are not more desirable than wealth, amid the turmoils and cares of the city, and the vicissitudes of fortune to which its dwellers are exposed. Rural life and employment has the elements of the beautiful and agreeable, or it would not possess so many charms to the occupants of all other departments of human enterprise and industry.

Why, then, do so many young men, turning from Agriculture, as unworthy their attention seek other employments, or crowd the mercantile or professional ranks? It may be for various reasons. Some may desire a more speedy return from their labor and think it found in daily or weekly wages; not considering the uncertainty of constant employment or comparing their actual profits with those of the working farmer.—Others may be led away by the attractive and fashionable appearance of acquaintances who have found employments in the city, or by the hope of rivaling the *one* out of twenty, who has succeeded in making a fortune in as a merchant; for getting, meanwhile, the confinement and drudgery of the every-day life of their gentlemanly friend, and the nineteen failures which have taken place while the latter has risen to wealth and notoriety. A larger class are impressed with the idea that, in cities exist greater facilities for finding a comfortable living without much active labor; and this thought has charms for the indolent, which they cannot resist. How bitterly they will be disappointed, miserable multitudes, who are waiting with MICAWBER, for "something to turn up," can sorrowfully relate.

The idea also prevails that the youg man who has been liberally educated must study a profession—that in law, medicine or theology, alone, can be found use or occosion for the learning he has acquired. It will be a better day for all, when it is discovered that "the highest honers of the college do not unfit a man for the practical studies and duties of the agricultor"—that it is not burying one's knowledge, at an inglorious retirement, to graduate from the university to the farm. Some of our most successful scientific agriculturists have reached farming through law, finance, politics, or merchandize; going by the way of the professions to their present field of labor. When such men—as such soon will—take the directest, shortest route—farming will rank not only as healthful and pleasant but as profitable and honorable in the esteem of men. Increase in position, will give increase in knowledge and refinement, and make the life of a farmer every where, what that life should be which a WASHINGTON has adorned by his example and honored by his praise.

### THE DIFFERENCE.

BY CHARLIE CHESTNUT.

"You have a fine crop of potatoes there neighbor," said Farmer R. one morning as he was passing where Farmer C. had commenced his day's work, hoeing.

*Farmer C.*—Yes, they look very well indeed.

*Farmer R.*—Now, what on earth the reason is, I can't *see*, or why they should look so much better than mine, over the fence, there. I took a great deal of pains plowing and planting my piece, but it's so mighty hard, some spots I could'nt get the plow in, if I should die. How'd that new plow, sub—what do you call it, ge, you sent to Albany for?

*Far. C.*—O, it went fine indeed, I put one team on the surface plow, and one on the subsoil, and we have got a soil here 12 inches deep, mellow and nice.

*Far. R.*—That does hoe nice, I declare; but do you think you will get potatoes enough more, to pay for the trouble? JIM—my boy—says that he believes *we* ought to have a subsoil plow,—says he has seen in the paper your boy let him have, that potatoes and corn too, grow best on deep soil, and since I've been considering the subject, I see it stands to reason that they should. You see, there's my potatoes over the fence there, I *vow*, I could'nt git the plow in half of the time,—JIM told me '*that wasn't* the way to *plow*,' but says I, 'it looks likely I don't know as much about it as *you* do JIM; *me*, an *old man!*' Now the boy *meant* well enough, but he has got some new-fangled notions in his head, since he's read them are papers—don't see how it should come so, but as I was saying, I see it stands to reason. *Your* potatoes have a good, deep, mellow soil to grow in, and they look green and nice, but mine, yonder, are yellow and look as though they would die. As JIM said, I believe it ain't no way to plow, as I plowed that piece. I'll have that pair of three-year old's broke, and put on behind a subsoil plow, another year, if I can scratch together enough to buy one.

*Far. C.*—Does JAMES read the papers much?

*Far. R.*—O yes, he's all carried away with them, and says if *he* can git money enough, *he's* going to take the YORKER.—Now, I don't know what to do with the boy; he wants to go to school this winter, and wants the papers, and wants, wants, wants, and there is no end to his wanting.

*Far. C.*—JAMES is a smart boy, and you ought to let him go to school. He would make a farmer of the right stamp if he could get the necessary knowledge.

*Far. R.*—Well, I don't know. I think sometimes too much knowledge spoils a person. Now, before he get hold of them papers, he was whittling and whistling, and *banging* around; but *now* every spare moment he gets, he's reading, and if I tell him to do anything, he does it, (and I can't complain,) and does it well, and back again, and washes hands and is reading again,—never did see such a boy!

*Far. C.*—My boys all have the papers, and I don't think it ever hurt them.

*Far. R.*—Well, your boys are different from mine. They *take* to learning. There's my eldest—can't write his own name—some how or another I couldn't *get* him to go to school—he'd rather hunt; and my second always wanted a fiddle, and there aint a social gathering down to old ——'s but he must be there, sawin' to 'em.

*Far. C.*—Don't you think JAMES likes books, and would learn them easily?

*Far. R.*—I don't know but he would.—He is n't like the other boys. I bought him that cultivator, this spring, to please him, and I tell you he takes pride in using it, and the corn never looked better. He got the notion for *that* out of the RURAL—what you call it? and seeing you use yours. O, how much did you get for them heifers you sold the other day? JIM said you got $40 a piece and *I* only get *ten*, and I the't mine were fair. JIM sayss yours were a different breed.

*Far. C.*—JAMES told you correctly in regard to the price, and they *are* a different breed—the Durham stock. Their sire was imported from England, from fine blood there.

*Far. R.*—Well, I don't know what the world is coming to; JAMES says I did not get enough, according to the market prices in the papers, and that is what we lose by not taking the papers.

*Far. C.*—You did not get enough. Beef is high; you say yours was fair.

*Far. R.*—Well, that's just what JIM told me, but I didn't believe the boy knew anything about it. But I must be going. Have you seen my cows any where? They didn't come home last night, and where they be I can't tell. JIM says he is going to fix up the fence and keep them in the pasture, and I see he is over there at it now—don't see what has got into the boy? Don't you think neighbor, he says he is going to break up that fifty acre lot next summer, and sow it to wheat! It has hardly borne red top this ten years, and he says, with a little fixing, it will bear wheat! The book-farming, them papers teach will turn his head wrong side out, but there's no use in trying to stop him,—he will have his own way.

*Far. C.*—I would let him try the experiment on the old pasture; it will not hurt it, and if it bears anything, it will bear as much as it does now.

*Far. C.*—I guess I shall have to, and take up wife's money that she has got out at interest, and let him get such tools as he wants,—wife is fast for it. But I declare there is the horn for breakfast, and I'll go down and eat, and then get on the old mare and hunt up them *poxed* cows. But I tell you, neighbor, JIM shall have the paper—the RURAL NEW-YORKER you call it—for he can't do without it as I see. Them potatoes *do* look neat.

Farmer R. has learned to be proud of his son, who now carries on the Homestead farm of 200 acres, takes the RURAL NEW-YORKER,—has a *subsoil plow*, and a *mowing machine*—and is a *model* to all farmers.

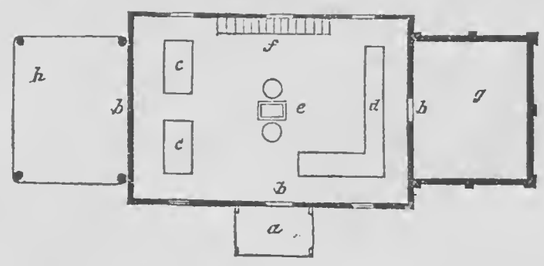
CANADIAN WHEAT CROPS.—A Darlington, C. W., farmer tells some large stories of Canadian crops in the Toronto Examiner. He says, and would like to know if any Yankee farmers can beat it,—"Mr. Thomas Brown, raised, threshed and cleaned 75 bushels of clean wheat as the produce of one acre. Another near neigher, Mr. B. Bowen, raised, threshed and cleaned from five acres, 300 bushels or 60 per acre. From 40 to 50 bushels per acre is not thought much of with us."

VEGETABLE growth furnishes the chief supply of fertilizing materials.

CHEESE DAIRY HOUSE.

THE Dairy business is one of growing importance to the country, and many of our readers will be pleased with the tasteful and well-arranged plan for a "Cheese Dairy House," which we transfer with its description, from ALLEN'S "Rural Architecture." Wherever the dairy is made a prominent branch of farm production, buildings for its distinct accommodation should be erected. It is as much a manufacturing business as any other, and needs its own peculiar conveniences and facilities. This cheese house Mr. A. descibes as follows:

"The building is one and a half stories high, with a bread, spreading roof of 45° pitch; the ground plan is 10 feet between joists, and the posts 16 feet high. An ice-house, is at one end, and a woodshed at the opposite end, of the same size. This building is supposed to be erected near the milking sheds of the farm, and in contiguity to the feeding troughs of the cows, or the piggery, and adapted to the convenience of feeding the whey to whichever of these animals the dairyman may select, as both or either are required to consume it; and to which it may be conveyed in spouts from the dairy-room.



GROUND PLAN.

The front door is protected by a light porch, (*a*,) entering by a door, (*b*,) the main dairy-room. The cheese presses, (*c*, *c*,) occupy the left end of the room, between which a passage leads through a door, (*l*,) into the wood-shed, (*h*,) open on all sides, with its roof resting on four posts set in the ground. The large cheese-table, (*d*,) stands on the opposite end, and is three feet wide. In the center of the room is a chimney, (*e*,) with a whey and water boiler, and vats on each side. A flight of stairs, (*f*,) leading into the storage room above, is in the rear. A door, (*b*,) on the extreme right, leads into the ice-house, (*g*.) There are four windows to the room—two on each side, front and rear. In the loft are placed the shelves for storing the cheese, as soon as sufficiently prepared on the temporary table below.—This loft is thoroughly ventilated by windows, and the heat of the sun upon it ripens the cheese rapidly for market. A trap-door through the floors, over which is hung a tackle, admits the cheese from below, or passes it down, when prepared for market.

The cheese house should, if possible, be placed on a sloping bank, when it is designed to feed the whey to the pigs; and even when it is fed to cows, it is more convenient to pass it to them on a lower level, than to carry it out in buckets. It may, however, if on a level ground, be discharged into vats in a cellar below, and pumped out as wanted. A cellar is convenient—indeed almost indispensable—under the cheese dairy; and water should be so near as to be easily pumped or drawn into the vats and kettles used in running up the curd, or for washing the utensils used in the work. When the milk is kept over night, for the next morning's curd, temporary tables may be placed near the ice-room, to hold the pans or tubs in which it may be set, and the ice used to temper the milk to the proper degree for raising the cream. If the dairy be of such extent as to require larger accommodation than the plan here suggested, a room or two may be partitioned off from the main milk and pressing-room, for washing the vessels and other article employed, and for setting the milk. Every facility should be made for neatness in all the operations connected with the work.

Different accommodations are required, for making the different kinds of cheese which our varied markets demand, and in the fitting up of the dairy-house, no *positive* plan of arrangement can be laid down, suited alike to all the work which may be demanded. The dairyman, therefore, will best arrange all these for the particular convenience which he requires. The main plan and style of building, however, we think will be generally approved, as being in an agreeable architectural style, and of convenient construction and shape for the objects intended."

For a butter dairy Mr. ALLEN suggests the erection of a similar building, without the upper story; the posts being nine feet above the sills. A good walled cellar, well lighted, as a room for setting the milk is required, with a broad flight of steps from the main floor above, into it. The churning and working of the butter may be attended to in the cellar, while the washing and drying of pans, pails and buckets should be performed in the room above. As in the cheese house, the dairyman will need suit himself, the locality, and his own facilities, in the details of the building erected.

### SAW DUST FOR LITTERING STABLES.

MESSRS. EDITORS:—I wish briefly to call the attention of your readers, to the value of saw dust as an article for bedding horses and cattle. The hard plank of which most of our stable floors are constructed, is very injurious to the sensitive feet of the horse, often causing lameness and tender feet, which could be wholly avoided by a liberal application of saw dust. Straw will not answer the purpose as well, unless it is cut with a straw-cutter, as the movements of

tho animals are continually working it out of place. It is also quite an aid in the saving of manure. On account of its porous nature, it absorbs the liquid part, which is, by very many farmers, permitted in a great degree, to run away or evaporate.

True, there are other articles, which might be used for the same purpose, but I have found none that is equal to this for bedding horses. When we consider what an amount of this article is annually allowed to run to waste—filling up the beds of some of our streams, it seems advisable to turn it to so good a purpose. Farmers residing in the vicinity of saw mills, will find it to their advantage to try it. It is also an excellent article for dressing fruit trees, or mulching; as it keeps down grass and weeds, renders the ground moist and light, and when decayed, makes manure. R.

Skaneateles, N. Y., Jan. 12, 1853.

## INFORMATION WANTED.

Here are a few queries, upon which information is wanted by sundry subscribers. Who will help us answer them—with facts and experience on the subject?

1. W. L. B., of Kalamazoo, Mich., asks, "Can you inform us as to the difference in durability of red, white or yellow cedar for posts?"

2. A Hornby, Steuben Co. correspondent asks, "What is the cause of smut in oats? Can it be remedied?"

3. J. W., Jr., of Black Rock, N. Y., wishes to know, "If blood or bogy spavins are hereditary, from dam to foal?" He has raised three colts from a very superior mare which had a spavin. One of the colts has a similar blemish—the others are free from it.

4. W. N., of Alabama, N. Y., wishes to inquire of the *Journal of Agriculture*, "how to apply cement so as to 'head off' rats from a corn crib?" He has set his corn crib on blocks two feet high, with old tin pans inverted beneath the corners, but says that rats will jump higher than that, and get into his crib.

5. "Rusticus," of Kalamazoo, Mich., asks us to "give Mr. Ross's description of his Conical Mill, with the amount of power necessary to drive it to grind the different kinds of grain, &c." Will Mr. R. give us "statements" for publication in the Rural?

## MINERAL AND NITROGENIZED MANURES.

Eds. Rural:—An article on "Mineral and Nitrogenized Manures," in No. 151 of the Rural contains some conclusions drawn from Mr. Lawes recent experiments, which appear to me not to be wholly warranted in the premises. It is therein remarked that these experiments show "that the soil usually contains a supply of those inorganic substances which analysis finds in the ash of plants," and hence inferred that the most remunerating crops can *generally* be obtained by increasing the quantity of animal and vegetable matter in the soil. Now, so far as it regards the soil subjected to Mr. Lawes experiments, and similar soils, this is no doubt true. But by referring to the report of these experiments, in the June No. of the Geneseo Farmer, we found that the soil in question "was generally known as a good wheat soil," and that four grain crops were taken from the field the four years preceding these experiments, without the application in the mean time of any kind of manure to the land. The subsequent experiments showed, that this naturally good wheat soil contained the needed supplies of mineral substances, for the profitable growing of grain crops, "but for the want of organic matter the plants could not assimilate them."

There are, however, other soils, and they are by no means rare, in which chemical analysis indicates a marked deficiency of some of the inorganic elements which comprise a large proportion of the ash of the grain of wheat, and other cereal crops.—The analysis of the soils of many of the farms of the rich county of Seneca, N. Y., not long since made by Dr. Antisell, furnishes abundant proof, in the comparatively small amount they contain of some of the essential mineral elements, that their productive powers could be greatly increased, by direct application of lime, ashes, and especially the phosphates, in connection with animal and vegetable manures. Dr. J. H. Salisbury has recently furnished me with an analysis of the soil of a portion of my own farm, which I think determines with unerring certainty, a most speedy and economical increase of its productive powers, can alone be secured by a direct application of several important mineral elements in connection with animal and vegetable manures.

Judging from the character of the soil, as from the exhausting system of cropping which has generally prevailed in this and other sections of the State, I can safely say that this analysis fairly indicates the present actual condition of large bodies of our farming lands. One hundred parts by weight of this soil gave about 2 per cent of lime, 18 of potash, and 02 of phosphoric acid. Although the quantity of lime would furnish specific food for several crops, it is now well understood, that by its mechanical as well as chemical action it exerts an important influence upon vegetation, aside from merely acting as food for plants.—Hence it is that soils containing from 2 to 3 per cent of lime have been greatly benefitted by frequent and *direct* applications of moderate quantities of lime. There is also occasion for the free use of ashes to supply the deficiency of potash in this soil, but more especially of the phosphates, there being a marked deficiency of phosphoric acid, only 02 per cent. When we reflect that about 50 per cent of the ash of wheat, and nearly that of the other grain crops is phosphoric acid, and that a great proportion of this essential element is not again returned to the soil—the grain not being consumed at home—we will at once perceive, that no small proportion of our wheat lands, even in most favored localities, would be greatly benefited by direct applications of this mineral in connection with animal and vegetable manures—the quantity of mineral matter in them alone being too small to afford the needed supplies for the rapid succession of the cereal crops.

Marshall, Michigan, 1853. W. R. S.

Remarks.—There can be little question as to the practical value of the course recommended in the article criticized by our correspondent. If the application of "barnyard manure and composts of different animal and vegetable substances, and the plowing in of green crops," will not give fertility to the soil, then that soil is a marked exception to the general rule. We have often spoken of the ameliorating effects of lime, marl, ashes, &c., and recommended their application, and perfectly agree with W. R. S., that both mineral and vegetable elements are required in the soil to make it a productive one.—[Ed.

## THE AGRICULTURAL PRESS.

### Hay and Meal For Fuel.

It is a wasteful practice to use fodder to keep up animal warmth, when good shelter will answer the same purpose so much more economically. It requires enough, surely, of hay, roots, &c., to keep up their flesh, without increasing the amount by exposure to the cold. That it does and how, the following paragraphs from the *Country Gentleman* will explain:

Let us inquire why it is that the human body, and the bodies of warm blooded animals generally, (except at the surface merely,) are always at the same temperature, whether in summer or in winter, in cold climates or in hot—why, in the intense cold within the arctic circle, where the mercury of the thermometer is frozen solid, the heat of the body is as great as under the burning sun of the torrid zone? In those cold regions the heat is constantly escaping from the body at a prodigious rate, in the same way that the heat of a stove is constantly passing into the air which surrounds it, and is carried off by the currents. Where does it all come from to supply this constant waste?

By breathing, a large quantity of oxygen from the air is constantly received into the lungs. The circulation of the blood brings this oxygen into contact with the carbon and hydrogen of the blood, both of which are derived from the food. The oxygen combines with these two elements, and in the act of combining, heat is given out, in precisely the same way, only more slowly, that it is given out by the burning of wood. Combustion in pure oxygen gas is very intense, and its heat greater than that of the hotest furnaces; combustion in common air is slower, and the heat correspondingly less intense. But in the animal body many hours are required to consume the same amount of oxygen as in quick combustion. But the *real amount* of heat is the same; its intensity is diminished as the time is lengthened. This is further proved by the fact that animals which breathe rapidly, have the highest animal heat. A child has a more rapid respiration than a man, and we accordingly find its temperature two or three degrees higher. Birds breathe more rapidly than quadrupeds, and have four or five degrees more of heat. Fishes and reptiles, known as cold-blooded animals, breathe very slowly. Active exercise increases the amount of bodily heat, by throwing the blood more rapidly into the lungs, and which thus combines faster with the oxygen, or in other words produces a more rapid combustion.

Hence more food is required for animals in winter, to keep up the more rapid waste of heat. And hence too, domestic animals, exposed to cold winds and snow storms, require more food than those sheltered in stables. A starving animal of any kind is soonest frozen to death. Beasts of prey in the arctic regions, far exceed in voracity those of the torrid zone. The inhabitants of the extreme north, consume almost incredible quantities of food. Every farmer knows that it requires more grain to fatten beef and pork in the depth of winter, than during the milder weather of autumn.

Now, when domestic animals are exposed to the severe cold of winds and snow storms, there must be three resulting alternatives. Either a large amount of food must be given them to keep up the heat, besides what is needed for aliment; or the flesh must be drawn upon and reduced for the same purpose, developing the skeleton; or else the animal must freeze to death. One of these three alternatives is inevitable. The last, no one desires; the first is a costly process; the second is not less to be dreaded. Now, our advice to all is, to avoid this triple-horned dilemma, by securing the warmth of comfortable shelter.

### New Things.—Corn sown for Fodder.

Here are some hints for hereafter—which may aid some of our farmers in deciding on the use to which they will put, at least, one-half acre, the coming season. We cut them from the *Agricultor:*

Ourself a farmer, we trust we may take the liberty of uttering one plain truth to our brethren, and that is, they have as a class, a more bitter hostility to everything new than any other profession whatever. Go to the manufacturer or mechanic; he is ever on the watch for all new improvements and is willing to give them a trial, frequently when quite unpromising. But with the farmer, as a general rule, however promising, he obstinately sets his face against it, and cannot be persuaded to give it a trial.

Sowing Indian corn for fodder, is one of these new practices which has come into vogue among enlightened farmers within the last ten years; and if it had been generally adopted the past dry season, would have been millions of dollars in the pockets of the husbandmen of this country, saved thousands of poor and almost worthless cattle from the butcher's shambles, and other thousands from what is akin to prolonged starvation.

Every farmer ought invariably to sow one acre of Indian corn for fodder, for every ten head of animals which he keeps. In case of a drouth then, he will obtain food enough from this source alone to one-third winter his stock, which would have the effect of lessening the price of hay, and enable him to retain or sell his surplus stock to greater advantage. American summers are often dry, very dry. Improvident, indeed then, is that man who depends entirely upon grass for his stock; for a dry season cuts off from one-third to two-thirds of his crop. But with Indian corn it has not the same effect. Plow deep, manure well, and let the corn get one month's start, and it will take pretty good care of itself after that, through the season, wet or dry.

### Poor Salt and Poor Butter.

The *Agricultor* says that two-thirds of the butter of Ohio and the Western States, when it reaches the New York market, is nothing but rancid grease; and simply because they use Kenahawa, Syracuse, and Zanesville salt. The *Ohio Farmer* admits this to be true, and remarks:

It was a long time before our farmers and farmer's wives *knew* what the trouble was, and also until lately no other salt than Syracuse, came to this region, where butter is one of the leading articles of the farmer. But *now* it is different. Our farmers all *know* that Syracuse salt will not cure meat as it it should be cured nor preserve butter. Still the old *habit* is too firmly fixed to be changed at once. There is the old barrel of Syracuse salt in the wood house that cost only $1.25 in Cleveland. It *looks* so nice and clean that the house-wife is "sure it will answer;" so in it goes to as nice and yellow a churning of butter as ever was "fetched" and the butter is ruined.

We can hardly believe all the fault is in "Syracuse" salt. We have known as good and long-keeping butter as we could ever care to taste, in which no other salt than the common coarse Onondaga was used.

### Horse Stables.—Saw-dust Beddings.

Here are some capital hints for those interested in keeping and using horses—from the *Ohio Cultivator:*

The Horse Stable should be so constructed that currents of air can be effectually shut off from coming directly upon the horse, when desired. This is frequently impossible in many stables that we have seen, in consequence of open seams, through the siding and floors of the stalls. A horse put in such a stall, coming warm and moist from the road, with the winter winds blowing upon his reeking hide, is very much in danger of taking cold, and laying the foundation of disease, aside from the immediate discomfort and stiffening of his body. His back may be kept warm by a blanket, but his legs will be still sadly exposed, and thus the elasticity of his travel impaired.

The Stable Floor, for draft horses, we should always prefer to have lowest in front, except for the reason, that such a stable cannot so readily be kept dry and clean.—We prefer it, because when standing upon such a floor the muscles which were most employed in the draft, are temporarily relieved and rested, and it will be perceived that when a roadster is in pasture, and at liberty to choose his position, he will rest himself with his fore feet lowest. But as it is highly necessary that the horse be kept dry and clean, we should allow a falling back of some two inches in ten feet, in the planks of the floor.

The Feeding Box for hay, should be a manger, coming down within some eighteen inches of the floor, leaving underneath, that space for the bedding, during the day time. The stable should be so arranged with regard to *light*, that a person on coming from without, would experience no difficulty in discerning objects within. We do not approve of having a bright beam of light, let in immediately upon the horse's eyes; but should prefer a well diffused, subdued light. *Ventilation* should be well provided for, to dispose of the foul air, and keep up a proper circulation.

Bedding should not be neglected, and on this subject we have bestowed some attention of late, especially in observing the results of an experiment in the stables of Messers. Blake & Williams, of this city.—The material used for this purpose is *saw-dust*, and the results have been highly satisfactory. Several bushels of dry saw-dust are thrown into the stall, upon which the horse stands during the night. In the morning it will be found that about a bushel has to be removed—one half of which is manure and one half saw dust, so well saturated as to contain a large portion of ammonia, performing the double office of absorbent and purifier; thus the air of the stable is kept pure, and the ammonia saved for the compost heap. This compost Mr. Blake has applied to his stiff clay land, and reports that it operates like yeast, making the ground very light and mellow. In the morning that portion of the bedding which remains dry is shoved up under the manger, to serve for another night.

Another advantage from this material for bedding is that a horse which lies upon it, is much easier cleaned off, than one which lies on the straw; the saw-dust entering among the hair, brings away the secretions, when the curry-comb and brush are applied, leaving a bright, lively coat. In warm weather it has another great advantage, that of being much cooler than straw, so that a tired and heated horse, can sleep pleasantly, without incitements to feverish restlessness. The establishment of steam mills in all parts of the country, renders this material easy of access to almost every neighborhood, and we doubt not when its virtues are better known, it will be generally applied to stable use, as a means of comfort to the horse, and also of turning an otherwise useless article to profitable account.

### Lime for Fowls.

Eggs are, if at any time, a luxury in winter, and whatever (by keeping the fowls in good health and condition) promotes their production is of interest to the majority of our readers. We find the following seasonable paragraphs in the *Boston Cultivator:*

All domestic fowls, as well as other animals, require more or less lime. It is the chief constituent of their bones, and is probably useful in many cases, in small quantities, as a condiment. In addition to these purposes, fowls which lay eggs require lime for the formation of the egg-shells. Ordinarily, fowls which have their liberty can procure sufficient lime to satisfy their wants. It is contained in the grain on which they feed, and frequently in the stones and earth which they swallow.

But in Winter, when fowls have less access to the ground, or when they are confined in small enclosures, they have less opportunity to select the mineral substances which they require. Hence an artificial supply becomes necessary. How shall this be given? By placing the articles within their reach, so that they may take, voluntarily, just the quantity to which they are prompted by nature. Place slacked lime, broken into pieces the size of peas, on shelves where the fowls can readily pick it up. By slacking lime in a vessel, in considerable water, so that it will form a paste, and letting it dry, it can readily be pounded into the desired form, in which it appears to suit the fowls best.

An article is going the rounds recommending lime-water for fowls. If they are not compelled to drink lime-water because they can get no other, we see no objection; or to giving lime to fowls in solution, provided they have pure water always within their reach, but there is nothing to show that this form of giving lime has any advantages over the mode first described above, and the former has the preference as to convenience, especially in cold weather, when the article is most required.

### Lucerne for Milch Cows.

The *Soil of the South* thus commends this grass for summer soiling stock, remarking that he has the Chilian clover growing and can see no difference between the two. He says:

We know all about the lucerne, and prize it as highly. We know of no good reason why it is not more generally cultivated for feeding milch cows through the summer, except we are too lazy, and prefer the pint of sun burnt herbage milk to the rich creamy gallons of the luxuriant lucerne. And the milch cows are not the only animals that thrive on the lucerne.—Stock of every description are extravagantly fond of it, and this is not all. It forms one of the most beautiful borders for garden walks or yards, being easily kept in order by its constant trimming to feed with. In this section, it may be planted any time from October to March. It should be cultivated in drills, two to three feet apart, and kept clear of grass and weeds. We know of nothing that will yield a better return for the trouble.

### System in Farming.

Farmers sometimes write articles for their county papers, worthy of a wider circulation. Such an one is the following from the *Poughkeepsie Telegraph:*

There is no one thing that renders farming so unseemingly unprofitable, as a want of system in conducting the affairs of husbandry, and to do the work of tilling and seeding in its proper season. If this is not done in a suitable and just manner, the farmer cannot expect any good result from his labor, and poor profit is the event of farming without system. And if we deposit seed for prospect of gain, the land must be in good cultivation and rightly prepared to yield a *harvest* that will pay expenses. The soil rich and in preparatory order, will give to her laborer fair return for his pains bestowed. It is perfectly idle for the agricultural man to think of much gain from a poor preparation for any sort of crop he may choose to venture on his grounds. One acre of good land will produce its value; if it is put in good condition it will produce a fair compensation and remuneration for his time employed.

The absurd notion that a farmer should possess two or three hundred acres of land in order to do a great farming business, is rather an erroneous idea. By taking half those acres, with the best management, an equal amount can be made, and that, too, with much less expense, by having a smaller number of acres put into the best possible cultivation to make it give a fair rate of income. Why then not pursue this plan, as a better policy and a saving of extra expense?

No judicious farmer will undertake to plant, or sow an acre of ground, without a previous and well-directed preparation of such grounds, knowing he cannot realize ample profit without this careful procedure; and therefore his efforts are not underrated and he gets his full pay. The *unthrifty farmer* will complain that his crops are poor, and do not equal his neighbor's, and is ready to exclaim that farming will not make him rich or pay for his labor, when in fact the fault is in the man, and not in the quality of the land. This is the cause of much, too much, failure in agricultural advancement, and operates as a damper many times to well-disposed and frugal men in farming pursuits. But an onward course to those who are thrifty and labor to profit, would be an incentive for the prudent man, that they might experience the like effects, in tilling the soil and reaping the fruits of their labor.

### Every Farmer a Mechanic.

We extract the following from an article credited to the *Farmer and Artisan:*

Every farmer should be to some extent a mechanic. He should know how to make the wooden tools that he has to use, such as yokes, bows, handles, rakes, &c., &c. The boys too should be instructed in this art. Habits of industry are among the richest legacies that a man can leave his children; and on the possession of those habits, to a great degree, does the success and happiness of every individual depend.

Mr. Brown, the thrifty farmer of whom I have before spoken, acted upon the principle: he had three children, two boys and a girl. He sent them to school during the time that the school was kept in his district, but if you chanced to call at his house on a winter evening you would be very sure to find himself and two boys engaged in whittling out and finishing up some axe handles, or something of the kind, that had been blocked out during the day, while the girl read to them from a newspaper, his house being well supplied with this indispensable commodity. Jacob Jones used to go over to Mr. Brown's frequently to hear the reading, and it was whispered about the neighborhood that a conversation with Maria on a particular subject would have been even more interesting, but all his arts and efforts were unsuccessful in eliciting it. This however was mere chit chat and not to be talked about in an agricultural paper.

What I was about to say was, that one evening as they were employed as usual, and Maria had finished reading the address delivered before the agricultural society, Jacob said to Henry Brown, "you can't make so neat an axe handle as I have got." After a pause of a moment, Henry looked up and asked, "who made it for you." "It is one that father bought at the agricultural ware house, in Portland," replied Jacob. Henry, in order to tease him, not once suspecting the fact, said, "as likely as not it is one I made, for we sent two dozen there last week to be sold." "No," says Jacob, "this was made in Massachusetts, of the very best of wood." Henry as he placed his mark on a handle he had just finished said, "there, if it has a cross on the end like that, it is one that I made, for I mark all of mine with this little chisel." When Jacob went home he at once examined his axe handle, and lo, and behold, it had upon it the identical cross that Henry showed him.

### Breeds of Swine.

Under this head, Sanford Howard, Esq., the well-known and capable Agricultural editor of the Boston Cultivator, has recently written a series of valuable articles which are now publishing in the *Wool Grower and Stock Register*. Below is the first number—giving a very interesting history of the origin and character of the animal:

It is only a few years since it was very common to hear an expression signifying that the breed of a hog is in the food he gets. This notion has been to a great extent eradicated, but is not yet without advocates. There are still some who do not believe there is anything in the breed, because they "can't see how it is." But that is no reason for denying the fact. They can't see how it is that in a parcel of pear seeds,—all of which to outward appearance are just alike, and probably would appear so by the nicest chemical test,—some will produce fruit the most delicious and melting, and others with precisely the same advantages of soil and culture, fruit which is the most crabbed and austere. They can't see how it is that the bear should line and cover his carcass with fat to an amount nearly equal to half his whole weight, and which supplies his lamp of life for five months in the year, while the wolf and the fox remain gaunt and lean. They can't see how it is that the same kind of food when eaten by the ox, the sheep, the turkey, or the common fowl, produces meat which to human taste is of very different qualities.

All these effects are obvious; yet we cannot see their causes, nor fully understand them. All we can say is, they result from the varied *nature* of things. They show, however, that there is in the original germ of plants and animals, a principle which produces certain peculiarities greatly affecting, in many instances, their value for the purposes of man. This principle is not only manifested in the characteristics of different species, but exists more or less in varieties of the same species. We see its effect in the different kinds of wheat, and in other species of grain,—in varieties of peas, beans, apples, potatoes, &c.,—and in the peculiarities of the different varieties of the dog, the sheep, the hog, and other domestic animals. It is man's business to study these peculiarities, and secure and apply them in those ways which will render them most subservient to his wants.

Geological researches have proved that the hog is one of the most ancient of mammifferons animals. His fossilized bones have been found in various places, associated with those of the mastodon, dinotherium, a gigantic species of deer, and other animals long since extinct. An able zoologist (Martin) observes:—"Of the identity of these bones with those of the ordinary wild hog, all doubt has been removed by the most rigorous comparisons." The same writer remarks:—"It were useless to ask how it is that while the mammoth and the mastodon, the urus, the huge red-deer, the gigantic cervus megaceros, hyenas, enormous bears and powerful feline animals, have perished in times geologically recent, the wild hog continued it race. We cannot solve the mystery. It has escaped the fate of these animals—its contemporaries—whatever might have been the cause of their own annihilation, and though no longer a tenant of our Island [Britain,] it is spread throughout a great portion of Europe and Asia."

The hog is not a native of America. The South American peccary, though of the same order, belongs to a different genus. But in the uncultivated parts of Europe, Asia, and Africa, the wild hog has existed from time immemorial, and no less than eight species are enumerated by naturalists as inhabiting those countries.

The domestic hog was evidently derived from the wild, though it can hardly be supposed that any one species of the latter has been the parent of all the domestic breeds. On the contrary, the great diversity of characters which the domesticated animal presents in different countries, is probably owing in a great degree to its affinity with various original stocks. Experiments have proved that the domestic hog is capable of breding with different wild species, and that a prolific offspring is the result.

The subjugated animal is very different in his disposition and instincts, from his untamed ancestor. The common hog is as dependent as most other domestic animals. In his natural state, on the contrary, he is sagacious, bold, and independent. When of mature age, and in possession of all his faculties, he acknowledges no superior, and will not turn from his path for the proudest beast of the forest. Even the tiger and lion have found themselves unable to withstand his furious charge, and have been laid in the dust by wounds from his formidable tusks.

But the domestic hog soon regains many of the primitive habits of the race, when allowed his liberty in situations where he can supply himself with food. The semi-wild character of the "woods-hog" of our southern and western States, shows this. Even in his ordinary bondage, he is by no means the stupid and senseless animal which some have imagined him. He frequently manifests considerable intelligence, and his intellect is capable of great development. Everybody has heard of "learned pigs," which among other tricks would spell out various names by arranging the letters of the alphabet. Pigs may also be encouraged to defend themselves against other animals. We saw not long since, an advertisement of a "fighting pig," weighing forty pounds which was offered to be matched against any dog of any size. A more extraordinary instance of the education of this animal, is that of the "sporting pig," described in Daniel's Rural Sports.—This animal, a black sow called *Slut*, was actually broke to find and stand game, like a pointer dog. She was of the sort of swine which run in the New Forest, so called, where they chiefly obtain their support. She was trained by the brothers Toomer, game-keepers to Sir Henry Mildmay. After a few weeks' trial, according to the statement, "she would retrieve birds that had run as well as the best pointers, nay, her nose was superior to the best pointer her trainers ever possessed, and no two men in England had better." She appeared to take great delight in hunting, and often went alone, the distance of seven miles, from the residence of one of the Toomer's to the other, "as if to court being taken out shooting." She lived till she was ten years old, and was then killed because she was suspected of having aided in the disappearance of sundry lambs. She had got fat and sluggish, and weighed 700 pounds.

In subsequent numbers, we shall speak of the properties of various domestic breeds of swine, in connection with illustrations of some of those which are most highly esteemed.

---

Roup in Chickens.—This is a very detestable disease, being attended with a swelled head and a free discharge from the nose and mouth. About the best way to cure it in ordinary chickens, is to cut off their heads. In the case of the *Shanghai's*, and other high priced birds which cost 20 and 50 dollars each, this would be rather a summary disposal of so large an amount; and it might be worth while to try for a cure. The Maine Farmer says that the disease *can* be cured by washing the eyes and nostrils clean, three times a day, with whiskey, keeping the fowls in a dry warm place, and feeding with mashed food. Whiskey may be good for something after all. Thus saith the Prairie Farmer.

---

Profanity is a disgraceful vice.

# Orchard and Garden.

## HINTS ON PLANTING ORCHARDS.

The annual time of *planting trees* has again nearly arrived, and a few practical hints on the subject, derived from trial, experience and observation, may not be out of season to those of your readers just about planting.

Notwithstanding the endless variety of fruit, little attention has been bestowed, so far, in this section of the country, beyond the cultivation of the *Apple*, and it is probably one of the most useful products of nature, especially in which the genius of man has had a hand in bringing to its present state of perfection. If we witness our pomological exhibitions, it is surprising to notice the numerous varieties of this one particular kind of fruit grown to *perfection*, in beauty, hue and color, shape or size, and of inherent qualities—some sweet, some tart, so as to meet the approbation of all tastes and fancies.

To behold a fine lot of well matured fruit, even in the recent state, is temptation. Its sight makes faces smile, its participation gladdens the heart, and makes merry many a ruffled feeling of our rosy juveniles; whilst its susceptibility of application to a multitude of purposes, often contributes largely in completing bills of luxury to meet the most fastidious tastes of graver years

A thing, therefore, that ministers to the happiness of our posterity, and so pleasantly to our personal comforts, and serves to contribute to the material *substance* of some prudent old gentle fellow, who has had courage to plant orchards in by-gone years, and now reaps the benefits of his labors, is deserving of especial attention.

Many a social family circle was formed in our early life around the time-honored fruit basket, which maternal care seldom failed to keep well replenished, with our then good cheer. What happy faces!—a picture with associations never to be erased. Yes, that basket soothed many a childish grief, and saved us from many a mischief.

Every man who owns ground should take this matter in consideration. Fruit is daily becoming more extensively used, and it is found subservient not only as a luxury, but actually ministers to our health, if properly partaken with our food.

Fine fruit is a charm of delight to every one, while in particular it causes a spell of triumphant pleasure in the old to observe the products of their earlier labors. Not unseldom, some of the fairest specimens of the season are carefully selected, by dainty hands, to some reserve place of the house, for the purpose of gracing their hospitality on occasions when friends call to *tete-a-tete* with the pretty priestesses of our old neighbor. *En passant*, some of these specimens may be sent to our pomological exhibitions. —*Berks and Schuylkill Journrl.*

## FRUITS AND FRUIT TREES.

Buying and selling Fruit Trees.—Purchasers *sometimes* get good trees from irresponsible itinerant dealers, who purchase *good-looking* trees where they can get them cheapest, the quality of the fruit they shall bear, al hough highly recommended, being rather uncertain for some years to come.—The Agriculter gives a sample of the mode in which this kind of business is sometimes conducted. A lot of trees was purchased by a speculator, who bought at the same time a quantity of fruit, for the purpose of showing the quality, certificates being in readiness to convince those who never read agricultural papers, that the fruit grew on those identical trees!

Market Peach Orchards.—Trees may be placed within 12 feet of each other, if they are kept properly shortened in. It is perfectly useless to allow the long, naked arms to extend out from the trunk, so as to require more room than this. The commonly recommended practice, of clipping off a part of each yearling shoot, is too slow a process for a large orchard, and when alone relied on, commonly proves quite insufficient, being imperfectly or only occasionally performed. To keep the heads sufficiently compact, it will be found best to make a wholesale work of it, and remove the ends of the branches of several years' growth—but taking care always to cut off at a side branch, so as not to make a dead stump.

Dwarf Pears—May be trained at half standards, that is, with clear stems about two feet high, for market culture, on all soils but those liable to become very soft by excess of moisture. On such soils they are apt to bend over by wind, or by the weight of heavy crops, in consequence of the shortness of the quince roots on which they grow. Where this difficulty exists, it is better to allow the branches to cover the whole stem, forming full pyramids. — *The Country Gentleman.*

---

Horticultural Society.— *Annual Meeting.*—The Annual Meeting of the Horticultural Society of the Valley of the Genesee, for the election of Officers, hearing the Annual Reports, and for other important business, will be held in the Law Library Room, in Corinthian Hall, on Saturday, the 5th day of February next, at 2 o'clock P. M. of that day. An Exhibition of Winter Fruit will take place on the same day, at the same room—the Hall to be open for that purpose at 10 o'clock in the forenoon.

---

Great Growth of Grapes.—We find the following in the Ontario Times, signed, H. C. Lucas:—"On the 5th day of May last, I engrafted two scions of the Spanish Cherry into a stock about two inches in diameter, which have grown fifty-three feet of top." Rather a thrifty growth, that.

# Domestic Economy.

## POISONS AND ANTIDOTES.

It not unfrequently happens that serious and distressing results are occasioned by the accidental employment of poison, and it occurred to us that we might possibly do a service to some of our readeas by presenting them with a brief and compendious list of the more common poisons and the remedies for them, most likely to be close at hand.

*Acids*—Those cause great heat, and sensation of burning pain, from the mouth down to the stomach. Remedies, magnesia, soda, pearlash or soap, dissolved in water; then use stomach pump or emetics.

*Alkalies*—Best remedy is vinegar.

*Ammonia*—Remedy, lemon juice or vinegar, afterwards milk and water or flax seed tea.

*Alcohol*—First cleanse out the stomach, by an emetic, then dash cold water on the head, and give ammonia (spirits of hartshorn.)

*Arsenic*—Remedies, in the first place evacuate the stomach, then give the white of eggs, lime water or chalk and water, charcoal and the preparations of iron, particularly hydrate.

*Lead*—White lead and sugar of lead. Remedies, alum, cathartic, such as castor oil and epsom salts, especially.

*Charcoal*—In poisons by carbonic gas, remove the patient to open air, dash cold water on the head and body, and stimulate nostrils and lungs by hartshorn, at the same time rubbing the chest briskly.

*Corrosive Sublimate*—Give white of eggs freshly mixed with water, or give wheat flour and water, or soap and water freely.

*Creosote*—White of eggs and the emetics.

*Belladonna, or Night Henbane*—Give emetics and then plenty of vinegar and water or lemonade.

*Mushrooms, when poisonous*—Give emetics and then plenty of vinegar and water, with doses of ether if handy.

*Nitrate of Silver*, (lunar caustic) give a strong solution of common salt and then emetics.

*Opium*—First give a strong emetic of mustard and water, then strong coffee and acid drinks, dash cold water on the head.

*Laudanum*—Same as opium.

*Nux Vomica*—First emetics, then brandy.

*Oxalic Acid*—Frequently mistaken for epsom salts. Remedies, chalk, magnesia, or soap and water, and other soothing drinks.

*Prussic Acid*—When there is time, administer chlorine in the shape of soda or lime. Hot brandy and water. Hartshorn and turpentine also useful.

*Snake Bites, &c.*—Apply immediately strong hartshorn, and take it internally, also give sweet oil and stimulants freely—apply a ligature tight above the part bitten, and then apply a cupping glass.

*Tartar Emetic*—Give large doses of tea made of galls, Peruvian bark, or white oak bark.

*Tobacco*—First an emetic, then astringent tea, then stimulants.

*Verdigris*—Plenty of white of egg and water.

*White Vitriol*—Give the patient plenty of milk and water.

In almost all cases of poisoning, emetics are highly useful, and of these, one of the very best, because most prompt and ready, is the common mustard flour or powder, a tea-spoonful of which, stirred up in warm water, may be given every five or ten mintes, until free vomiting can be obtained.

Emetics and warm demulcent drinks, such as milk and water, flax seed or slippery elm tea, chalk water, &c., should be administered without delay. The subsequent management of the case will of course be left to a physician.—*Hartford Times.*

## IRISH BUTTER--HOW PREPARED.

We have already noticed the sale at auction in Boston, of a lot of Irish butter. In reference to the article a Boston paper says:

"The choice Irish butter which finds a market at Cork, is said to be the best butter in the world. It cost the present season there 80s per cwt., equal to about twenty cents per pound. This butter is packed in tubs containing 66 to 70 lbs. each. The quantity of salt used in the making is about one pound of salt to ten or eleven pounds of butter; the buttermilk well worked out of the butter without using the hand too much. Care is taken to pack it as closely as possible. Space is left at the top of the cask for pickle, and at the port of exportation the pickle is added, with one or two pounds of salt additional to each cask, to keep the pickle at full strength.

---

Spanish Fritters.—Cut the soft part of baker's bread in slices of a quarter of an inch thick, and of any form you choose. Take a pint of milk or cream, three well-beaten eggs, half a teaspoonful of nutmeg and cinnamon mixed, three drops of the essence of lemon, and sugar to the taste. When they have absorbed as much of the milk as they will, take them out before they get too soft, and fry them of a nice light brown on both sides. They may be served with or without sweet sauce.

---

Turkeys.—If young, the legs will be black and smooth, the eyes lively, and the feet pliable. If old, the eyes will be sunken and the feet dry.

Hens.—If the comb and legs are rough, they are old. If smooth and limber, they are young.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending January 18, 1853.

Robert W. Andrews, of Stafford, Conn., for improvement in operating the treddles of looms.

Chas. L. Bander, of Cleveland, O., for improvement in bedstead fastenings.

Dexter H. Chamberlain, of Boston, Mass., assignor to Cyrus G. Howard, of same place, for improvements in machinery for reducing metal bars.

Jos. Contner, of Milroy, Pa., for improvement in saddle trees.

Geo. and David Cook, of New-Haven, Conn., for improvement in driving circular saws, &c.

Edward Everett, of Lawrence, Mass., and Sam. T. Thomas, of Lowell, Mass., for improvement in harness boards for Jacquered looms.

James S. Hogeland, of Lafayette, Ind., for improvement in wool condensers.

Jno. Griffiths, of Philadelphia, Pa., for improvement in screw cutting dies.

Jno. L. Kingsley, of New York, N. Y., for improvements in compounds for stereotype plates.

Jeremiah P. Smith, of Hummelstown, Pa., for improvement in corn shellers.

Jos. W. Webb, of Aurora, N. Y., assignor to Benj. Gould, of same place, for improvement in valves of rotary steam engines.

Samuel and Wm. H. Witherow, of Gettysburgh, Pa., assignor to Samuel Witherow, of same place, for improvement in seed planters.

## WATER RAMS FOR FIRE ENGINES.

Messrs. Editors:—When the fact is admitted that the water ram is capable of raising a given proportion of water to any reasonable height, it would seem to me, good reason to conclude that with a sufficient fall, a large supply of water and a huge ram, by contracting the discharge pipe, as in the fire engine, it might be made to serve as a substitute therefor. If the ram can force water to the height of two or three hundred feet, the power is there, and I lack the knowledge to understand why it cannot be made to operate. Would not a ram with a six inch supply pipe cost less than a fire engine and out last two?

S. S. L.

Remarks.—Our readers will remember an article which appeared in the last volume on this subject, but owing to the above letter being mislaid, the discussion was not concluded. We owe this apology to our correspondent, to whom we would say in reply:—It is true the water ram is able with a good fall, to raise a proportion of of the water to the height named, but the amount raised will be, as compared with the whole, in inverse ratio to the elevation of the discharge pipe above the fountain head. The water being forced into the air chamber, compresses the air until it becomes the projecting force, which causes the water to find vent in the discharge pipe. This force is sufficient to cause a discharge of the water at the terminus of the pipe, but has no power to force it beyond. If the end of the discharge pipe could be situated over the building, the water as it run out would fall upon and quench it, but if the fire was one foot above the highest point of the pipe, the compressed air in the chamber of the water ram has not force enough to communicate sufficient momentum to the water to cause it to overcome that distance. To convoy that momentum, requires the quick operation of a briskly worked force pump, as constructed in a powerful engine.

A water ram with a six inch supply pipe would only discharge its proportionate amount of water, which would be subject to the same law as governs the small machine in common use. Increasing the size would not increase its power to project the water beyond the pipe, as the air only communicates motion enough to enable the water to fall gently, as it is discharged. It is a miniature stream constantly supplied, without the power to leap from its bed to extinguish a neighboring conflagration and the only effect of putting in a pipe having a smaller calibre than one through which the water comes from the machine, would be in effect, building a dam to restrain a portion of the water without increasing the velocity of what runs over the dam and escapes.

Whether as large a machine as our correspondent contemplates would cost less than a first class engine we are unable to say, but in our opinion would not; neither would it be much more durable, and lacks the convenience of being readily moved where most needed.

## IMPROVEMENT IN BUTTER FIRKINS.

Butter firkins, as at present constructed, require to be sawn horizontally through the centre, or the head removed, in order to obtain the butter, which is liable to be injured from the consequent exposure to the air.—As an improvement on the above, a new method has been invented by Daniel Minthorn, of Watertown, N. Y., who has taken measures to secure a patent. The firkin is made to consist of two parts, which are connected together by means of a taper flange on the core of the one, which fits into a corresponding recess cut inside the edge of the other, the two parts being kept firmly together with hooks or any other suitable fastening. The great advantage of a firkin of this description is, that small quantities of butter can be taken out when required, and the firkin afterwards closed air-tight, which renders it superior to those of the ordinary construction for family use; moreover, the firkin can be used repeatedly for the same purpose until completely worn out.—*Sci. American.*

## IMPROVED BOOT CRIMP.

William Faus, of Buckhorn, Pa., has taken measures to secure a patent for improvements in the above. These improvements consist in the employment of two sets of clamps, one set of a double wedge or conical shape, for stretching the corners of the leather, when the boot is fixed for crimping, and the other for stretching the entire surface. The operation of crimping is performed by a removable lever, which is likewise an improvement, as by the ordinary plan this lever is stationary, so that the boot, after being partly crimped or shaped, must be taken off and finished by hand. In this improved apparatus the crimping lever is attached to the table by a pin, so that it can be removed after the crimping has been done, and another substituted in its place. The clamps are made to work in slots cut through the above-named lever, by means of set screws, which operate exclusively on their corresponding set of clamps. All, therefore, that is required to be done for crimping the boot is to attach the leather to the clamps and press the lever between a pair of wooden jaws four or five times, moving the screws and clamps outwards as the lever is operated.—*Scientific American.*

## VARNISH FOR IRON WORK.

Locksmiths and others working at the forge are accustomed to blacken the articles intended for railroads by making them red hot and burning on them some linseed oil. This plan, which is practised to improve the appearance of the articles, and to protect them from rusting, is not economical nor always successful; it fails when the combustion of the oil has been too great.

By the following process a varnish is made without the above disadvantages, and which gives to articles a better appearance:

Dissolve, in about 2 lbs. of tar oil, something more than half a pound of asphaltum and a like quantity of pounded resin; the mixing is performed hot in an iron kettle, care being taken to prevent any contact with the flame. When cold the varnish is poured into a vessel and kept for use.—These varnishes are for out-door wood and iron work, not for japanning, leather, or cloth. Oil varnishes are used for patent leather; and copal for japanning metal.

---

Improved Carriage Hub.—In order to secure the axle more effectually than has hitherto been done, on the wheel, a new improvement has been invented by John Olles, of Philadelphia, who has taken measures to secure a patent. For this purpose two tubes, one inside the other, are let into the eye of the hub, and the end of the axle is made of a suitable shape to play freely within the inner one, but is prevented from working out by means of a collar and screw box, which are fitted on to the outer tube. The objects effected by this arrangement are, first, that of shifting the bearing of the axle to all parts of the inner circumference of the intermediate casing, which is accordingly made movable, and in the second place that of securing the wheel firmly on the axle as well as preventing the oil from flowing anywhere except to that part of the axle inside the hub.

---

New Fluid Lamp.—A fluid lamp has been invented within a few days, which, the Boston papers say, is perfectly safe, even if broken. It is entirely original and quite simple in construction, and will cost but little more than ordinary glass lamps. When the bowl of the lamp, which is glass, is formed, before it is "closed up," a burnished brass globe or vessel is inserted, and the glass is formed up around it. The tubes of the lamp are thus fastened to this brazen globe, instead of being fixed to the glass, as in the ordinary lamp. Thus, a beautiful article is made, the glass of which may be broken to atoms, and yet not a drop of fluid spilled. The yellow brass, burnished to a dazzling brilliancy, shows with great effect through the glass case that surrounds it, giving additional beauty to the lamp, which combines all the neatness and security of the metallic lamp.

---

Cutting Barrel Heads.—A machine of the above description has been lately invented by Franklin Fruit, of Jefferson City, Mo., who has taken measures to secure a patent. Barrel heads are formed of several pieces, and these often vary in thickness, hence causing some difficulties in the process of chucking. The inventor has overcome this obstacle by using a chuck of a peculiar description. It is made of two circular discs with a series of centres placed in a circular form. Each centre is provided with a spiral spring, so that it can yield to accommodate the different thickness of the wood.—All persons engaged in this great branch of manufacture will understand that the chuck can be employed in conjunction with the usual shaping and bevelling apparatus.—*Sci. American.*

---

A manufacturer in Wurtemburg has invented a mode of applying a surface coating to sheet-iron, which enables it to take freely the mark of a slate-pencil. It is said to be much lighter, and much less liable to injury, than common slate.

[Written for Moore's Rural New-Yorker.]

## WHERE ARE GREAT INTELLECTS FORMED?

BY A FARMER'S WIFE.

As one after another of the mighty intellects that exercise such sway over the public mind pass from among us, it is well to inquire in what direction we are to look for those who are to take their places in the great arena of life, and examine into the operation on the young mind, of the various pursuits of life. I am aware that this is rather a trite subject, nevertheless it is one which will admit of frequent consideration.

When we cast our eyes over the vast extent that is now covered by our every day reading, and see the names of eminent men, who stand out as beacon-lights in the various departments of science, literature, arts, statesmanship and agriculture, the inquiry naturally arises in the mind, What advantages have they enjoyed, above what I possess?

It is not my intention to individualize to any extent, but history will confirm the assertion that a large proportion of those who have acquired the respect and admiration of mankind, have been the students of nature in her rural aspects. The most successful writers, orators, and painters, have drawn their imagery from Nature's vast storehouse. Poets, too, derive from her arcana the most beautiful decorations of their pages. No one could suppose that he, whose poetry we may say, is "read of all men," would have been the poet so universally admired in his works, had he been born and lived in Edinburg instead of Ayrshire.—Neither could his sympathies with the humbler portion of society have been so keenly alive, and so feelingly pictured, had he always been the excise-man, instead of the plowman. Most of the pieces that have immortalized his name, and almost deified the man in the minds of his countrymen, were composed when under the immediate influence of some natural scene connected with rural life. After learning that it was the habit of such a man as BURNS, at dinner time to retire to his little chamber and scribble down the morning's reflections, let no farmer's son or daughter, of our day, say they have no time for mental improvement.

No one could read HOGG's thrilling descriptions of snow-storms in the Highlands, and believe they could have been written by any but a partaker in the scenes. Yet the "Ettrick Shepherd," who acquired a world-wide reputation for his beautiful poetic delineations, was a poor, hard-working country boy, without the advantages that may be enjoyed by the poorest American child. I could fill pages with examples, but will leave them to the intelligent mind to supply and bring the subject to a practical examination.

Where have the lives of most of our eminent men been spent? Surely not in the counting or sales-room of the merchant, but in the mechanic's shop or on the farm. It is true that commerce encourages agriculture and the mechanic and fine arts, because their productions are requisite in filling up her various ramifications. But look at those whose days have been spent in large cities, in active commercial life. There are those among them who have acquired large fortunes in mercantile pursuits, who possess capacious and discriminating minds, and benevolence to contribute with an open and liberal hand to the support of those enterprises which are establishing for us a national character, to whom all honor is due—yet, while in the pursuit of these fortunes, their minds could not be directed into other channels. Hence it is not in the commercial mart that we must look for minds that make their possessers "head and shoulders higher than other men."

Much of the success of life depends on an energetic and close application to some useful pursuit. This is probably one reason why superior minds are more likely to be developed in families, where children are obliged to perform a moderate amount of labor; such children set a higher value on their time and improve their opportunities better than those who are accustomed to having their wants supplied without an effort of their own. The child who can attend school all the time and feel that his father is able and willing to keep him at school till he has acquired a thorough education, is less likely to apply the energies of his mind to his daily exercises, than one who knows he can have but a limited amount of instruction. A reflecting child of the latter class will be very likely to say to himself, "I must improve every moment, and acquire all the knowledge I can during this three months, to enable me to study to advantage without instruction, the rest of the year," and probably at the end of that time he will be far ahead of his compeer, who has been at school all the time, and will have the additional advantage of *habitual* application.

So far from the lighter kinds of labor being detrimental to profitable thought, those pursuits which are in a measure performed mechanically, are encouragers of thought, inasmuch as they merely employ the hands, leaving the mind free, and not unfrequently the work itself suggests ideas of the most beautiful order. Children who are raised in cities are in a measure deprived of the benefits of concentration. Their minds become diffused among so many objects of attraction, that much time is lost and misspent. For instance, a young person may spend one or two evenings a week listening to instructive lectures; if he spends the remaining four at parties or concerts, how much time, think you, would his mind dwell on the truths of the lecture? Late hours and variety are certainly detrimental to the thoughtful investigation of any grave subject. On the contrary the pursuits that engage children in the country, their sports, their pastimes, and their labors, are necessarily in the open air, among objects calculated to foster the best feelings, develop the physical energies and store the mind with a knowledge, without which, the efforts of the Painter and the effusions of the Poet are tame and spiritless. It is an established principle that the excellence of all Art consists in the nearness of its approach to Nature. And what so likely to stir up a desire to understand the principles that govern and keep in their places the millions of atoms of which this vast Universe is composed, as a constant familiarity with their beautiful operations?

In our country, where the avenues of distinction are alike open to all—how cheering to the toil-worn parents, the thought that they may live to see the son they are striving so hard to educate, taking his place among men filling a large space in the annals of his country's fame.

I would, by no means, undervalue early advantages, but I think there is often a great and serious injury inflicted on children by over-anxiety of the parent to bring forward the intellect to an intense development, especially if the child evinces uncommon forwardness. How many precocious children have been ruined, physically and mentally, by this forcing process. Hear what one of its victims, the lamented MARGARET FULLER OSSOLE says upon this subject:

"My father thought to gain time by bringing forward the intellect as early as possible. Thus I had tasks given me, as various as the hours would allow, and on subjects beyond my age; with the additional disadvantage of reciting to him in the evening after he returned from his office. As he was subject to many interruptions, I was often kept till very late; and as he was a severe teacher, both from the habits of his mind and his ambition for me, my feelings were kept on the stretch till the recitations were over. Thus frequently, I was sent to bed several hours too late, with nerves unnaturally stimulated. The consequence was a premature development of the brain that made me a 'youthful prodigy' by day, and by night a victim of spectral illusions, nightmare, and somnambulism, which at the time prevented the harmonious development of my bodily powers, and checked my youth; while, later, they induced continual headache, weakness, and nervous affections, of all kinds. As these again reacted on the brain, giving undue force to every thought and every feeling, there was finally produced a state of being both too active and too intense, which wasted my constitution, and will bring me—even although I have learned to understand and regulate my new morbid temperament—to a premature grave."

Many men who fill the highest civil stations in the country, have been in youth surrounded by circumstances adverse to an early development of their mental faculties; even devoting years to mechanical or agricultural labor. The time will soon have passed when a blush shall mantle the cheek, at the mention of the plow, the plane or the anvil, in connexion with the employment of the father or the lover. Every tendency of the real reforms going on in the world is to dignify labor, and place man in a scale where real merit weighs against position. This perhaps is not true of merely political distinction, for unfortunately the balance is in the hands of those who can be influenced by the money of the demagogue. Hence the reluctance of some men of incorruptible integrity to enter the political arena.

In justice to my own sex I will not omit to mention another fact truly encouraging to those who do not think we shall remain in darkness, because so many brilliant stars have sunk beneath the intellectual horizon. There is now a class of women on the stage of action, who are intellectually in advance of the preceding generations. There may be no better minds than existed here and there in former days, but intelligence is more generally and better diffused. It may be said there is but one woman of this generation who could have written "Uncle Tom's Cabin," that too, by snatches, while engaged in household avocations; but there are *many*, very many, who, if they would write, could fill pages with "thoughts that breathe and words that burn," while their hands are engaged in domestic employments. If you visit the unpretending farm-house or even the log-cabins of the western wilds, you will find in the forests, the fields, the book-cases and periodicals, the mental aliment of those mothers and sisters who are destined to nurture the intellects that shall sway the nation.

It is in places like these we may look for superior minds, rather than among those, whose first breath was inhaled from an atmosphere redolent with French perfumes, imbibing in infancy and fostering in youth, a disgust toward every thing not enveloped in the folds of artificial life.

## CANINE SAGACITY.

Mr. MOORE:—Having observed that you frequently publish anecdotes illustrative of the peculiarities of various animals, I have thought the following instance of canine sagacity ought not to pass unrecorded.

Doctor W. of Dedham, Mass., lately owned a dog (of what particular breed I am not informed,) that became somewhat noted for his intellectual developments. Sometime during the last summer the Doctor's brother, who resided in New York, went to Dedham with his family to make a visit. While there the children and the dog became such good friends that the uncle was prevailed on to give them the dog. Accordingly they took him to Norwich in the cars, thence to New York in the steamboat Knickerbocker. After a short time the children began to attend school, and the dog was evidently very lonesome and no doubt tired of the "noise and confusion" of the great city of Gotham. One day he strolled down to the wharf where the K. usually lay, but the dog not being able to inquire, embarked on board the Jersey City ferry boat, at that moment occupying a place near the K. Before the ferry boat had crossed the dog had discovered his mistake and refused to land, but went back when she re-crossed. When she reached the wharf the K. had arrived in her place. Our canine friend immediately went on board, and was soon after found and recognised by some of the waiters. He had found his way to the identical state room and ensconced himself in a berth occupied by the children with whom he had travelled a short time before. When they arrived at Norwich the dog proceeded on his journey in the same car in which he had gone to New York. Dr. W. had an office in Boston, and was much surprised one day, to see the dog enter his office and wag a familiar "how d'ye do." After ascertaining that all was right there, he left, to pay his respects to the family at Dedham, where on going home the Doctor found him, apparently happy at seeing his friends.

I do not know what philosophers might think of that quadruped, but I think he showed more evidence of possessing *reason* than is evinced in the conduct of many bipeds. M.

## THE PALM TREE OF SCRIPTURE.

THE Palm tree, is a tree remarkable for loftiness, straightness, and productiveness, and hence made an emblem in scripture of uprightness, fruitfulness, and victory. Its fruit is the date, very sweet and nourishing, and a large portion of the inhabitants of Egypt, Arabia, and Persia, subsist almost entirely upon it. Camels are fond of the stone. The fruit is of the size of an olive. Palm branches were signals of joy and triumph. The leaves are six or eight feet long, and proportionably broad when spread out, and are used to cover houses, and make couches, baskets, bags, fences, hats, &c. From the fibres of the branches are made thread, ropes, rigging, &c. Indeed the natives (says Gibbon) celebrate, either in prose or verse, three hundred and sixty uses to which the trunk, branches, leaves, juice, and fruit are applied.

The palm tree attains maturity in thirty years from planting the seed, and continues in full strength for seventy or eighty years, bearing annually three or four hundred pounds of dates; and finally dies at about two hundred years old. From its sap, palm wine is made, called by the natives Araky. It is a beverage which easily intoxicates, and is thought by Bishop Lowth to be the "strong drink" mentioned by Isaiah.—From the species of palm tree called Landon, growing wild, in various parts of the East, the common sage is procured.—*Jewish Chronicle.*

## THE AMERICAN CROSSBILL

WE presume that few of our little readers have ever seen the very remarkable bird which is represented in the above picture. On first glancing at his crossed bill, from which he derives his name, one is likely to pronounce it deformed. But by observing the dexterity with which he detaches the seeds of the pine-tree from the cone, it seems peculiarly adapted to the purpose of procuring food.

The summer residence of these birds is far to the north, from which they visit us in the fall and winter, when they may be seen in flocks, feeding on the seeds of the hemlock and white pine. They cling to the twigs in all sorts of postures, and go through the operation of feeding in a quiet and business-like manner, each one attending to his own affairs. It is, indeed, a pleasant sight to see the little creatures fluttering among the twigs, all in constant action, like so many bees on a cluster of flowers. They have a loud, sharp, and not unmusical note; chatter as they fly; alight during the prevalence of deep snows, before the door of the hunter, and around the house, picking off the clay with which the logs are plastered. At such times they are so tame as only to settle on the roof of the cabin when disturbed, and in a moment after descend and feed as before.

The time of breeding is, perhaps, the most remarkable circumstance connected with this bird. A friend of ours informs us that on cutting down pine trees in the month of February, he has discovered their nests and eggs. We have ourselves, often seen the old birds feeding their young in the latter part of February, but supposed them to be late birds of the preceding year. Mr. Bechstein, in his book of chamber birds, says: "They build in the upper branches of firs and pines, and make their nests of the delicate twigs of those trees; within the the outer wall of this nest is a thick layer of ground-moss, followed, inwardly, by a lining of very delicate coral moss. The female lays from three to five eggs, which are grayish white, and surrounded at the thick end with a coronal of reddish brown spots, lines and dots. The heating quality of their food protects, at this season, both young and old from the cold; the young are fed from the crop, like all the kernel-eaters."

The male is about the size of the Blue-bird, is of a red-lead color, intermixed with spots of olive. The female is somewhat less in size, and her color a dirty-green.—*Youth's Casket.*

## THE SOCIABLE VULTURE.

THIS is a bird of extreme rarity. It was discribed by Le Vaillant, in his "Travels in the Interior of Africa," under the name of *oircou*,—fancifully derived from the folding of the skin around its ears, and along its neck. A more detailed account was afterwards furnised by the distinguished ornithologist, in his Oiseaux d' Afrique, where a full grown male is very accurately figured. We do not find that it has since been observed by any zoologist; for all the accounts of it with which we have met, are copied from Le Vaillant.

In size, this gigantic bird is fully equal to the condor; the larger spicimen measuring, according to Le Vaillant, upwards of ten feet in the expanse of their wings. The head, and greater part of the neck are of the color of raw flesh, and exhibit in their adult state no appearance of down or feathers, but only a few scarcely perceptible, scattered hairs. The throat is covered with blackish hairs, and the lower part of the neck behind, with a kind of ruff crisped and curled feathers of the same color—within which the bird withdraws his head while in a state of repose, especially after feeding; an attitude which is common to most of the vultures.

Like all other vultures, this is a bird of the mountains, the sheltered retreats formed by their caves and fissures constituting its proper habitation. In them it passes the night, and reposes, after it has sated its appetite, during the day. At sunrise, large bands are seen perched on the rocks at the entrance of their abodes, and sometimes a continued chain of mountains exhibits them dispersed throughout the greater part of its extent. Their tails are always worn down by friction against the stones between which they thrust themselves, or on which they perch; while the eagles, seldom walking and frequently perching upon trees, preserve theirs more entire. Those of the vultures are moreover injured by the soil of the plain, inasmuch as they cannot raise themselves into the air at once, but only after running several paces forward and by a forced contraction of the limbs. The flight of the vulture is, nevertheless, powerful and lofty; they raise themselves to a prodigious height, and disappear entirely from the sight.—*Illustrated Family Friend.*

FREQUENT application is to the mind what repeated tillage is to the earth.

# Sunday Reading.

## EVENING PRAYERS OF CHILDREN.

It is the hour when babes with angels speak;
While we are rushing to our pleasures weak
And sinful, all young children, with bent knees,
Eyes raised to Heaven, and small hands folded fair,
Say at the self-same hour the self same prayer
On our behalf, to Him who all things sees.
And then they sleep. Ah, peaceful cradle sleep!
O, chi'dhood's hallowed prayer!
Of love, not fear, in happiness expressed!
So the young bird, when done its twilight lay
Of praise, folds peacefully at shut of day
Its head beneath its wing, and sinks to rest.

## THOUGHTS ON THE CLOSING YEAR.

A LEAF FROM MY JOURNAL.

WITH December 31st, closed the year eighteen hundred and fifty-two. Again has this terrestrial ball completed its accustomed yearly revolution around the great centre of the solar system. Again have we been favored with "seed time and harvest," in pleasing and timely succession.

The year eighteen hundred and fifty-two, like its predecessors has come and gone, and is now added to the catalogue of years, which chronicle the age of our planet, and unite to swell the countless centuries of a never-ending eternity. Its golden moments have fled—aye, forever fled. The opportunities which it has afforded me for improvement—for becoming wiser and better myself, or for doing good to my fellow men, have also fled.

I have during this period, exerted an influence upon the characters of those by whom I have been surrounded, which will have an important bearing upon their future destiny, both temporal and eternal.—Oh, may I ask myself, "what has been the *tendency* of this influence, and what is to be its final result?"

How many who began the past year with bright anticipations for the future, have had their fondest hopest crushed by the cruel hand of disappointment! How many who on the first of the year were fondly looking forward to a long life of happiness, and perhaps of usefulness, are now sleeping that "dreamless sleep," from which they will not waken till the trump of the Archangel is heard calling them to judgment. While *these* have passed "to that bourne whence no traveller returns," *I* am still living in the enjoyment of health, in the possession of reason, and blessed with the society and sympathy of kind friends and relatives.

But am I, in the least degree, grateful for these unmerited mercies, and if so, what have I done, what am I now doing to *prove* my gratitude? Alas! I am conscious of having done comparatively little, worthy of myself as a man—little to render the world better for my having lived in it—little to prosper the cause of Truth and Christianity.

Oh, shall I, as each successive year wheels its annual round, have the same pitiful tale to record on the pages of this journal? Let me hope, let me pray that it be not so.

Port Gibson, N. Y., Jan. 1, 1853. J. A. T.

## BUNYAN'S ONE BOOK.

A WRITER in a late foreign review upon the genius and writings of Bunyan, makes the following remarks upon the influence exerted upon that wonderful man by the study of the Scriptures:

"The Bible we have called Bunyan's one book; and his case corroborates the common notion; beware of the man of one book; of one who, by frequent perusals, has drank so deeply into a book's spirit—has got so much into its thought and feeling—travels, in short, so easily and naturally into its track, that without any conscious imitation, his works become duplicates of the original. This is true of other books, but much more of the Bible. It is a Pactolus, and he who bathes in it comes out decked in gold; nay, it resembles that other fabled stream which made the bather invulnerable and immortal. Bunyan had read little else; he had read it, too, in circumstances which burnt and branded its language upon his soul; he had read it as its blessed words swam on his eyesight through tears; he had read it amid the Slough of Despond—by the red lightnings of Sinai; and as he gazed upward from the Delectable Hills to the far-streaming glory of the city; even in the Valley of the shadow of Death, he had continued to clasp while unable to see it; every chapter in it was a chapter in his history, and every verse touched and thrilled some chord in his heart. Like the poor man's lamb, 'it lay in his bosom, and was to him as a daughter.' Many millions have loved the Bible; but we question if any one surpassed or equaled Bunyan in the depth and fervor of his love. Many have framed concordances, and made entire transcriptions of it; but Bunyan's concordance was his memory, and it lay all transcribed' every word and syllable of it, in his heart."

FITNESS FOR HEAVEN.—Let us not delude ourselves. They who are not made saints in the state of grace, shall never be saints in glory. The stones which are appointed for that glorious temple above are hewn and polished, and prepared for it here, as the stones were wrought and prepared in the mountains for building the temple at Jerusalem.—*Leighton.*

# Miscellaneous.

## TRUTH IN A WELL.

Once at mid-day toiled a youth
In the bottom of a well,
Delving for no mystic truth
Down where sun-light never fell.

All he sought was the revealing
Of some stream from living fountain,
Through Earth's hidden arteries stealing
From the heart of yonder mountain:

Which should spring, a well of joy
To the sacred homestead ever;
Sweet and pure without alloy,
And bounteous as the all-bounteous Giver.

Upward looked he to the light
And the span of sky afar,
And behold, as at midnight,
Shone at noon a sparkling star!

Then first learned he that the sun
And the glare and stir of day
Were but shrouds and darkness dun
To the high and far away:

That the light so prized, which made
The near palpable around us,
But the tyrant with us played,
And to dust with short chain bound us.

Only when the darkness falls,
Veiling all the objects nigh,
Look we freely o'er these walls
To the glorious sphere on high!

*Knickerbocker Magazine.*

For the Rural New Yorker.

## WINTER THOUGHTS.

The winter winds are howling piteously among the leafless branches. Cold, gaunt wintor, sways his sceptre over universal nature—and all around is dreary and desolate. The vegetable world is buried beneath a thick covering of snow—the limpid streams are bound in icy fetters, and the insect tribes are swept from existence. But thus it shall not always be. The germ remains. The icy bands of winter shall be burst asunder—the death grasp shall be loosed—and nature shall again come forth from her grave and put on her beautiful robes. The elements shall regain their myriad, happy populations—the groves be vocal with richest melody. All, all shall unite their voices, and swell the universal anthem of praise to the Infinite—the Eternal.

Thus with the soul. Death may throw around us his dark pall, and the clods of the valley may close over us. But the grave cannot bind us—the germ—the soul—shall live. We shall not always sleep.—The spring will come—we shall spring from our bondage and come forth immortal, rejoicing in newness of life.

Romulus Centre, N. Y., 1853. S. Furman.

## HAWTHORNE AND BERKSHIRE.

Of Hawthorne we feel at liberty to speak more freely. The example which he himself has set us, in his introduction to "The Scarlet Letter," is of itself sufficient to remove all scruples that we might otherwise have.

On the northern shore of the Stockbridge Bowl, in a spot of unrivaled loveliness, stands a small, uninviting red house with green window-blinds, and with one single pine tree before it. You might pass it almost any time of the day, and you would think it vacant; the doors would all be shut, the blinds all closed, and that single pine tree would look as sullen as if it were conscious of its loneliness. There would be no path to the gate, and no knocker on the door, and you would immediately conclude that the red house of the two gables was shut against the resort of men—and you would not be far from right, for there lives Nathaniel Hawthorne.

If, however, on a closer inspection you observed a wreath of smoke curling up from the chimney of the house of the two gables, and had curiosity enough to saunter about the precincts, in hopes of seeing signs of life, until about four o'clock, you would finally hear the door creak, and there would stand before you a middling-sized, thick-set man, with a large, vigorous face, and, lying under a profusion of coarse black hair, a head of massive development. There would be no particular feature in his countenance of especial beauty, except it were his dark and intelligent eye, arched by a very black eye-brow—yet you would gather from the *tout ensemble* of the expression that it betokened an intensely-working and thorough going intellect. Were it not that the countenance is relieved and heightened by the vigor and intensity of mental activity, that beams through it, you would think there was something in it very heavy and sombre. If you ever had any hint that there was a vein of rancor and acrimony in his character, you would see no indications of it in his face, unless you fell to imagining what expression that black eye would take, and that heavy eyebrow, and that firmly drawn mouth, when he was belaboring the Custom House officials, or spurring his bitterness against some hypocrite—who was of course a Calvinist and a Puritan. But while you were making these observations, your hero would raise his eyes from the ground long enough to give you one of those modest, but expressive glances which mark the man of seclusion and reflection, and then, with a kind of swinging gait, which would assure you that he was not used to bustle among the crowds of business or fashion, would wend his way up to the village Post Office.

Mr. Hawthorne, even for a man of letters, leads a remarkably secluded life. He has a few literary friends, with whom he cherishes an intimacy congenial to a mind of such cultivation and sensibility, and a friendship which does honor to his heart, but he shows no disposition to mingle largely in society. This aversion to social intercourse has been remarkable in him during his literary career, and even far back into his youth, if we may credit the accounts of his acquaintances.—Not only in his private life, but all through his writings there seems to breathe an unsympathising, morbid spirit—a spirit that seems to take a satisfaction in keeping itself aloof from those who are guilty of the foibles which it takes a still greater satisfaction in contemplating. This spirit he could never have inherited from his ancestors, else those progenitors of his, who for so many generations "followed the sea," were a strange set of tars! Perhaps all his better sympathies were chilled in those speculations with his dreamy brethren of the Brook Farm Community; perhaps he and Emerson, enraptured with the mystic perfection of their own fantasies, abjured all communion with this our gross humanity; he certainly could not have had his feelings frozen into hate by contact with the genial and sympathizing intellect of Ellery Channing, or at the warm hearthstone of Longfellow.

Yet, after all, we should be strangely insensate and ungrateful, if we were disposed to grumble at what may be, in the case of Mr. Hawthorne, but the concomitant of seclusion and literaty devotion, or what, at the worst, is so admirably wrought into piquancy in his writings. The world, and we with them, would be sorry were it far otherwise, and we are perfectly indifferent as to which of the two gables of his red house he shuts himself in, if he will but open the door occasionally, and send forth such volumes as he has of late been giving to the public. But we are not so selfish that we cannot see, or that we would not like to tell Mr. Hawthorne, that our gain is his loss, in one respect at least. We would tell him that the church upon our hill—the church, too, whose walls echoed the almost dying tones of his beloved Channing, in his last public address—is not the sanctuary of asceticism of any kind, and the eloquent sincerity of a believihg Calvinist has attractions even for those who have no sympathy with his piety; but the shadow of the occupant of the house of the two gables seldom, if ever, darkens a church door. Doubtless the remains of the Puritan sermons which moaned through the shattered timbers, and pealed through the tree tops of the old manse at Concord, sufficed Mr. Hawthorne for the remainder of his life, or else disgusted him with the idea of anything which by any possibility could savor of the Puritan homilotics.

## FOREIGN TRAVEL FOR BOYS.

I think the sentiments embodied in a conversation which I had with Mr. Webster at Washington, previous to my visit to Europe in 1851, are worthy of record.

"Well, sir, I notice from your letter for passports, that you will take three of your pupils. I am glad they are going. You will teach them things abroad which will be useful to them when they return. Show them the great farms, the noble stock; let them see the rural life of England, and learn to love it. We want to have more love for the country. We want more beauty through our houses, and the lads will come home with better taste. Try to cultivate their memories as to the localities of England. Let them never forget the places sacred to liberty. The Tower is a perfect study—it requires thought, it is no place to be despatched in a hurried visit. It is a history, sir. Westminster Abbey is a wonderful place, not only for what it is, but for what it is not. Smithfield, too, is full of glory. If ever Jacob's ladder rested upon earth, it was there, where bloody Mary made it the heaven for so many martyrs.—Bunhill fields; I was too good a Puritan not to go there. I wanted to stand where Bunyan, Owen, Goodin and Defoe were buried. I should like to stand at the grave of all the great men of England.

"This journey will do the lads great good; it will furnish them matter for thought in future life; and if they improve this opportunity it will teach them what so few understand, how to grow old decently. An ignoraut, uncultivated old man is a poor affair; the tailor can pad out his wasted form, but nothing except early acquirements and good sentiments can make a fine old age. You will see the Duke, sir; he is the most remarkable man in the country; so practiced, such sterling sense, so self-reliant; a man is nothing who does not depend upon himself. I shall give you letters, sir, addressed to men I value highly, who are ornaments to our nature. Pray make the lads notice the attention paid to age and position; nowhere can the proprieties of life be learned so well. What a destiny lies before those two countries, England and the U. States; the same language, laws and religion. Did you ever think of the wonderful concealment of America from Europe, till the set time had arrived for its revelation?"—*Rev. J. O. Choules' Sermon.*

Wit that is Wit.—It was Sheridan who said to the tailor who asked him at least, for the interest of his bill, "It is not my interest to pay the principal, nor my principle to pay the interest." And no matter what the witty Jones may have remarkod, it was the witty Smith who retorted upon some one who called him an every day man: "If I am an every day man you are a weak one." It was the same Smith, too, who, when it was mentioned that a certain confectioner thickoned his isinglass with dissolved parchment, observed that, "some fierce people made you eat your words, but that he ate his doed;" and if it wasn't Smith, it was some one one else, who described an epitaph as "giving a good character to parties on going into a new place, who sometimes had a very bad character in the place they had just left."

## THE PERILS OF THE DESERT.

By the time we were approaching the most elevated point of Central Asia, a terrible wind had set in from the north, which lasted fifteen days, and increased the rigor of the cold to a degree that threatened us with great misfortunes. The sky was still clear, but the cold was so terrible that even at mid-day the influence of the sun was scarcely perceptible. Even during the day, and of course still more during the night, we were under the continual apprehension of being frozen to death.

I may mention one circumstance that will give an idea of the extremity of the cold. Every morning before setting off, the caravan used to take a meal, and then not again till they encamped; but as the tsamba is a kind of food so little agreeable, that it was difficult to take enough of it at once to support us during the day, we used to soak in tea two or three balls of it to keep in reserve for the days journey. We wrapped up this boiling paste in very warm linen, and placed it on our breasts; and over this we had our clothing, namely a garment of sheepskin, then a waistcoat of lamb's skin, then a short garment of fox's skin, and over all a great woolen coat. Now during this fortnight we constantly found the balls of tsamba frozen, and when we drew them from our bosoms they were so hard that we almost broke our teeth in attempting to eat them.

The cattle suffered terribly, especially the mules and horses, which are not so strong as the oxen. We had to dress them in felt carpets, and tie camel's skin round their heads; and in any other circumstances their appearance would certainly have excited our hilarity, but now we were in no humor for laughing, for, notwithstanding all precautions, the cattle of the caravan were decimated by death. The numerous frozen rivers that we had to pass occasioned us much trouble, especially the camels, which were so awkward that we were compelled to trace a path for them by strewing sand on the ice, and breaking the top of it with our hatchets; even then we had to lead them very carefully, one after the other; and if one of them chanced to make a false step and fall, it was scarcely possible to get it up again. First we had to relieve them of their baggage, and then to drag them on their sides to the river bank, or spread carpets for them, and tug at them with all our might, but very often to no purpose; they would not make the slightest effort to rise, and they had at last to be abandoned; for it was impossible, in this frightful country, to stay waiting on the whims of a camel. All these hardships threw many of the travellers into deep dejection.

To the mortality of the animals was now added that of men, whom the cold seized, and who were left to perish on the road.—One day, when the exhaustation of our beasts of burden had compelled us to slacken our march, we perceived a traveler seated by the wayside, on a large stone. His head was bent down, his arms pressed against his sides, and he remained motionless as a statue. We called him several times, but he made no answer, and we thought he had not heard us. "What madness," we said, "to stop on the road in this way in such weather. This unfortunate man will certainly die of cold." We called him again; but as he still did not answer, we alighted and went toward him. His face had the appearance of wax, his eyes were half open and glassy, and he had icicles suspended to his nostrils and the corners of his mouth. He just turned his eyes toward us with a terribly vacant expression; but he was quite frozen, and had been forsaken by his companions. It appeared so cruel to leave him thus, without an effort to save him, that we determined to take him with us; and we lifted him up from the ground, and, after wrapping him up, we placed him on Sandadchiemba's mule. As soon as we had pitched the tent we went to seek out the companions of the unfortunate man; and they prostrated themselves before us, saying we had excellent hearts, but we had given ourselves trouble in vain; their comrade, they said, was lost, for the cold had reached his heart. We returned to our tent to see what we could do for him, but he was already dead. More than forty men perished thus in the desert.—When they could no longer eat or speak, or support themselves on their horses, they were left on the road, though still alive, a small bag of oatmeal and a little wooden bowl being placed beside them as a last mark of interest in their fate. When every one else had passed by, the crows and vultures were seen to wheel round them in the air, and probably they began to tear the unfortunate men before they were fairly dead.—*Huc's Travels, through Tartary, Thibet, &c.*

## SHORT SAYINGS.

Do what good offices you can; but leave yourself at liberty from promises and engagements.

There is no condition so low but may have hopes; nor any so high that it is out of the reach of fears.

To live above our station shows a proud heart, and to live under it, discovers a narrow soul.

Errors in religion may claim our pity, but excite no anger.

Employment is the greatest instrument of intellectual dominion.

Every man that is capable of secret injury is a coward.

The church is out of temper when charity grows cold and zeal hot.

Say nothing of my debts unless you mean to pay them.

Judge not thy neighbor until thou art in his situation.

# For the Ladies.

## GOLDEN MEMORIES.

BY ELLEN E. MACK.

They sometimes steal around me
Those thoughts of other days,
Like glad, low strains of music
Or dancing sunlight rays.

As they hover 'round my pathway
With their unsie sweet and wild,
The bright delusion waves me,
And again I am a child.

Then I tread the hallowed places
Where my infant footstep roved;
I list to gladsome voices
And see the forms I loved.

And my spirit bounds within me,
As I roam my native hills,
Or list to wild-wood melody,
And sweetly gushing rills:

Oh childhood, blessed childhood,
Oh bright and happy home,
Oh verdant mead's and flower vales—
Where fancy loves to roam.

The crystal spring—the pleasant brook
That wandered through the dell,
Where I gathered pebbles many a day,
For one I loved full well.

These, these are "golden memories,"
Bright tokens of the past;
Sweet, gushing springs of happiness
That in my heart will last.

Barre, N. Y., 1852.

## MY SCISSORS.

BY FRANCIS D. GAGE.

"Good morning, Mrs. Wicks; hope I see you well, this morning."

"Well, yes, pretty well, all but my hands."

"Your hands! What's the matter with your hands; not been scalding them I hope?"

"No! worse than that; I have got them all blistered up, trying to cut out the children's tall clothes with my old scissors; I've had 'em these ten years, and they're just as dull as a hoe, and every time I cut a roundabout, shirt, or pair of pants, I have just such a time of it. Susan Willard is sewing for me now, and I wanted to get my cutting done while my hand was in, so I just wanted to see if you would not lend me your nice large tailor shears, a day or two, for I won't do another thing with mine for a week to come."

"Really, Mrs. Wicks, I would like to accommodate you, but I am very busy with mine just now, cutting rags for my carpet, and could not possibly spare them without great inconvenience."

"Well, I don't know what I'll do; I can't cut out any more with mine, and Susan has only two weeks to stay. Do you know of any one that has a good pair?

"No, I do not. Would it not be better for you to purchase a good pair? I could hardly get along without mine for a single day, without feeling the want of them."

"What did yours cost?"

"Two dollars and a half."

"Two dollars and a half—goodness! Mr. Wicks would no more let me have money to buy such a pair of scissors, than he'd fly."

"Oh, I think you are mistaken; I have always thought Mr. Wicks very indulgent."

"There's where you are altogether mistaken. I hardly ever ask him for money, but what he says something to hurt my feelings, and I often do without things I really need, rather than have any words. Why, yes, to-day I asked him for money to get my fall trimmings for my bonnet and Rosina's, and it was all I could do to get it out of him—"

"How much did it require to fit your bonnets up for winter?"

"Only five dollars: it would cost ten you know to get us both new ones. I thought he need not have complained at fixing up the old ones."

"And you have the five dollars in your possession—"

"Yes, and we thought we would get trimmings at Grant's. That beautiful royal purple with the orange edge, it's a love of a ribbon, and so cheap, only seventy-five cents a yard."

"My dear Mrs. Wicks, let me give you a new idea. Would your husband complain if you should trim your bonnets with ribbon worth half that sum, and appropriate the balance to the purchase of a good pair of scissors?"

"No, of course he would not; but who, I'd like to know, is going to make themselves the town-talk for the sake of gratifying a husband's whims?"

"Do it to gratify yourself, to add to your own comfort. My bonnet, trimmings and all, will not cost me over one dollar and a half, and I don't believe the town will trouble itself one bit about it. Town-talk or no talk, you may be sure I'll never run about with my fingers in rags while I can save the price of a pair of scissors in one bonnet trimming. Now don't be offended, Mrs. Wicks; I know you really think you can't get along any other way than just as you do; but if you will only make the effort to economise in your items of dress, &c., you will soon find yourself amply supplied with all these little household conveniences, which you seem so much to want, and my word for it, your husband will not make half the objection to furnishing money for usefuls that he now does for the purchasing of non-essentials."

"Now, there is neighbor Pennyman's wife flourishing in a fifteen dollar crape shawl, but her girl complains that she has to borrow wash-tubs, weekly, and that Mrs. P. says that it is all Mr. Ponnyman's fault."

"Why, Mrs. Smith, I thought you were a Woman's Rights' woman."

"And so I am; but I assure you I am no advocate for woman's injustice and folly, and while I feel that the law of the land, in common justice, greatly oppresses woman, I also feel that she oftentimes greatly oppresses herself, and lays heavier burdens upon her own heart than she herself is willing to bear, and to excuse her own foolish love of display, lays all the blame upon her husband, who would willingly indulge every reasonable desire, and only frowns when ungenerous demands are made upon his means."

"Well, I don't know—Mr. Wicks seems more willing to give me money for dress than anything else."

"Is not that because he does not feel at liberty to deny you any personal gratification, because he feels that he can make you happier thus than in any other way? Try the experiment, Mrs. Wicks. Tell him you will reserve half your usual expenses for household conveniences, and if he does not fill your purse with a more cheerful heart, I am much mistaken in him. Begin on the scissors, and if he makes one word of objection, I will agree to change with you for a week, and wear my hands to blisters on your old ones."

"Well, I'll try this once. Good morning."

"Good morning, Mrs. Wicks."

Mrs. Wicks went home, and when her husband came in to dinner, the first thing that attracted his attention was a beautiful pair of polished steel scissors, not worth less than two dollars.

"Whose are these? been borrowing again, Sarah?"

"No," replied Mrs. Wicks; "I blistered my hands, yesterday, with my old ones, and I just concluded I would wear my old, last winter trimmings, and have me a good pair of scissors for my work. Don't you think they are nice ones? I thought you would not care how I spent my money." Her voice was kinder than usual.

"Of course not," he replied. Nothing further was said. In the evening, instead of going out, he drew up his chair by the work-stand.

"Ain't you going down street?" said Rosina.

"No, I believe not to-night; I like the click of your ma's new scissors, and if I go down street, I am afraid they will lose their pleasant tone."

Mrs. Wicks did not look up; her heart was full, for just then a little roll of "royal purple with orange edge," "cheap at seventy-five cents," fell into her lap.

## KEEP UP YOUR HEART.

"But Lady Anne, dinna be vexed for me, for I'm keeping up my heart."

So says little Kate Stewart in the beautiful story of that name. Her lover had been pressed into the king's service, and for ten long years she saw him not. In that time what doubts she must have struggled with, what bitter tears shed. But bravely would she say from day to day, "I will keep up my heart, Lady Anne."

That's the noble resolution for you—I *will* keep up my heart. Sorrow may press sore upon the soul, and the fainting spirit whisper, it is more than I can bear; but no, says resolution, I will keep up my heart.

A poor, and hard working woman died some years ago in a town near Boston, leaving a family of eight children. The oldest was scarce a woman—and how felt she sitting beside her mother's corpse, while from the golden haired babe, lisping on her knee, to the sturdy boy weeping upon her neck—seven poor orphans were left wholly dependent upon her.

Did she sink beneath the thought? Did she give those little ones into the care of strangers, or send them to the pauper's home? Not she; she kept up her heart—untiringly she toiled after she had seen her dead mother laid under the sod, and with but little aid she reared that family; noble men and women they are to-day, and to what do they owe all they are? Under God, to that sister, who, when the bitterest trials crossed her path, bravely kept up her heart. Heed not then the voice that would charm you from your duty. However often the cup of pleasure is dashed at your feet, keep up your heart. If the very waters of hope dry at their source, if the well becomes bitter, still keep up your heart. If hopes are disappointed, friends prove faithless, and even your own turn coldly from you, still keep up your heart; there is always some blue spot in the heavens—some little isle in the ocean, some fresh, beautiful oasis in the desert. Your time of triumph will come in God's time; so till then keep up your heart.—*Olive Branch.*

When a couple are now to be married mutual love, or union of minds, is the last and most trifling consideration. If their goods and chattles can be brought to unite, their sympathetic souls are ever ready to guarantee the treaty. The gentleman's mortgaged lawn becomes enamored of the lady's marriageable grove; the match is struck up, and both parties are piously in love—according to act of parliament.—*Goldsmith.*

Fear is implanted in us as a preservative from evil; but its duty, like other passions, is not to overbear reason, but to assist it; nor should it be suffered to tyrannize in the imagination, to raise phantoms of horror, or beset life with supernumerary distresses.

We should take a prudent care for the future, but so as to enjoy the present. It is no part of wisdom to be miserable to-day, because we may happen to be so to-morrow.

Fine sense and exalted sense are not half as useful as common sense.

Few are so generous as to praise without making some drawback.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JANUARY 29, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ THOSE who are forming large clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ SEE Terms, Premium List, &c., on last page,—and notice to Agents and others on next page.

### Where the Rural Circulates.

As we are frequently asked *where* the RURAL circulates the most extensively, and whether we send it to such and such a State, Territory, etc., a paragraph or two on the subject may not prove uninteresting. The great majority of our subscribers—perhaps over two-thirds—are residents of the Empire State, but principally of Western New York. The latter is the only district in which the paper has what may be termed a *general* circulation. But, though mainly designed for this meridian, it is adapted to others, and hence its circulation is rapidly increasing in distant sections of the country. We have made no particular exertions to introduce the paper in other States, yet it circulates more or less in about every State and Territory in the Union—in several of them somewhat extensively—and in the adjoining British Provinces. Of late its circulation is becoming far more general—National, as some would express it,—than formerly. During the past month we have received orders from scores of places, in distant States, not before on our books. We frequently receive, in one day, orders for the paper from fifteen to twenty different States. As a singular circumstance, however, we may mention here, that the first *twelve* letters we opened on Monday morning last (and we took them, without selection, from a "pile" of about fifty,) were from *eleven* different States, Territories, &c., as follows:—Mich., Pa, Ohio., Tenn., Vt., Missouri, Ky., Conn., Canada West, Minnesota Ter., and New York. Were we asked in this connection—as we frequently are in conversation—to mention the States, &c., in which the RURAL circulates most extensively, and in proper order according to the number of subscribers in each, we should say, (without referring to books for exact figures,) New York, Pa., Mich., the Canadas, Ohio, the New England States, Wisconsin, Va., Ill., Kentucky, Tenn., &c.

Though some of our readers may not be interested in this matter, we hope they will not consider this a boasting article,—for we indite it in no vain spirit, but rather with deep, heartfelt gratitude. Yet we confess that we are more than gratified—perhaps a little proud—at the reception given the RURAL, at home and abroad—that it has found ardent friends and earnest supporters wherever it has become known, and that it is rapidly increasing in circulation and consequent usefulness. And we shall make suitable efforts to merit and maintain for it the standing the paper now occupies. This is perhaps the most appropriate return we can render the numerous friends of the paper who are generously exercising their influence in promotion of its success. And whatever may be the future of the RURAL, we have the proud consciousness of having endeavored, at least, to perform our duty to its readers and community—of having preferred to furnish a good safe, useful journal, rather than fill our purse—and of having pursued a straightforward, honorable course toward all our cotemporaries, and the public generally, in bringing it to its present position.

### Modest Request.—Advertising Agencies.

"NEW YORK, Jan. 20, 1853.

Publisher of Rural New-Yorker insert the enclosed advertisements of —— ——, the long one 1 month—the short one 2 months, with change of contents which will be forwarded,—and charge my New York Agency $8.—Be careful of proof. Respectfully, —. —. ——."

Such is the tenor of an order before us, emanating from a celebrated "Newspaper Subscription and Advertising Agency." It is a business-like document, and commendable for its definiteness and brevity. We have received similar epistles before. Indeed, years ago we were verdant enough to advertise, and send several copies of the paper we were then publishing, (the Genesee Farmer,) on the order of such an agency; but the pay therefor has never been realized, and is not noted among future expectations. Since we commenced the RURAL, however, no attention has been given to like epistles, from such sources, for two cogent reasons: first, we didn't like the idea of being "sold" by an "agency"—and, next, we have had more advertising offered, at our own prices, than we desired.

But the request above quoted is so extremely modest—some might say superlatively impudent—that we must pay it our respects. We'll prove its frigidity by introducing a few figures, as thus: According to published terms—which terms are very low, when the circulation of the RURAL is considered—our bill for inserting the two advertisements the length of time specified (aside from "change of contents," which would increase the amount,) would be just *seventy-seven and a-half dollars*, ($77,50,)—for which we are *promised* (our terms are cash, *in advance*,) the astonishing amount of *eight dollars!* Now it is not among the probabilities that we shall "charge my New York Agency $8," or "be careful of the proof."—Neither will we call our liberal business correspondent hard names; in fact we don't believe we could do justice to *such* a subject. But the next time we visit Gotham, and have any leisure to spend in viewing rare and curious things, our first endeavor will be to find this agency man!—As a student of natural history, we are curious to see this elephant. Meantime we shall be happy to communicate his address to those engaged in the ice trade—to whom such a subject might prove invaluable this open winter!

These advertising agencies may be, and no doubt are, very advantageous to their proprietors and eastern business men; but, so far as newspaper publishers are concerned, we believe the system a greater curse than benefit. In this opinion we may be mistaken, but it is uttered in all seriousness. Confident we are that the publication of the advertisements above alluded to in any respectable paper, having as many *hundred* subscribers as the RURAL has *thousands*, would be *worth* double the amount specified. We hope our friends of the press will not allow a third party to dictate terms, and line his own pockets, in the manner indicated—*at their expense*.

### The Rural for Reading Rooms, &c.

SEM. READING ROOM, }
——, Jan. 22, 1853. }

D. D. T. MOORE, Esq.,—*Dear Sir:* The RURAL NEW-YORKER came to our Reading Room regularly, through your generosity, until the commencement of the volume for 1853, and it was ever a welcome guest and admired by the students and faculty. Its discontinuance has probably occurred on account of the change in your books. If you should see fit to continue to favor us with it, we shall feel under very great obligations to you, and shall return the favor whenever it is in our power.

Respectfully yours, —. —. ——.

REMARKS.—We should be happy to furnish the RURAL free, as heretofore, to the above and many other Reading Rooms; but the applications from such sources are becoming so frequent and numerous, (we received three in one day, not long since,) that we must discontinue the practice, or suffer serious pecuniary consequences. Thus far we have been altogether too *affirmative*, in replying to such requests, for our own interest,—think we have already contributed our full share, and are entitled to an honorable discharge. We shall continue to send to Reading Rooms which are *free to those who are unable to purchase books and periodicals*,—but respectfully submit, that prosperous and richly endowed institutions, where the sons of the wealthy are educated, are much more able to pay for this paper, than we are to furnish it gratis. Indeed, they have no greater claim upon us for the RURAL, than upon each miller in Rochester for a barrel of flour, each bank for one of its $5 notes, and so on. Though some persons seem oblivious of the fact, newspapers cost money, as well as flour and bank notes,—at least, we are positive that not a few V's of the latter are expended in producing each number of the RURAL.

—But we will compromise with our friends, in this manner:—Will furnish the RURAL to Reading Rooms of Seminaries, Lyceums, &c., at $1 25 per year, the lowest club rate. We also send it to Clergymen at the same price.

Correspondence of the Rural New-Yorker.

### Niagara Falls.

THE PRESENT PROSPERITY AND FUTURE PROSPECTS OF THE PLACE.

FRIEND MOORE:—Having spent a day at Niagara Falls not long since, perhaps a transcript of the notes there taken may interest the readers of the RURAL.

The contrast between winter and summer here is very great. The monster hotels which are thronged in summer, and are hardly sufficient to accommodate the thousands and tens of thousands of visitors, are now closed. Two or three second class hotels only, are open for the accommodation of the very few people who deign to visit this wonder of the world in winter. The streets, the avenues, the groves and all the noted places of resort are deserted. I spent several hours in viewing the Falls from different points, and yet saw but one person near them in the whole time, although the day was fine. The truth is, but few people visit Niagara for its own sake. By far the greater number are attracted thither by the allurements of pleasure and fashion. And, aside even from its great natural attractions, it is one of the most desirable places in the United States for a summer residence, on account of its healthiness and pleasant location. When we add to this the magnificent scenery which surrounds it, we are only surprised that the visitors are not hundreds of thousands instead of tens of thousands.

As a permanent location for men of means and leisure, or for young men just commencing business, I think it at present stands unrivalled. The new impulse given to it by the various improvements going on, in and round it, will not subside so soon as many imagine. The various railroads leading to and from it will give it considerable commercial importance, and, when the proposed canal is completed, it will soon rank among the first manufacturing towns of the State. There will then be no limit to the water power, or to its availability. The site of the canal is already located and the ground already staked out, and considerable progress will be made towards opening it the ensuing season. It leaves the river just below Schlosser and passes through the town a short distance east of the new depot, and thence into the river again about midway between the Falls and the Suspension Bridge.

The Rochester, Lockport & Niagara Falls, and the Buffalo & Niagara Falls Railroad Companies have built a splendid Depot here the past season. It is in the form of an L. The Canandaigua & Niagara Falls Railroad Company will also, I am informed, build a fine Depot here next season.—It is well known that the great Canadian Railway is to connect with these at the Suspension Bridge. This Bridge, when completed, will be one of the greatest artificial attractions of the place. Active preparations are now making for its construction the coming season.

Another great novel feature here, will be the Railroad to Lewiston. It is to commence a short distance above the Suspension Bridge and run at the water's edge to Lewiston, through the awful chasm which serves as an outlet for the river.—Persons in whom a passion for the romantic and sublime predominates, can find abundant gratification in a ride over this road. One cannot well conceive of a railroad ride through a more majestic scene than this will be.

"Do the Falls perceptably wear away?" is a question which is often asked. From observations made some fifteen years since, I find, upon comparision with observations made during my recent visit, that there has been a very preceptable wearing away, particularly at the Horse-shoe Fall. It would be very difficult to estimate the exact distance which they have receded in that time, but I should judge that it would amount, at different points, to from five to forty feet. Speculation seems to be in order everywhere and about everything, but speculation about the chances of draining lake Erie, or obliterating the Falls by the wearing away of the rocks in the bed of the river, smacks rather strongly of the fanciful. A winter view of the Falls differs not very materially, except so far as the presence of humanity is concerned, from that of summer. The same scene (indescribable by words,) meets the eye—the same ceaseless roar greets the ear—the same flocks of gulls* seem as much at home amid its spray as in summer, and their flight seems almost as ceaseless as the roar of the Cataract.—Through sunshine and storm, cold and heat, summer and winter, they sail on with unwearied wing from "early dawn" till the curtain of darkness again covers the earth. And when the rays of the sun meet the glistening spray the same rainbow, in all its beauty, adds grandeur to the scene.

R. B. W.

*Large numbers of gulls, attracted probably by the fish which are destroyed by passing over the Falls in winter, and float on the surface of the water below, take up their winter quarters here. Also, large flocks of wild ducks pass up the river in the morning, in search of food, and return again at night, finding a secure resting-place in the gorge between the Falls and Lewiston. Query:—Will they not consider the proposed railroad an invasion of their time honored rights and privileges?

## Literary Notices.

AN ELEMENTARY TREATISE ON ALGEBRA; designed for Schools, Academies, and Colleges. By CHAS. D. LAWRENCE, Professor of Mathematics in Cortland Academy. Rochester: Wanzer, Beardsley & Co. 1853.

Here we have a new Algebra, and from a very cursory examination we have come to the conclusion that it is a good one—well designed to aid the learner in acquiring a knowledge of this important branch of the study of Mathematics. —W.

THE CHRISTIAN REVIEW was promptly issued the first of the month, an contains articles on the following topics: Ancient Philosophy in its Relations to Christ; Soul Liberty; The Debt of the World to its Champions and Defenders—By JOHN DOWLING, D. D.; A few Thoughts on Self-Education; The Eclipse of Faith; Doctrinal Preaching; Daniel Webster; Philo and his Opinions; John S. Maginnis, D. D.; Notices of New Publications, and Literary Intelligence. This is a good number of an ably conducted Quarterly. Terms $3.00 per annum. A. GRANT, Agent.—w.

"THE MUSICAL REVIEW AND CHORAL ADVOCATE; a companion for the Choir, the Singing School and the Fireside," is the name of a monthly paper of sixteen quarto pages, edited by C. M. CADY, and published by T. J. Huntington, 23 Park Row, New York. We think it well calculated to please those for whom it is particularly intended, and the spirit with which it enters on its fourth volume shows that thus far, it has been well appreciated. $1 per year in advance.

BLACKWOOD'S MAGAZINE for January commences the seventy-third volume of that standard monthly. It contains an article on Slavery and the Slave Power in the United States, the conclusion of BULWER'S novel, the first part of another story, a letter about many things, a Biographical sketch of Thos. MOORE, and a political article on the Defeat of the Miuistry. Published by Leonard Scott & Co. D. M. DEWEY, agent, Rochester.

WEBSTER'S GREAT ORATIONS.—Our enterprising townsman, WILBER M. HAYWARD, will publish next week the Great Orations and Senatorial speech of DANIEL WEBSTER, with an accurate likeness of the Statesman and Orator. It will contain the eulogy on Adams and Jefferson—landing of the Pilgrims—Bunker Hill Monument, and Reply to Hayne, making a volume of 140 pages, to be sold at 37½ cts.

THE UNION JOURNAL OF MEDICINE, is the new title of the Eclectic Journal, which has been removed to Syracuse and united with the American Journal of Medicine. The Journal is ably edited by Prof. L. REUBEN, late of this city, assisted by S. H. POTTER, M. D. Treating of diseases and their causes in a practical way, it commends itself to the general and professional reader. $1 per annum. †

GODEY'S LADY'S BOOK for February is, as usual of late, a double number, with six engravings and 112 pages letter press. MCMAHON, Waverly News Rooms, has it.

☞ Steamers, both from Europe and California, were due several days since, but do not yet arrive. The news from Europe, received since last issue, is but a day or two later than that then given.

## Congressional.

### Synopsis of Proceedings.

TUESDAY, Jan. 18.—*Senate*—The promised speech of Mr. Cass in affirmance of the Monroe doctrine was delivered. It was a powerful argument in favor of the principles of the Monroe declaration, particularly in their relations and the position of the United States and Cuba. Mr. Butler followed in an attempt to prove the limited application of the Monroe doctrine. Mr. Hale ridiculed the spirit of territorial acquisition, and desired that attention may be directed toward Canada.—The House bill appropriating fifty thousand dollars for the Equestrian statue of Washington, was passed unanimously. Mr. Soule offered a resolution calling for information in regard to American Colonies in Hayti. Mr. Petit of Indiana, appeared and took his seat in the Senate.

*House.*—The Taliafero claim was laid on the table. Mr. Brooks, from the Committee on Ways and Means, reported a bill to establish a Branch Mint, which was read by its title. The House discussed questions of order, until the expiration of the morning hour, when the subject dropped. The bill to suppress small notes as a currency in the District of Columbia, was passed, Yeas 81, Nays 38. The provisions of the bill are very stringent.

WEDNESDAY, Jan. 19.—*Senate*—A resolution calling upon the Treasury Department for the draft of a new plan for the General Revenue was adopted. A message was received from the President calling the attention of Congress to the claim made by the Spanish Government on behalf of its subjects, in the Amistad case. The President recommends an impartial consideration of the claim. A report was received from the War Department, communicating the return of the officers appointed to select a Military Hospital at the Blue Lick Springs. The joint resolution of Mr. Cass, concerning the Monroe doctrine, was taken up, and Mr. Mason attempted to disprove some of the positions assumed on Tuesday by the Senator from Michigan. He argued that Mr. Monroe's principle was intended to be applied only to the affairs of Spanish America, and that, having already accomplished its purpose, it could not be resuscitated unless in the event of a contingency of a similar character. Remarks followed from Messrs. Soule and Dixon, and on motion of Mr. Soule, the subject was postponed till Tuesday next. The Pacific Railroad bill was then taken up.

*House.*—The morning hour was occupied by a spirited debate on the New York Mint bill. Mr. Chandler expressed his views in opposition to the bill, and intimated charges of bribery and corruption against the friends of the measure. The bill passed over without action. A communication was received from the President, transmitting information respecting the Seminoles in Florida. The President states that inasmuch as all efforts for the removal of the Indians have all proved abortive, the only remaining alternative is either to compel them by force to comply with their Treaty stipulations, or to continue to them the privilege of temporary occupation of the territory in accordance with the arrangement in '42.

THURSDAY, Jan. 20.—*Senate.*—The Pacific Railroad bill was again under discussion, in the Senate. Mr. Chase modified his amendment so as to confine the location of the Eastern terminus of the road to some point on the Missouri river not above Kanesville, Iowa, nor below Independence, Mo., and addressed the Senate in support of it.

*House.*—The time was mainly occupied by the New York Mint bill. The debate was continued until the expiration of the morning hour.

FRIDAY, Jan. 21.—*Senate*—The Senate was in Executive session. Adjourned to Monday.

*House*—Met but did nothing of interest and adjourned to Monday.

MONDAY, Jan. 24.—*Senate.*—The Committee to whom the President's Message on the Florida Indians was referred, reported in favor of the adoption of strong and decisive measures for their removal.

HOUSE.—Four Senate bills were passed, and several resolutions.

### Festival at Syracuse.

SOJOURNING briefly in the "Saline City," we had the pleasure of meeting many of the printers of our growing neighbor at a Festival in commemoration of the birth day of BENJAMIN FRANKLIN. It was given by the worthy proprietors of the Globe Hotel.

A goodly company assembled, prominent among which we were pleased to greet the wives, daughters and mayhap sweet-hearts of our fellow craftsmen. We trust their example may become a law unto the fraternity. The bill of fare was well discussed and voted decidedly a "phat take," as is every thing which is furnished by the proprietors of that excellent house. The evening was enlivened by the reading of the regular and many voluntary toasts, accompanied by music from an excellent band, interspersed with speeches and responses, and followed by dancing. It was an occasion to be remembered. †

THE WEATHER.—A little more than a week of pretty good sleighing has passed—that is to say in the city. In the country round about the city, the sleighing has not been tolerable. Sleighing is good in New England, so say the papers. The Connecticut river was closed with ice, for the first time this winter, on the 18th inst. The week closing on this (Tuesday) morning, has been quite mild, like most of its predecessors of the present winter. Snow fell during Sunday and Monday, much of which melted as it fell. The chances of an ice harvest appear rather slim.—w.

EXPLANATION.—The steam press upon which our paper is printed was accidently broken while striking off last week's edition—causing considerable delay in printing and mailing.

## News Brebities.

—— There are 11,217 physicians in France.

—— An autograph of Moliere was recently sold in Paris for 430 francs.

—— The railway between Alexandria and Cairo will be finished in two years.

—— A Marine Insurance Company has been established at Rome, by the Pope.

—— The new Maine liquor law of Florida has been killed in the House of Representatives.

—— The First Presbyterian Church at Buffalo is to be rebuilt at the cost of $100,000.

—— The Hudson river has not remained open so late as this year since 1804, when it closed Jan. 12.

—— Hon. Jonathan Phillips has made a donation of $1,000 to the Boston Music Hall Association.

—— Over 22,600 children are attending the public schools in Boston, where they have a law to punish truants.

—— The railroad from Lockport to Buffalo is open, and trains run regularly from this city on that route.

—— James Laffoon, a soldier of the Revolutionary War, died at Fayette, Ky., on the 27th ult., aged 90 years.

—— There are 81 males and 18 females in the Buffalo Penitentiary, all in a condition to labor except seven.

—— A negro lately died in New Orleans, who was supposed to be in the neighborhood of 112 years old.

—— Private advices from Mexico represent that every State, with the exception of three only, have joined the revolutionists.

—— The Legislature of Florida has passed an act which requires all liquor dealers in the State to pay a license of $200.

—— Shad are in the market in Norfolk, green peas in Charleston, and peach trees are beginning to bud in Florida. So say the papers!

—— The St. Lawrence has closed at Kingston, and a bridge of ice formed, on which teams pass from the city to Wolfe Island.

—— There are 18 steamers, 22 propellers, 25 brigs, and 80 schooners, laid up for the winter in Buffalo harbor; in all 145 vessels.

—— The price of a through ticket from New Orleans to New York, via Louisville and Cincinnati, is $23. Distance about 2,500 miles.

—— Sewing Societies were first introduced into New England in 1839. At first, no woman was allowed to carry her baby to the meetings.

—— An ingenious down-easter has invented an umbrella with a gutter all around it, so that the water pours off in a single stream.

—— The Boston Transcript states that steps have been taken to erect a Crystal Palace and hold a World's Fair in the City of Notions.

—— A single sheet of paper 3,000 yards in length, 54 inches broad and weighing 400 pounds has been manufactured in a Scotch paper mill.

—— Counterfeit 1's on the Commercial Bank, Troy, letter B., dated July, 1851, are in circulation. They are signed V. Leake, Cash., F. Sherman, Pres.

—— Stephen Spaulding, one of the veterans who composed the famous Life Guard of Washington, died at Monroe, Me., on the 30th ult., aged 97.

—— Hay is imported from Canada to New York. It is brought across the river to Cape Vincent, and passes over the Watertown and Rome railroad.

—— The Caloric Engine, it is not doubted, will be applied successfully to locomotives, making an important saving in the cost of running the trains.

—— A piece of land was recently sold near the Royal Exchange, London, at so great a price that had it contained an acre it would have realized $10,000,000!

—— The commerce of the great western lakes, it is said, doubles every six years. This has been the past history of that mighty region. What will it be for the future?

—— The most popular work recently published is a list of the offices at the disposal of the new administration, with salaries attached. It was issued at Washington.

—— The aggregate amount of tons received on all the canals of New York during the year 1852, was $3,117,607; in 1851, $3,329,727—showing a decrease of $212,120.

—— The Oswego Palladium advises persons holding the bills of the Merchant's and Mechanic's Bank, of Syracuse, (late of Oswego,) not to sell their money at a discount.

—— President Sparks, of Harvard University, has relinquished his connection with that Institution, and will for the future devote himself exclusively to literature.

—— The Rochester, Lockport and Niagara Falls Railroad Company have declared their half-yearly dividend, which is four per cent, payable on the 1st of February.

—— Mrs. Anna Cooper, one of the earliest emigrants to Ohio, died at Cincinnati, on the 8th inst., in the 86th year of her age. She came from Virginia as early as 1792.

—— It is stated that the amount of drafts drawn at the Sandwich Islands on New Bedford by whalers, and received by the last California mail, is not less than $300,000.

—— The Le Roy Gazette says the fare on the Canandaigua and Niagara Falls Railroad, just opened to Batavia, is *three cents* per mile, or one-half more than on the other roads.

—— In London there are more Irish than in Dublin; in Manchester and Salford more Irish than in Cork; in Glasgow as many Irish and descendants of Irish as in Belfast.

—— Buffalo Rough Notes notices the appearance of a new batch of counterfeit two dollar bills on the Bank of Westfield, which are said to be an excellent imitation of the genuine.

—— They are circulating, in Chicago, California gold half-dollars. On one side is a head surmounted by thirteen stars; on the other a wreath with the words Half Dollar—California Gold."

—— The New York Express says that the joint yield of gold from California and Australia, in 1853, will exceed five hundred millions of dollars. Let it come,—we can stand it.

—— The Californians, who have large claims against the Government, are urgent for pay. The cost of the Indian war in California, amounting to $700,000 in all, is yet to be paid out of the Treasury.

—— It is estimated that the present high prices of iron will put into immediate and extensive operation at least four hundred iron forges, rolling mills, &c., which are now idle, causing also an extraordinary increase in coal mining.

# Legislature of New York.

## Synopsis of Proceedings.

TUESDAY, Jan. 18.—*Senate.*—Bills were passed chartering the village of Salem; authorizing the Rensselaer County Agricultural Society to hold real estate, and several others of minor interest.

*Assembly.*—Petitions were received and referred, bills noticed, &c., and discussions held on exempting ministers of the gospel from taxation, and on the canals.

WEDNESDAY, Jan. 19.—*Senate.*—Resolutions on the case of the Madai family were passed.

*Assembly.*—Many petitions were presented and referred for the passage of a Liquor Law similar to that of Maine, but the proceedings were generally of no interest.

THURSDAY, Jan. 20.—*Senate.*—The Railway Consolidation bill was largely debated,

*House.*—In the House the Canal Enlargement was the main topic.

FRIDAY, Jan. 21.—*Senate.*—Mr. BABCOCK laid on the table of the Senate, a series of resolutions against the grant of land to the State of Michigan, for Railroad purposes.

*House.*—A deputation of ladies desiring to present, in person, the petition of 28,000 in favor of the Maine law, appeared. The petition was finally received. The Canal discussion was continued by Messrs. TAYLOR and SHAW.

SATURDAY, Jan. 22.—*Senate.*—Busy with discussions of various matters, but nothing of general interest.

*Assembly.*—Numerous petitions for a Maine law, are daily presented. Reports, notices, and motions occupied the session. The Canal Commissioners reported the work done under the nine million law.

MONDAY, Jan. 24.—*Senate.*—After reports and notices, the Savings' Bank bill was discussed.—It was proposed to apply unclaimed deposits to the free school fund. No final action was taken.

*Assembly.*—Petitions, reports, notices and motions occupied the session. The Medai resolutions were concurred in.

# News Paragraphs.

☞ Daniel Webster, Robert Rantoul and others, ascribe the authorship to Nathan Dane, of Mass., of the ordinance of 1787. Mr. Edward Coles, of Philadelphia, conclusively shows that Thomas Jefferson was the author. Mr. Coles is an aged Virginian. He is a brother-in-law of Hon. Andrew Stevenson; was President Madison's private secretary; the first Governor of the State of Illinois, and a warm friend and correspondent of Jefferson, to whom his elder brother, Isaac Coles, was private secretary.

☞ It is proved by statistics, although it seems perhaps hardly probable, that more deaths and serious accidents annually occur from the use of "burning fluid" in the United States, than from steamboat explosions and railroad accidents combined. Professor Silliman says that if his word were law, there should never be another drop of it used in the ordinary lamps now kept in shops in families.

☞ Some of our American city papers, we perceive, are ridiculing English papers for saying that in the State of New York farmers use sheep to churn their butter. How the facts may be as to other parts of the State we are unable to say, but so far as the English statement applies to this section, it is correct. A great many use sheep of late as churners, instead of dogs, and give them the preference.—*Pough. Eagle.*

☞ The Minnesotian of the 1st states that there were not three consecutive days in December that did not bring a snow storm. January 1st, snow between two and three feet deep at St. Paul, and further north much deeper. At Crow Wing, reported ten feet. The last storm continued sixteen hours, and snow badly drifted. Traveling impeded all over the country.

☞ The Cleveland Herald says that the cattle growers of Madison county, Ohio, have organized a cattle importing company, the capital stock, $10,000, all taken. The company will shortly send one of their number to England to make selections and purchases. A similar company is being formed in Indiana, with a capital of $25,000.

☞ It was decided by one of the Courts at Cincinnati, last week, that if a passenger in a railroad car purchases a ticket, but accidentally looses it, the company have no right either to make him pay the fare a second time, or turn him out of the cars, provided he can bring proof that he actually paid for the lost ticket.

☞ The Supreme Court of the United States have decided that all contracts entered into by citizens of the United States for money or supplies to be employed in military operations by citizens of this country against the people or territory of any nation at the time in amity with the United States, are illegal and void.

☞ A native African called "Uncle Moore," resides in Wilmington, N. C., eighty-three years of age—forty-five a slave. His time is chiefly occupied in reading the Scriptures in Arabic. He writes the language with remarkable accuracy and beauty of penmanship.

☞ The New York Tribune of yesterday says, "it is a notable fact, as illustrating the rapid increase of steam navigation, that of the two hundred entries at the Custom House to-day, one hundred and eighty were of importations by steamers."

☞ According to the Sexton's report, there were 264 deaths in Buffalo during the last quarter of 1852. Of these 17 died of cholera, 50 of consumption, 24 of dysentary, 16 of typhoid fever, 15 of old age, 11 teething, and 20 unknown.

☞ There are now completed and in operation in the state of Indiana 753½ miles of railroad and 979 more in the course of construction, of which over four hundred will be completed in the course of the next six months.

☞ Messrs. Lewelling & Meek, near Milwaukee, Oregon, have an immense orchard of 200,000 trees, the grafts of which were brought across the plains in 1849. The trees of four years growth produce splendid apples, quinces, &c.

☞ The amount received by Mrs. Stowe up to the close of the last year, as her share of the proceeds of the sales of "Uncle Tom's Cabin," was about twenty thousand dollars. The publishers have cleared $40,000.

## The Hop Market.

WE clip the following item of interest to Hop growers, from the Cooperstown *Freeman's Journal:*

So far as our information extends, the brewers do not hold a very large amount of hops. The speculators have considerable on hand; and they have been very successful in disposing of what remained of previous crops. By the best estimate we are enabled to make, there is now remaining in the hands of the growers of this State, about 420,000 lbs. of hops—the principal part of which lie in the counties of Otsego, Madison, Oneida and Herkimer.

The future admits of some speculation and calculation as to the price this article will continue to command. Our own view of the matter is, that hops are not likely to sell for *less* than they are bringing at present, while the chances are that they will bring *more*. This opinion is based partly on the belief that large speculators will attempt the same policy they pursued last year, whenever they think the time has fully come—especially should the money market remain easy.

## News Clippings.

☞ The Southern Star states that there are 40,000 Baptists in Mississppi. The sum of $30,000 was subscribed by the recent Baptist Convention, towards the endowment fund of $100,000, proposed to be raised for the Literary and Theological Institute, located at Clinton, besides several thousands for interests, home and foreign, under the direction of the body.

☞ The Warsaw Mirror says the Directors and Contractors of the Attica and Allegany Railroad, have agreed that "spiritous liquors shall not be bought, sold or used as a beverage on the line of the road." The Contractors are obligated while the road is building, and the Directors when it shall be in operation.

☞ According to the late census, New York State rendered assistance during the year ending June 1st, 1850, to 59,855 paupers at a cost of $817,336. During the same year, there resided in this State 1307 deaf and dumb, 1272 blind, 2530 insane, and 1739 idots.

At the present term of the U. S. District Court held at Albany, WILLIAM A. HILLIARD, of Bridgewater, Oneida county, has been found guilty of using a postage stamp after it had been once used before. Penalty, fifty dollars.

☞ The Artesian Well at Charleston has reached the extraordinary depth of 936 feet without coming to water. A tube has been inserted of six inches in diameter, connected by screw joints, the entire distance.

☞ Porkopolis is a great town. The Nonpareil says:—"Not far from the Brighton House, we saw a woman in a smithshop, with a leather apron on, and hammer in hand, setting a wagon tire."

☞ A German paper calculates the number of political prisoners now confined in the prisons of Europe at 76,680; and that over 200,000 have fled to avoid imprisonment for the same cause.

☞ The last census shows 53,829 free Negroes in Virginia. This class of colored people, says the Richmond Enquirer, increases much more rapidly than slaves.

STATE OF ARKANSAS AND THE CITY OF ST. LOUIS—The assessed value of real estate in the State of Arkansas, is $41,000,000. The assessed value of the real and personal property in the city of St. Louis is $15,000,000. The amount of taxes of Arkansas in 1852 was $88,000. The amount of city taxes, for the same period, of the city of St. Louis was $360,000, and the whole revenue of the city upwards of half a million of dollars.

DELICATELY DONE.—Rev. Dr. De Witt, in his prayer in the House of Representatives, at Harrisburg, on Thursday morning, asked grace for the members that their "hands may not be polluted with bribes." The doctor has a kind of way of alluding in exhortation, prayer and advice, to matters which the guilty like to have avoided. He makes them shake in their boots; but does not he sometimes "excite ideas?"—*Harrisburg Tel.*

AMERICAN COMMERCE.—The annual report on commerce and navigation, which is in the hands of the printers at Washington, shows that 1,441 vessels have been built the past year, measuring 351,491 tons, and that our aggregate tonnage is now 4,138,441 tons. Maine built last year 354 vessels, measuring 110,047 tons.

FAT HOG AND FAT PRICE.—Volney Douglas, of Richland, in this county, lately killed a hog which weighed dressed, 757½ pounds, and sold it for nine dollars a hundred, which amounts to the snug little sum of $68 17½. A pretty fair price that for one porker.—*Oswego Times.*

## To Agents and New Subscribers.

IN compliance with our offer (see Premium List on last page,) we forward the present, or a back volume of the Wool Grower and Stock Register (or a volume of the Farmer,) to *every person* who sends us $2 for a single copy of the RURAL. Hence all new subscribers who receive our monthly will understand that it is sent free, or as a premium,—and *not remit payment* as some have done. Those who do not wish the monthly, or prefer to have it addressed to a third person, will please advise us accordingly.

Speaking of Premiums, we invite the attention of new subscribers and friends to our list on last page. It is not too late to form clubs, and we shall probably be able to supply back numbers of this volume for some weeks—and those who prefer can commence with this or any future number. We hope our new friends, as well as former ones, will see what may be done for the RURAL in their respective neighborhoods.

ADDITIONS TO CLUBS—Are now in order. After a club for the year is formed, any number of copies may be added at the club price. Agents, and those wanting the RURAL, will please bear this in mind, and govern themselves accordingly.

MOORE'S RURAL NEW-YORKER—Is already making its arrangements for the new year. Reader, if after taking a home paper, you are in want of an eastern journal, one which will be invaluable to yourself and family, send for the one the name of which heads this paragraph. We venture to say it is not excelled as a family paper by any other, we care not the name or pretensions. Its various departments are calculated especially for each member of your family. Father, mother, son, daughter, may all find articles appropriate to their several pursuits and stations. If you wish to make the members of your household a present which will increase in worth as the year grows old, subscribe for the New-Yorker.—*Coldwater Sentinel.*

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Jan. 26, 1853.

FOR the week past the market has been very quiet, the state of the roads and weather precluding active operations. At present a little snow has set the ball in motion.

FLOUR AND GRAIN.—No change to note. Prime Genesee wheat is in demand at $1,12@1,18. Other grains fluctuate according to supply.

PROVISIONS.—There has been less demand, and in some articles a slight decline. Butter is dull, and here as at the east, is falling in price. Eggs more plenty. Dressed hogs are firm at $7,25@7,50 for home consumption.

SEEDS.—Clover seed is quite active, with prices which indicate a speculative demand. Held at $6,50@7. Timothy of prime quality is not abundant and sells readily at quoted rates.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, Jan. 26.

FLOUR—Holders of Western and State flour are firm.—Demand fair. $5,37½ for State, and for exports the firmness in freights restricts business. Canadian nominal at $5,62½. Private advices by the steamer are better than the published accounts. Sales of western canal 2,000 bbls at $5,44@5,50 for common to straight State; $5,62@5,75 for Michigan, Indiana and Ohio.

GRAIN—Holders of wheat are firm at prices above the views of buyers, and the demand more active to complete cargoes. Sales 800 bu white Ohio at $1,30; 700 bu red Long Island at $1,15½. Barley in good demand and firm. Sales 2,000 bu fair two rowed at 70; 3,000 bu prime four rowed 74. Oats dull and heavy—50@51 for State and western. Corn very plenty, dull and heavy. Sales 13,700 bu at 66@69 for fair to prime white Southern; 70 for yellow do. Old nominal.

PROVISIONS—Pork dull and nominal. $18,25 for old mess; $16 for do prime; new mess $18,25; do prime $16,-37½@50. Lard quiet—11@11¾. Dressed hogs saleable 8@8½. Butter plenty and prices unchanged. Cheese selling at 8@8¾.

STOCKS—Market steady. Money in demand at 6 per cent. Sterling steady—109½@109¾. U S 6's of '67 120; Rochester and Syracuse 125; Syracuse and Utica 115; Hudson River 72½; Erie 92¾; Erie bonds of '68 116.

## ALBANY MARKET.

ALBANY, Jan. 24.—Flour was quiet, demand being confined to city trade. Very little doing in grain, some barley arriving by railroad to fill a contract. In provisions a moderate retail demand. Mess pork $19, and $16@16,-50 for prime. Clear is held at $21. Beef quiet at $11@12 for mess. Lard dull. Butter heavy with a downward tendency. Cheese quiet. Dressed hogs in fair demand at $7,12@8,25 for good, heavy hogs.

## NEW YORK CATTLE MARKET.

NEW YORK, Jan. 17.—At Washington Drove Yard—At market 2,900 Beeves (600 Southern and Western, remainder from this State.)

Prices steady at from 7 to 9¼c per lb. Market closed very dull, with about 300 left over.

At Browning's—Offered 1,100 Sheep and Lambs. All sold at from $2,50 to 4,50@5 for Sheep, and $4,50 to $3,50 for Lambs. Cows and Calves—35 offered and all sold at $22,50@45,50.

At Chamberlain's—Offered 700 Beef Cattle; sales at from $6,50 to 8,00; extra $9. 30 Cows and Calves offered, and all sold at prices ranging at from $25@35 to $45, as in quality. 4,000 Sheep and Lambs offered; sales of Sheep at $2,25, 3,50@5,50, and Lambs at $2, 2,50@4,50.

## ALBANY CATTLE MARKET.

ALBANY, Jan. 18.—Woolford's Bull's Head—At market 500 Beef Cattle. Prices extra, $6,75; 1st quality, $6,-25; 2d do. $5,50; 3d do. $4.50@5.

Cows and Calves—Not any in market.

Sheep and Lambs—2,000 in market—Prices of Sheep at $2,50@3,50, and extra $6. Lambs $2@3,50.

Swine—4,000 in market. Prices $6@6,25.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Jan. 19.—At market, 1,175 Cattle, about 1,100 Beeves, and 75 Stores, consisting of Working Oxen, Cows and Calves, 2 and 3 years old.

Market Beef—Extra, $6,25 ₱ cwt.; 1st quality, $6,25; 2d do, $5@5,50; 3d do, $4@4,50; ordinary $4.

# Marriages.

In Medina, Dec. 30th, by Rev Mr. Ryan, SAMUEL C. BOWEN, of Lyndonville and Miss KATE JACKSON, of the former place.

# Deaths.

In Barre, Orleans Co., on the 13th ult., FRANCIS ROMANDA, youngest daughter of Wm. and Asenath Cole, in the 9th year of her age.

Also, in the same place, on Thursday, the 23d ult., of consumption, Miss ELMINA L. COLE, in the 29th year of her age.

On Monday, the 24th inst., at East Henrietta, MARTHA DELANO SHELDON, wife of N. B. Sheldon and only daughter of Issac and Clarissa Colvin.

She was a young mother, a beloved daughter, a warm and faithful friend. J. H. W.

**IMPROVED FARM FOR SALE.**

ONE HUNDRED and forty-five acres of land, highly cultivated, on traveled road, in one of the healthiest and pleasantest spots in Western New York—one and a half miles from the village of Wyoming, Wyoming Co., N. Y. The soil of this rich Valley is misurpassed by any in the Genesee country—about one half is wheat land, twenty-five acres wood land. The Hornellsville, and Attica Railroad runs within six miles of the house, and affords a good market for every thing produced.

The house is a cobble stone, two story building, in good condition, recently improved, which cost over $2,000.—There is a large barn and horse barn, also, a good grafted fruit orchard, containing apples, cherries, plums, and peaches.

To a person having a family of children to educate, the Wyoming Academy, an old and flourishing institution, affords superior advantages, within one and a half miles of the house—altogether this is a most desirable farm and will be sold cheap.

Stock and farming implements can be had with the farm if desired. Apply to WILLIS KEMPSHALL, Wyoming, Wyoming county, N. Y., or application for information may be made to D. M. DEWEY, Bookseller, Rochester.

161eow3 J. B. DEWEY, do.

**TRACY FEMALY INSTITUTE,**
No 33 Alexander Street, Rochester, N. Y.

THE next quarter of this Institution will commence on Wednesday, the 3d day of February.

Board, including fuel and furnished room, is $80 per year, or $25 per quarter Tuition is from $3 to $8 per quarter. There is an extra charge for Music (Organ, Piano, Guitar,) Painting, Drawing and the Languages.

Bills for board and tuition must be paid, or otherwise settled, in advance. Letters of inquiry may be addressed to |161w1*| LUCILLA TRACY, Principal.

**The Stowell Evergreen Sweet Corn.**—A few bushels of this new and valuable variety from seed raised by Professor J. J. Mapes, L. L. D., for sale. Per bushel $10; peck $3; half peck $3; quart $1; sent by express to any part of the country, on receipt of the money by mail. This is beyond all doubt the best and most prolific kind of Sweet Corn ever grown. No Farmer should be without it. One of the advantages claimed for this corn by Prof. Mapes is that it may be kept GREEN AND FRESH ALL THE YEAR ROUND The subscriber's limited experience, however, does not enable him to endorse this. Address, post-paid,
ALFRED E BEACH,
White Plains, Westchester Co., N. Y.

From the "Working Farmer," September, 1851. By Prof. Mapes.

We have long been convinced that Sweet Corn would prove superior as green fodder, to any other; and the only objection urged against its use has been the smaller yield per acre compared with other kinds. We are now prepared to recommend the use of Stowell's evergreen corn for this purpose. The stalks are nearly as sweet as sugar cane, and double the quantity can be grown to the acre to that resulting from ordinary sweet corn.

Prof. Mapes, in the "Working Farmer," December, 1851, gives the following directions for preserving the Stowell Evergreen Sweet Corn:

The ears should be gathered when fully ripe, and the husk should be tied at the nose (silk end,) to prevent drying, when the corn will keep soft, white and plump for MORE THAN A YEAR, if in a dry and cool place. At the dinner of the Managers after the Fair of the American Institute, last year, we presented them with the corn of two successive years' growth boiled, and there was no perceptible difference between the two. This year we sent to the Fair one stalk containing eight full and fair ears, and could have sent many hundred stalks of six ears each.

*To Farmers, Gardeners, Fruit Growers, & other Cultivators*

**THE JOURNAL OF AGRICULTURE,**

A Monthly Periodical of thirty-two pages, Edited by WM. S. KING, Prof. J. J. MAPES, and LEVI BARTLETT. Published at Nos. 8 and 10 Gerrish Block, Blackstone Street, Boston. TERMS: 50 Cents per Annum, payable *in advance.*

THE Journal will contain, among other matter interesting and important to the Farmer, complete treatises on the following subjects:

The Breeding and Management of Domestic Animals, by W. S. King; the Preparation and Care of Manures, by Levi Bartlett, of Warner, N. H.; the Cultivation and Treatment of Fruit Trees, by Geo. Jaques, of Worcester, Mass., author of "A Practical Treatise on Fruit;" Mineral and other Manures, by C. L. Flint, of Portsmouth, N. H., &c., &c; the Management of Bees, by T B. Miner, author of "American Bee Keeper's Manual." Also articles on the Selection and Raising of Poultry, by Dr Eben Wight, Mr. Jonn Giles, and others; and communications on various subjects, by Marshall P. Wilder, President of the United States Agricultural Society; Dr. Charles T. Jackson, and many other well known practical men.

The pages of the Journal of Agriculture will be enriched by elegant engravings of Stock, Farm Houses, Plans of Barns, &c., Fruits, Flowers, Fowls, Portraits of Morgan, Black Hawk, and other Breeds of Horses; Improved Agricultural Implements, &c., &c.

"We have read this paper with more than ordinary care from its commencement, and we can truly say, that as a paper devoted to the rising generation of farmers, and to *sound, practical, and scientific agriculture*, it has no equal in the United States."—*Northern Farmer.*

"It merits the praises, that have been so universally bestowed upon it by the agricultural press."—*Am. Vet. Jour.*

Manny's Patent Adjustable Northern Illinois
**REAPER AND MOWER.**
FIRST PREMIUM MACHINE FOR 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

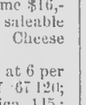
The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. HARMON Wheatland, Monroe Co., N. Y.

149-tf. R. HARMON, Agent.

**A VALUABLE FARM FOR SALE.**



PLEASANTLY situated in the town of Hopewell, Ontario Co., 7 miles east of Canandaigua, on an important thoroughfare,—2 miles west of the village of Orleans; 4 do. from Clifton Spa,—3 miles from the Railroad running from Canandaigua to Jefferson, and the same distance from the Rochester and Syracuse Railroad. The farm contains 207 acres, and is extremely well watered; it is a good grazing farm, and equally adapted to the raising of grain. About 40 acres of excellent timber, in great variety—a large number of fruit trees, mostly grafted. There are on the farm, a two story brick dwelling, 45 by 35,—a grain barn, 80 by 30, with stabling under the whole—horse barn, carriage house, and all other necessary out-buildings. Terms reasonable—part of the money can remain a series of years. Inquire of the subscriber on the premises, or by letter.

[125-tf] RICHARD H. SHECKELL.

**American Seed and Implement Store,**
NO. 4 MAIN STREET, CURTIS' BLOCK.
*Garden and Nurseries at Monroe-st. Plank Road Gate.*
(Over five Tons of Garden Seeds grown in 1851.)

THE Proprietor of this establishment has been extensively engaged in growing and selling Seeds for the last twenty-four years, with every facility for a successful business, and a determination that not an article shall leave his Store but such as will prove satisfactory to the purchaser. He therefore expects that his efforts will be appreciated and meet the approval of his customers.—Over Fifty First Premiums have been awarded at the State and County Fairs for Vegetables grown at his Garden.

**Garden, Field and Flower Seeds** of all kinds and of first quality.

**Fruit and Ornamental Trees,** Shrubs, &c., Green House and Hot bed Plants in their season.

**Farm Tools** of every description. Emery's Railroad Horse Powers, Thresher, and Separator, Seed Drills, Corn Planters, Machine Belting, &c.—Wholesale and retail at Manufacturer's prices, adding transportation.

C. F. CROSMAN,
April 1, 1852. 118-8w. Rochester, N. Y.

**"SPEED THE PLOW."**
**Genesee Seed Stoe and Ag'l. Wnehouse.**

THE subscribers beg leave most earnestly to call the attention of the farming community to the fact that they have just received a supply of the most popular and modern improved implements used in Agricultural and Horticultural pursuits.

They would particularly invite all interested, to the well established MASS. EAGLE PLOWS, in a series of 24 different sizes manufactured by Ruggles, Nourse & Mason. Also the latest and most improved kind of SEED PLANTER, invented by the same firm.

We have also on hand the well known Curtis or Albion Plow, of various sizes and extra manufacture.

Wheeler's Horse Power, Thresher and Saw Mill.

Hussey's Celebrated Grain Reaper.

Pennock's Wheat and Grain Drill.

As also a complete assortment of Field and Garden Seeds, both domestic and imported.

72 JOHN RAPALJE & Co., Irving Block,
65 Buffalo-st., Rochester

**FARM FOR SALE.**

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

JOSEPH ARMSTRONG.
Pittsford, Monroe Co., N. Y., Jan. 7, 1853 158-tf

**Farm Implements for California.**

BURRALL'S Prize Reapers, Mowers, Threshers and Separators, Clod-Crushers, Field-Rollers, Cultivators, Horse Powers, &c., &c. All *warranted* of the best material and workmanship—strong, compact and reliable—expressly for that market.

Made and sold cheap for cash by
THOMAS D. BURRALL.
Geneva, Ontario Co., N. Y. 159-8w.

**Emery's Patent First Premium 1852,**
**RAILROAD HORSE POWER,**
Threshing Machines, Separators, &c., Western New York Agency.
**E. D. Hallock, Agricultural Warehouse,**
No. 50 State St., Rochester, N. Y.

THE Subscriber, late from the Albany Agricultural works Warehouse and Seed Store, where he has been engaged for the past six years, has secured the sole Agency for the sale of Emery's Patent Railroad Horse Power for Rochester and vicinity, so widely and favorably known throughout the country, and which has without exception, taken every highest premium awarded in the States of Ohio, Michigan, and in New York, for the best Railroad Horse Powers in 1850, 1851, and again in 1852, also at the Provincincial Fair of Canada, recently held at Toronto, was awarded a Diploma and £2, of which the judges highly commend the principle and workmanship of this Power, now offer them at manufacturer's prices, with the transportation added, and subject to the warrantee as follows:

"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded."

For further particulars see Circulars and Catalogues, which are furnished gratis on application to the subscriber.

The attention of the Farming public is solicited, and a careful investigation into the construction of this Power and its comparative merits, as well as price, is requested before purchasing elsewhere.

The Wheeler power is also offered *ten* dollars cheaper than heretofore by any other agency, and subject to same warrantee as given by others for the same kinds. Samples will be kept constanly on hand, and to insure promptness and avoid disappointments in supplying them, farmers are requested to send in their orders at as early a date as possible.

He will keep for sale, Emery's Seed Planters, the best in use; Circular and Cross Cut Saw Mills, Feed Mills, Corn Stalk and Hay Cutters, Corn Shellers, Churning fixtures, &c., adapted to the Power.

Also, Reapers, Mowing Machines, Grain Drills, Plows, Harrows, Cultivators, Corn Shellers, Hay Cutters, Fan Mills, and Agricultural and Horticultural Implements generally He will be prepared to furnish dealers with Dunn and Taylor's well known Scythes; also, Manure, Straw and Hay Forks, Snaths, Rifles, and other haying tools, at manufacturers' prices, wholesale and retail.

Particular attention is called to A NEW PLOW, which is believed to be the best cast-iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any plow heretofore sold in this vicinity, while the price is less than for any other equally well finished.

The "uniform one-price, cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time will allow. Farmers and others are invited to call and examine the stock of Machines and Implements,—and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

E. D. HALLOCK, 50 State street, Rochester.
Oct. 5, 1852. [145-tf]

**Important to Farmers**
**PORTABLE MILL.**
[From the Ohio Farmer, December 2, 1852.]

ROSS' IMPROVED PATENT CONICAL BURR MILL STONES.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
151-tf opposite the Arcade, Rochester, N. Y.

**CARY'S ROTARY FIRE ENGINE PUMP.**

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.
No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.

76-tf. CARY & BRAINARD.

**PIKE, BROWN'S NEW STORE,**
With New Goods, and Enlarged Accommodations

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

GENTLEMEN'S FURNISHING GOODS.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

HAIR WORK of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

FISHING TACKLE.—Sportsmen, call and see.

TO LADIES.—A lady will be in attendance in the front Store.

☞ Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,
[129-tf] No. 26 Buffalo St., Rochester, N. Y.

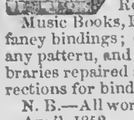
**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a STEREOTYPE FOUNDRY in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to
J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.
N. B.—Old type taken in exchange for work.

**MARSHALL'S BOOK BINDERY,**



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122-tf] F. H. MARSHALL.

## THEY SLEEP IN DUST.

BY IDA FAIRFIELD.

They sleep in dust—the glorious dead,
Lie stattered far and wide;
Wherever human footprints tread,
Their shadowy phantoms glide.

Far in the sunny south they sleep,
Where orange blossoms fling
Fragrance and beauty, all the year,
Around each living thing.

They sleep in beauty, and in trust,
On India's gemmed strand;
Dust hath been called to kindred dust,
'Mid Afric's burning sands.

Dust in the ruined sepulchre,
Of dim old Palestine;
Dust, human dust, is sleeping,
Beside the flowing Rhine.

They sleep in dust, beneath the sky,
On lonely desert plain;
And piles of dust, unburied lie,
From those in battle slain.

They sleep in dust, but little reck,
We, of the *distant* dead;
Alas! alas! from our *own homes*,
The light of life hath fled.

Low in the dust, our dearest ones,
Our gentlest, soon are laid;
And in our hearts, and by our heaths,
Are vacant places made.

They shall not always sleep in dust,
Soon will the trumpets tone,
Summon the lost of every clime,
To God's eternal throne.

Independence, Jan., 1854.

# Rural Sketch Book.

## THE BACK-ROOM WINDOW.

BY BARRY CORNWALL.

We live in a world of busy passions.—Love and hate, sorrow and joy, in a thousand shapes, are forever near us. Death is at our threshold. Life springs up almost at our feet. Our neighbors are "exultations, agonies!" And yet we seem to live on, ignorant of all.

Could we but unroof (Asmodeus-like) the houses which, day after day, present towards us so insensible an aspect, what marvels might we not disclose! What fruitful thoughts, what radiant visions, would throng into our brain! The mystery of human conduct would lie unveiled. We should see and know all men truly. We should see the miser, the spendthrift, the scholar, the toiling artizan, the happy bride, and the girl deserted (like the people in the palace of Truth)—all contributing their share to the unknown romance, which time is forever weaving round us. As it is, each of them spins out his little thread, and dies, almost unknown, and soon forgotten,—unless some curious accident should arise to extend his influence into another region, or to hold his "fame" in suspension, twenty years after his coffin has been lowered into the dust.

It was some such chance as I have just adverted to, that threw into our knowledge certain facts regarding a neighboring family, which else had probably slipped very quietly into oblivion. You will observe that what I am now about to relate is almost literally *a fact*.

Some years ago, we lived, as you know, in B—— Square. The room in which we usually dwelt was at the back of the house. It was spacious, and not without some pretensions to the graceful, the marble chimney-piece being distinguished by a painting of Cipriani, whilst on the ceiling lay scattered some of the conventional elegancies of Angelica Kauffman. From the windows which occupied the northern extremity of the room, we looked (to the left of a large oriental plane) upon the back of a crescent of houses, the points of the arc receding from us. [I mention these things merely to recall to your mind our precise position.]

In the centre of this crescent was a house which had for a long time been untenanted. Whilst its neighbor dwellings were all busy with life and motion, this only was, for some reason, deserted. We were beginning to speculate on the causes of this accident, and to pity the unhappy landlord, whose pockets were lamenting the lack of rent, when suddenly—it was on an April morning—we perceived, for the first time, signs of change. The windows of the deserted mansion were opened, and workmen were seen bustling about in different rooms. There was an air of preparation evidently, which announced an incoming tenant.

"Well," said A——, 'at last that unhappy man has discovered some one bold enough to take his haunted house; or perhaps, after all, he is merely endeavoring to decoy the unwary passenger. We shall see."

A few weeks determined the question; for, after the house had been duly cleansed and beautified, and the odor of the paint suffered to fade away, various articles of furniture were brought into the rooms.—These were of moderate price, and explained to us that the new tenant was a person of respectable station, but not rich. We began to feel a wish to know "what manner of man" he was. Our interest in the once empty house had received a new impulse; and we looked out, day after day, for the stranger's arrival.

At last a young man, of lively and agreeable presence, was one morning seen giving directions to a servant, about the disposition of the furniture. This was evidently the master of the mansion. He stayed for half an hour, and then departed; and he repeated his short visit daily. He was probably a clerk in some public office,—a merchant, or professional man whose time was required elsewhere. But, why did he not reside there? That was a problem that we strove to solve in vain. In the end he went away altogether.

"Each morn we missed him in th' accustomed room."

And now no one, except the solitary maid, was seen throwing open the windows in the morning to let in the vernal May; closing them at night; rubbing with a delicate hand the new furniture, gazing at the unknown neighborhood, or sitting listlessly in the afternoon, "imparadised" in rustic dreams, she appeared to be the sole spirit of the spot. It was not the "*genius loci*" which we had reckoned upon. Our imaginations were not satisfied; and we looked forward confidently to another comer.

We were not disappointed. After a lapse of a fortnight from the young man's departure, our inquisitive discovered him again.—He was sitting at breakfast with a lady by his side. Pretty, young, neat, and attired from head to foot in white, she was evidently a bride. We rushed at once upon this conjecture; and certain tender manifestations, on the husband's leave-taking, confirmed us in our opinion. He went away; and she, left to herself, explored, as far as we could observe, all the rooms of the house. Everything was surveyed with a patient admiration; every drawer opened; the little book-case contemplated, and its slender rows of books all, one by one, examined.—Finally, the maid was called up, some inquiries made, and the survey recommenced. The lady had now some one to encourage her open expressions of delight. We could almost fancy that we heard her words—"How beautiful this is! What a comfortable sofa! What a charming screen! How kind, how good, how considerate of ——!" It was altogether a pretty scene.

Let us pass over the autumn and winter months. During a portion of this time, we ourselves were absent in the country; and when at home, we remembered but little of what happened. There was little or no variety to remark upon; or, possibly, our curiosity had become abated.

At last, spring came, and with it came a thousand signs of cheerfulness and life.—The plain put forth its tender leaves; the sky grew blue overhead, (even in London;) and the windows of the once melancholy house shone blushing with many flowers.—So May passed; and June came on, with its air all rich with roses. But the lady?—Ah! her cheek had waxed pale, and her step grew weak and faltering. Sometimes she ventured into her small garden, when the sun was full upon it. At other times she might be seen wearied with needlework, or sitting languidly alone; or, when her husband was at home (before and after his hours of business,) she walked a little, to and fro, leaning on him for support.—His devotion increased with her infirmity.—It was curious to observe how love had tamed the high and frolicsome spirit of a man. A joyous and perhaps common manner became serious and refined. The weight of thought lay on him,—the responsibility of love. It is thus, that in some natures, love is wanting to their full development. It raises, and refines, and magnifies the intellect, which else would remain dull, trivial and prostrate. From a seeming barrenness, the human mind springs at once into fertility,—from vagueness into character,—from dullness into vigor and beauty, under the "charming wand" of love.

But let us proceed:

On a glittering night in August, we saw lights flashing about the house, and people hurrying up and down, as on some urgent occasion. By degrees the tumult subsided; the passings backwards and forwards became less frequent; and at last tranquility was restored. A single light, burning in an upper window, alone told that some one kept watch throughout the night. The next morning the knocker of the house was (we were told) shrouded in white leather; and the lady had brought her husband a child! We drank its health in wine.

For a few days quiet hung upon the house. But it was doomed speedily to depart.—Harry and alarm came again. Lights were seen once more flickering to and fro. The physician's carriage was heard. It came and departed. The maid now held her apron to her eyes. The husband burying his face in his hands, strove (how vainly) to hide a world of grief. Ere long the bedroom window was thrown open; the shutters of the house were closed, and in a week a hearse was at the door. The mystery was at an end; she was dead!

She died! No poet ever wove around her the gaudy tissue of his verse. The grave she sleeps in is probably nothing more than the common mould. Her name even, is unknown. But what of this? She lived and died, and was lamented. The proudest can boast of little more. She made the light and happiness of one mortal creature, fond and fragile as herself—and for a name, a tomb? Alas! for all the purposes of love, nothing is wanted save a little earth—nothing but to know the spot where the beloved one rests forever. We fear, indeed, to give the creature whom we have hoarded in our hearts to the deep and ever shifting waters,—to the oblivion of the sea! We desire to know *where* it is that we have laid our fading treasure. Otherwise the pilgrimage is easy and painful to the simple churchyard hillock, as to the vault in which a king reposes. The gloomy arches of stately tombs, what are they to the grandeur of the overhanging heavens! and the cold, ghastly marble, how poor and hideous it is in comparison with the turf whereon many a daisy grows!

The child survived. The cares lately exhausted on another, were now concentrated on a little child. The solemn doctors came and prescribed for it, and took their golden fees. The nurse transferred to it her ready smiles. The services which had been purchased for the mother, were now the property of another claimant. Even the father turned towards it all of his heart which was not in the grave. It was part of her who had strewn sunshine in his path, and he valued it accordingly.

But all would not do. A month, "a little month," and the shutters were again closed. Another funeral followed swiftly upon the last. The mother and child were again together.

From this period a marked change arose in the man's character. The grief which had bowed him down at his wife's death, (relieved a little by the care which he bestowed upon her child,) now changed to a sullen or reckless indifference. In the morning he was clouded and oppressed; but at night, a mad and dissonant jollity (the madness of wine) usurped the place of his early sorrow. His orgies were often carried into morning. Sometimes he drank with wild companions; sometimes he was seen alone, staggering towards the window, stupid and bloated, ere the last light of the autumn sunset concealed him from our sight. There were steadier intervals, indeed, when reflection would come upon him—perhaps remorse; when he would gaze with a grave, or oftener a sad look upon the few withered flowers that had once flourished in his gay window. What was he then thinking of? Of vanished hopes and happy hours? Of her patience, her gentleness, her deep untiring love?—Why did he not summon up more cheerful visions? Where was his old vivacity? his young and merry spirit? The world offered the same allurements as before, with the exception only of one single joy. Oh! but that was *all*. That was the one thought, that had grown vast and absorbed all others. That was the mirror which had reflected happiness a thousand ways. Under that influence the present, the past, the bright to come—all had seemed to cast back upon him the pictures of innumerable blessings. He had trod, even in dreams, upon a sunny shore. And now—!

But why prolong the pain and disgrace of the story? He fell, from stop to step.—Sickness was on his body; despair was in his mind. He shrank and wasted away, "old before his time;" and might have subsided into a paralyzed cripple or a moody idiot, had not death, for once a friend, come suddenly to him, and rescued him from further misery.

He died, as his wife and child had died before him. The same signs were there—the unnatural quiet—the closed shutters—and the funeral train. But all, in their time, disappeared; and in a few weeks workmen came thronging again to the empty house; the rooms were again scoured—the walls beautified. The same board which two years before had been nailed to the wall, with the significant words, "To Let," upon it was again fixed there. It seems almost as though the old time had returned again, and that the interval was nothing but a dream. * * * * * *

And is this all? Yes, that is all. I wish that I could have crowned my little tale with a brighter ending. But it was not to be. I wish even that I could have made it more heroic, or have developed some grand moral for your use. As it is, it contains little beyond the common threadbare story of human life—first hope, and then sorrow—all ending quietly in the grave. It is an ancient tale. The vein runs through man's many histories. Some of them may present seeming varieties—a life without hope or joy—or a career beginning gaily and running merrily to its close. But this is because we do not read the inner secrets of the soul—the thousand, thousand small pulsations which yield pain or pleasure to the human mind. Be assured that there is no more an equality or stagnation in the heart, than in the evermoving ocean.

For my part, I can derive nothing for you from my story, except, perhaps, that it may teach you, like every tale of human suffering, to sympathize with your kind.—And this, methinks, is better, and possibly quite as necessary, as any high-wrought or stern example, which shuts the heart up, instead of persuading it to expand, which teaches prudence instead of love; and reduces the aim of a good man's life to a low and sordid mark, which all are able, and most of us too well contented, to reach.

We should not commit ourselves to the fields, and inhale the fresh breath of the spring, merely to gain strength to resume our dry calculations, or to inflict hard names upon simple flowers. We should not read the sadness of domestic history merely to extract some prudent lesson for ourselves. We should open our hearts beneath these great influences, and endeavor to learn that we possess the right, the power, nay, the wish, though it sleep, of doing good to others, to a degree that we little dream of.

So persuaded am I of this truth, that I have invented a sentence wherein to enshrine it, and I hope that you will not entirely contemn this, until you have given it the consideration of a friend. It is this—"*Let but the heart be opened, and a thousand virtues will rush in!*"

---

Philip of Macedon, said he was beholden to the Athenian orators for reproving him; for he would endeavor, both by words and actions, to make them liars. And Plato, hearing it was asserted by some persons that he was a very bad man, said, "I shall take care to live so that nobody will believe them."

---

It is madness for an atheist to talk of annihilation, since the boasted accident that gave him being, may avail to continue and perpetuate it hereafter.—*Dr. Sprague.*

---

Covetous men need money least, yet most affect it; and prodigals who need it most, do least regard it.

---

The Human Heart.—What I have seen in the world and known of the history of mankind, teaches me to look upon the errors of others in sorrow, not in anger.—When I take the history of one poor heart that has sinned and suffered, and represent to myself the struggle and temptation it has passed through; the feverish inquietude of hope and fear; the pressure of want; the desertion of friends; the scorn of the world, that has little charity; the desolation of the soul's sanctuary, the threatening voices within—health destroyed—happiness gone—even hope, that remains longest, gone—I would fain leave the erring soul of fellow man with Him from whose hands it came.—*Longfellow.*

---

Thought and Memory.—Odin was said to have been always attended by two ravens, which sate on his shoulders; whence he was called the God of Ravens. One was styled Hugin, or Thought; the other Mugin, or Memory. They whispered in his ear all that they saw or heard. At the earliest dawn, he sent them to fly around the world; and at eve they returned fraught with intelligence and truth.

---

Rich and Poor.—Poverty is recommended by the address with which we overcome it, or by the complacency with which we submit to it. The greatest achievement which man can perform is the mastery of poverty; to exchange her gloom for glory; her rags and wretchedness for wreaths and roses; her penury and perturbations for place and power.

---

You will not anger a man so much by showing him that you hate him, as by expressing a contempt of him.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## MISCELLANEOUS ENIGMA.

I am composed of 23 letters.
My 2, 5, 3, 11 is a part of the foot.
My 4, 7, 10, 22, 3, 11, 20, 1 is an ornament.
My 15, 21, 18, 12, 16 is a garden vegetable.
My 6, 5, 8 is an old woman's beverage.
My 9, 8, 7, 16 some people spin in the street.
My 23, 11, 11, 3, 21 is a lady's name.
My 13, 18, 1 people sometimes get.
My 14, 8, 16, 19, 9 children generally like.
My 17, 8, 21 is useful in warm weather.
My whole we should never be guilty of.

Farmer, Seneca Co., N. Y. Dolly.

## CHARADE.

Astonishing thought, I was never created;
I'm older than Chaos, to nature related
My commission I have from the regions above—
I'm the parent of hope, and the sister of love;
I'm the support of virtue, the friend of the wise;
And I never deceive him who on me relies.

Tho' you'll find me in death, I'm uncertain in life—
The criterion of love, in a virtuous wife.
The devil's my enemy every place,
And oft his attempts to bring me to disgrace,
But the wiles of the wicked, shall never succeed
Me to stigmatize, flatter, or ever mislead.
When the events of time, on uncertainty's stream,
Shall convey us to death, and show life as a dream;
Immutable then, in the presence of God,
I shall stand, when my enemies all overaw'd
Shall recede and implore that the mountains so high,
May hide them in shame, from the Deity's eye.

So each my young readers, tell what I am now,
And always thro' life, at my altar still bow.

Groveland, Jan., 1853. A Subscriber.

## SHADOW BUFF.

Shadow Buff differs very materially from blind-man's buff, but it is equally amusing. A sheet or table-cloth should be fastened neatly up at one end of the room, so that it hangs free from wrinkles. Buff (not blind-folded) seats himself on a low stool, with his face to the sheet. A table on which is a lighted candle, should be placed about four or five feet behind him, this being the only light in the room. Buff's play-fellows next pass in succession, between the candle and him, distorting their features in as grotesque a manner as possible, hopping, limping, dressing themselves in bonnets, shawls, cloaks, or other disguises, and performing various antics, so as to make their *shadows* very unlike themselves. Buff must then try to guess to whom the shadows belong; and if he guess correctly, the player whose shadow he recognises, takes his place. Buff is allowed only one guess for each person, and must not turn his head either to the right or left, to see who passes.

## TO AGENTS AND OTHERS.

Encouraged by the brilliant success which has thus far attended the publication of Moore's Rural New-Yorker, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* Premiums. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the Rural New-Yorker from any one town in *the State of New York*, in proportion to its population, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in Books or Agricultural Implements, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Postmasters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for fifty or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for thirty subscribers.

4th. To every one remitting payment for twenty copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for ten copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for six copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

---

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the Rural and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

---

Moore's Rural New-Yorker is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The Rural New-Yorker, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

One Dollar per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the New-Yorker is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form Specimen numbers sent free. Money, properly enclosed, at our risk.

### Progress and Improvement.

### FEBRUARY.—FARM AFFAIRS.

"At length grim Auster with his snowy head
And gloomy countenance, and sable wings,
Forth from the cave of Eolus hath sped,
And o'er the land his varied winter flings.
Along the pathway of the storm he wends,
Sometimes enwraped deep in his dusky clouds,
Anon a treach'rous sunbeam forth he sends,
And the next moment all again enshrouds—
With scudding mists he hides the mournful moon,
That weeps behind them for a glimpse of earth,
Then for awhile reveals her, and as soon
Makes the night dark as ere creation's birth.
Thus 'tis with Man—now bright—now dim appear
The hopes and joys of each succeeding year."

FEBRUARY was the second month added by NUMA, and named Febuca, Februara, or Februadis, in honor of the heathen goddess, Juno, to whom the Romans offered sacrifice for purification. Our Saxon ancesters called it Sprout-Kele, because Kalo usually begins to sprout and grow in England during this month. In later times they called it Sal-month, or Pan-cake month, because cakes were offered to the sun.—The Flemmings called it pruning month.

The WEATHER during this month, taking one year with another, is usually cold and stormy—the temperature generally being quite variable—the mercury frequently falling lower, as well as rising higher, than in either of the preceding months. The barometer is also quite variable—the prevailing winds are SW. W. and NW.

The FARMER, who, for the past two months, has not felt the pressure of hard labor, now begins to bestir himself. The days are lengthening, and his cares and toils are multiplying with the increasing hours. His ewes will begin to lamb and his cows to calve, all of which must be carefully attended to. The lambs, some of them, will need a little extra nursing, and perhaps, sometimes will require a little cow's milk for a few days. The ewes that have lambed should be soparated from the flock and fed on rowen, with some potatoes or turnips.—Do not confine them in wet yards. Let them be kept dry and warm—not too warm. All live stock require especial attention through this month. Do not forget to use plenty of litter, so as to keep clean as well as comfortable, in all other particulars. If you have not litter enough, provide more by purchasing of your more provident neighbor, who may have more than he needs for his stock—for by so doing, you will increase both the comfort of your stock and the qualities of manure.

Very little, if any thing can be profitably done this month with the soil of either the garden or the farm. Rails and other materials for repairing and making fences, may now be distributed, if it has not already been done. So the finishing up of wood-drawing should be attended to—for March will soon come, when you will have something else to do—and this is not the only, nor the chief reason for attending to it at this time. It is generally a better time now to transport over your farm, and your team is not needed for other work, as it will be then. Manures may be removed to the fields, where they will be required, or where they are destined for use the coming Spring.

Do not delay the work of this month, though the weather is a little cold and otherwise disagreeable—for you will find it more agreeable to attend to February's work in February, than to do the work of both February and March, in March, or neglect it through the year.—W.

### FRENCH MERINOS.

MR. EDITOR:—I had the good fortune a few days since to get a glimpse at a couple of the newly imported French Merino ewes, of the celebrated Vermont stock. A glimpse, I say; for, owing to the politeness of the gentlemanly proprietor, I had only a glimpse; just sufficient to discover, that they were not bears, which they somewhat resembled in color, but veritable sheep.—Expressing great curiosity to see them as I had heard so much about them, the proprietor, then checking up his horses at the pump on the side walk, replied: "I have no time to talk, sir—I cannot stop a minute." "I ask to detain you, sir, but just half a minute, that I may see the quality of the wool," I said, having reached the hip of one, by passing my hand through the crate that covered them, and beginning to part the fleece with my thumb and finger. But he had now regained his seat, and his fine horses were off in a dash.

I greatly regretted his haste, and hope his time may never be less valuable than it was at that moment. I discovered at a cast of the eye, that they were very large sheep; well formed, long bodied, and very tall, and that the wool was thick set upon the carcass, and of fine length. As to quality, I had no opportunity to form any judgment. I can easily imagine, from the size of the animal, the length and thickness of the wool, and the dark complexion of the surface, (which I suppose is peculiar to the Vermont atmosphere,) that the weight of the French Merino fleece should be great. It is however, questionable, in my view, whether their progeny here, will maintain the present size of the imported stock, and their consequent weight of fleece. It is very questionable I think, whether the climate and soil of Vermont, and of this State, both in regard to winter circumstances, and summer pasturage, will prove as favorable to them, as the fine soil, and genial climate of France. The reported weight of their fleeces is much greater than that of our best fine wooled Saxons or Merinos; and principally for the reason, that they are much larger sheep. The fact of their size, is no doubt owing to the mild climate, rich pasturage, and high care and keeping, to which, for thirty or forty years, they have been accustomed in their native country.

These imported sheep are a selection from decidedly the best flock in that country.—They are bred by gentlemen aiming at the highest improvement,—men of science and skill in their profession,—understanding and having at command, all the elements of success in such an enterprise; and who have given their undivided energies to this object, for a long period. It is no wonder then, that their efforts to enlarge the size, improve the form, and enhance the weight of fleece of their sheep, should be eminently successful. That the unusual size and excellence of their sheep, is owing to these causes, is conclusively proved by the fact, that intelligent Americans who have visited France and Germany the past year, for the express purpose of purchasing Merinos, report that they found the flocks of those countries generally inferior to American sheep. It is only where such extra care has been bestowed, united with science and skill incompassing desired results, that sheep of such size and character have been found. Now, if they could continue to realize, in all respects the same circumstances here, I can see no reason why they should deteriorate. But since a change of country and climate renders this impossible, it will ere long have to be decided, whether they can maintain their present character, under less favorable circumstances. The common sense decision, before hand, would be, that they cannot.

It is important, in comparing these imported Merinos with our best American flocks, to recollect, that a sheep weighing 150 to 200 lbs. will necessarily be twice as costly to sustain as one weighing 75 to 100 lbs. In the rage for foreign sheep, our best Saxons seem to be wholly overlooked. At recent large sales in New York, the Saxon wool averaged ten cents a pound more than the best Merinos. In Europe, the Saxons are Merinos, improved with special reference to the quality of the fleece. In this country, efforts have been made to enlarge their size, and the consequent weight of fleece, still retaining its original fineness. There are now flocks of improved Saxons here, reared and sustained with no extra care, where the ewes weigh from 75 to 100 lbs., and yield 4½ to 5¾ lbs. of clean washed, superfine wool. It must be a splendid ewe of any size, name, or country, that shall yield twice this amount, of like quality and condition. It is safe to assume, that sheep of this character are nowhere to be found, unless from the flocks from whence the Vermont importations have been selected. These flocks have been reared by intelligent breeders; devoting to their improvement all their energies,—enjoying the most favorable circumstances, in all respects, for the attainment of the highest perfection. Now it is not for a moment to be imagined, that New York farmers will apply the same care and skill to their culture. They think too much of wheat and other subjects, to give sheep and wool growing, any other place, than that of a secondary, or collateral object. The fair and legitimate inference seems, therefore, to be, that French Merinos of the present time, will be quite a different article, from the American-bred French Merino, a few years hence.

FARMER D.

Rochester, Jan. 15, 1853.

### FARMERS' HOMES.—PLANTING TREES.

MESSRS EDITORS:—Your article on "Farmers' Homes," in a recent number of the RURAL, has suggested some reminiscences of years past, which you can publish if you think they will advance the cause of rural embellishment.

In the spring of 1826, soon after I bought my small place and commenced house-keeping, Mrs. WILCOX planted a black walnut in the door-yard. It failed to vegetate the first season, but the frosts of the second winter opened the nut, and next year there was a fine shoot growing, to which we gave some care,—cutting off the side shoots, and so causing a more rapid upward growth.—When it had attained a height of ten feet, a late spring frost nipped the top, and we then allowed it to send out branches to form the head, and kept its slender trunk supported by a stake, in the growing season. It has grown finely and its circumference, one foot above the ground, is now nearly four feet. It has a straight unmarred trunk, and a well-balanced top, which covers a space of thirty-four feet in diameter. Some have told me if they had it in front of their dwellings, they would not take $25 for it, and several times that sum would not secure our consent to its removal. It is pleasant in summer, to go out beneath its shade among the flower borders, while the soft air rustles its pendant leaves, and the songsters make their varied music among the branches. And, in autumn, the fruit which loads its branches, gives ample return for all the care which it has required.

It is about eighteen years since I set some sugar maples in the high-way, in front of my house—leaving room for the side walk between them and the fence. Frequently have I heard people say, while passing by one of them, "that is the handsomest shade tree I ever saw." Several years since, I extended the row of maples the entire front of my place, some 25 rods. While I was setting the trees and putting boxes around them, for protection, some said they would not amount to much; I told them that I thought different, saying, "let them attain the size of those I first set, and if I wanted to sell my place, a row of such trees would enable me to realize $100 more for it than I could sell for without them." To the observing man, who wishes to locate himself with a pleasant home, there is something more attractive in such things than most farmers suppose.

To transplant the sugar maple, select straight and smooth ones from 1½ to 2 inches in diameter; trim all the limbs off and the top also, leaving the body about 10 feet in length. Do not set them very deep, as the sugar maple strikes its roots near the surface of the ground. If they grow, the sap seldom fails to force out buds near the top. All the shoots should remain two or three years. Then to form handsome tops trim off all except one, and they seldom require more trimming to make handsome trees. I came near losing one of my largest trees by leaving two shoots to grow. The result was, it made a crotched tree, and a heavy wind split it over three feet, down the body. If the balsam fir trees are taken from the swamp, set them first in a moist place, under the north side of a tight board fence, to protect them from the hot summer sun. In a few years they can be set where wanted, with little risk of loss.

I have frequently had people hitch their teams to my maple trees, though there was a good hitching post but a few feet distant. Now I would like to give a gentle hint to those who forget that a shade tree in front of a man's dwelling is not set there for a hitching post.

In conclusion I would urge every man to set a few shade trees in front of his dwelling. Let him select such kinds as best suit his fancy. Do not place them too thick, as a few of different kinds, with large and well-spread tops, look better than a thicket, and give a better chance to the flower borders. An Isabella grape vine, trained over a summer house, or upon a trellis, with proper care, in a few years will be laden with fruit, and add to the beauty of the rural scene. Every farmer will receive ample and ever increasing satisfaction for the care bestowed on the embellishment of his home. ALVIN WILCOX.

West Bloomfield, N. Y., Jan., 20, 1853.

### THE RED CEDAR FOR FARM FENCES.

THE scarcity of timber makes us begin to think that some substitute must be used for fencing, and one inquiry is, What kind of tree will make the best hedge when planted for that purpose? The merits of the different varieties used, thus far, have been fully discussed, but I have never heard of the Red Cedar tree being spoken of as suitable for a farm fence, yet I believe that this, after all, is the variety of tree which will yet be used for such purpose more than any other, and does in reality possess more good qualities to recommend it for such purpose for our climate.

The different good qualities are: It bears pruning to any extent, and at any season, and is improved thereby. It is subject to no diseases. It grows equally well in poor, thin soil as in rich. It is not affected by long drouth or the coldest weather. Grain or other plants will grow even among the branches, so that no barren land is caused by the growth of its roots. It will be a protection from the sweeping winds that blow across our country in winter. It will form an agreeable shade for all domestic animals and by a general adoption of this tree for fence, our whole country will be beautified by the cheerful appearance of these evergreens.

I would be glad to awaken all readers of the RURAL to this subject, for none, certainly, is more worthy of their attention. I have hundreds of these trees under my observation—some standing singly—some in groups and other, in lines, and none can be more ornamental. I. HILDRETH.

PLASTER ON WHEAT.—A Michigan farmer turned under a five years clover sod for wheat, plowing deeply and harrowing thoroughly before sowing. The wheat grew well in autumn, but in spring turned yellow. The last of April, plaster was sown upon it, and in a few days it turned a dark green color. It yielded, where plastered, 28 bushels per acre; where none was applied, about 18 bushels.

THE best investment for a farmer is live stock and plowshares.

### GOOD FARMING.—MR. HARMON'S STATEMENT.

MR. EDITOR:—I have read your paper for some time, and as a general thing, prize most highly the recorded experience of brother farmers; thinking a little practical experience is worth an indefinite amount of theory,—be it scientific or otherwise.—Should farmers more generally publish their various systems of farming, it would be greatly useful.

To act upon the above suggestion, and to induce others to do likewise, I make the following statement:

One year ago last spring, I may say that I commenced farming. Although born and bred a farmer—yet previous to that time, with the exception of one year, I had not managed a farm on my own account; I am therefore a *new beginner*. At that time my farm consisted of 254 acres, 22 being in wood land, 32 meadow land, roads, yards, &c.; the remaining 200, good wheat land—mostly a clayey loam—some of it inclined to be springy. I have dug, this season and last, 350 rods of underdrains and filled the most of them with small round stone, (and I wish I had done so with all of them.)—Thus much by way of premises.

I harvested this last season, from ninety acres of summer fallow, and ten acres of corn ground in wheat, three thousand and fifty-six bushels. Seventy acres were Flint, and thirty were Soule's—and I think I might have had from three to five hundred bushels more had I sown fifty acres more to Soule's instead of Flint wheat.

Fifteen acres of the land was pastured one season—ten acres were mowed two seasons, the remainder was in wheat the season but one before, excepting the corn ground, which had been mowed two or three seasons, and I put on thirty loads of manure to the acre. The summer fallow was plowed but once—but before harvest. It was cultivated with the wheel cultivator, three or four times, before sowing. I plowed in all the clover the land would grow, and it was well plastered early in the spring. I plowed, as a general thing, not less than nine inches deep, which I consider as shallow as land ought to be plowed for wheat.

Now, taking into consideration the size of the farm, (there being only 254 acres;) and that I sow the *same land* "every other year;" and that so much of it was Flint wheat; and that it was not quite as well prepared for wheat as it ought to have been, I would challenge any reader of the RURAL to beat it. I shall expect a good many of those who have raised the *big yields*, of which we have heard so much the past fall, to present their cases. Should they beat me, I suppose I shall have to wait till another season before I can give them another challenge, when, as I have another hundred acres of wheat growing, I shall not fail to do so.

I have usually kept from sixty to eighty sheep—but I made up my mind this last summer, that they did not pay, and I do not now own one. Instead of sheep, I intend to keep cows; not so many as to prevent the clover from growing, but enough to work into manure the straw, hay, &c., which grow on the farm—say twenty or twenty-five; which will yield a clear profit of $20 per head, besides partly fattening from twenty to thirty hogs. In this manner I hope to realize a far greater sum than I did from the sheep, and in the mean time enrich the land.

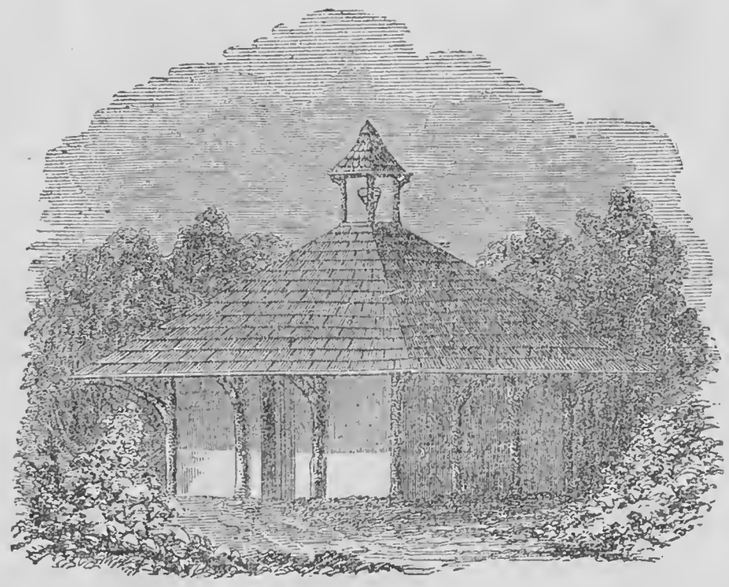
Can any of your readers who sow only one third of their farms to wheat, and keep sheep, show an equal profit with the above?

I have been thus minute in my statement in the hope that others, who may give us their mode of farming, may be equally so. Should any of them convince me that there is a more profitable way of farming, I shall be most ready to accept it.

A. E. HARMON.

Wheatland, N. Y., Dec. 16, 1852.

THE grateful soil yields back with interest all that is lavished upon it.



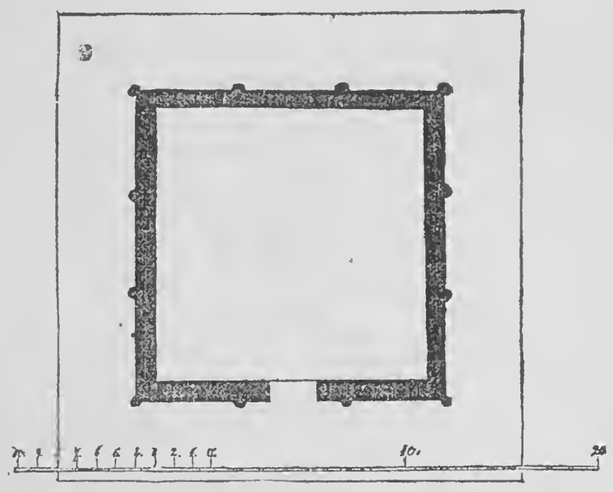
AN ICE HOUSE.—Elevation.

Among the useful and convenient appendages to the farm and country establishment, is the Ice House. Different from the general opinion which prevailed in our country before Ice became so important an article of commerce, and of home consumption, the building which contains it should be above ground, instead of below it. And the plainer and more simple it can be constructed, the better.

The position of the Ice house may be that which is most convenient to the dwelling, or to the wants of those who use it. If it can be placed beneath the shade of trees, it will so far be relieved from the influence of the sun; but it should be so constructed that sunshine will not affect the ice within it, even if it stand unsheltered; and as it has, by the ice merchants of our eastern cities, who put up large quantities for exportation abroad, and others in the interior, who furnish ice in quantity for home consumption, been proved to be altogether the better plan to build the ice house entirely above ground, we shall present no other mode of construction than this. It may be added, that five years' experience with one of our own building, has confirmed our opinion of the superiority of this over any other plan which may be adopted.

The design here presented is of the most economical kind, yet sufficiently ornamental to make it an agreeable appendage to any family establishment. The size may be 12 feet square—less than that would be too small for keeping ice well—and from that up to any required extent. The idea here given is simply the *principle* of construction. The posts should be full eight feet high above the ground, to where the plate of the roof is attached, and built thus:

Mark out your ground the size you require for the house: then, commencing at the one corner, dig, opposite each other, a double set of holes, one foot deep, and two and a half feet apart, on each side of the intended building, say three feet equi-distant, so that when the posts stand up they will present a double set, one and a half feet apart. Then set in your posts, which should be of oak, chestnut, or some lasting wood, and pack the earth firmly around them. If the posts are sawed, they may be 4x6 inches in size, set edgeways toward each other. If not sawed, they may be round sticks cut from the woods, or split from the body of a tree, quartered—but sizable, so as to appear decent—and the insides facing each other as they stand up, lined to a surface to receive the planking. Of course, when the posts are set in the ground, they are to show a square form, or skeleton of what the building is to be when completed. When this is done, square off the top of each post to a level, all around; then frame, or spike on to each line of posts a plate, say six inches wide, and four to six inches deep, and stay the two plates together strongly, so as to form a double frame. Now plank, or board up closely, the *inside* of each line of posts, that the space between them shall be a fair surface. Cut out, or leave out a space for a door in the centre of the side where you want it, two and a half or three feet wide, and six and a half feet high, and board up the inner partition sides of this opening, so as to form a door-casing on each side, that the space between the two lines of posts may be a continuous box all around. Then fill up this space between the posts with moist tan-bark, or saw dust, well packed from the ground up to the plates; and the body of the house is inclosed, sun-proof, and air-proof, to guard the ice.



GROUND PLAN.

Now lay down, inside the building, some sticks—not much matter what, so that they be level—and on them lay loose planks or boards, for a floor. Cover this floor with a coating of straw, a foot thick, and it is ready to receive the ice.

For the roof, take common 3x4 joists, as rafters; or in place of them, poles from the woods, long enough, in a pitch of full 35° from a horizontal line, to carry the roof at least four feet over the outsides of the plates, and secure the rafters well, by pins or spikes, to them. Then board over and shingle it, leaving a small aperture at the top, through which run a small pipe, say eight inches in diameter—a stove-crock will do—for a ventilator. Then set in four posts, say two feet high—as in the design—throw a little four-sided, pointed cap on to the top of these posts, and the roof is done. If you want to ornament the under side of the roof, in a rude way—and we would advise it—take some pieces of 3x4 scantling, such as were used for the roof, if the posts are of sawed stuff—if not, rough limbs of trees from the woods, to match the rough posts of the same kind, and fasten them to the posts and the under side of the roof, by way of brackets, as in the design.

When the ice is put into a house, a close floor of boards should be laid on joists, which rest on the plates, loosely, so that this floor can be removed when putting in ice, and that covered five or six inches deep with tan, or saw-dust—straw will do if the other cannot be had—and the inside arrangement is complete. Two doors should be attached to the opening, where the ice is put in and taken out; one on the inner side of the lining, and the other on the outer side, both opening out. Tan, saw-dust, or straw should also be placed on the top of the ice, when put in, so as to keep the air from it as much as possible; and as the ice is removed, it will settle down upon, and still preserve it. Care must be taken to have a drain under the floor of the house, to pass off the water which melts from the ice, as it would, if standing there, injure its keeping.

It will be seen, that, by an error in the cut of the ground plan, the inside line of posts does not show, as in the outer line, which they should do; nor is the outside door inserted, as is shown in the elevation. These defects, however, will be rectified by the builder.

We have given considerable thought to this subject, and can devise no shape to the building more appropriate than this, nor one cheaper in construction. It may be built for fifty to a hundred dollars, according to the cost of material and labor, and the degree of finish given to it.—*Allen's Rural Architecture.*

New Fertilizer.—We find in the N. Y. *Times*, the following reference to the "Pozzolano," as a newly discovered article is called:

It seems that the Island of St. Vincent, abounds in a kind of earth of very peculiar properties, and withal so valuable, that it is likely to become, at no distant day, an important and regular article of exportation. Little less than 2,000 tons have been taken to Bermuda, to assist in the formation of a breakwater that is being erected by the Government there. They claim that it is an excellent cement for use under water.—Besides, it is said that English chemists have analyzed it, and pronounced it to be more valuable than guano even, as a manure.—Every article which can possibly aid the farmer in developing the agricultural treasures of the earth is of consequence to the world.

Uses of Cement.—Mr. Butterfield of Colosse, Oswego Co., says that from an experience of seventeen years in the use of water lime for cement, he thinks the mode of mixing it, recommended by the author of "A Finality on Rats," is wrong—yet he furnishes us no better one. He says he has used it with excellent success in constructing water pipes, &c., using it instead of lead or zinc, and at a much less expense.

## AGRICULTURAL INTELLIGENCE.

### County Agricultural Societies.

The following officers for 1853, were elected at the annual meeting of the *Genesee* Co. Ag. Society:

President—Hon. H. U. Soper.
Vice Presidents—Eden Foster, Elba; A. E. Wilcox, Bergen; Cyrus Pond, Alabama; T. B. Lord, Pavilion.
Secretary—M. G. Soper.
Treasurer—C. Kirkham, Jr.
Executive Committee—Amasa Johnson, Alabama; B. Benedict, Alexander; Chester White, Batavia; Cyrenus Walker, Byron; Sylvester Gillett, Bergen; H. Dixon, Bethany; D. J. Lee, Darien; W. S. Holmes, Elba; B. Murphy, Le Roy; C. Wolcott, Oakfield; D. N. Wells, Pembroke; C. Hannum, Pavilion; L. A. Baker, Stafford.

The officers of the *Otsego* Co. Ag. Society, for the present year, are the following:

President—Homer Colman.
Vice Presidents—Alexander H. Clark, L. Proctor, Z. Martin.
Executive Committee—Wm. Davison, J. W. Ball, Phillip Potter, Thos. Higby, David Bundy, R. H. Van Rensselaer, A. Barnum, J. A. Cheney, J. Chamberlin, S. Baker, R. Franchot, Wm. Frater, S. G. Cono, George Clarke, R. Day, Charles McLean, J. Rathbone, J. Walker.

The *Franklin* Co. Ag. Society, have elected the following board of officers:

President—Sidney Lawrence.
Vice Presidents—C. C. Keeler, Malone; Michael Roberts, Chateaugay; C. Russel, Bombay; J. G. Dickey, Constable; P. Berry, Westville; Sidney Raymond, Fort Covington; Edmund Sargent, Bangor; Shubal Hastings, Brandon; Milton Heath, Dickinson; Geo. Churchill, Moira; Ezekiel Ladd, Duane; J. R. Merril, Franklin; P. Miller, Harrietstown; Jno. Richey, Bellmont; Timothy Beman, Burke.
Treasurer—H. H. Hosford.
Secretary—H. S. House.
Executive Committee—Wm. Andrus, C. C. Keeler, M. L. Parlin, A. Townsend, Ira Russell, Wm. Smith, M. M. Roberts, H. H. Hosford, and H. S. House.

The *Jefferson* Co. Society—one of the most efficient in the State or Union—has the following list:

President—John Winslow, Watertown.
Vice Presidents—Hiram Dewey, Orleans; Wm. Sill, Rodman; Jno. C. Cooper, Adams; Benj. Maxon, Houndsfield; John Bradley, Brownville; Stephen Johnson, Clayton; P. Hardy, Leray; Alex. Parker, Watertown; Aaron Shew, Pamella; Asahel W. Danforth, Philadelphia.
Treasurer—Tallcott H. Camp.
Rec. Sec'y—Hiram Holcomb.
Executive Committee—John A. Sherman, Moses Eames, M. R. Patrick, Alfred Fox, S. D. Hungerford, Jas. Brodie, Howell Cooper, Curtis Goulding, Jr., Asa B. Carter.

Officers for the *Cortland* Co. Society, were recently elected as follows:

President—Paris Barber.
Vice Presidents—Moses Kinney, J. W. Reed, Lyman Hubbard, Manly Hobart.
Treasurer—Morgan L. Webb.
Secretary—Erasmus Brown.
Cor. Sec'y.—Ames Hobart.
Executive Committee—Israel Boies, Geo. J. J. Barber, H. Hopkins, Anthony Freer, Joshua Ballard, 2d., Ames Rice, N. Hitchcock, Jr., Hamilton Putnam, Peter Walrod, F. H. Hibbard, Hammil Thompson.
Marshals—Oliver Glover, Ira Bowen, W. L. Sherman.

The *Oneida* Co. Society, elected the following officers for 1853, at their annual meeting:

President—Roland S. Doty, Rome.
Vice Presidents—Geo. Bristol, Kirkland; Thos. R. Walker, Utica.
Treasurer—Henry R. Hart, Whitestown.
Secretary—Levi T. Marshall, Vernon.
Executive Committee—John Thompson, Augusta; Thos. D. Penfield, Camden; D. G. Drummond, Lee; H. N. Carey, Marcy; Henry Rhodes, Trenton; J. W. Jones, Utica; G. Benedict, Verona; Jairus Knapp, Westmoreland; Jas. H. Sherrill, New Hartford.

Maine Board of Agriculture.—At its session, in 1852, the Legislature of the State of Maine, passed a law for the organization of a State Board of Agriculture. The first meeting of that Board, consisting of eighteen members, representing Agricultural Societies, was held at Augusta, on the 26th of January. E. F. Crane, Esq., was chosen President, and Dr. E. Holmes, Editor of the Maine Farmer, Secretary. Many plans and suggestions for the advancement of Agriculture were presented; among them plans for a model farm, or farms, town clubs, agricultural instruction in schools, a geological and agricultural survey of the State, and other subjects bearing upon the interests entrusted to the Board. The commencement argues well for future success. †

Prince Albert's Farming.—A Liverpool paper gives the following item of Royal occupation:—"We learn that Her Majesty and Prince Albert possess several farms in the Isle of Wight, two of which, containing about six hundred acres, the Prince farms himself. Every recent improvement has been introduced into these farms, and steam engines are now performing on them various agricultural operations. His Royal Highness is a thrifty and successful farmer, and the results of his skill and superintendence may be regularly seen at the neighboring markets. The Prince is partial to the rearing and fattening of Scotch black cattle."

Winter Fair at Albany.—Those interested in the doings of the State Ag. Society should remember that the annual meeting takes place at the Capital, on the 9th inst., and that at the same time will be held a winter exhibition of fat cattle, dressed meats, and poultry. Also, of roots, grain, seeds, &c. Also, a show of improved poultry. We are assured the arrangements are good and predict an interesting exhibition. We hope the Fruit of Western New York will maintain their supremacy, which they are sure to do when properly represented. †

Prices of Fowls.—The Daily *Union* says: "The fowl fever in this city, continues to rage. We hear of sales of Cochin China's at fifteen and twenty dollars per pair.—These may be considered high prices, but we see it stated by a paper before us, that at a late cattle show, held at Smithfield, England—where John Rogers was burned—some pairs brought £40, and one pair of Cochin China's brought £50."

Revolving Coulters.—A Subscriber at Mt. Morris, wishes to know where this improvement can be obtained. Those he has seen were originally brought from Massachusetts, and worked admirably.

## THE AGRICULTURAL PRESS.

### Making and Saving Manure.

"Composter," gives in the *Country Gentleman* the following mode of manufacturing horse manure and litter, into good, first quality of manure, remarking that he has practiced it several years with much satisfaction:

In the first place, let me say that my hogs are confined to the pen, and a small yard in the rear of it, nearly the whole year round, (my breeding sows only being allowed to range in winter.) My horse barn stands adjoining the pen and one side of the yard. The manure from the horse stable is thrown directly into the hog-yard. The hogs are allowed the liberty of the yard, and so the horse and hog manure, and the litter of both, go together. The yard has been cleared so often, that the earth has been taken out more than a foot deep, and it will hold water like a dish; and the water that falls into the yard, with the urine of the animals, keeps it well saturated most of the time.—Occasionally we scatter a few quarts of corn over the yard, and the whole mass will soon be turned up-side down by the industrious pigs; and in this way I can have it turned just when I wish.

The whole is allowed to remain in the yard through the summer, and in the fall I find it all rich and rotten manure. The horse manure, which otherwise heats and dries so much, and by evaporation loses half its fertilizing properties, without a great deal of extra labor is bestowed upon it, is now thoroughly mixed with the hog manure, and all improved thereby. By a liberal supply of bedding to both horses and hogs, one may increase this heap to several loads for each animal kept.

When straw is not at hand, a resort to the woods for leaves as bedding, is an excellent substitute, and they are certainly within the reach of all. I have drawn several loads of them this fall, and find them good for bedding. Any one who has not tried it, will be surprised to find how easily and quickly they are obtained.

### Training Steers.

The following mode of transforming the wild and unmanageable steer, into the gentle and well trained ox is both reasonable and instructive. We extract from the *Country Gentleman:*

The first point is to make them tame and gentle. This may be accomplished by feeding them out of the hand, and carding them daily. They should be approached gently, without yelling at them until they are frightened out of their wits. After having reduced them to a state of perfect docility, a good yoke should be procured, suitable to their size and strength. A small pen is necessary to put on the yoke; approach gently with the yoke, patting and speaking gently to them until you have the yoke on the off steer; then let an assistant drive the other under the yoke. Their tails should then be securely fastened, to prevent their getting the habit of turning the yoke.—They should be yoked in the morning, and unyoked at night—in this manner, for several days, until they become accustomed to the yoke.

The first thing to teach them is, to stop at the word of command. This may be done by striking them across the face; the blows should be repeated until they stop, and then discontinued; by striking them for every non-observance of the word of command, they will soon learn that by stopping they will avoid it, and will act accordingly. They may be taught then to "gee" and "haw," by gently pushing them around. Backing may be taught by beginning with an empty cart on a side-hill; then on a level; then with an increasing load until they will back nearly the same load they will draw. They should never be put to a load that they cannot readily draw, or drilled by prolonged exercise beyond the period when it becomes irksome. Loud and repeated yelling, or the use of the lash, is both cruel and useless. Clear and intelligible, yet low and gentle words, are all that is necessary to guide a well trained ox. The ox understands a moderate tone more perfectly than a boisterous one, as all sounds become indistinct as they increase. A command should never be given unless enforced. Many bear with bad tricks for a long time, without even an expression intelligible to them—but when patience departs, a thorough storm of blows is poured upon them. This is the way to ruin every beast; a single blow should be given for each offence.

### Bots in Horses.

The following on the subject of Bots in Horses, gives some information, new and interesting to most people. We copy from the *Journal of Agriculture:*

Many years ago, assisted by Dr. Roe, of White Plains, N. Y., we made examination of a horse that appeared to have died of the bots. We found the cuticular coat of the stomach almost entirely covered with them. They were upon the top, and upon the bottom, and upon both sides.—They worked side by side, like lazy street sweepers; and were in no wise hurried or interrupted in their operations by our observation. Some were lapped over others, as sucking pigs who get the upper row of teats are wont to feed. They ate systematically and, as remarked in the paper quoted below, "they swept clean" as they progressed, as a silk-worm cleans a mulberry leaf. The stomach was alive with these sluggish but persevering pests. But that the horse died of the bots, although there is reason so to think, we dare not undertake to say; for the weight of authority is against us, nevertheless, *we think he did.* * * *

We "exhibited" to our subjects a tempting dose of sweetened milk;—in fact we submerged a portion of the stomach in milk and molasses, but the adult bot preferred the tripe, whatever the baby bot might do with the drink. We tried an application of sulphuric acid, (*oil of vitriol.*) to their backs without perceptible effect. We steeped the portion of the stomach in the acid without at all interrupting their meal. This is accounted for by the fact, that the bots are coated with mucus, which defends them against the acid. Finally, we tried a powerful burning glass; and either worried out by the protracted fight, or unequal to a contest with the sun, they gave up the ghost. But this remedy would be somewhat difficult of administration, with a living horse, and therefore we do not "patent" it!

After the bots are full grown and fairly established, and in operation, they are safe from most applications; for this reason, that as many of them must be engaged on the upper portion of the stomach, medicine cannot reach them, unless the stomach is kept constantly full of the medical agent, and besides their mouths are so deeply buried in the business before them, that they will not quit it for the most seductive drug.

In view of the whole matter, we come to these conclusions. So long as there exists a sufficiency of mucus in the stomach, the bots will not attack the cuticular coat, and will at the proper time be disengaged, passed out of the stomach with the chyme, and evacuated with the dung.

In the commencement of the attack they may be expelled by the remedy recommended, (sweetened milk,) or more easily by green and succulent food. So long as they confine themselves to the mucus, their presence is not dangerous to the life or health of the animal, though they cannot be claimed to be positively essential to his comfort and well being. The act of eating the cuticular coat is not of itself painful to the horse, for the coat is insensible; but, the cuticle removed leaves the stomach at least *liable* to inflammation. At this stage, we do not doubt that fatal effects may follow.

On the whole, it appears to us as idle to say that horses do not die of the bots; as to deny that children die of measles or hooping cough, because the cases are rare, where *rightly and seasonably treated*, they do not recover.

### Saving Liquid Manure.

The *Boston Cultivator* has the following valuable information on this important branch of farm economy:

We have often spoken of the advantage to the farmer of saving the urine of his stock. The substance, though equal in value to the solid excrements, is in many cases totally wasted. Perhaps the readiest and best way of saving that from cattle and horses during the winter season, is to have a cellar under their stalls, where both the liquid and solid portions of the manure are deposited together. By this means nothing need be lost, and if it is desirable to mix any other substances with the manure, it may be very conveniently done; they may be spread over the manure from time to time in just such quantities as are deemed proper.

But there are situations in which the advantages of cellars cannot be readily obtained. Many farmers are obliged to occupy barns already built, and if they are not on the most approved plan, they must be turned to the best practical use. The animal liquids may be mostly saved even where there is no cellar for the manure. Absorbants—as litter, muck, charcoal dust—may be strewed over the floors of the stalls. But it will be necessary to have the floors tight, or there will be more or less loss.

A mode similar to that just mentioned is adopted by Hon. F. Holbrook, Brattleboro', Vt., whose judicious management and application of manures, has been an important item in his highly successful farming. We had the opportunity, a few days since, of seeing Mr. Holbrook's arrangements for saving manure. He has no cellar; but by proper attention saves all the animal manure, and by a mixture of other articles, considerably increases the aggregate value. The floors of his stables are water tight. A channel is made in the rear of the platform

on which the animals stand, and into this a quantity of muck is thrown every day, after the manure made the previous day has been cleaned out. This muck absorbs all the urine, and is gathered with the manure into one mass. In addition to this, the animals are well littered with leaves.

The muck and leaves are collected in the fall, and placed in situations where they can be obtained as required. If the muck freezes, it is not objectionable, as the frost tends to destroy the acids it sometimes contains; it can be easily broken up with a pick, and the barn is made so warm that in the coldest weather the temperature, while the stock is in, is above the freezing point, and the frozen muck in absorbing the liquid, becomes completely pulverized. The leaves are very good simply as a bedding, and make the very best manure by decomposition.

### Twenty Acres of Corn.

M. C. CRAPSEY of Lockport, N. Y., gives in the *Journal* of that place, the mode of cultivation adopted and *exact expenditure* incurred in raising twenty acres of corn.—Every farmer will read it with interest. He says:

The land must be entirely clear from stumps, stones or anything that will obstruct the drag or cultivator. Sod ground, which was used in this case, is decidedly preferred.

The earliest warm weather in the spring should be improved for drawing on the manure.

Plough eight inches deep, roll hard, then drag and cultivate the ground till it is fine as an onion bed. When the ground is thus prepared, no danger need be apprehended from the wire worm. The corn is up and beyond harm from this insect before it comes to the surface. Mark the ground each way in straight rows, just 3 feet apart. This gives 4,840 hills to the acre, or a fraction more than 66 hills to the bushel.

Delay planting until the ground is so warm that the corn will come up within eight days. Put in from 5 to 8 kernels in a hill and roll the ground after planting.

Cultivate each way as often as the weeds start. About the time of wheat harvest pull up all the large weeds that can be found.

Cut up when the *small* as well as the large ears are sufficiently glazed. When husked, I put the ears in an out-door covered crib which admits the free passage of the air.

ITEMS OF EXPENDITURE TO EACH ACRE.

| | |
|---|---|
| 1. Drawing 16 loads manure, | $2,00 |
| 2. Ploughing, | 2,00 |
| 3. Rolling, dragging, and cultivating before planting, | 1,38 |
| 4. Marking out before planting, | 31 |
| 5. Seed corn, 19 cts; planting, 75 cts, | 1,06 |
| 6. Rolling after planting and thinning out, | 72 |
| 7. Cultivating each way 3 times, | 1,12 |
| 8. Pulling weeds, | 1,13 |
| 9. Cutting up, &c., | 1,13 |
| 10. Husking, cribbing, setting up stalks, | 4,80 |
| 11. Shelling, $1,54, drawing to market 77 cts. | 2,31 |
| 12. Interest of money on land, | 7,00 |
| Total, | $23,97 |
| 77 bushels corn at 56 cents per bushel, | 43,31 |
| Stalks, | 7,00 |
| Clear profit, | 19,34 |
| Clearing from 20 acres, | 573,80 |

The mode of culture described above saves labor, and adds largely to the profits compared with any that I had previously practised. I have recently traveled through Ohio, Indiana, Illinois and Michigan, and although I have seen localities where a larger *amount* can be raised with the same labor, I have seen no place in the west where the same number of day's work, or the same expenditure will bring larger returns to the producer than in this county.

### Minnesota Farming.

A LEGAL gentleman tells the following story of farming in that new country:

I have just returned from attending a term of the District Court, held in Benton county, a region that two years since was a wilderness. It is some 90 or 100 miles north of this. The county seat is Sauk Rapids, near which, you remember, I have commenced farming by proxy. I am now able to give you an account of my first year's operations:

I reckon the one hundred and sixty acres, with one hundred acres ploughed and fenced, and a comfortable log house on the premises, to have cost me, in all, about $700. This includes charges for labor and carrying on the farm. I have now on hand 2,000 bushels of oats, worth at least sixty-five cents per bushel—$1,300; 100 bushels of potatoes, worth $50; and a sprinkling of corn. So that I have at least $1,350, amount realized the first year, to offer against the $700 cost, expenses, and all. And this, too, under unfavorable circumstances. A man tilling his own land would do far better. So much for Minnesota farming.

### Hints in Season.

THE following Farm Hints for February, are from the Mass. Ploughman:

The flat turnips and the pumpkins are now used up, and the vegetables should take their turn. The yellow turnip will remain good till May. The carrot should not be kept so long. Cows yield more milk, when they have roots, and young cattle grow fatter with a variety of food than on hay alone.

Water is plenty this winter, and it is a pity that cattle should not have a good supply. We sometimes see them lapping snow—this is probably for want of drink rather than food.

Calves need more attention than stock which has passed through a winter. They must have good hay, and they need something besides. They will eat poor hay better in April than in February, because they will be older and more used to dry food. Apples and roots are suitable for calves.

# Orchard and Garden.

### THE CRESCENT SEEDLING STRAWBERRY.

So many readers of the Horticulturist have expressed a wish to be more particularly informed respecting the Crescent Seedling Strawberry, that I have written to Mr. Lawrence, of New Orleans, and learn from him that his manner of cultivating it it very simple. He says:

"I give it all it requires to perfect its fruit, and check the luxuriance of the vines by reducing our rich, alluvial soil two-thirds—that is, I add two-thirds river sand to it.—This mode likewise enables the plant to withstand the excessive hot months of June, July and August. In fact, the soil best adapted to my seedling is a sandy loam; and I also know, by experience, that the less manure of any kind used, the better it is for the plant. In planting, I never mulch; I place the plants 10 inches apart in the rows, and the rows 18 to 24 inches apart. In dry weather I water copiously two or three times in as many consecutive days, and then let them take care of themselves for awhile.—When the ground is moist from previous rains during the planting season, I never water. I transplant *every year* into new beds, as new soil is preferable to old, and besides, as I have noticed in a former letter, old stools die out completely by over-production of fruit and incessant bearing. I gathered the *last fruit of the season* on the 25th of July, which is seven months, to a day, since they commenced bearing—Dec. 25, 1851.

"This experiment of mine, accidental as it is, I consider as one among the wondrous productions of nature. A similar accident may not occur again for many years, and I have been always impressed with the belief that I have been aided and assisted by our climate in producing this truly extraordinary strawberry; and although I give myself but little credit, yet I am happy that it should be so widely known and favorably noticed throughout the Union, and, altho' I disliked it, I could not prevent my name going forth in this connection. My only aim is pleasure and amusement in this delightful climate of ours."

A few weeks ago Mr. Lawrence answered my minute inquiries on the subject as follows:

"1st. The runners *bear* the same season they strike.

"2d. It is the same identical plant which bears fruit so fine and large in January, and which continues to bear a constant crop until the July following. Weak plants are shy bearers at all times. I plant none but the strongest plants (runners;) the weaker ones I neither use nor dispose of until such time as they are fit to set out. I am disposing of my seedlings so rapidly that it is doubtful whether I can supply the demand."

Mr. L., in a previous letter, informed me he had sold 20,000 plants. I consider Mr. L.'s suggestions, in regard to the cultivation of the strawberry, valuable for our soils and climate. I am no more disposed to enrich our soils for the strawberry, with ordinary manures, than Mr. L. It should be remembered that our seasons are of different length than the seasons at New Orleans. My Crescent Seedlings are very strong and vigorous, and I have already forwarded to B. M. Watson, Plymouth, Mass., more than 250 plants, from the avails of eight feeble runners that were scarcely alive when set out in my garden on the 28th of May last. This fact indicates a vigorous plant, and I shall look with interest for its habit of bearing, next July and August.—*R. G. Pardee, in Horticulturist.*

### THE ENGLISH WALNUT TREE.

WHILE much is said and done in regard to the cultivation of the various and best kinds of fruits, such as apples, pears, peaches, &c., by agriculturists, all valuable for the purposes for which they are designed, yet there are other species of fruit trees which probably might be propagated with advantage to fruit-growers, and to the community, of which we hear but little said.—The English Walnut is a tree, which though not always propagated with entire success in some locations, yet it is believed that in favorable situations its success may not be so doubtful.

This tree, a native of some part of Europe, has probably been cultivated in the Island of Great Britain for centuries, a climate as severe or our own. More than fifty years ago, I assisted in planting the nuts of this kind, and found no difficulty in raising the trees to full maturity. Our object was to raise the fruit to use in its green state for culinary purposes, and to sell in market for that purpose.

Most of the trees bore each a considerable amount of fruit, part of which was used in the family for pickles, and the remainder of those gathered in that state, were readily sold in Salem market at one dollar per hundred. A bushel contained a thousand nuts; thus they brought $10 per bushel, no small profit, as the trees bore, most of them, from three to five bushels each. This was not all; they were in great demand among the most epicurean housekeepers, and they usually voluntarily added their thanks to us for giving them a call, and we were generally desired to bring some the next season, as they always wanted a portion of them to mix with their other pickles, for they imparted to them a peculiar spicy flavor, more pleasant than that derived from any other source. About two hundred to five hundred were wanted to a family.

The proper time to gather and use the English walnut for pickles, is the fore part of the month of July, and to test their fitness for the purpose, is to find when a knitting needle will easily perforate both the inner and outer shell. They are far better pickles than the butternut, (sometimes called oilnut,) as they require much less rubbing to take off the dark surface that will appear on them in the process of pickling; also the former has far the richest flavor.—They are a thrifty growing tree, and require nothing more than a tolerably rich soil.

But the greatest difficulty, it is apprehended, will be found in procuring a proper location. I have, however, no doubt that located on the southern side of houses, a thicket of trees, or of a hill, and with a southern aspect, this tree might flourish, and bear many years, although perhaps not so long lived as many of the species of the Nut Tree. And if so, no tree propagated in New England would be found to be more profitable, if used in the manner above mentioned, or they may be left to ripen, as they will, to perfection.—*Mass. Ploughman.*

### ONIONS.—HOT WATER vs. WORMS.

SUMMER before last I had a beautiful bed of onions which were threatened total destruction by the maggot. It was the first time the little rascals made their appearance on our premises, and we didn't know at all what to think of them. Conversing of the matter with the man who that year represented our town in the legislature, he told me that a profuso application of boiling water to the tops of the onions would give the maggots their quietus without injuring the onions themselves. I first tested the experiment by applying the boiling water to two rows, letting it trickle down the tops and soak into the ground at the roots. The next day these two rows had become a shade lighter in color but otherwise appeared lively and thrifty. I then served the whole bed in the same way—pouring hot water profusely over them, and repeated the operation at occasional intervals for several weeks. The experiment was entirely successful, as the onions grew well and bottomed finely. *This* year none of our seed came up, and of course I had no chance to make the trial again. I don't know of any body else that tried the experiment, but in my view two facts are established. First—that Hen. Representatives are good *for something* after all. Second—that onions may be saved from the maggots by a timely application of boiling water.—*Granite Farmer.*

### RAISING GARDEN SEEDS.

A GOOD lesson is contained in the following paragraph:

Some years since, in pulling my English turneps (raised from imported seed) though a great yield, they run too much to tops with dishing crowns. Finding one only, with a small top and small root, shaped like two saucers put together, I preserved it for seed, and the next year sowed what I got from it, among my potatoes, then beginning to be affected with disease. They mostly died; but I got 75 bushels of turnips "true to the seed." I saved and set out 8 bushels of the most beautiful I ever saw. This was in Springfield. All who saw them admired them, and spoke for some of the seed, which I circulated freely at $1 the pound. *Tops* barely enough to pull up the single root, not much bigger than a pipe-stem. They were good as handsome. All this goes to encourage me in selecting the best roots and employing the best *means* possible, for obtaining the very best seed, from which to secure the reward for the best care and culture of the orchard, field and garden.—*N. E Farmer.*

# Domestic Economy.

WHEAT AND INDIAN BREAD.—A correspondent of the N. Y. Farmer, who is now obliged to use wheat as a substitute for rye, gives the following receipt for making wheat and Indian bread: "To two quarts of fine Indian meal add boiling water enough to wet the same; when sufficiently cooled, add one teaspoonful of salt, one half pint of yeast, one teaspoonful of saleratus, one half teacup full of molasses and flour enough to form it into a loaf, (it should not be kneaded hard;) when light, bake two hours in a well heated oven, (it should be baked until brown.) This is nearly as good as the rye and Indian made in Yankee land.

CURE FOR ERYSIPELAS.—The editor of the Salem Observer, gives a public cure for this distressing disorder, from which he has been a great sufferer. He says, "a simple poultice made of cranberries, pounded fine, and applied in a raw state, has proved in my case, and a number also in this vicinity, a certain remedy." In this case the poultice was applied on going to bed, and the next morning, to his surprise, he found the inflammation nearly gone; and in two days he was as well as ever.

RICH CRULLERS.—Beat to cream a quarter of a pound of fresh butter, and mix with it the same quantity of pounded and sifted loaf sugar, and 4 well beaten eggs; add flour till thick enough to roll out; cut the paste into oblong pieces about 4 or 5 strips; wet the edges, and plait one bar over the other, so as to meet in the centre; throw them into boiling lard, or suet; when fried of a light brown, drain them before the fire, and serve them in a napkin, with or without grated loaf sugar strewed over them.

A LIGHT PIE CRUST.—A light pie-crust may be made by rubbing into 1 lb. of flour 2 oz. of butter worked into a cream, and one teaspoonful of carbonate of soda, dissolve with water half a teaspoonful of tartaric acid, and pour it over the ingredients, quickly adding a sufficiency of water to make it the proper stiffness for pie-crust. This is still better when a well-beaten egg is added to the flour, &c., before the water is put.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending January 25, 1853.

John Bell, of Harlem, N. Y., for improvements in method of joining corners of boxes, &c.

Jas. Black and Orson Beecher, of Philadelphia, Pa., for improvements in working the condenser attached to steam diaphragm pumps.

Charles Bourgard, of New York, N. Y., for improvement in manufacturing wigs.

Henry Bretney, of Springfield, O., for improvement in tanning hides and skins.

Freeman Palmer, of Conneaut, O., for improved feed-motion in sewing machines.

Samuel M. Perkins, of Springfield, Pa., for improvement in manufacture of seamless felt wearing apparel, &c.

Wm. H. Lazelle, of New York, N. Y., assignor to Henry F. Wilson, of New York, N. Y., and S. E. Fenwick, of Washington, D. C., for improvement in machines for paring apples.

Jos. Piffaut, of New Orleans, La., for improvement in the frames of piano fortes.

Jos. W. Archibald, of Porto Rico, West Indies, assignor to Horace Southmayd, of New York, N. Y., for improvement in sugar-draining machines.

Abiather F. Potter, of Boston, Mass., for improved gold-washer and amalgamator.

Thos. Prosser, of New York, N. Y., for improvement in expanding drills.

Peter Taltavull, of Washington, D. C., for improvement in omnibus registers.

Augustus B. Childs, of Rochester, N. Y., for improvement in winnowers of grain. Dated Jan. 25, 1853. Patented in England, May 22, 1852.

DESIGNS.

Sherman S. Jewett and Francis H. Root, of Buffalo, N. Y., for design for a cooking stove.

Sherman S. Jewett and Francis H. Root, of Buffalo, N. Y., for design for a wood stove.

Sherman S. Jewett and Francis H. Root, of Buffalo, N. Y., for design for a cooking stove.

Jos. G Lamb, of Cincinnati, Ohio, assignor to Alexander Bradley, of Pittsburgh, Pa., for design for a cooking stove.

Jos. Pratt, of Boston, Mass., assignor to Bowers, Pratt & Co., of same place, for design for a cooking stove.

### WASHING BY STEAM.

A NEW YORK correspondent of the Boston *Transcript*, in describing the new St. Nicholas Hotel in that city, thus refers to the steam washing machine in the basement of the building;

"This is something *new* under the sun.—Four hundred pieces are thrown into a cylinder, half filled with water and soap-suds. This is thrown into rapid revolution by a small steam engine. Steam is then let into the cylinder under the water and clothes, which raises the clothes out of the water, passing through the pores of the fabric, and out the top of the cylinder. The clothes are then thrown down again by the pressure of steam, into the suds, and so on.—The changes thus produced by the rapid revolution, and by the passage of steam through the clothing, washes them perfectly clean in the space of ten minutes. The clothes are then thrown in a body into another cylinder and *wrung* by the revolution of the cylinder; and then by letting in *hot air*, which passes through the clothing, they are perfectly dried, ready for ironing in seven minutes. The whole time occupied in *washing, wringing, drying*, is but seven minutes. The advantages of this apparatus are: first an immense saving of time and expense in washing; second, the finest cambrics can be washed without wearing them out or injuring the texture, as is necessarily done by rubbing. I have seen a hand machine in operation, of the same description, (costing from $50 to $100) where one woman would do the work of twenty.

### A NEW GUN.

Col. P. W. PORTER, of Tennessee, has invented a Repeating Rifle, whereof the cylinder revolves vertically (instead of horizontally, like Colt's) and carries nine charges. This gun primes and cocks itself, and may be fired once a second, or as often as the trigger can be pulled. With the magazine of sixty charges which is furnished with it, it may be fired nearly sixty times in a minute. It seems to be quite simple in construction, is little heavier than the ordinary rifle, shoots with great force and is said to be easily kept in order. To a marksman of our sort, who might chance to tree a squirrel or other game, we should think such a gun would not come amiss. In a fight with a grizzly bear, a Californian would find it useful, provided the bear would keep a proper distance, which some badly educated cubs do not seem to understand. For desperate duelists, it must have great attractions. We believe its cost (without magazine) is $60.—*N. Y. Tribune.*

OLD NAILS.—Horse shoe nails, kicked about the world by horses innumerable, are not the useless fragment we might naturally deem them. Military men may discuss the relative merits of Minie rifles and needle guns, but we all agree that the material of which the barrels are made should be sound and tough; gun-makers tells us no iron is so well fitted for this purpose as that which is derived from horse shoe nails and similarly worn fragments. The nails are in the first instance made of good sound iron, and the violent concussions which they receive when a horse is walking over a stony road, give a peculiar annealing and toughening to the metal highly beneficial to its subsequent use for gun-barrels.

### SEWING MACHINES.

THE Scientific American states that since its first notice of the sewing machine of E. B. Howe, of Mass., that paper has described seven different sewing machines. Among them is the machine of A. B. Wilson, which he has since brought to great perfection and has two American patents, and has made arrangements to get it patented in the principal kingdoms of Europe. The Scientific American says, "Wilson's Machine is, in our opinion, a great triumph of American genius. It is no larger than a neat, small work-box, very portable and convenient, and we have seen fine shirt-bosoms and collars stitched by it in a more perfect manner than we have ever seen done by hand-work.—There are now, we believe, about 500 machines in operation, and orders exceed the supply.

The sewing machine is but on the threshhold of its career; it is but partially known and applied in this country. Private families know nothing about its use, and shoemakers and saddlers have not yet tested its benefits. Mr. Wilson informs us that he is about to make one that will sew boots and shoes with a rapidity that will astonish the sons of St. Crispin. Any invention that shall abridge these tedious labors, will ultimately prove of great benefit to all parties concerned—for whatever lessons the aggregate labor performed by a whole community, soon results in the advantage of every member of that community. One of Wilson's machines will enable a woman to make a fine shirt with all its seams, in one hour.

### ARTIFICIAL ICE.

IN consequence of the open state of the rivers and creeks, and the rather dull prospect for ice just now, the dealers in that article are fearing that unless some means are provided, their occupation next summer will be gone.

One of our citizens, Mr. Geo. P. Mitchell, has been directing his attention to this matter, and has made some experiments which upon a small scale have succeeded admirably, and he has prepared a building in which to develope his plans more fully. He ascertained some time since, that by leading a small stream of water down a piece of twine in ordinary cold weather, ice would make very rapidly, and he has arranged a part of his large ice house in such a manner as to make a large quantity of ice. There are large openings at either end and in the roof, to admit of a free circulation of cold air. Along the rafters are leaden water pipes pierced in small holes so as to throw out a considerable quantity of water in minute streams or spray. At the level of the perpendicular portion of the building are rods, from which an innumerable number of small strings drop to the ground some twenty feet below. The small streams play upon these strings, and if there is any ordinary freezing weather, the ice will form very rapidly. The greater the freezing surface is, the more rapidly will the ice make, and it may reasonably be expected that this building will be filled with columns of ice in a very short time.—*Berlington, N. J. Gaz.*

### NEW FIXTURE FOR DRAWING WATER.

D. STILES, JR., of Middleton, Mass., has communicated to the Ploughman, a description of a novel fixture which he uses for drawing water. He says:

"It consists of two grooved or cleated joists, running parallel with each other to the bottom of the well, at a distance of about fourteen inches, between which the bucket runs, set in a frame, with sides of wood, ends of iron, about 14 by 18 inches square, the bucket hung about the centre of the frame, and centre of bucket, by a spindle. The bucket is provided with a space of about four inches square in the bottom, which receives the water, then the clapper shuts like a pump box, and is drawn up by a common windlass to the spout, where it encounters a book of irregular form, which turns the bucket and discharges the contents instantly."

### COUPLING SHAFTS AND AXLES.

A VERY ingenious contrivance for the above purpose has been invented by Safford E. Sturtevant, of Hartford, Vt., who has taken measures to secure a patent. It consists in securing the shafts of vehicles to the axle or the axle to the shafts, by means of an eye or collar with taper or conical ends, which fit in sockets attached to the shafts. A screw-bolt is inserted longitudinally thro' the eye or collar and the sockets to keep the ends firmly secured. To obviate any inconvenience from the wearing of the eye or collar, so that the ends would not fit tight, the shanks in which the sockets are sunk, can be brought nearer together by means of a nut on the bolt. The apparatus, although simple, will be found very efficient for the intended purposes, and it is a useful improvement on the ordinary method of uniting together the axle and shaft.

HOW TO MAKE A CISTERN.—For a cistern to hold 25 barrels of water, procure one bbl. of water lime, (hydraulic cement,) and three barrels of clean coarse sand. If your soil is clay or any kind of compact earth, dig a hole as near the shape of an egg, and down, as far as you can; mix your cement, a little at a time, and plaster it directly upon the earth. You have no need of brick work. If there is any considerable cavity in the sides of the pit, fill with clay mortar and thus save your cement. When the first coat is dry, put on the second, and perhaps a third, though much thinner than the first. Cover the top with a large flat stone, if procurable, having a man-hole and place for a pump broken through the centre. A cistern eight feet in diameter and nine feet deep will hold a hundred barrels.—*N. Y. Plow.*

# Educational.

## LANGUAGE.—NO. 2.

2d. Was language the invention of man? or the gift of the Creator?

The first human pair, (for I believe the Bible account of the creation of man,) as well as their descendants, possessed all the organs of speech. If language was a human invention, it must have been invented by this pair; for it is wholly incredible, that they would, or could, have continued long together, possessing organs of speech and yet no means of communication but that of signs.

But how would ADAM have understood the language and instructions of his Creator, without having himself a knowledge of language? And how could he "give names to all the beasts of the field," without a knowledge of language? And this he did before the creation of the woman. Taking this view of the subject, then, it is evident that man, must have been endowed with language *from the beginning*. It was not necessary, that it should be a perfect language, but only that it should answer their then present purposes. So much was necessary, that man might be pronounced "good;" i. e. complete, perfect. The improvable character of man would advance it as occasion might require; but its origin was Divine.

I am well aware that many writers on this subject, object to an appeal to Revelation, and contend for a philosophical, or philological, investigation only. To this I reply, 1st, that their philosophical arguments are liable to very many objections; and 2d, that I am giving only my own views on the subject. If any one desires an examination of the philosophical arguments, it will be cheerfully given.

3d. Into how many branches was language divided by the "Confusion of tongues" at the building of Babel?

The number of languages now called original, is about eighty, while the number of branches, or dialects, derived from them, amounts to several thousands, (3,364.) [By an "original language" is here meant, one that cannot be traced to any higher source—one that affords no evidence of being derived from any other.] It is not pretended that eighty is the exact number produced by the "Confusion;" some of the originals may have been lost amidst the revolutions of succeeding ages, or some may have furnished a foundation for others, which, in time, may have lost all traces of their original. Neither of these suppositions is *very* probable; and hence we may conjecture, that eighty is an approximation to the true number produced by the "Confusion."

4th. Whence the great number and variety of languages now existing in the world?

The permanency of a language depends upon circumstances. If written, its character, when once settled, may be preserved. Such a language will change but little during any given period of time, provided the productions of the press be freely distributed, and the people be a reading people, and have full and free intercourse with each other. Without this proviso, however, changes will gradually show themselves in distinct sections of a country using the same language. Many of us may recollect when our own country furnished an illustration of this fact. There was an Eastern, a Southern, and a Western, pronunciation, as well as a set of words and phrases peculiar to each section of the country, already amounting to a provincialism, and laying a foundation for a new dialect in each. This tendency has been checked by the liberal circulation of the productions of the press, general intercourse, &c. As a further illustration and proof of the same fact, it may be remarked, that the pronunciation of the French language in Canada, differs so materially from that of the French in Paris, that the people of the two countries with difficulty understand each other. It is in this way, too, better than in ang other, that we may account for the different dialects of the ancient Greek language. It can hardly be admitted that men whose native language was the pure Greek, would have written, one in the Attic dialect, another in the Ionic, another in the Doric, &c. It is true, the Greeks had a written language, but it was not sufficiently diffused among the people, nor in time to prevent the formation of dialects in several countries in which their language was used.

In the case of an unwritten language, the change would be much more rapid and extensive, from the fact, that distant tribes, and remote portions of the same tribe, would have little intercourse with each other.—This would especially be the case in the early age of the world, when the number of inhabitants was comparatively small, and "the whole land was before them." Commercial intercourse did not offer any hindrance to the multiplication of dialects: and the people, scattered in colonies in different parts of the country, and the world, with nothing to hinder their continued migrations, would at each remove leave behind them the half-found dialect, to be divided and sub-divided at each succeeding colonization. The same cause would continue to operate through all succeeding time, modified at different periods, by revolutions, amalgamations, &c.; and hence the great number of languages now existing.

Down East, 1852. H.

## THEY DON'T KNOW HOW TO WRITE.

WE are wont to judge of the intellectual condition of a community by the number of persons in it who cannot read and write.—If it should be announced that in some county of the State there existed not one person, over five years of age, who had not an acquaintance with the mystic arts of reading and writing it would be told of, far and near, as highly complimentary to the locality. Generally this is correct. But the two arts we find, do not always go hand in hand. There is a country in Christendom that we wot of, where abide certain and sundry men of noted learning, who can read like a book.—aye, even make a book.—yet do not know how to write. They are handy enough with the pen,—they can use it making marks all day long; but the marks are no more intelligible after they are made, than if children had made them with the tips of their little dumpy fingers dipped in ink. Out in the back-woods, there are men who keep tavern and score down the drinks they sell, with a piece of chalk, on the ceiling. They can't write, but they can understand their own rude figuring. But some of the learned men we treat of, cannot do so much as that. Fortunately for the world who need their learning, they generally keep some one around, who, by knowing the drift of the master's thoughts, can shrewdly guess out an interpretation of his hieroglyphics. And others of them, being driven to it by a stern necessity, have learned to read those ciphers of their own, which, by courtesy, are denominated their hand-writing.

One not acquainted with the habits of literary men would scarcely believe this true, but to our sorrow, we know how susceptible of proof it is. Under a press of circumstances, we could furnish the names of many grave and reverend seniors in our own land who have great reputation for wisdom, and even for book-learning, who do not know how to write. There are Doctors of Divinity we could name whose nearest approach to writing is as far from decent, as the inarticulate utterances of a dumb man are from eloquent talking. We know of men who honor the bar, but dishonor their good fathers, by never having learned to write. We know of men who, in all other respects would honor the Cabinet of Mr. Pierce, or the next best man in the States, but who could not write the copy, "Many men of many minds," if by doing it they could avert an impending war, or entitle our country to the undisputed possession of Cuba.

It is very unfortunate. It is bad for us who might possibly make a good use of their writing, if they could possibly write. It is bad for those who are influenced by their example to neglect this branch of their education, thinking that the inability to write may be mistaken in them, as in their exemplars, for a faculty of making good briefs, fine poetry, splendid orations, and excellent addresses.

Writing-masters are not like dentists, exorbitant in their charges. For ten dollars and a little patience, even the stiff and crooked fingers of middle-aged men might be taught to trace legible characters on paper. We appeal to our readers who can read, if it is not worth while to try to learn to write also. But to "parents and guardians," we would respectfully suggest that notwithstanding our last very encouraging remark, it is better to insist that their children learn to write while they are young, for when they get old—we are driven to the conclusion—they can't.—*N. Y. Times.*

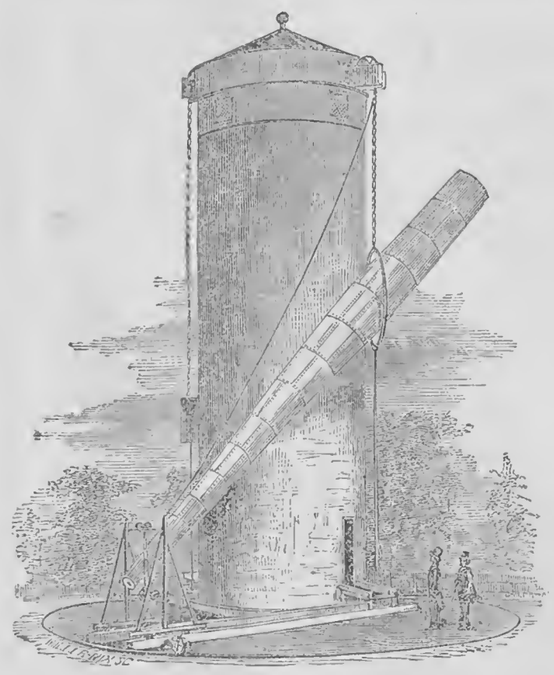
## TRUTH IN CONVERSATION.

THE love of truth is the stimulus to all noble conversation. The tree which springs from it may have a thousand branches, but they will bear a golden and generous fruitage. It is the loftiest impulse to inquire—willing to communicate and more willing to receive—contemptuous of petty curiosity, but passionate for glorious knowledge.—Speech without it is but a babble. Rhetoric is more noisy but less useful than the tinman's trade. When the love of truth fires up the passions, puts its lightning in the brain, then men may know that a prophet is among them. This is the spring of all heroism, and clothes the martyr with a a flame that outshines the flame that kills him. Compared with this, the emulation of argument—the pungencies of sarcasm—the pride of logic—the pomp of declamation—are as the sounds of an automaton to the voice of a man.—*Dewey.*

OTHER passions have objects to flatter them, and seemingly to content and satisfy them for a while: there is power in ambition, and pleasure in luxury, and pelf in covetousness; but envy can give nothing but vexation.

HOPE is very fallacious, and promises what it seldom gives; but its promises are more valuble than the gifts of fortune, and it seldom frustrates us without assuring us of recompensing the delay by greater bounty.

CHILDREN, obey your parents.



MR. CRAIG'S GREAT TELESCOPE.

THE cut at the head of this article is a faithful representation of the largest refracting telescope ever constructed. The object-glass is two feet in diameter, and the focal length seventy-feet. The tube in which it is mounted is made of sheet-iron, rivoted together like a steam-boiler. It is in the form of a cigar, is thirteen feet in circumference in the largest part, and tapers each way as shown in the cut.

This monster telescope is mounted upon a tower of brick, 64 feet in height, 15 feet in diameter, and weighing 220 tons. The different floors of the tower are loaded, to make it as steady as possible, and the telescope is suspended by the side of the tower by a chain which runs over the top, and has a weight attached to the other end to balance the instrument. From this weight a rope goes down to a small windlass, by which the telescope is raised or lowered at pleasure. It can be lowered to the horizon, and raised to within ten degrees of perpendicular.

To allow of motion horizontally, or in right ascension, the top of the tower is so constructed as to revolve; while the lower end of the telescope is connected with a small frame, that runs around the tower upon a circular railway, at a distance of 52 feet from its centre. By this means the instrument may be pointed to any part of the heavens, except a circle of 20 degrees about the zenith.

"The powers of this telescope," says the *London News* "are unapproachable by all others. It separates minute points of light so distinctly that its space-penetrating qualifications will render it, as a discovering instrument, one of the most superior order. It resolves the Milky Way, not simply into beautiful and brilliant 'star-dust,' to use the language of astronomers, but actually subdivides it into regular constellations.

"The telescope is perfectly achromatic. Saturn exhibits itself with milk-light whiteness. Now that the instrument is adjusted, Mr. Craig wishes the planet Venus to be examined, for he hopes to settle the question whether she has a satellite or not."

So distinct are the mountains and rocks on the surface of the moon through this telescope, that if any large buildings, cities, roads, or, forts, existed upon that planet, they would certainly be detected. Poor Luna still appears as seen by Dr. Scoresby through Lord Rosse's mammoth reflector, "like one great ruin of nature." We may expect some startling disclosures ere long from the other side of the water by the use of this gigantic refractor. It is called the "Craig Telescope," after Rev. Mr. Craig, under whose direction, and at whose expense, it was constructed.—*Musical Review.*

## SCIENCE ANSWERING SIMPLE QUESTIONS.

WHY is rain water soft? Because it is not impregnated with earth and minerals.

Why is it more easy to wash with soft water than with hard? Because soft water unites freely with soap, and dissolves it instead of decomposing it, as hard water does.

Why do wood ashes make hard water soft? 1st. Because the carbonic acid of wood ashes combines with the sulphate of lime in the hard water, and converts it into chalk; 2d. Wood ashes converts some of the soluble salts of water into insoluble, and throws them down as a sediment, by which the water remains more pure.

Why has rain water such an unpleasant smell when it is collected in a rain water tub or tank? Because it is impregnated with decomposed organic matters, washed from roofs, trees or the casks in which it is collected.

Why does water melt salt? Because very minute particles of water insinuate themselves into the pores of the salt, by capillary attraction, and force the crystals apart from each other.

How does blowing hot foods make them cool? It causes the air which has been heated by the food to change more rapidly, and give place to fresh cool air.

Why do ladies fan themselves in hot weather? That fresh particles of air may be brought in contact with their face, by the action of the fan; and as every fresh particle of air absorbs some heat from the skin, this constant change makes them cool.

Does a fan cool the air? No, it makes the air hotter by imparting to it the heat of our face, but cools our face by transferring its heat to the air.

Why is there always a draft through key holes and window crevices? Because the external air, being colder than the air of the room we occupy, rushes through the window crevices to supply the deficiency caused by the escape of warm air up the chimney, &c.

If you open the lower sash of a window, there is more draft than if you open the upper sash. Explain the reason of this? If the lower sash be open, cold external air will rush freely into the room and cause a great draft inward; but if the upper sash be open, the heated air of the room will rush out, and of course there will be less draft inward.

By which means is a room better ventilated. By opening the upper sash, because the hot, vitiated air, which always ascends toward the ceiling, can escape more easily.

Why does the wind dry damp linen? Because dry wind, like a dry sponge, imbibes the particles of vapor from the surface of the linen as fast as they are formed.

Which is the hottest place in a church or chpel? The gallery.

Why is the gallery of all public places hotter than the lower parts of the building? Because the heated air of the building ascends, and all the cold air which can enter through the doors and windows, keeps to the floor till it has become heated.—*Dr. Brewer's Guide to Science.*

ABOUT the age of 36 the lean man generally becomes fatter and the fat man leaner.

## NATURAL WONDERS OF CALIFORNIA.

A CORRESPONDENT of the San Joaquin Republican thus describes a natural curiosity in Calaveras:

Four miles south of Vallecita, on Cayote Creek, are what are called the Natural Bridges, two of which span the creek. Imagination cannot picture or form any idea of the grandeur of the scene that here meets the eye of the beholder. Volcanic action has piled rocks upon rocks and nature appears to be in ruins. Whilst gazing, the naturalist is lost in conjecture. Underneath the labyrinths of arches the eye detects imitations of clusters of grapes, cherries, and other fruits; vines, stems, and leaves are perfectly imitated; festoons of flowers and fretwork moulded in every imaginable shape; all of which have been formed when the substance was a molten mass, and the convulsions of nature hurled it to its present position. On close examination the wonder still increases; the observer beholds the natural outline of leaves, vines, &c., imprinted on the solid rock, and the interstices expose petrified remains of vegetation.

Near the Natural Bridges is Cayote Cave, a deep semi-circular chasm. The explorer is first lowered down perpendicularly one hundred feet; he then lights his torch and proceeds over shelving rocks, gradually descending, from one hundred and seventy-five feet to two hundred feet below the surface, when he arrives at a large chamber called the cathedral, from the overhanging rocks assuming the appearance of huge bells, and when struck two or more at the same time, produce the varying sound and deep melodies, of a full chime. Proceeding one hundred feet further, still inclining downward from thirty to forty-five degrees, we came to a lake, apparently a large body of water, and bottomless, from the experiments made in throwing rocks, &c. Judging from the sound, this chamber must include many acres of space, but owing to the damp air, our lights burnt faintly and were finally extinguished, when we grouped our way amidst darkness and uncertainty to the mouth of the pit, and were glad to quit the lower for the upper deck. All the archways of these subterranean chambers are fringed with overhanging masses, of spar, stalactite, and quartz, assuming most fantastic forms. As soon as the dry season will permit there will be another, and I hope a more successful exploration of these subterranean chambers.

THE Arabians have a saying, it is not good to jest with God, death or devil; for the first nether can nor will be mocked; the second mocks all men one time or another; and the third puts an eternal sarcasm upon those who are too familiar with him.

WHEN we have practised good actions awhile, they become easy; and when they are easy, we begin to take pleasure in them; when they please us, we do them frequently, and by frequency of acts they grow into a habit.

A MAN who cannot command his temper, his attention, and his countenance, should not think of being a man of business.

## CHILDREN IN HEAVEN.

In the broad fields of heaven,
In the immortal bowers,
Dwelling by life's clear river,
Amid undying flowers,—

Myriads of beauteous spirits,
Fair children of the earth,
Linked in bright bands celestial,
Sing of their human birth.

They sing of earth and heaven—
Divinest voices rise,
In thanks and praises unto Him
Who called them to the skies.

The golden haired, the blue eyed,
That lighted up our life,
And folded were within our hearts,
From all the world's rude strife;

The blessings of our bosoms,
The stars upon our sky,
The flowers up-springing in our path,
Too beautiful to die;

They are all there in heaven,
Safe, safe, and sweetly blessed;
No cloud of sin can shadow
Their bright and holy rest.

For the Rural New-Yorker.

## ON THE DEATH OF A CHILD.

ANOTHER sweet bud of innocence has faded! another little immortal spirit has winged its way to the Paradise of GOD.—Another home is made desolate—a sister weeps, brothers mourn, and a widowed mother's heart is well nigh crushed with anguish.

Lovely indeed she was, and the affections of many hearts were closely entwined about her. Who that ever gazed upon that cherub face and into the depths of those clear, large blue eyes, turned away without being charmed into love with the little one so pure, so good, so beautiful.

When my own heart seemed breaking, I have turned to the unselfish love of that angelic child and found relief; and, as she would so confidingly rest her little head on my shoulder—her cheek pressed to mine, and clasp my neck so lovingly with her tiny arms, I have prayed the gentle Shepherd, who so tenderly carries the lambs in his bosom, to shield her from sin and sorrow—to incline early her young heart to wisdom, and teach her to "put her little hand in his," and direct her feet into a thornless path.

MARVENA! MARVENA! Thou wert dearly loved and thou art mourned! But why mourn we? He, who doeth all things well, hath indeed shielded thy pure spirit from the taint of sin or the touch of sorrow, and thy feet shall indeed tread a thornless path, for they shall press the gold and pearl-paved streets of the Heavenly Jerusalem.

Bereaved mother, dry thy tears and look up, for thy MARVENA, the little loving angel that nestled in thy bosom, lies not in yonder dark grave, on which the cold, deep snow is heaped, but she has gone to her *father's* arms—up to the Mount of GOD; and her young voice which had just learned to lisp the holy names of Mother, Sister, Brother, is now tuned to the harmonies of Heaven, and on her fair brow she wears a crown of life.

January 15, 1853.

## A GOOD MAN'S WISH.

I FREELY confess to you that I would rather, when I am laid in the grave, some one in his manhood should stand over me and say: "There lies one who was a real friend to me and privately warned me of the dangers of the young; no one knew it, but he aided me in the time of need. I owe what I am to him." Or would rather have some widow, with choking utterance, telling her children: "There is your friend and mine. He visited me in my affliction, and found you, my son, an employer, and you, my daughter, a happy home in a virtuous family." I say, I would rather that such persons should stand at my grave, than to have erected over it the most beautiful sculptured monument of Parisian or Italian marble. The heart's broken utterance of reflections of past kindness, and the tears of grateful memory shed upon the grave, are more valuable in my estimation than the most costly cenotaph ever reared.—*Dr. Sharp.*

## GO TO CHURCH.

IT is a duty of parents to see that their children attend the public worship of Almighty God as much as possible, on the Sabbath. Nothing acts more unfavorably on the moral habits and character of an individual, than habitual abstinence from the House of God. When a man thinks of purchasing an estate, one of the first questions asked should be, "Are there in its neighborhood well-conducted churches, where families may enjoy religious instruction and the ordinances of the House of God?" We do not act the part of good parents while we leave our families unprovided in this respect. No neighborhood or community can long have a healthy state of morals, unless it has an altar erected to the worship of the Ruler of the universe.

A GOOD man obtaineth favor of the Lord: but a man of wicked devices will he condemn.

DON'T talk ill of your neighbors.

# Miscellaneous.

### A CITY RHYME.

I saw two children in the streets,
Two little maidens, yester' eve,
And one was pale, and both were fair,
And both did make me grieve.

Nestling in robes of silk and down,
On velvet cushions, one rolled by;
One went a wan and ragged thing—
A tear-drop freezing in each eye.

One sped to Fashion's princely seat,
To learn the guile that jewels sin;
The other groped through dismal doors,
And found her mother dead within.—H. N. P.

For the Rural New-Yorker.

### MUSIC.

BY GEO. R. POULTON.

Music! beautiful music! Gift of a bountiful Creator to make us better — it lends the soul a holier influence and softens every harsh feeling. Music is the language of love—a glorious intoxication — an enchantment of the senses—it is an intellectuality, an embodied idealisation of sentiment.—Music is but just beginning to be thought of in the right manner—as a power which is to move the masses — to sway the world.—There are comparatively few who appreciate its high and proper aim. The majority of people look upon it as a means of pleasurable *sensation* only, a mere pastime of the moment. They either do not think of its spiritual influence, or they deny its having such. But this state of opinion is rapidly passing away before the advancing studies of the art. Music is *the* Art, and as such will live when sculpture, painting, and all others shall have expired in the intellectual socket of the brains' chamber. Not that I would undervalue these beautiful pursuits —no, they all claim a place in our hearts. But music can move the very deepest springs of feeling—can make the tears course down the rugged cheek of age, and speed a thrill of joy to the heart of bounding youth, while it sends the blood more rapidly thro' the veins of every living being. A strain of sweet sounds witches us ever—*who* can withstand it? Music! oh, welcome the time when it shall be widely diffused among the millions of earth. It will draw men nearer together, and nearer to God. Actual demonstration proves how much it is capable of doing—its purity, beauty, and refining influence. Gladly shall the time be welcomed when every household shall have within its limits the elements of this beautiful art in some form.

The musician's throne is high in the hearts of men—his text-book is creation's varied form, and his harp is hung with the heart strings of men, tied by sensibility and tempered in the casket of lovely doings.—*He* is a High Priest, whose work it is to individualize Nature's varied sounds, her sweet whisperings, and her louder notes, and to give them an expression, to study the sounding harmonies, the fundamental bass of the great Organ of the Deity. To see the goodness, the harmony of construction that everywhere lives and shines forth direct from Him who rules all, and holds the world in "the hollow of his hand." Oh! it is painful to look upon the world as it is *now* —all seems to be contention and discord, and wrong feeling chains and rules the impulses of men. Come, thou bright spirit of religion, poetry — Music — come now in all thy purity of character, thy loveliness and goodness, and assert thy prerogative. Tell earth's multitudes *what* you will do for them, and await the reply. Believe me, it will ring through all coming generations, and "we shall be changed."

Men speak of Poetry, of the poetic principle within us, that grasping for the supernal loveliness as expressed in words, that inward perception of beauty *here*, and realization of fancy, which assures us that there *is* a Heaven, where all is most perfect as partaking of the attributes of a just and holy God. But is not Music the very essence of all Poetry, an immortal instinct, purely spiritual in nature, and an embodiment of that longing, and earnest yearning which man ever finds within him, and which urges him on to high deeds and daring things? Does not Music picture to us a future bright as the wings of hope? Does it not bring the realms of the Past before us, and make the Present more endurable? If there is any dissatisfaction connected with its pursuit, it is as Poe tells us—"Because, that when we are melted in tears, or transported with joy, and catch glimpses of holier, diviner, and more rapturous feeling *through* the instrumentality of the music, we *cannot grasp the perfect reality, to have and to hold, forever.*" And again—"We are often made to feel, with a shivering, trembling delight, that from an earthly harp are stricken notes which *cannot have been unfamiliar to the angels.*"

Music is God's *primitive idea*, (if indeed such an one can be assigned Him,) as exemplified in the harmony of His laws, moral, religious, creative, intellectual and physical. An able author justly says, "that Music is the finest and highest of the fine Arts, and the life and soul of ALL the rest. Eloquence is the music of speech. Painting the music of colors—and Architecture the music of proportion. And he who has musical taste is in a manner fitted for them all." Often on hearing a beautiful strain of sweet music, have I thought "*would I were the soul of that sweet sound.*" To be *a musical thought.* Who can wish higher than this? To be wafted on gossamer pinions to the throne of infinite love. Every note of pure music wings its way direct to courts of bliss, and there receives the sanction of a Deity, who will not permit a shadow of worldliness to fall on anything within his presence.

Jonesville, Mich., Jan. 24, 1853.

### THE MONARCH OF GEMS, THE DIAMOND.

In all its characters and relations the diamond occupies a peculiar and lofty place.—It is the monarch of the subterranean world; the material divinity, which the Pagan, the Jew, and the Christian worship with equal idolatry. The *sacra fames auri*, the accursed thirst for gold, is an inferior and less exciting passion than that with which we would struggle for the gigantic brilliant, or scrambling for its glittering fragments. Over this globe of ours, there rules many a mighty sovereign On its surface are many rich and powerful empires — many a cloud capt tower and gorgeous palace rises above its plains — many a mass of gold and of silver has been wrenched from its bowels, and many a gem of art has arrested the intellectual eye; but more loved than sovereigns —more prized than empires—more coveted than gold—more admired than the creations of Raphael, is the sparkling diamond which flashes in the imperial crown or adorns the royal sceptre, or adds to beauty its only "foreign aid."

Nor is this an idle appreciation of its rarity and worth. It is in truth the very essence of property. It is riches condensed and wealth secured; too small to be seen by the midnight burglar — too easily hid to be seized by the tyrant, and too quickly carried away to be wrested from the patriotic exile or torn from the hunted outlaw. In vain would the vanquished monarch strive to remove his bags of gold, or transport his territorial domains; but a diamond is an empire made portable, with which he might purchase a better kingdom and mount a prouder throne. Had the treasury of Crœsus been invested in brilliants he might have founded a nobler Lydia beyond the reach of his Persian invaders. It is difficult to express in words or in numbers the commercial value of the diamond; but we may truly say that a string of Koh-i-noors, a furlong in length, would purchase the fee-simple of the globe, while a ring engirdling the Arctic Zone would buy the whole planetary system.

### MISS O'CONNELL UPON THE IRISH.

This lady is a niece of the great Agitator. She has written a book lately, in which she thus plainly alludes to the faults of her countrymen:

"Yes! they like leaving their business; they fail lamentably in persevering industry; and so it is that in several of the larger towns in Ireland, the principal houses of business are conducted by Scotchmen.—The Irish are the creatures of impulse—thinking of the present, forgetting the future. Of course I heard many examples of the contrary; and I know that, away from their country, they seem to need neither the plodding perseverence of the English, nor the thrifty forethought of the Scotch. And the tears of many a mother saddened by bitter poverty have been dried up by a handsome remittance from America, from the son that had barely scraped together the 'passage money' of the cheap winter's season, and had landed, poor fellow, on a strange shore, with but a few shillings in his pocket. How diligently he must have labored, for a few months brought money enough to give comfort in his cabin-home, and enabled another brother to join. I could multiply such instances—I need not; yet I will express my regret that, in Ireland, the poorer classes are deficient in hearty industry; theirs is a passive endurance of their lot, a carelessness of improving their condition; their wants are few, and they barely seek to supply them."

### THE GERMANS.

An American student at a German University, writes home:—"A German bed is always a single bed—in the cases where Providence has blessed a man with a wife, the same custom is adhered to, and the single beds are drawn *lovingly* side by side." The same writer says,—"I verily believe that half the people in Germany think that the Americans are *black*. Only yesterday, I was soberly asked by a theological student, 'how many heathens are there in Massachusetts,' and if the 'Americans are not generally *blacks*, or COPPER *colored?*' And, last evening, at a concert, we were asked by an intelligent lady, if it was *safe traveling* in the part of our country from which we came, on account of the *Indians*. An American friend, who is sojourning in a country town, at some distance from here, writes that the country people exclaimed, on seeing him, 'Why, is he an American? he is as white as any of us.' Speaking of music, he adds, 'for *three cents* you can at any time hear a better concert than you can hear in America, except on the rarest occasions.'"

### THE FURLOUGH.

AN IRISH ANECDOTE.

"Time was called."—ROXIANA.

In the autumn of 1820, some private affairs called me into the sister Kingdom, and as I did not travel like Polyphemus, with my eyes shut, I gathered a few samples of the Irish character, among which was the following incident:

I was standing one day at the window of "mine inn," when my attention was attracted by a scene which took place beneath.—The Belfast coach was standing at the door, and on the roof in front, sat a solitary passenger, a fine young fellow in the uniform of the Connaught Rangers. Below, by the front wheel, stood an old woman, seemingly his mother, a young man, and a young woman, sister or sweet-heart, and they were all earnestly entreating the young soldier to descend from his seat on the coach.

"Come down wid ye, Thady,"—the speaker was the old woman,—"come down now to your old mother. Sure its flog you they will, and strip the flesh off your bones I give ye. Come down, Thady, darlint!"

"It's honor, mother!" was the short reply of the soldier; and with clenched hands and set teeth, he took a stiffer seat on the coach.

"Thady, come down—come down ye fool of the world—come along down wid ye!"—The tone of the present appeal was more impatient and peremptory than the last; and the answer was more promptly and sternly pronounced:

"It's honor, brother!" and the body of the speaker rose more rigidly erect than ever on the roof.

"O Thady, come down! sure its me, your own Kathleen, that bids ye! Come down or ye will break the heart of me, Thady, jewel; come down, then!" The poor girl wrung her hands as she said it, and cast a look upward, that had a visible effect on the muscles of the soldier's countenance. There was more tenderness in his tone, but it conveyed the same resolution as before.

"It's honor, honor bright, Kathleen!" and as if to defend himself from another glance he fixed his look steadfastly in front, while the renewed entreaties burst from all three in chorus, with the same answer.

"Come down, Thady, honey! Thady, ye fool! come down, come down? O Thady, come down to me!"

'It's honor, mother! It's honor, brother! Honor bright, my own Kathleen!"

Although the poor fellow was a private, this appeal was so public that I did not hesitate to go down and inquire into the particulars of the distress. It appeared that he had been home on furlough, to visit his family, and having exceeded as he thought the term of his leave, he was going to rejoin his regiment and to undergo the penalty of his neglect. I asked him when his furlough expired.

"The first of March, your honor — bad luck to it of all the lack days in the world —and here it is, come on me like a shot!"

"The first of March! Why my good fellow, you have a day to spare then — the first of March will not be here till to-morrow! It is leap year, and February has 29 days."

The soldier was thunderstruck. "Twenty-nine days it is! You're sartin of that same? Oh, mother, mother—the Divil fly away wid your ould almanack—a base cratur of a book, to be deceaven one after living so long in the family of us."

His first impulse was to cut a caper on the roof of the coach, and he threw up his cap with a loud huzza! His second was to throw himself into the arms of Kathleen—and the third was to wring my hand off in acknowledgment.

"It's a happy man I am yer honor, for my word's saved, and all by yer honor's means. Long life to yer honor for the same! May ye live a long hundred years—and lape years ivery one of 'em!"

### A MINE OF WEALTH.

Dr. J. V. C. SMITH, in an address recently delivered in Boston, on Palestine, alluded to the following circumstance:

The Shieks or Arab Chiefs, are in the habit of burying their treasures in the sand of the desert; no matter what it is, an American half-eagle, or a tin box, any thing they wish to preserve secure, they at once repair to the desert and deposit it, where none but themselves can hope to find it.

When the doctor visited the Dead Sea, he hired Shieks to accompany him as guides and protectors; he gave five dollars to each, besides the present always necessary at the close of a bargain; the Shieks went immediately out into a desert place to deposit their money.

Some of these Arabs live to be 125 years old; they continue to bury their wealth as long as they live; they are reputed to be wealthy, because they have much wealth buried; increase of riches make scarce any difference in their indulgence, or mode of life. In their old age, they forget where the articles are deposited, and die without ever leaving anything for their children.

It is supposed that not less than a million dollars in value is thus buried annually! and the time will come when the searching for, and recovering of this hidden wealth, will be an extensive and profitable business.

The failings of good men are commonly more published in the world than their good deeds; and one fault of a well-deserving man shall meet with more reproaches than all his virtues praise: such is the force of ill-will and ill-nature.

Hopes and cares, anxieties and fears, divide our life. Would you be free from these anxieties? think every day will be your last, and then the succeeding will be the more welcome, because unexpected.

### SIBERIAN COLD.

A TRAVELER in Siberia, during the winter, is so enveloped in furs, that he can scarcely move; and under the thick fur hood, which is fastened to the bear skin collar, and covers the whole face, one can only draw in, as it were, by stealth, a little of the external air, which is so keen that it causes a very peculiar and painful feeling in the throat and lungs. The distance from one halting place to another takes about ten hours, during which time the traveler must always continue on horseback, as the cumbrous dress makes it insupportable to wade through the snow. The poor horses suffer at least as much as their riders, for besides the general effect of the cold, they are tormented by ice forming in their nostrils, and stopping their breathing. When they intimate this, by a distressed snort and a convulsive shaking of the head, the driver relieves them by taking out the piece of ice, to save them from being suffocated. When the icy ground is not covered by snow their hoofs often burst from the effects of the cold.

The caravan is always surrounded by a thick cloud of vapor; it is not only living bodies which produce this effect, but even the snow smokes. These evaporations are instantly changed into millions of needles of ice, which fill the air, and cause a constant slight noise, resembling the sound of torn satin or thick silk. Even the reindeer seeks the forest to protect himself from the intensity of the cold. In the Tundras, where there is no shelter to be found, the whole herd crowd together as close as possible to gain a little warmth from each other, and may be seen standing in this way quite motionless Only the dark bird of winter, the raven, still cleaves the icy air with slow and heavy wing, leaving behind him a long line of thin vapor, marking the track of his solitary flight.

### SOCIETY IN MINNESOTA.

A CORRESPONDENT of the *Tribune*, writing from St. Pauls, gives us an insight into society at that remote city:

The society is a peculiar conglomeration of attractive and repelling elements, reaching through all shades of colour, from the bronzed savage to the smoothly-polished Circassian; and that confusion of tongues, which distracted the builders of the Tower of Babel, was no comparison to the St. Paulian jargon. The Sioux, the French, the Patois, Dutch, German, Norwegian, Irish, English and American, alternately salute you in the street. The prevailing fashion for dress is just what we can get.

The old Dutch woman sports a short gown and petticoat, and such of the upper crust as brought a good stock of clothing from below, swell along *a la Oriental*. There is a circle of ladies here—and one who should ever be mentioned with great respect and honor, as everybody esteems her, not more for her liberality than for her personal kindness and affability, is Mrs. Gov. Ramsey;—a circle that would be an ornament to any city. Intelligent, accomplished, and entirely free from vulgar affectation. There are but very few drones here,—everybody is busy, with no idle monied aristocrats to tyrannise over the industrious poor. The governor is a whig in politics, but a social democrat in feeling, and indeed sociability characterizes the town. All here are strangers from different parts; all adventurers; all industrious, generally very orderly, and, consequently, very prosperous and happy."

### CHEMICAL EXPERIMENT.

Not many days ago a very interesting experiment was tried in this city to ascertain the amount of oxygen necessary to support life. Six hundred persons were placed in a hall in one of the hotels, all the doors and windows were closed, and the experiment began. During the first half hour nothing special was observed except an universal drowsiness, which was warded off as long as possible by an ingenious device of the experimenter, in the shape of an eloquent lecture. During the second half hour several sank into a deep sleep, from which it was impossible to rouse them, and a few fainted. At the end of the third half hour it was deemed unsafe to continue the experiment longer, and the fact was considered established that, under these circumstances life would not become extinct within the space of ninety-five minutes.—*Chicago Tribune.*

This experiment was doubtless chemically satisfactory, but very imprudent nevertheless. Human life was imminently endangered and foolishly tampered with. Suppose one of the number had died?

An American, now travelling in Europe, says that "Dutch babies are the most phlegmatic, contented, independent looking creatures on the face of the globe. They never cry. In order to test this, I pinched several of them as I passed in the crowd.—One of them slightly yawned; the others merely gazed placidly at me, but made no sign." Model babies those.

No man who improves his leisure hours in useful reading and study, can fail of becoming distinguished and useful in his profession — while he who spends his time in idleness or self-indulgence, is sure to occupy an inferior position in life.

To attempt to enchain a husband's affections, whether of body or mind, without the sense and the heart, which alone can preserve them, is about as wise as to try to form a garland of flowers only, without the stalks.

In the month of the foolish is a rod of pride; but the lips of the wise shall preserve them.

# For the Ladies.

### LITTLE NELL.

She was not *wise*, but she was fair,
Bright as the rosebuds in her hair;
I never saw her soft eyes look
Upon the pages of a book;
Oh no! bright little Nell, no!
'Twould make them dull, I told her so.

She was not *learned*, but she to me
Was Nature's sweetest poetry;
Those golden curls, I see them now
Sweep like a sunbeam on her brow;
No great thoughts puzzled that bright head,
They made it ache, so Nellie said.

She was not *wise*, but, oh her eye
Melted with gentlest sympathy;
When clouds lay heavy on my way
Bright Nellie chased them all away;
Sweet, simple child—she did not know
What in her heart made sunshine so.

She was not *learned*—but oh her face
Had such a pure, a loving grace,
The angels loved it, and they bore
Our Nellie to a brighter shore;
I saw the laughing lips grow still,
Sweet Nellie sleeps beneath the hill.

*N. Y. Magazine for Feb.*

### MATCH-MAKING.

Of all the evils which civilization has entailed on us, few are more worthy of hearty condemnation than the inveterate spirit of match-making, that pervades every atom of society. The importance of securing a husband and avoiding the stigma attached to old maidism, is inculcated on the tender mind of the young woman as the first and most urgent duty. She, her parents, friends and acquaintances, join in admiring the good sense and good fortune of such of her companions as marry early or make wealthy matches, while the romantic creature who has the hardihood to refuse a "good offer" is held up as an object of reprobation, and her conduct is condemned as the height of folly. No matter what the mental, moral or personal qualities of the aspirant may be, if he is able and likely to make a "good provider," a woman is bound to accept him, and consider herself very fortunate. I once heard it seriously said, while discussing the merits of a rumored match, that a "swindler might make a very good husband—decidedly better than no husband at all."

It is painfully ludicrous to observe the various manifestations of this spirit—to see with what unwearied politeness fathers and mothers play the agreeable to unremarkable young men whose chief merit consists in their being bachelors—to see young widows eagerly inviting their young friends to come often and visit them socially and bring their beaux; and, above all, to see the total indifference with which most young ladies treat those who are not marrying men. They seem to consider it perfect waste of time to talk to an old bachelor or married man, and prefer listening to the most vapid nonsense from the lips of one whom their imagination can convert into a lover, to joining in a rational conversation which can have no effect upon their hymenial prospects. Some persons from a sense of propriety, endeavor to conceal their match-making plans under the veil of hospitality; but others come out boldly. For instance, an old lady with a daughter-full house, not long since asked a friend of mine, Mr. A. to introduce some bachelors to her family, informing him that her eldest daughters were marriageable, and that each at wedding would be made mistress of a small house and a couple of negroes.

Mr. A. accordingly introduced Mr. B. who on his first visit spent the evening and was very much pleased with the young ladies. Being no Romeo, but a cool, moderate man, he let several days elapse without repeating his visit, whereupon the old lady, getting uneasy, went to the office of Mr. A. to inquire why his friend had not called again, and if he was displeased. What is to be expected of a woman educated in such a school? They are almost certain to cultivate only those accomplishments which are convertible only into matrimonial capital. They play on the piano forte, sing, dance, and talk small talk, while mere domestic acquirements are generally neglected.

Some parents, however, belonging to the new school, whose motto is that the way "to a man's heart is through his stomach," have their daughters initiated into the mysteries of the kitchen, in which case young men are generally invited to dinner, and always informed, accidentally, of course, that certain dishes were prepared—or, if at all aristocratic, superintended—by "my or our daughter." This over anxiety to secure husbands, and especially rich ones, besides its injurious effects on female character, is the cause of nine-tenths of the unhappy marriages we see—now hurrying its possessors into inferior matches from a dread of never getting other chances, and again inducing them to refuse those whom they really prefer, and who are perfectly unexceptionable, from a false ambition. The remedy for all this lies in cultivating their minds and hearts; in teaching them that wedlock is not always a blessing; that if entered upon from unworthy motives, it is likely to become a curse, and that it is far better to remain single than to marry for the purpose of bettering ones condition.—*Mrs. R. S. Nichols.*

Hope is the last thing that dies in man; and, though it be exceeding deceitful, yet it is of this good use to us, that while we are travelling through this life it conducts us through an easier and more pleasant path to our journey's end.

Great poets are like great mountains—they have many echoes.—*Victor Hugo.*

☞ *Back numbers from 1st Jan. can still be supplied. Additions to clubs received at club price. New subscribers can begin with the year, or this No. It is not too late to form new, or add to old, clubs.—We this week add several hundred to former edition, to supply all who wish to commence with present No. Agents and others, please continue your reports.*

☞ *Fractional parts of a dollar may be remitted in postage stamps, or we will return change in same medium, if preferred by agents.*

## Our Agricultural Exchanges.

Two or three weeks ago, in an article headed "The Agricultural Press Advancing," we promised to ere long pay our respects to exchanges which announced new editors, or had made other noteworthy changes—not omitting mention of new recruits to the ranks. Since then we have been, and still are, too busy to fulfil the promise properly—but we will at least go through the motions. We will commence where morniug begins, and proceed sun-downward, in this wise:

THE MAINE FARMER—one of the *main* weeklies on our list—opens the new year with a beautiful new head typographical, which much improves the appearance of this always good-looking journal. The "old head," however, still has the editorial charge of the paper, and we doubt whether any change would be an improvement. Dr. HOLMES' phrenologicals must be just right for an agricultural editor, and we trust he will long retain the useful and honorable position he uow occupies. The Farmer is published by R. EATON, Augusta, at $2 a year.

THE Boston weeklies—the Boston Cultivator, the New England Farmer, and the Massachusetts Ploughman—though presenting no new features, commence the year vigorously aud under most favorable auspices. We trust they are receiving, as they richly merit, increased patronage.

THE GRANITE FARMER enters upon its 4th volume with spirit and enterprise. Dr. CROSBY, the former editor, is now assisted by Mr. A. G. COMINGS. The farmers of the Granite State should see that this work is supported properly, by giving it precedence to foreign publications. Published weekly, by J. O. ADAMS, Manchester, at $1,50 a year.

THE GREEN MOUNTAIN CULTURIST has been merged in the JOURNAL OF AGRICULTURE, published at Boston by W. S. KING. The JOURNAL is a spirited monthly, deserving a wide circulation—which it bids fair to attaiu, as it is published at the low price of 50 cents a year.

NEW YORK AGRICULTOR.—We have at last received a number (that of last Saturday) of this recently started weekly. It is a large, well printed aud well filled folio sheet. The number before us is priucipally filled with Agricultural, Horticultural and News matter—containing less miscellany and variety than we anticipated. The previous numbers, which we have not seen, (but now bespeak,) probably embrace a greater variety.—The AGRICCLTOR is published by A. B. ALLEN & Co., of the New York Agricultural Warehouse, at $2 per annum.

THE COUNTRY GENTLEMAN.—We have also recently been favored with this new weekly—heretofore briefly meutioned in our pages. Like everything emanating from its publisher, it is well executed and makes a fiue appearance. Indeed, to our appreheusion, it is a little too "finified" for utility—but will not fiud fault, as tastes differ. As an agricultural and horticultural journal it will take high rank, while the miscellaneous and news departments, though limited, will enhance its popularity. We wish it, and the AGRICULTOR, deserved and emiuent success. Published by LUTHER TUCKER, Albauy: 16 pages quarto—$2,50 a year—$2 in advance.

THE OHIO FARMER commences its second volume with a new figure-head, etc. The publisher seems determined to make this journal pay, and we trust his efforts will be crowned with commensuiate success. Published weekly, by THOS. BROWN, Cleveland; $2 a year.

THE OHIO CULTIVATOR—Appears in a beautiful new dress, including vignette, &c.,—a decided improvement. The CULTIVATOR is a first rate journal, and its founder merits a large measure of success for his enterprise and perseverance. We hope brother BATEHAM, as well as his associate, Col. HARRIS, may reap a rich reward. Published semi-monthly, by BATEHAM & HARRIS, Columbus, at $1 per aunum.

THE PRAIRIE FARMER—which has always been a favorite of ours—has *did it*, beyond dispute. It has so many new features and attractions, that we hardly know where to begiu: a new and beautiful design for cover—a very tasty vignette title—new type—and, finally, new brain-power. J. AMBROSE WIGHT, Esq., who retired from the FARMER about a year ago, has returned to his first love, and resumes charge of the Agricultura department—with Dr. J. A. KENNICOTT, a talented and spirited writer, as Horticultural editor. The January No. presents a vast improvement in appearance, and not a little in contents. Under such auspices and guide-boards, the FARMER is bound to advance. Published monthly, by WRIGHT & WIGHT, Chicago: $1 a year.

THE SOIL OF THE SOUTH.—This able agricultural and horticultural journal commences its third year and volume, by changing from a quarto of 16, to an octavo of 32 pages. It is also otherwise improved, and is altogether one of the best rural journals published at the South. It merits a wide circulation, especially throughout the Southern States. Published monthly, by T. LOMAX & Co., Columbus, Ga., at $1 a year.

—More, perhaps, at another sitting. Meantime any of our readers who want one or a half dozen good journals, can be accommodated on application as above. Unlike some contemporaries we wot of, we can see virtue and value in other publications than our own, and rejoice in their prosperity.

## "Ithaca and Geneva Railroad."—Again.

ED. RURAL NEW-YORKER:—I notice an article in the RURAL of the 22d iust., on the Ithaca and Geneva Railroad, speakiug in high terms of the prospect of said road, aud the probability of uniting with the Vienna and Great Sodus Bay road, and the advantages of said road to the inhabitants of Tompkins and Seneca counties, by thus unitiug at Ithaca with the Owego and Ithaca road, and at Owego with the New York aud Erie road and the coal fields of Pennsylvania. Now, I think if your correspondent, Mr. FURMAN, will look at the interest of Seneca county and the stockholders iu such road, as far as reaching Sodus Bay is concerned, a much more feasible route could be located than to run to Geneva.

A few of the reasons, I will endeavor to point to auy at all familiar with the location of Ithaca and Sodus Bay, the terminus of said road. Geneva lies as far west as Sodus Bay, and Vienna four miles still farther west than either point. Look now at a map of Tompkius, Seneca, Ontario and Wayne; all the counties said road enters. See the snake-like aspect of the road going from Sodus to Vienna, then to Geneva and Ithaca—then compare that with the location of the road from Sodus Bay to or near the village of Lyons, thence to Waterloo and Romulus Centre, and see the difference in distance, with equally as easy grade, and passing through a sectiou of couutry not surpassed by any in the State—leaving out Geneva, but takiug in Waterloo in Seneca, and Lyons in Wayne, both flourishing places, doing a large amount of manufacturing, mechanical and commercial business. Now take the distance saved in length in the latter route, the straightness of the road, and the difference in runniug on a straight or over a curved road. And, again, nearly every road running through this State that is a paying road, is being straightened, or a parallel road, which cuts off the travel is being built, which shows conclusively, I think, that the time is past when railroads are to be run by every place that takes stock—but the roads must be ruu the most direct route from one commercial point to another.

There is uo doubt but a road from Ithaca to Sodus Bay would be a payiug road to stockholders, and very beneficial to the counties of Tompkins, Seneca and Wayne; but look at the differeuce in the two routes, see the advantage of a straight road with equal facilities, over a crooked one, aud then choose between the two, after a survey has been made—else have the survey from Ithaca through the whole length of Senaca, leaviug somewhere near the north-west corner of said couuty, or the most direct feasible route through said county to Sodus Bay, which would pass the whole length of the couuty, and through as fine a section of farming country as in any part of the State, and that too, where they read the RURAL, and I hope profit by it. YOURS, JUNIUS.

Junius, N. Y., January 24, 1853.

## Counterfeit Bank Bills.

THESE, to use an old adage, "are becoming as plenty as blackberries," and almost every other man we meet has some of the vile trash. It is getting to be an evil which calls loudly for remedy. Banks will be under the necessity of adopting some additional safe-guards, or the people will soon look upon all paper money with suspicion. Some of it is so well executed as to be received and paid out at the counter of banks.—If paper money cannot be made more secure from counterfeits, we shall soon have an irresistable crusade against paper money, which will be injurious to all concerned.

Too much cautiou cannot be exercised in taking bills, and also in so marking them as to enable holders to know where they were obtained. A law excluding bills of less than five dollars from circulation would protect the day laborer and men of small means, from the loss occasioned by bad bills, as they could easily be paid in specie.—Some such measure will be found necessary.—Again we say, look sharp and know what you take, and of whom it is taken. †

TOO GOOD TO LAST.—A Vermont gentleman to whom we recently forwarded, by request, a few specimen numbers of the RURAL, sends us his subscription—remarking that many of his neighbors like the paper, but "think it too good to hold out," and therefore decline subscribing. We suspect these Vermonters have been "elected" by certain publishers, who issue "taking" numbers at the commencement of the year or volume—such as an extra sheet, additional pages, and that sort of thing. Well, if such is the case, they are right in their lack of confidence;—aud, modesty aside, we are not surprised that they should doubt anybody's ability to furnish fifty-two numbers of such a paper as the RURAL at the price asked. But we mean to make it "hold out"—aud, judging from the continually increasing demand for the paper, a lack of "material aid" will not prevent the fulfilment of our intention.

THE RURAL RESIDENCE—Offered for sale by DAVID THOMAS, the distinguished florist, pomologist, etc., must be very desirable. It is rare that the homestead of such a man—located in a place celebrated for its fruit gardens, beautiful scenery, etc.—can be obtained, and we trust this one will fall into worthy and appreciative hands.

## Albany Correspondence.

ALBANY, January 26, 1853.

DEAR RURAL:—Last week was a most interestiug one to the friends of Temperance. The demonstration by the Sons and Daughters, and the various societies, was the largest ever made here, or any where else.

The Assembly Chamber was given up to the State Society, and one of the most convinciug and finished addresses I ever heard on the subject, was delivered by that good man NEIL DOW. I had the pleasure of meeting Mr. Dow one evening at a party, and was very much pleased with him. He is a slender built man, with a genial, earnest, but friendly manner, that endears him to all with whom he becomes familiar. He is truly a pillar in temperance reform, and the Pine Tree State may ever be proud of her noble-hearted son.

A novel precedent was also given by the Assembly's giving liberty to a Committee of the Ladies Temperance Society, to present their petition in person. After leave was granted, some five came into the central isle, in front of the Speaker's Chair, accompanied by Gen. BURROUGHS, the gallant member, who carried a carpet-bag well crammed with the petitions of 28,000 ladies of this State, asking for the Maine Law. Miss CLARK acted as spokesman, and presented the petitions in a very neat little speech. The whole went off well, and whether Miss CLARK is at home in the kitchen or not, she is certainly not a bad hand in the legislative hall. Friday evening there was a large gathering in the Assembly Chamber to hear addresses from the ladies, and they acquitted themselves well.

The petitions in relation to the Maine Law are pouring in from all quarters, and there has probably not far from 100,000 names come in already. I think there is some hope that a prohibitory law may be passed, and referred to the people at a special election. This will be the best that can be done. There are occasionally some queer subjects turn up. A gentleman to-day presented the petition of Aunt Betsey, of Darien, Genesee Co, on the subject of the liquor traffic; it was of course gravely received, and referred.

Nothing as yet has been done in relation to the Canals, though there is a desire expressed on all sides to take some steps that will ensure a speedy and safe completion of them.

Cabinet making just now seems very fashionable, but the material is defective in some shape or other, for nothing is accomplished.

Kindly yours, RUSTIC.

The above was received just too late for last week's paper.

## Literary Notices.

THE MILK TRADE IN NEW YORK AND VICINITY.—By JOHN MULLALY, with an Introduction by R. T. TRALL, M. D., New York: Fowlers & Wells, 1853. Mail edition, 25 cts.

THIS is a neat pamphlet of some 118 pages, a portiou of it reprinted from the N. Y. Eve. Post. It gives an account of the sale of pure and adulterated milk—the daily and yearly consumption—the amount of property invested in the business—the milk-dealers and dairymeu of Orange and other counties—injurious effects of impure milk on children, and advice to couutry dealers.—It is a subject of great importance to all who dwell in or near the city.

THE WESTERN LITERARY MESSENGER for February completes the XIXth volume of this cheap and excellent monthly. The next volume will be materially improved in appearance, and each number will contain some appropriate illustration. Our friend aud valued contributor, J. CLEMENT, remains editor—and the fine taste, graceful pen, and varied information which he possesses, guarantee the continued interest of the work. Buffalo: Jewett, Thomas & Co. $1.50 per year; 3 copies $4; 5 copies $5.

FUGITIVE ESSAYS, is the title of a neat volume of near 400 pages, from the press of SAWYER, INGERSOLL & Co., Hudson, Ohio. It is made up of matters pertaiuing to the early history of Ohio, its geology, agriculture, &c., beiug a compilation of papers from the pen of CHARLES WHITTLESEY, heretofore published in different journals. It contains matter, not only of a local, but also of a general interest, which will well repay a perusal. E. DARROW has it in Rochester. †

THE NEW YORK MAGAZINE for February is a decided improvement on its predecessor. The articles which fill it are generally well written, and upon topics of interest—and the new Editors, Messrs. W. M. LEWIS and W. T. KENNEDY, Jr., enter spiritedly upon their task. It contains a fiue steel engraving of the Rev. Dr. J. B. SHAW, of this city, and several miuor illustrations of merit. Rochester: J. E. DERYEE, Publisher. $2 per year.

HARPER'S MAGAZINE for February contains the usual number of illustrations and eight pages additional readiug matter. "Crusoe-life," a sketch of adventures iu Juan Fernandez, is one of its attractions. WILBER M. HAYWARD, Burns' Block, supplies this and other Magazines on most favorable terms.

PUTNAM'S MONTHLY for February has added the feature of illustratiou to its valuable characteristics, and bids fair to become an "Original American Monthly," worthy of our Literature and of general support. New York, P. G. Putnam. $3 per year; sold at DEWEY'S, as also Harper and other Magazines.

CHAMBER'S POCKET MISSELLANY, Vol. IX., is before us. This is a cheap and pleasant series of volumes; each containing 180 pages of choice literature, complete by itself, and sold at 20 cents per volume. Boston: Gould & Lincoln publishers. Sold at DARROW'S.

## Legislature of New York.

### Synopsis of Proceedings.

TUESDAY, Jan 25.—*Senate.*—Several committees made reports, and the Broadway Railroad bill was discussed.

*Assembly.*—Some progress was made on various bills and several reports and communications received.

WEDNESDAY, Jan. 24.—*Senate.*—The Broadway Railroad passed to a third reading, aud several of less interest.

*Assembly.*—The bill introduced by Mr. PETERS, appropriating $200 to provide a teacher for the childreu of the Indians on the Tonawanda Reservation, was passed. Various bills and resolutions were introduced or noticed aud several discussions occurred.

TUESDAY, Jan. 27.—*Senate.*—The debate on the Broadway Railroad was continued.

*Assembly.*—The Report of the Canal Commissioners was received and ordered to be printed.—Several bills were introduced and others passed to a third reading.

FRIDAY, Jau 28.—*Senate.*—The bill in relation to the construction of Railways in cities, passed by a decisive vote.

*Assembly.*—A debate took place upon the reference of the Governor's Message, and an unsuccessful attempt was made to recousider the vote on placing the Canal question in the hands of a Special Committee.

SATURDAY, Jan. 28.—*Senate.*—A Committee of Investigatiou in the case of the Broadway Railroad, was appointed, and the bills relating to the Savings Banks and the Pacific Railroad were further discussed.

*Assembly.*—Another debate on the Canal question occurred.

MONDAY, Jau. 31.—*Senate.*—The Railroad Consolidation bill was further debated, and an amendment was made extending certain provisions of the bill to all roads competing with any of the State Canals.

*Assembly.*—Nothing of much importance was completed in the House.

## Congressional.

### Synopsis of Proceedings.

TUESDAY, Jan. 25.—*Senate.*—The session was occupied mostly with the speeches of Mr. SOULE and Gen. Cass upon the Cuba question.

*House.*—A bill was passed granting right of way to the St. Louis and Iron Mountaiu Railroad Company. The New York Mint bill came up and was further discussed, until the expiration of the morning hour; after which the bill to supply deficiencies in the appropriations for the past fiscal year, was the prominent topic.

WEDNESDAY, Jan. 26.—*Senate*—The Homestead bill was postponed till Thursday of next week. Mr. Cass' joint resolution on the MONROE doctriue was taken up. Mr. SEWARD made a speech upon the subject, to which Mr. Cass replied.

*House.*—The New York Branch Mint was refused engrossment and finally disposed of, 86 to 89. The Deficiency bill was before the House, but the long discussion held had nothing to do with it.

THURSDAY, Jan. 27.—*Senate.*—The Senate, after having given the Aztec Children a capital advertisement, took up the BULWER and CLAYTON resolution of Mr. Cass, and adopted it, Messrs. CASS, BELL, MASON, HALE, and others having discussed it at considerable length. Mr. Cass' joint resolutiou re-affirming the MONROE doctrine, was postponed till next Thursday. The Pacific Railroad bill was taken up, aud further debated.

*House.*—In the House Mr. Stauly reported a bill to pay the fourth instalment of the money which was to be divided among the States, by the act of 1836. The bill was promptly laid upon the table by a vote of 165 to 60. The appropriation for the Jackson monument caused another debate over a variety of amendments to appropriate sums for various purposes, from $5 to $500,000. The $3,000 for Andrew Jackson in brouze was appropriated.

FRIDAY, Jan. 28.—*Senate*—The Senate did a little private business—ordered a new Pacific Railroad bill, introduced by Mr. RUSK, to be printed—nobody knowing its contents—and adjourned to Monday.

*House.*—Twenty-two private bills were passed and the House adjourned.

SATURDAY, Jan. 29.—*House.*—Nothing done of interest.

MONDAY, Jan. 31.—*Senate.*—Messrs. HUNTER, BRIGHT and PEARCE were appointed on the Joiut Committee to examine and count the Electoral votes, &c. After which the death of Mr. BUELL was formally announced, and Mr. SEWARD, after a touching speech, offered the usual resolutions, which were passed.

*House.*—The announcement of Mr. BUELL'S death and the usual resolutions occupied the House.

THE WEATHER.—Splendid winter weather for the last week or so. Sleighing first rate—and judging from appearances, all ages, sexes, and classes have enjoyed it. On Wednesday the 26th, at Worcester, Mass., the thermometer stood at 2 above zero. On Thursday morning at Cambridge, near Boston, at zero; at Greenfield, in the Connecticut Valley, above Northampton, 2 below zero, at 8 o'clock A M. At Albany, 17 above; at Troy, 16 above; at Quebec, 30 below zero; and at Montreal 20 below. Here, in Rochester, on the east side of the river, 3 above zero; and on the west side down to zero. The evenings have been very fine for sleigh-riding, as well as for star-gazing. Tuesday morning—continues mild—with indications of a thaw. The ice dealers have been gathering in their harvest during the past few days. Owing to the unusual mildnes of the winter, and the increased use of coal, the price of wood has rather depreciated. On Saturday last good wood was offered for four dollars per cord.—w.

## News Brevities.

—Boats were running on the Miami canal on the 24th ult.

—In Chicago there are thirteen Banks of issue, deposit and discount.

—The Havana Diaro has been fined $100 for an article on Louis Napoleon.

—The Duke of Wellington was worth at the time of his death, about ten millions of dollars.

—The Syracuse people are moviug in the matter of a railroad from Syracuse to Newburg.

—The census of the population of Prussia has just been taken. It now exceeds 18,000,000.

—It is stated that the Messrs. Wards contemplate introducing Caloric Engines on the lakes.

—The name of the Fairport Post Office, Chemung county, has been changed to Horseheads.

—A Railroad north from Syracuse through Pulaski, into the lumber regions of Oswego county, is talked of.

—Persons who have used respirators for weak lungs will know the main principle of Ericssou's engine.

—The Maine Liquor Law is pressed by the Temperance people of Michigan, and it is believed that it will pass.

—A Post-office has been established at Pearl Creek, Wyoming county, N. Y., and T. B. Miller appointed Post-master.

—A vessel has been chartered in Boston for the purpose of carrying supplies for the starving population of Maderia.

—Spanish official documents state that the revenue of Cuba in 1850 was $6,729,605; in 1821 it amounted to $8,462,834.

—The Pittsburgh Company supply an excellent article of coal to the people of Cleveland at from $2,25 to $2,50 per ton.

—The Ohio Railroads have decided to carry editors for half price. They must be "very poor" if they take that as a compliment.

—Colt's revolving pistols and other fire-arms are in so high repute abroad, that a manufactory has been lately established in London.

—The population of Dunkirk is four thousand seven hundred aud forty-one, an increase of over one thousand during the past year.

—The inventor of the Caloric Engine—Captain Ericsson—is about to deliver a lecture in New York explanatory of all its details.

—The excess of females over males in England is 400,000; in Scotland 150,000: in Ireland 120,000; and in the United States 600,000.

—The Hon. Robert J. Walker seems to be rapidly failing. He is extremely emaciated, having changed much during the last fortnight.

—Application is soon to be made in the New York Legislature for an act to incorporate a company for the building of six Ericssou air ships.

—At Castleford, England, fifteen millions of bottles are annually made, though the population of the towu is only two thousand two hundred.

—A Company has been formed in Utica to construct a Railroad from that city to Clayton, on the St. Lawrence. It will be 100 miles in length.

—Lima is the topmost city of the earth, being situated thirteen thousand seven hundred aud twenty feet above the level of the sea.

—The three lines of railroads leading from Boston to the West, have advanced the freight charge on flour from 50 to 62½ cents per barrel.

—The report that the late Amos Lawrence bequeathed to Mrs. Gen. Pierce $35,000, is contradicted—no such provision being in the will.

—New Post Offices are established at Hurlbut's Mills, Clinton county, F. W. Ames, P. M., and at Coomer, Niagara county, T. M. Titus, P. M.

—The Governor of Cuba recently advertised proposals for the laying of six hundred miles of subterranean telegraph wire, and three hundred miles on post.

—The number of births in New Jersey in 1852, were 10,683; marriages 2,682; deaths 6,371. Among the deaths were seven persons over 100 years of age.

—The census of Toledo, just taken, shows that place to contain 6,412 inhabitants. Number of dwellings erected the past year, 162; stores, 32; warehouses, 6.

—Nothing has yet been done with the money sent by Jenny Lind to Sweden; indeed, it is a difficult thing to know what is the best way of employing it.

—There were over five thousand persons in nine institutions under the charge of the Ten Governors, in New York city, during the week ending Saturday last.

—A new volume of poems by Whittier, will be out in a few days. The Quaker poet has lost none of his fire, and his last lines are worthy of his high fame.

—Gov. Seymour has formally recognized Ely S. Parker, of Rochester, as the elected Chief and Representative of the ancient confederacy of the Six Nations.

—The ship John C. Calhoun sailed from Philadelphia, on the evening of the 20th ult., for Liverpool, with 9,000 barrels of flour aud 30,000 bushels of grain.

—Mr. Consider Arms, of Conway, in this State, has sold a pair of steers to a gentleman from New York city, for five hundred and fifty dollars! They weigh about 6,000 lbs.

—T. F. Meagher, Esq., was presented with a magnificent sword, on Tuesday evening, by the Napper Tandy Guard of Brooklyn, as a testimonial of their esteem and respect.

—Frederika Bremer, has in preparation a work entitled "Homes in the New World," giving her impressions of America, derived from her recent visit to this country.

—It is reported that the Governor has nominated Hon. Rufus Choate for Attorney-General of Massachusetts. It is hardly probable that Mr. Choate will accept the office.

—They are getting a Clay Monument in New Orleans, at a cost of $50,000, which is to be raised by subscription. A committee is engaged in collecting the names of subscribers.

—The number of meeting-houses of the Friends (Quakers) in 21 of our principal States and the District of Columbia, is 715, and the aggregate accommodation is stated at 283,023 seats.

—Francis Madia, one of the persons imprisoned in Florence for reading the Bible, died in prison. He was imprisoned about 18 months since, and his wife is still in confinement.

—The "Western Plow Boy" is a semi-monthly Agricultural paper started at Fort Wayne, Indiana, by Messrs. R. D. Turner and J. P. Jenks. Price, $1,00 per annum.

—The value of property going from the Hudson River in 1852 is estimated at $118,896,444, against $89,217,789 the previous year, showing an increase over 1851 of $29,678,055.

# California News.

## Arrival of the Star of the West.

The Steamship Star of the West arrived at New York on the 29th inst., with two weeks later intelligence. We glean the following:

The amount of gold by the shipments from San Francisco now on the way by the Mail Steamers, falls short of two millions, a less sum than has been recently received by the semi-monthly arrivals, but as large as could be expected during the present inclement season.

The papers from the interior are filled with accounts of floods, disasters, starvation and misery. The miners on the lower North Fork were spending their time in securing drift wood on the swollen rivers, which paid very handsomely. The heavy rains and winds had wrought injury on bridges, fences, farms, mining works, and almost every species of stock. Accounts of rising waters, falling snows, works swept away, and machinery sunk—their owners driven from their claims, and in many places forced to leave their cabins, in consequence of the cold, and scarcity of provisions from every quarter. This winter causes more suffering in the mountains, than any winter that has yet been experienced by the white inhabitants of the mining regions.

An important decision has been rendered by the U. S. Land Commissioners, confirming the title of Col. Fremont to a large tract of land containing ten square leagues.

Oregon dates were to the 27th of December. Incessant rains were visiting those parts also.

Sandwich Island dates were to the 4th of Dec., but no news of importance. The schooner Caroline, which sailed from Honolulu in July last, for the purpose of conveying to Micronesia the Rev. Messrs. Snow, Gulick and Sturges, with their wives, and two natives of the Hawaiian Islands, with their wives, as teachers, to establish a mission in that extensive archipelago, returned and report the expedition entirely successful. The islands were taking more than usual interest in agricultural matters. The 20th of December was celebrated with great *eclat*—it being the anniversary of the recognition of Hawaiian independence. The new Constitution of the Kingdom went into effect on the 6th instant.

# Foreign Intelligence.

## Arrival of the Africa.

The steamship Africa with Liverpool dates to the 16th, arrived in New York on the 30th ult.

Markets.—Cotton in better demand. Sales 43,700 bales, for the week—6,800 on speculation, 2,300 for export. Market closed steady.

Trade in Manchester quiet. Prices unchanged.

Beef in demand. Holders ask higher prices.—No sales of pork. Wheat in fair demand at full rates of last week. Flour—extreme figures of last week obtained. Indian Corn held firm; good demand for floating cargoes.

England. — The only political news is an announcement by Lord John Russell that he holds his present office ad interim, and will soon resign in favor of Lord Clarendon. Lord Aberdeen officially intimates to Napoleon the desire of the new Cabinet to recognize the Empire on the same terms as would have been done by the preceding Cabinet, but without wishing to disturb the good relations at present existing. The English papers announce the death of the Earl of Stair at the age of 82. Gov. Kossuth is about to revisit this country in consequence of the election of the democratic candidate for President. His visit will occur at an early day.

France.—From France, we learn that Mr. Rives, the American Minister, had presented his credentials. The Ottoman, Prussian, and Austrian Ministers had also made their appearance officially.—A line of French steamers is to be established, to run between Chersburg and the principal ports of North and South America. The line, it is said, is to consist of fifty-three screw-steamers. The winter both in France and England has been extraordinary mild.

Spain.—Spain has under consideration plans for the military defence of Cuba.

Portugal.—In Portugal, the Cortes assembled on the 2d inst. The Duke de Salbanca informed the House that the Gen. Armstrong claims referred to French arbitration, had been decided in favor of that country.

The news from the remainder of Europe is totally unimportant. The yield of the gold-mines in Australia continues to be enormous. The golden freight by the Australian was 222,293 ounces, or eight and a half tons, besides large amounts in the hands of passengers.

---

Coal Mine on Fire.—The Broad Mountain Vein at Coal Castle, which took fire on the 13th of December, thirteen years since, still continues to pour forth its sulphurous gases, and in wet weather, steam may be seen rising in volumes.—For a distance of half a mile, this large vein has been consumed above water-level—how far below is not known. It may be remembered that two miners lost their lives by suffocation in the attempt to quench the fire, and were afterwards found and with difficulty removed by the foreman of the mine, Mr. Michael Sands.—*Harrisburgh (Pa.) Union.*

---

Advance in Land Warrants.—A speculative demand from the West has increased the price of Land Warrants in Wall street, and dealers are paying $12, $81, and $156, for warrants which, calling the land $1,25 per acre, are equivalent to $50, $100, and $200. The Times says the cause of the advance is attributed to the demand from the neighborhood of the new lines of Railway in Illinois, Wisconsin, &c.

---

Hogs.—The Cincinnati Gazette, of the 27th ult., states that the number of hogs packed in that city during the season just closed, was 361,871.—Number last year, 852 058. With regard to the weight of the hogs the Gazette says that compared with last year there is, undoubtedly, a falling off of five per cent, and the deficiency in lard is estimated at ten per cent.

---

—— The New York Herald states that 1,000,000 barrels of apples are received at the Washington market alone, in that city, during the year; about one-half of which are shipped to other places.

—— Messrs. Gage, Hittinger & Co., of Charlestown, have lately despatched an ice house *and contents* for Australia. Ice will be a great luxury there, and will bring the gold in exchange for its crystals.

—— Negro property, says the Tennessee Whig, has advanced very considerably in this county since the letting out of the railroad contracts.—Common field hands are hiring from $140 to $160.

# News Paragraphs.

☞ It is stated in one of the Boston papers, that a few evenings since a little stranger, in the shape of a bright-looking boy, about four weeks old, was left on the door-steps of a Mr. Strange, No. 28 North Russell street, who took him in and will see that he is properly cared for. What makes this *strange* affair more *strange*, is the fact that the father of Mr. *Strange* was left on somebody's door-steps in the same *strange* manner.—This is why the name of *Strange* was given to him.

☞ The Auburn Advertiser learns that a number of gentlemen in that city intend to make a proposition to assume all the debts of the Auburn State Prison — complete the improvements that have been commenced inside the wall—put a new roof on the main building, which is much needed, and pay all the expenses of the institution for ten years to come from the profits of the convict labor for that length of time, taking the contracts for labor as they now stand.

☞ A correspondent of an Irish paper, writing from Monahan county, Ireland, gives a remarkable instance of longevity. Owen Duffy, when 116 years old, lost his second wife; he subsequently married a third, by whom he has a son and daughter. His youngest son is two years old, and his oldest 90. He is now 122 years of age, and retains in much vigor the use of his mental and corporeal faculties. He walks frequently to the county town, a distance of some eight miles.

☞ A curious case of somnambulism is recorded in the Chillicothe (O.) Gazette. A daughter of Mr. Thomas Kaine arose from her sleep, and in her night clothes walked four miles up the Sciota river, waded into the stream, and swam across the deep part, and was found by an "early riser" sitting on the bank of the river asleep!—Remarkable enough, as the girl was only 13 years old, and could not swim when awake!

☞ There are in Cincinnati 175 persons and companies that pay an annual tax of between five and ten thousand dollars; 54 who pay between one and two thousand; 15 who pay between two and three thousand; 7 who pay between three and four thousand; 1 who pays between four and five thousand; and two who pay between five and six thousand. Nicholas Longworth pays a tax of $19,177 39.

☞ Frederick Wolcott, of Corning, watched the trains of the Erie Road, and employed others to do the same, till he was able to prove forty-five violations of the statute in not ringing the bell at crossings. He sued the Company in the name of the people. The Jury brought in a verdict of nine hundred dollars. One half of this sum goes to the complainant, who makes a very handsome speculation.

☞ Two hundred acres are planted with the Catawba grape vine in the town of Hermann, Mo. The vineyards are upon the southern side of the high banks of the Missouri river, and thrive well. The town contains 1,200 people, all engaged in the wine making business. They expect to manufacture 25,000 gallons in an ordinary season, when the vines come to maturity.

☞ A venerable subscriber to the Hartford (Ct.) Courant writes as fallows:—"I have this day forwarded by mail two dollars. I have taken the Courant sixty-three years — forty while in Connecticut, and twenty-three since I have resided here. I may not live to the end of this year, but shall be ninety years of age should I live to the first of March next."

☞ Letters from St. Jago, Cuba, state that according to the official returns, twenty-six hundred and fifty persons died of Cholera at St. Jago, Cuba, in October and November, and December last, out of a population of 30,000 to 40,000. During the height of the pestilence, a terrible earthquake occurred, which destroyed many of the best buildings in the city.

☞ The Bituminous Coal-smoke seems now to be particularly annoying to the Pittsburgers, the damp atmosphere having condensed the immense clouds of smoke thrown out by the numerous factories of the city, and caused it to descend in showers of sooty flakes, rendering the city more than usually uncomfortable.

☞ An Island, one hundred feet in length and seven feet in height, was recently formed in the Lake of Cleevets, near Eutin, in North Germany, by the effect of the hurricanes. In 1814 a similar phenomenon occurred, but in a few months the isle suddenly disappeared, and there were twelve feet of water where it had been.

☞ The Boston Post recommends the disposition manifested by Congress to forward the enterprize of Messrs. Alden and Eddy to build a Telegraphic line to San Francisco, and adds that the prospects are that that city and those on the Atlantic will be within speaking distance within eighteen months.

☞ The Toledo Blade tells a good story of one of the land owners of that thriving city, who was offered for an eligible lot as many silver dollars as would cover it. He took a night to consider the offer, and agreed next morning to accept it, on condition that the dollars were placed upon their edges.

☞ Twenty millions of gallons of wine are annually consumed in this country. Six millions of gallons are imported; three hundred thousand gallons are manufactured from American grapes; and the remainder from cider, turnips, logwood, whiskey, rain water, and sugar.

☞ The Post-master General publishes an official notice ordering that on all letters to and from France through England, the single rate of United States postage be 21 cents, and on newspapers 4 cents: such postage to be collected in and retained by the United States.

☞ The Fredonia Censor in noticing the fall in butter in Albany, New York, &c., states that a great reduction has taken place in Chautauque county, and that some lots for which twenty-six cents per pound were lately refused, are now selling at sixteen cents in trade.

☞ One of the largest retail dry goods establishments in Boston, has paid, in the regular course of their business, during three months, the sum of *one hundred and thirty-five dollars*, or an average of *forty-five* dollars per month, as premium for silver coin.

☞ The bridges on the Baltimore and Ohio Railroad, between Cumberland and Wheeling, number one hundred and fourteen. One of them is 600 feet long, and is elevated forty feet above the Monongahela river, which it spans.

☞ The San Francisco Times, of December 15, describes a "stalk of corn twenty feet tall, with some of the ears still upon it, about eighteen feet from the root," brought to that office from near Sacramento.

—— The estimated value of property coming to the Hudson River the past season is $66,893,102, against $53,927,508 the previous year, thus exhibiting an increase of $12,965,594 in 1852.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Feb. 2, 1853.

The sleighing of the past week has given to business more than usual animation. Farmers of the surrounding country, embracing many from adjoining counties, have been bringing forward produce by teams, and buying liberally supplies for home consumption.

Flour.—Holders are still sending forward by Railroad. The home price and demand stands unchanged.

Grain.—It is computed over 50,000 bushels of wheat have been brought in by teams for which $1,12@1,17 has been obtained. Corn, Oats and Barley in fair demand at quotations.

Provisions.—Very little alteration in staples. Butter and eggs are less firm. Potatoes plenty—sales from teams 31@37½. Very few apples for sale.

Fresh Meats.—Although the season may be said to have closed, small lots of Pork are coming in for which $7@7,50 is paid. Beef not quite as plenty, but better. An advance would not be improbable. Mutton carcasses not in as good supply.

Poultry—Abundant; rates less firm.

Seeds.—Clover is held high and very little will be sold, all waiting for a change for the better. We hear $6,50, 7@7,50 mentioned. Little doing in Timothy.

Hay.—The supply is fair. Sales are readily made at the rates in the table.

In other articles we hear of no change demanding attention.

### NEW YORK MARKET.

NEW YORK, Feb. 1.

FLOUR—Holders of western and State flour are firm under the Africa's news. Demand is mainly for home and eastern trade. The firmness in freights limits enquiry for export. Canadian quiet and prices nominal. Sales western canal 2,500 bbls, at $5,44@5,50 for common to straight State; $5,62@5,75 for mixed to fancy Michigan and Indiana; $5,68¾@5,75 for common to good Ohio.

GRAIN—There is little doing in wheat and holders are firm, but to effect sales some abatement would have to be made, and quotations in absence of sales would be nominal. Barley firm and in fair request. Sales 2,500 bu good two rowed at 72. Oats plenty and dull. 50@51 for State and western. Corn firm. Sales 7,500 bu at 68@70 for southern white and yellow. Old dull and nominal.

PROVISIONS—Pork dull and heavy. Sales old mess at $18,50; do prime $15,87; new mess $18,87; do prime $16,-25. Beef steady and in fair demand. $9,50@11,25 for country mess. Dressed hogs scarce—8¼@8½. Lard dull, plenty; 11c for Western. Butter firmer. 19@23 for Western dairies; 14@18 for Ohio.

**A Desirable Country Residence For Sale.**

DAVID THOMAS, near Aurora, Cayuga Co., N. Y., wishing to retire from the care of his farm, offers it with all its extensive improvements for sale. It is pleasantly situated near Cayuga Lake, contains 118 acres of land, has a spacious and comfortable dwelling, with a laborer's cottage, and various out-buildings, together with extensive orchard and fruit-gardens, and a large ornamental and kitchen garden; the whole forming a completely furnished, comfortable, and desirable farm-residence, which is offered at the low price of $60 per acre. 163–3t

**FARM FOR SALE IN MACEDON.**

A FERTILE Farm, under a high state of cultivation, situated 1½ miles from Macedon Centre, where a flourishing Academy is located; one mile from the Syracuse and Rochester Railroad, and two miles from Macedon locks, on the Erie canal. Seventy-five acres are under cultivation, and twenty-five covered with a heavy growth of valuable timber. The farm is watered by permanent springs,—has good orchards of the best varieties of apples, pears, peaches, &c.,—and comfortable and commodious buildings. It will be sold for $45 per acre. Inquire of J. B. Sands, Canandaigua, or on the the premises, of L. TAFT.
Macedon, N. Y., Jan. 29, 1853. 163–3t–eow*

**FARM FOR SALE.**

A SMALL Farm of twenty acres, under good cultivation. Seven acres fall plowing done; remainder corn-stubble and meadow; all feasible, good land: situated in East Penfield, eleven miles from Rochester, near the Free-will Baptist Church—pleasant and desirable location. Good dwelling house, newly fitted up, and outbuildings good. Fruit abundant; large orchard, all grafted when small, of choicest fruit. Peaches of the choicest kinds; quinces, cherries, plums, grapes, and shrubbery tastefully arranged.

The above is a part of the Abram Becker farm. If not sold will be rented with or without the land. Inquire of the subscriber near the premises.
163–3t* TRUMAN MATTISON.

**DAGUERREOTYPES.**

THE Subscriber continues the business of Daguerreotyping, at his old stand in Chappell's Block, 82 State-st. Grateful for past favors, he will, as heretofore, adhere to the motto, that "whatever is worth doing at all, is worth doing well,"—trusting therein for a continuance of public patronage. Pictures copied, and all other work done in the highest style and finish known to the Art.
Rochester, Jan., 1853. [162–oam] S. B. SMITH.

**AMERICAN ELOQUENCE.**

WILBUR M. HAYWARD having published Webster's Great Orations, would invite public attention to the same. The volume contains the Eulogy on Adams and Jefferson; the Landing of the pilgrims; the Bunker Hill Monument; and the Reply to Hayne. These productions of America's Master Mind will live and be read forever. The eloquence and example of Webster is a rich and exhaustless legacy, of which every American can feel proud, and for which he should be grateful. The work is embellished with a fine and accurate likeness of the great Statesman and Orator. It should be in the hands, and its sentiments of lofty patriotism on the hearts of all who boast of the American name. It is now for the first time in a form accessible to all. Price—Single copies 37½ cents. 3 copies $1. It can be mailed to all parts of the Union, and Canadas. Readers of the Rural, send in your orders.
Address, WILBUR M. HAYWARD.
163–tf No. 4, Burns Block, Rochester, N. Y.

**FARM FOR SALE.**

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.
JOSEPH ARMSTRONG.
Pittsford, Monroe Co., N. Y., Jan. 7, 1853. 158–tf

Address D. M. DEWEY.
Arcade Hall, Rochester, N. Y.

☞ The Valentines are now ready to send.
January, 1853. jan1–8feb5.

**The Stowell Evergreen Sweet Corn.**—A few bushels of this new and valuable variety, from seed raised by Professor J. J. Mapes, L. L. D., for sale. Per bushel $16; peck $5; half peck $3; quart $1; sent by express to any part of the country, on receipt of the money by mail. This is beyond all doubt the best and most prolific kind of Sweet Corn ever grown. No Farmer should be without it. One of the advantages claimed for this corn by Prof. Mapes is that it may be kept green and fresh all the year round. The subscriber's limited experience, however, does not enable him to endorse this. Address, post-paid,
ALFRED E. BEACH,
White Plains, Westchester Co., N. Y.

From the "Working Farmer," September, 1851. By Prof. Mapes.

We have long been convinced that Sweet Corn would prove superior as green fodder, to any other; and the only objection urged against its use has been the smaller yield per acre compared with other kinds. We are now prepared to recommend the use of Stowell's evergreen corn for this purpose. The stalks are nearly as sweet as sugar cane, and double the quantity can be grown to the acre to that resulting from ordinary sweet corn.

Prof. Mapes, in the "Working Farmer," December, 1851, gives the following directions for preserving the Stowell Evergreen Sweet Corn:

The ears should be gathered when fully ripe, and the husk should be tied at the nose (silk end,) to prevent drying, when the corn will keep soft, white and plump for more than a year, if in a dry and cool place. At the dinner of the Managers of the Fair of the American Institute, last year, we presented them with the corn of two successive years' growth boiled, and there was no perceptible difference between the two. This year we sent to the Fair one stalk containing eight full and fair ears, and could have sent many hundred stalks of six ears each.

**Emery's Patent First Premium 1852,**
**RAILROAD HORSE POWER,**
**Threshing Machines, Separators, &c., Western New York Agency.**

**E. D. Hallock, Agricultural Warehouse, No. 50 State St. Rochester, N. Y.**

THE Subscriber, late from the Albany Agricultural works Warehouse and Seed Store, where he has been engaged for the past six years, has secured the sole Agency for the sale of Emery's Patent Railroad Horse Power for Rochester and vicinity, so widely and favorably known throughout the country, and which has without exception, taken every highest premium awarded in the States of Ohio, Michigan, and in New York, for the best Railroad Horse Powers in 1850, 1851, and again in 1852, also at the Provincial Fair of Canada, recently held at Toronto, was awarded a Diploma and £2, of which the judges highly commend the principle and workmanship of this Power, now offer them at manufacturer's prices, with the transportation added, and subject to the warrantee as follows:

"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded."

For further particulars see Circulars and Catalogues, which are furnished gratis on application to the subscriber.

The attention of the Farming public is solicited, and a careful investigation into the construction of this Power and its comparative merits, as well as price, is requested before purchasing elsewhere.

The Wheeler power is also offered *ten* dollars cheaper than heretofore by any other agency, and subject to same warrantee as given by others for the same kinds. Samples will be kept constanly on hand, and to insure promptness and avoid disappointments in supplying them, farmers are requested to send in their orders at as early a date as possible.

He will keep for sale, Emery's Seed Planters, the best in use; Circular and Cross Cut Saw Mills, Feed Mills, Corn Stalk and Hay Cutters, Corn Shellers, Churning fixtures, &c., adapted to the Power.

Also, Reapers, Mowing Machines, Grain Drills, Plows, Harrows, Cultivators, Corn Shellers, Hay Cutters, Fan Mills, and Agricultural and Horticultural Implements generally. He will be prepared to furnish dealers with Dunn and Taylor's well known Scythes; also, Manure, Straw and Hay Forks, Snaths, Rifles, and other haying tools, at manufacturers' prices, wholesale and retail.

Particular attention is called to A NEW PLOW, which is believed to be the best cast-iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any plow heretofore sold in this vicinity, while the price is less than for any other equally well finished.

The "uniform one-price, cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time will allow. Farmers and others are invited to call and examine the stock of Machines and Implements,—and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

E. D. HALLOCK, 50 State street, Rochester.
Oct. 5, 1852. [145–tf]

**Important to Farmers**

**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

Ross' Improved Patent Conical Burr Mill Stones.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for griuding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
154–tf opposite the Arcade, Rochester, N. Y.

**CARY'S ROTARY FIRE ENGINE PUMP.**

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.

No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.
76-tf. CARY & BRAINARD.

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a Stereotype Foundry in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

# Poetical.

### THE LITTLE HINDERING THING.

[It is not often given us to read a piece so unpretending, and yet withal so poetical, as the following touchingly beautiful lines. They were written by an English laborer, whose child was suddenly killed by the falling of a beam. Its premature death suggested the melancholy monody.]

Sweet, laughing child!—the cottage door
Stands free and open now,
But oh! its sunshine gilds no more
The gladness of thy brow!
Thy merry step hath passed away!
Thy laughing sport is hushed for aye!

Thy mother by the fireside sits,
And listens for thy call;
And slowly—slowly, as she knits,
Her quiet tears down fall;
Her *little hindering thing* is gone,—
And undisturbed she may work on!

# Rural Sketch Book.

[Written for Moore's Rural New-Yorker.]

## JEALOUSY;

### OR, IS HE MY RIVAL?

"Thank Heaven for my safe return!" was the ejaculation that escaped my lips, as I stepped from the deck of the Crescent City, and once more found myself in the great commercial emporium of our western world. "Three years ago, I left this very wharf a poor adventurer in pursuit of wealth amid the golden mines of California, and although thousands have fallen victims to pestilence or been sacrificed to the malice and cupidity of man, yet I have returned in health, and possessed of a sufficiency of the 'glittering dust,' to enable me to pass the remainder of my days in affluence."

Twenty-four hours subsequent to the above reflections, I found myself at a country inn, near the interior of the State, awaiting the arrival of the stage coach that was to bear me to the next town. While at Sacramento I had forwarded a few hundred dollars, in care of a firm in New York, to my widowed mother, but on my recent arrival, I learned that it had never been ordered by her. This gave me much uneasiness, and was a cause of hastening my departure from the city, as I had a vague apprehension that some calamity had befallen her during my absence. Still I confess that this was not the only cause of my anxious haste to reach my native town. It was there resided the loved one of my heart—that bright divinity of my soul, whose image had been with me through all the varied and eventful scenes I had encountered since my departure from R.

In the midst of reflections like the above the diligence arrived, and I was soon seated and on my way to my native town. One passenger only was my companion—a tall, genteel, well-dressed personage, apparently about my own age, with whom I was soon engaged in conversation. Being somewhat communicative he at length informed me that the place of his destination was the same as my own.

"Are you acquainted at R.?" inquired I.

"With one or two families, sir," was his reply.

"Do you know widow H.?" said I, with some degree of anxiety.

"She that lives next to Esq. Ellmore's?"

"The same."

"I have seen her while on a visit to the Squire's."

This answer in a measure relieved me from the anxiety I had felt concerning my mother's safety. After a short time, however, it began to awaken in my mind a somewhat perplexing inquiry. Why, tho't I, should this young, genteel appearing man be a visitor at Esquire Ellmore's? I considered the subject, and the more I considered it the more perplexing became the inquiry.

"You are acquainted, then, at Esq. Ellmore's," said I, with affected indifference.

"Yes, sir," was the reply, "that is the place of my present destination."

This answer, certainly, did not tend to allay my growing uneasiness. Yet as to entertaining any feelings of jealousy—pshaw! the idea was absurd! Still I considered that there could be no harm in continuing my inquiries.

"A very pleasant and agreeable family that of Esq. Ellmore's," observed I.

"You are quite right, sir," he responded; "the Squire and his lady are a very agreeable old couple; and as for Miss Julia, she is a perfect model of beauty and excellence!"

Now all this *I* knew to be true, but what right had *he* to know it? Could he be a rival in my Julia's affections? Nonsense! Impossible! I know her too well to doubt her constancy for a moment. Yet the thought that my mother had failed to apply for the remittance I had sent her from the land of gold, suggested the idea that perhaps my letters to her had never been received; and if hers had failed, why might not those I had written to Julia have shared the same fate? Still I cannot, will not doubt the constancy of my dear Julia. As for this traveling companion, he is probably some relative. Who knows but he may be my cousin-in-law, or uncle-in-law, or some other future relative.

"May I inquire, sir, if you are related to Esquire Ellmore's family?" was my next query.

Related! oh, no, sir, not at all; I am merely an acquaintance. I am expected there this evening; I promised Miss Ellmore I would come, *without fail!*"

This answer only increased my agitation; but fearing lest I should betray my feelings, I leaned my head on my hands and feigned fatigue. The more I reflected on the subject, the firmer hold did the "green-eyed monster" gain over me. Still I determined I would not thus distrust my Julia. Perhaps, thought I, this fellow is only a vain, conceited coxcomb, and wishes to pass himself off as an accepted lover.

I raised my head, and assuming a jocular tone, asked my companion if he thought Miss Ellmore really handsome.

"I will leave you to judge for yourself," said he, "as I happen to have a *fac simile* of herself with me." Saying this he drew forth a neat gold locket from his vest, and handed it towards me.

Heavens! how the blood rose to my face. It was my last parting gift to Julia. I took it in my hand—I knew it well. It was a double case, and I remembered that my own miniature had been set in the reverse. After gazing a moment at Julia's well-known face, I turned the locket, opened the opposite side, *and found it empty!*"

How I managed to keep my temper I know not; but I returned the locket to my companion, and became comparatively calm just as the coach stopped in front of Esq. Ellmore's residence. Julia was seated on the verandah in front of the dwelling, and as my companion alighted, I heard the exclamation, "He's come!" fall from her lips.

What a change had the last hour wrought in my feelings! Had not the incidents above mentioned transpired, I should have hastened to embrace her whom I hitherto supposed a model of constancy. As it was, I thanked my stars that I had learned her perfidy in time to save myself the mortification that might otherwise have ensued.

My reflections were now interrupted by a request on the part of my companion that I would alight from the coach, while he should take a roll of canvas from beneath my seat. I complied, taking especial care, however, not to be observed by the perfidious Julia. But as ill-luck would have it, Esq. Ellmore's gardener saw and recognized me, and at the same time exclaimed:

"Here, Julia! good news! George H. has come!"

Confound the the fellow's impudence! I could have strangled him. I turned to regain my seat in the vehicle, but in an instant Julia had flown to my side, thrown her arms around my neck, and almost smothered me with kisses. I was thunderstruck.

"Why Julia—what means—indeed, Miss Ellmore," said I, hesitating and stammering; "you forget you have a *friend* and visitor present."

Julia blushed, and turning to my companion, said, "You will pardon such a manifestation in your presence, Mr. Martin, when I inform you that this is George H., *the original of the portrait I have employed you to paint!*"

I comprehended all in an instant. Mr. Martin was simply an artist from the city, who had been entrusted with my miniature in order to transfer a copy on canvas, and that he might the better accomplish his design, it had been temporarily taken from the locket. I accompanied the party into the house, and as the canvas was unrolled and I beheld my own self faithfully represented thereon, I confess that all my jealousy, like Bob Acre's courage, suddenly oozed out the ends of my fingers.

Instead of feeling any ill will toward my fellow-traveler, I complimented him highly on his professional skill, and at his request gave him a "good recommendation" to the public in general, and all my friends in particular.

Just one week from that day, Miss Julia Ellmore became Mrs. George H., and since that time we have had more than one hearty laugh at my jealous indignation towards a poor, innocent portrait painter.

---

When any man speaks ill of us, we are to make use of it as a caution, without troubling ourselves at the calumny. He is in a wretched state who values himself upon other people's opinons, and depends upon their judgment for the peace of his life.

Knowledge is the parent of dominion.

# Wit and Humor.

### WHO BORROWED MY UMBRELLA?

I once a bright, round dollar spent
For an umbrella, which I lent,
And thought the fellow really meant
Back again to have it sent;
For such, he said, was his intent.
And many an anxious hour I spent
Waiting for that same event;
But wind or weather did prevent,
Or he his promise did repent,
And oft in storm though, I out went,
And plainly spoke my discontent;
Vain, all in vain, was my lament—
And so a fiery document,
Rich in persuasive argument,
Though very little blandishment,
No doubt to his astonishment,
Through the office, to him I sent.
When back he wrote, that accident,
My umbrella much had rent,
And he hoped my heart, benevolent,
Would not ask equivalent.
Was every man so impudent?
Or brass so awful evident?—
But I could not the deed resent
To fight, I was too corpulent,
(Though not the least belli-potent,)
And so myself I did content,
In rhyme my anger to give vent.
And though perhaps not eloquent,
I've told my honest sentiment,
That money's very poorly spent
Buying umbrellas to be lent.

### PARLIAMENTARY ORATION.

We are indebted to a gentleman who has been on a brief visit to the Provinces for the following outlines of a speech, delivered by Mons. ———, in the Provincial Legislature of New Brunswick, one of the Colonies of her M. G. M. Victoria I:

Monsieur Govner and de peoples on dis House et Monsieur Spekaro—I'm very stranger on places, and dis am premier time I am on dis House; but de peoples where was I belong gives me his confidence so much zat I feel gratefulness to dem for de honor dey refer on de top of me.

Gentreman, you not spect great deal of learn for one people dat only stop two years wid one school house on him, derefore you shall seuze my Anglais very much. One ting I want—to had a fair play. You had one priest on dis House au jour to make a de prayer, and dat time I will ho sall pray on do French when he sall pray, as de reason are de French prayer are more strong.

Some people was told mo, wo was to get some gold watch, and some gown for de vife of zose as belong to dis House; and some little ting more, as paper, de knife, de ting for pick tooth, and de ting for make smell good. I must have all dis little tings.

I wants to have my boy a new collars, and I want to pass one laws to stop de marchand for sharge so mosh; mine oncle was told to me de sharge was bomination high. De nex law I want to make will be to stop dem witch ting—I forget what you call de Messerize—dat make de peoples look as dies.—Some people was told me dem feller she's able to make dead de people; able to make sing; to make talk; to make told every ting on do House—do money dat you had on your pocket; and dey make told some ting more as ten thousand mile. All wat people wat make de morize, dat is surely one danger ting, very, and for a law should make.

Well, dere is one more kind. You may depen dem same fellar make rotten de potats, yes, dis five and six year; make lame de horse; make spilo de cow; make not grow all de grain very mosh; make kill all de peoples all do same as os one good doctor do it. Now we must hang all do whole of it.

Now Monsieur Spekaro, de next ting we sall took in hands is dis Road Rail dat is spoke so mosh about. I tink for me dey will tenancy for spile all de farm. Am tole dey will cut open all do farm where I was belong; and de French people have small onongh already. But spose you make de Road Rail you must stop his damage, and only way you could done dat, you must cut away all dem bits and let de water salt on do mash, de mash all now stop grow de grass. My father was told me so long as I am born de hay was grow so big, de cock not possible for stay on de mash. Dis are bad law.

New gentreman, I want you look on your consider. I tink we must try for stop de Yankee for raise de wooden pig. My cousin was bought one large shoulder behind; I tink he weigh forty pound; well, for look she'll do pretty well, but for eat sho is de dovil. Spose do peoples have to eat dis kind of pork, dey not live much long. Dem rascal Yankee mus bo kill.

Now dis tunder and lightnin road, some folks tell me was more fast you can't see.—I tink dey will be great danger ting. Suppose one people have some steel on her pocket for contraction de tinder, dey must be kill right away. Yes, dey'll be made so soft one ball puff.

I want to stop ever ting as make do people kill; dis ting I make speak about, dem is de ting I vete; for I tole you all on de House I hole myself responsibility to de peoples for all de law now made. Gentremen you will I tank for de contention you been make upon me; I'm loyal subjic and belong to de free restitutions. Dat's all I could say dis time.

---

Canine Nurse Wanted.—The following is a literal translation of an advertisement which appears in a French paper:

"La Signora Machesa Siffanti di San Bartholome wants a nurse, unmarried, to raise a small family of five English puppies, pure blooded. The Signora Marchesa, will expect the nurse to board at the house of his Excellency, breakfast with the Marchioness, dine with the servants, and sleep with the dogs. Salary twenty dollars a month."

### THE DOG AND THE LOBSTER.

There was much surrounding cachination where this circumstance was mentioned the other evening:

A man who was "somedele" fond of lobsters, was wistfully regarding a basket of them in the market, with his dog by his side, while another by-stander was sticking the end of his cane into one of the disengaged claws of a big fellow at the top. "How he does hold on!" said the man with the cane.

"Yes," responded the man with the dog, "but it's because he *'dents* the cane, and his claws won't slip on the wood. But he couldn't hold on to a critter, or you or I, in that way. When he feels any thing *givin'*, a lobster always stops pinchin'."

"Guess *not*," said the owner of the basket: "you put your dog's tail in that there claw, and you'll *see* whether he'll hold on to't or not." No sooner said than done; the lobster-lover lifted up his dog, dropped his tail into the open claw, which closed instanter, and the dog, "as smit by sudden pain," ran off howling, at the top of his speed.

"Hello!" exclaimed the owner, "whistle back your dog; he's runnin' off with the lobster!"

"Whistle back your *lobster!*" rejoined the other; "*that* dog aint coming back; that dog's *in pain*. I can't git him to come near me when he's in pain." That humane citizen dined that day upon as fine a lobster as there was in *that* basket, "any how!"—*Knick-Knacks.*

---

When you hear a man insisting upon points of etiquette and fashion, wondering for instance how people can eat with steel forks and survive it, or what charms existence has for persons who dine at three without soup and fish, be sure that individual is a snob.

---

Men are to be estimated, as Johnson says, by the mass of character. A block of tin may have a grain of silver, but still it is tin; and a block of silver may have an alloy of tin, but still it is silver.

The greatest king must at last go to bed with a shovel.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

### EXPERIMENTS IN ELECTRICITY.

1.—Lay a watch down upon a table, and on its face balance a tobacco pipe very carefully. Next take a wine-glass, rub it quickly with a silk handkerchief, and hold it for half a minute before the fire; then apply it near to the end of the pipe, and the latter, attracted by the electricity evolved by the friction and warmth in the former, will immediately follow it; and by carrying the glass around, always in front of the pipe, the latter will continue its rotatory motion—the watch-glass being the centre or pivot on which it acts.

2.—Warm a glass tube, rub it with warm flannel, and then bring a downy feather near it. On the first moment of contact, the feather will adhere to the glass, but soon after will fly rapidly from it, and you may drive it about the room by holding the glass between it and the surrounding objects; should it, however, come in contact with anything not under the influence of electricity, it will instantly fly back to the glass.

3.—A stick of sealing-wax rubbed against a warm piece of flannel or cloth, acquires the property of attracting light substances, such as small pieces of paper, lint, &c., if instantly applied at the distance of about an inch.

Answer to Miscellaneous Enigma.—*The betrayal of confidence.*

Answer to Charade.—*Faith*—(perhaps.)

### TO AGENTS AND OTHERS.

Encouraged by the brilliant success which has thus far attended the publication of Moore's Rural New-Yorker, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* Premiums. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the Rural New-Yorker from any one town in *the State of New York*, in proportion to its population, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in Books or Agricultural Implements, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for fifty or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for thirty subscribers.

4th. To every one remitting payment for twenty copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for ten copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for six copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere tricly to the following

### TERMS,—IN ADVANCE:

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the Rural and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

---

Moore's Rural New-Yorker is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The Rural New-Yorker, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

---

### MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising:

One Dollar per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the New-Yorker is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

---

### THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S
# RURAL NEW-YORKER.

VOLUME IV. NO. 7. ROCHESTER, N. Y.—SATURDAY, FEBRUARY 12, 1853. WHOLE NO. 163.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper,**
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

#### DRAINING AND CLEARING MARSHES

IN most sections of the country are found frequent portions of boggy land, covered for a whole or a part of the year with water, and producing little or nothing of value to the farmer. These tracts vary in size from less than one, to thousands of acres, and the character of their vegetation is also varied. Some are covered with coarse ferns, flags or grasses, others with small bushes, others still, with alders and willows and an occasional elm, birch, soft maple, or black ash sapling. They are characterized alike, however, by a deposit of muck of greater or less depth, and by the presence of sluggish or standing water for a large portion of the year. To render such lands of the highest value for agricultural purposes, draining and clearing are necessary, and it is of these operations that we propose to speak in the parapraphs which follow.

The supply of water in these marshes sometimes arises from springs, which break out in a comparatively level spot, and form a sluggish stream, which overspreads and saturates a wide surface; in other cases the water seems to flow principally from the higher surrounding lands—the marsh occupying a natural depression or basin. In most cases the subsoil is of a retentive character—often a pure blue clay, through which water penetrates but with the greatest difficulty, and in almost inappreciable quantities.

In the first of these instances—where springs supply the water—good and sufficient drains should be opened, to carry it freely away. If several springs exist, each one must thus be tapped, and if possible the general outlet should be of depth sufficiet to lower the springs two or three feet below the surrounding surface. If the springs are numerous, and, as in some instances we have known, do not come to the surface, such ditches as are recommended in the second case are needed.

Where the supply of water comes from higher lands, aided by the retentive character of the soil, a different treatment seems necessary. The sources of supply must be headed back or cut off by ditches at the the point where upland ceases, and swamp or marsh begins. These will divert and carry away the surplus water, and, with other drains proportioned to the extent of the marsh, will soon change the character and value of the land. The stagnant pond, the miry slough, and the boggy marsh, will soon become firm ground to the foot of man and beast, and when cleared, will yield most ample and surprising returns for the expenses of so desirable an improvement.

We have so recently given a complete treatise on the subject of Drainage, that particulars are scarcely needed in the present instance. The great object is to construct and keep open proper and sufficient channels to carry off speedily the surplus water in the soil, from whatever source derived; and the mode of accomplishing this each farmer may choose for himself. We recently copied an instance where brush drains were employed for all save the main ditches, and for many years have well and cheaply answered this purpose.

Ditching may, in most instances, best be performed in autumn, but the work of clearing can, in great part, be accomplished in winter while the ground is frozen, as boggy and springy places can be reached nearly as well in that case, before, as after clearing. The bushes will cut easier also—the timber of shrubs growing in such places, generally proving more brittle when frozen. Considerable fuel may be saved, especially in a black-alder swamp, and the fine brush may be burned at once, with proper attention to starting and supplying the fire, or may be left to dry until early summer. As soon as drained and cleared, most farmers sow to oats, and stock with Timothy or other grass, with no other cultivation than a thorough harrowing. A fine sod will soon be formed, either for meadow or for pasture, or, the land may be cultivated in various spring crops, winter wheat generally not succeeding perfectly where the muck is of much depth.

The draining and clearing of marshes is a matter of much importance to those whose farms are disfigured by them. They are not like wood-lots, constantly increasing in value, but are wholly useless, and often the source of unhealty malaria, to the injury of all within its influence. And, when cleared and drained, they become the most easily cultivated and productive part of the farm, often paying in a single year the whole expense of bringing them into condition for cropping.

#### A CHAPTER ABOUT DOGS.

MESSRS. EDITORS:—I have just paid my taxes, and among the items of the same, was 50 cts. for being an "able bodied man, and liable to military duty," and 50 cts. for my two dogs, "Boso" and "Trip." At the first thought it seemed rather mortifying that two dogs were of equal value in community with the "noblest work of creation," to wit, a private in the Militia of the State of New York; but when I think of the vast benefit they are in the world, and especially the luxury of their society I think our Legislators were correct in making two of them equal to a man. Think of this, ye unwise souls who have none of the delightful creatures. You know not how much pleasure you lose in this way. They are such loving, social beings, they leap upon you, leaving the marks of their attachment upon your garments—they follow you into the parlor, and floors and carpets prove that they have been that way. Even your little girl—in her new prink dress—is not left without something to remind you of the depth of their attachment.

But their friendship is but one of many of their useful qualities. They are great promoters of health in a community. All physicians agree that too much sleep is injurious to mankind. And who does not know how nicely dogs keep the community from too great indulgence in somniferous pleasures, especially in country villages?—Something disturbs the slumbers of old "Towsor" at one end of the street, and with a hoarse base he begins to "bay the moon;" "Pink" at the next house strikes in a treble, "Carlo" across the street now joins with a tenor, and soon the whole troop,

> "Mongrel, Whelp, and Hound,
> And curs of low degree,"

put in their notes, each adding to the music. Ah, sirs! this is delicious; shades of JENNY LIND or OLE BULL rest on your laurels and listen to this concert of vocal music in a country village! No fear of a superabundance of sleep there. Is not this one reason that people in country villages are so much healthier than in large cities, where, in consequence of the stringent ordinances about dogs and the quantities of *sausages* manufactured, dogs are not as plenty? Think of this, ye health officers.

Again, dogs are such useful assistants.—Does a cow or a hog get into the corn or potato field, how handy to have a dog to set upon them to drive them out. If they run to the extreme end of the field, and you have to follow and drive them back again, don't, by any means, suppose that the dog is to blame. It is only because the cow or the hog is too contrary to go out, where they came in. No blame should be attached to the dog—he did not drive them there—they ran ahead and he only followed after.

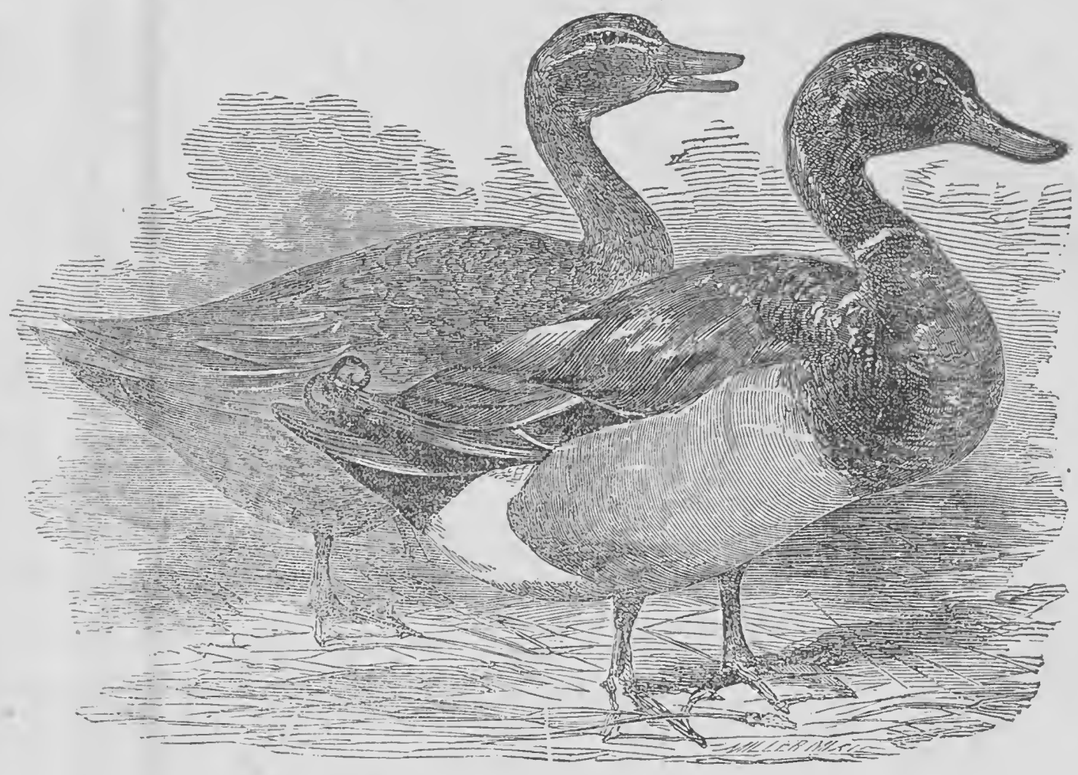
It is said that under the old Blue Laws of Connecticut, a person that was supported by the town was not allowed to keep more than three dogs. This unjust and tyrannical law, I presume, our Puritanical ancestors retained from their aristocratic forefathers, the English, and it shows how old prejudices will stick to an enlightened people. But, I am happy to say, this law has long since been repealed, and at the present time, a person, though so unfortunate as to be dependent upon public charity, may keep as many dogs as he pleases. At least I suppose this to be the case, from the instances which I have seen; why should the poor be deprived of this privilege?—it is all the stock they have; not a cow or a hog can be seen around their premises,—then why deprive them of the right of keeping half a score of dogs? Why, Mr. Editor, do we never see any thing in your valuable paper about the improvement of the canine race? While the Short-horn is loudly praised, no meed of praise is bestowed upon my favorite, old "Boso." While almost every paper has descriptions of celebrated bulls, not a word is said of the celebrated bull-dog.—While portraits of valuable horses, with arched neck and flowing tail, are frequently seen, the valuable dog may arch his neck and curl his tail, in the most approved style, but no artist deigns to notice him. While the most judicious and successful methods of crossing the different breeds of cattle, sheep and horses are explained, we hear nothing of improving the breed of dogs,—is it because they have already been bro't to perfection?

Give us a few touches on Dog-ology, Messrs. Editors, and oblige some of the

TAX PAYERS.

Greece, N. Y., Jan., 1853.

A TRUE farmer is a philanthropist. He labors not only to provide for his own wants, but he is urged by a constant desire to leave the world better and more beautiful than he found it, and add to the stock of human comforts.



DARK-COLORED ROUEN DUCKS:
THE FIRST PRIZE AT THE RECENT BIRMINGHAM (ENGLAND,) POULTRY SHOW.

DUCKS, in the height of the "Chicken fever" now prevailing, are rather overlooked, so we have thought it best to call attention to the subject by procuring the above fine engraving of a pair of Rouen Ducks,—the First Prize at the recent Birmingham, (England,) Poultry Show. "The variety of tame Ducks most in request," says BROWNE, "is the Dark-colored Rouen, or Rhone Duck; originally from France, but common both in England and in this country." To those who are suitably situated for the purpose, the keeping of Ducks is at once a pleasant and profitable business. They require access to water, and cannot bear confinement; a pasture, an orchard, or a green lane, and a pond or placid brook, clear, yet abounding in animal life, are localities in which ducks delight, and in which they are kept at little expense. They are no graziers, yet they are hearty feeders, and excellent "snappers-up of unconsidered trifles;" nothing comes amiss to them—they are not at all fastidious, and will well repay their owners, by keeping themselves in first rate condition if the chance is afforded.

#### CONDENSED CORRESPONDENCE.

##### Byfield Swine.

EDS. RURAL:—In answer to the inquiry respecting Byfield swine, I would say there has been in this vicinity for the last fifteen years, a breed of hogs remarkable for their fineness of bone, early maturity and despposition to take on fat,—but from what breed they originated I am unable to state. They are now known as a cross of the Leicester and Grass breeds. They are pure white, short legs, small and short head, thin ears which lop over the eyes, very peaceable and quiet disposition, fat enough to butcher at any time from six weeks to eighteen months old, at which last time they are about mature. I have had them dress at sixteen months old, 365 lbs. I sold a pig the other day a little less than five months old, whose live weight was 198 lbs.

I have two pigs, now two weeks old, and a sow and barrow, each of the latter weighing about 300 lbs. The sow will have pigs about the first of May. If friend C. wishes any of those I can accommodate him, or will save him a pair from the next litter.—JOHN C. ROYS, *Alloway, Wayne Co., N. Y.*, Jan., 1853.

##### The Sub-Sod Cultivator.

THIS is a new invention, and I am not aware that it has ever been tested. I shall therefore, give only a partial description of it, by way of announcement. As its name indicates, it is designed to loosen, and pulverize the soil *under the sod*,—without disturbing the surface more than to make small holes through it, which will serve to let in air and rain-water. Its principal use and object is, to obviate the necessity of breaking up such meadows and pastures as have become unproductive, on account of the soil becoming too compact, or sward-bound. The incredulous, I suppose, will be anxiously inquiring for the inventor, and "how it is done."

I will explain by saying that the implement consists, (prospectively,) of a series of cast iron wheels, about sixteen inches in diameter; all on one shaft,—each wheel turning on the shaft independent of the rest—each hub occupying a space of four to six inches on the shaft. These wheels, with the shaft, will form a sort of compound roller, to be used after the manner of a common field roller. The number of wheels will depend on the ability of team to manage them. Each wheel should have six or eight arms, each arm a vibrating tooth, three-fourths of an inch square, fastened with a bolt, four inches from the rim—the tooth extending outward through (and free to vibrate in) a slit in the rim of the wheel.—The teeth, I think, should project about six inches, making the length ten inches. Each tooth should occupy a slit in the rim, four inches long—extending from the arm forward, i. e. when the arm is upward—so that when a tooth passes over the centre, the point will fall forward and be ready to enter the ground point foremost.

I have written more than I intended to, but I could not give an intelligible description in less space.—N. CAREY, *Westfield, N. Y.*, Jan., 1853.

##### Sowing Clover Seed.

EDS. RURAL:—Every article I have read on the sowing of clover seed recommends using a large quantity of seed: this I think not always the best policy, and I will state the reasons for differing in some instances. If the ground is intended to be laid down to meadow or pasture, plenty of seed should be sown, but if it is to be plowed under for manure, I consider six pounds per acre enough. My reason for this opinion I find in the fact, that the plants acquire a stronger root when standing thinly than when they cover the ground, and the stronger the root the deeper it penetrates the subsoil, which I consider of more importance to enrich the soil, than a thick bushy top with small roots.—WM. NICHOL, *Alabama, N. Y.*, Jan., 1853.

##### Pumpkin Seeds Poison to Geese.

MESSRS. EDS.:—Having observed in the RURAL an article or two on the effect of pumpkin seeds on fowls, I will state the following fact:

I have for many years, formerly, been in the habit of feeding pumpkins to cattle by breaking them up on the ground where geese and other feathered bipeds had free access to the seeds. The effect on the geese was invariably to render them, after a few days, extremely talkative, weak and staggering, tipping about and steadying themselves with their tail, beak, or wings, as occasion required,—in short, exhibiting nearly all the

symptoms of intoxication, and if I mistake not, in one or two instances, terminating in death. But I recollect no effect on any other species of poultry.—T. PEIRCE, *Springville, Erie Co., N. Y.*, Jan., 1853.

### Chess.—Abortion in Cows and Sheep.

EDS. RURAL:—I wish to make a few inquiries in regard to chess. While conversing with a neighbor, a few days since, he stated that a fine heifer of his had slipped her calf, and he should probably lose her in consequence of it. The abortion he attributes to her having eaten a quantity of chess which he had fed out a few day previous. I think he said it was ground. He also said that his brother lost nearly all his lambs one spring, which he attributed to the same cause. Now I would like to know if you or any of your numerous correspondents ever heard of the like before,—if so, every farmer ought to know it, so as to be more careful in the future.—D. D. S., *Clarkson, N. Y.*, Feb., 1853.

## AGRICULTURAL INTELLIGENCE.

### U. S. Ag. Society.—1st Annual Meeting.

THE first Annual Meeting of the United States Agricultural Society, convened at the Smithsonian Institute in Washington, Feb. 2d. MARSHALL P. WILDER, the President, called the meeting to order. W. S. KING, of Rhode Island, the Secretary, appeared. The States were called, and delegations from most of them came forward. The Chair requested reports of the State Boards to be handed to the Corresponding Secretary.—President WILDER then delivered an appropriate address of which the following is a brief abstract:

Before proceeding to the election of officers he desired to submit, for the consideration of the Society, various subjects suggested by its brief history. The Executive Committee held a meeting in Philadelphia, in September, and concluded to defer the appointment of State and Territorial Boards of Agriculture, at least, until the present session. Some of the States had appointed their quota of the National Board, and it was hoped its full organization would soon be completed.

The first number of the Society's journal, an octavo of 144 pages, had been published and distributed, and it was hoped soon to issue the second. A correspondence had been opened with distinguished agriculturalists and many local associations, relative to the progress and condition of agriculture in the United States, and the objects of this Society. He suggested the appointment of a Committee to confer with the general Government respecting the facilities for conducting this correspondence through its functionaries in foreign countries, and for the interchange of information, seed, specimens, products, &c. He recommended the adoption of measures to secure the cooperation of kindred State associations, and to obtain their reports, from which compilations might annually be made, and a full history of American Agriculture be ultimately secured at the seat of Government. He also suggested an alliance with the American Pomological Society. The courtesy of the Smithsonian Institute is acknowledged, and a closer connection between the two bodies, and permanent accommodations for this Society in the Smithsonian building suggested. A permanent secretary located in this city is required.

Pecuniary assistance from Government is proposed, either as a grant, on the principel of State grants to their respective societies, or as a consideration for the performance by this Society of the duties of the agricultural department of the Patent Office. An increase of income is proposed by membership and donations. A local agent has in six weeks secured one hundred members in Rhode Island. Hon. Samuel Appleton, of Boston, has given the Society $1,000. Col. Thomas H. Perkins, Robert G. Shaw and others, have subscribed liberally. An exhibition of this Society in connection with the World's Fair next summer, or Crystal Palace, New York, is suggested to represent fully and fairly American Agriculture, Horticulture, Pomology and kindred arts.—Courses of lectures at the time of the annual meeting are proposed. Amendments to the Constitution are desired. In conclusion, eloquent allusion is made to the loss which agriculture in this country has sustained in the death of Downing, the great landscape gardener and rural architect of America; Norton, the distinguished professor and author, and the farmers of Ashland and Marshfield.

On motion, 2,000 copies of the President's Address were ordered to be printed and distributed.

The several subjects mentioned in the President' address were appropriately referred. After some debate it was declared inexpedient for the Society, in its infancy, to enter into the proposed exhibition of the Crystal Palace, at New York.

Mr. CALVERT offered a resolution to memorialize Congress to establish a Department of Agriculture—the head to be a Cabinet officer—which was made the special order for to-morrow. Adjourned.

SECOND DAY.

The Society met at 9 A. M. About one hundred members, representing nineteen States, were present.

The various Committees reported.

An amendment to the Constitution, changing the time of holding the annual meeting to the last Wednesday of February, was adopted.

Mr. WHEELER (Mass.) submitted a proposition to reduce the terms of admission and the annual subscription of members, which was debated and lost.

The following were elected honorary members; President FILLMORE, General PIERCE, SAMUEL APPLETON, THOMAS H. PERKINS, ROBERT G. SHAW, EDMUND RUFFIN.

The special order, a resolution to memorialize Congress to establish a Department of Agriculture, was taken up. Mr. CALVERT supported it. It was due that this great interest, embracing four-fifths of our population, should be represented in the Cabinet councils. Messrs. FRENCH and MAPES briefly advocated the resolution, when it was adopted unanimously.

The Society then proceeded to ballot for officers, and the following were elected:

*President*—MARSHALL P. WILDER.

*Vice Presidents*—Maine, Ezekiel Holmes; New Hampshire, Geo. W. Nesmith; Vermont, Frederick Holbrook; Mass., B. V. French; Rhode Island, Josiah Chapin; Conn., S. D. Hubbard; New York, Henry Wager; New Jersey, James J. Mapes; Pennsylvania, Frederick Watts; Delaware, C. P. Holcombe; Md., W. D. Bowie; Va., G. W. P. Custis; N. C., H. K. Bergwin; S. C., John Witherspoon; Ga., P. M. Nightingale; Ala., Richard Jones; Miss., A. H. Beques; La., A. B. Romar; Ohio, Samuel Medary; Ky., Robert Malloy; Tenn., Merideth P. Gentry; Ind., Joseph A. Wright; Ill., Stephen A. Douglas; Mo., R. Atchison; Ark, T. B. Flournoy; Mich., J. C. Holmes; Florida, Simmons Baker; Texas, Thomas J. Rusk; Iowa, M. F. Colbaugh; Wis., A. C. Ingham; California, M. Horner; Dist. Columbia, Jos. H. Bradley; New Mexico, J. M. Baird; Minnesota, H. H. Sibley; Oregon, Joseph Lane; Utah, Joseph S. Hayes.

*Executive Committee*—C. B. Calvert, John A. King, J. D. Weston, Moses Newell, Arthur Watts, Richard Peters.

*Corresponding Secretary*—J. C. G. Kennedy.

*Recording Secretary*—W. S. King.

*Treasurer*—William Selden.

The Treasurer reported that the funds of the Society had been augmented nearly $2,000 since his arrival yesterday.

Dr. ELWIN presented a paper written by Prof. BOOTH of Philadelphia, arguing that the analysis of *soils* in the present state of chemistry is of no immediate practical value to the farmer.

Prof. MAPES said he stood ready to refute every position assumed in the paper, and stated interesting facts against it.

After an animated discussion, the paper was withdrawn.

On motion of Mr. POORE, circulars were directed to be addressed to home and foreign Agricultural Societies, proposing the interchange of publications.

Major WHEELER suggested the propriety of memorialising Congress to establish a National Agricultural School.

The subject was deferred until the next annual meeting.

EVENING SESSION.

The Agricultural Society reassembled at 7 o'clock P. M. Pro MAPES delivered an interesting lecture on fertilizers.

A resolution complimentary to the officers and reporters was passed, and the Society adjourned to the last Wednesday in Febuary, 1854.

### The Japan Pea.

THE attention of horticulturists has been directed to a new pea, which, on account of the source from which it was received, is called the Japan Pea. Samples of them have been sent to the Massachusetts Horticultural Society, by Mr. A. H. ERNST, who has grown them in his garden, near Cincinnati, Ohio, the past season.

The account of their transmission into American hands is, that a Japan vessel in distress was encountered by an American vessel, which took off the crew and some of the stores, landing them at San Francisco, California. Among other things were some of these peas, which falling into the hands of Dr. EDWARDS, of Alton, Illinois, he handed them over to J. H. SADD, a distinguished horticulturist, by whom they were placed at the disposal of the Horticultural Society at Cincinnati. Mr. ERNST, who has successfully cultivated them, speaks of their being a peculiar plant, of an upright, stiff form, branching much,—the leaves large, light green and downy beneath. The flower is small, lilac-colored, the seed pods numerous, small, and wooly, grow in clusters, and are very productive. Its bearing propensities are large, the plant attaining good size, which it is believed will adapt it for field culture. They mature fully on the Ohio river, and it is believed they may be introduced into general cultivation.

Mr. J. E. TESCHEMACHER, the botanist of the Mass. Hort. Society furnishes the following information which will be found interesting:

The plant alluded to by Mr. Ernst, is Cajanus bicolor, a native of the East Indies, Amboyna, Japan, &c.; flower small, interior yellow, vexillum purple, erect shrub, pubescent, nearest in alliance to Lupinus. The seeds are good to eat, and, when young, very delicate. On soaking the round seeds for an hour in moderately hot water, they take exactly the form and appearance of the common white bean, become quite tender, and have a pure and delicious nutty and oily flavor. *The whole plant, with the seed, is excellent for fattening hogs and cattle.*

There is one other species, Cajanus flavus, common in South America and the West Indies, where it is sometimes used for a fence to sugar plantations. In Jamaica this species is much used for feeding pigeons, and is there called the Pigeon-pea. In Martinique the seed is much esteemed for the table.

Being a tropical plant, it would hardly stand our winters. Yet, from the observations of Mr. Ernst, it is not improbable that our climate might admit of an annual harvest of the seed, which seems to be so abundantly produced as to make an experiment highly interesting.

### County Agricultural Societies.

THE *Erie* Co. Agricultural Society has the following board of officers for 1853:

President—WARREN GRANGER.

Vice Presidents—John W. Hamlin, Aurora; O. Fields, Alden; V. Rogers, Amherst; L. F. Allen, Black Rock; Orin Lockwood, Boston; Jona. Hascall, Braudt; B. W. Pratt, Collins; B. F. Maltby, Colden; Mr. Cook, Concord; Alonzo Raynor, Clarence; Amos Chilcott, East Hamburg; Horace Parker, Hamburg; P. D. Riley, Holland; E. Burnham, Newstead; David Stickney, Sardinia; M. Failing, Tonawanda; Jas. Wood, Wales.

Secretary—W. R. Coppock, Buffalo.

Treasurer—Jason Sexton.

THE County Ag. Society of *Schoharie*, elected the following officers at their recent meeting:

President—JOHN P. GRIGGS, Schoharie.

Vice Presidents—Joseph J. Brown, Carlisle; Nicholas Russell, Cobleskill; John Fremire, Breakabeen; Geo. Mauning, Middleburgh; Griffin Whipple, Gallupville; I. W. Baird, Summit; Fred'k. Shafer, North Bleuheim.

Secretary—Wm. H. Davis, Schoharie.

Treasurer—J. A. Lintner, do.

Executive Committee—Jacob Vroman, Schoharie; M. L. Shafer, do.; Wm. Winters, do.; J. S. Waterbury, do.; S. Maham, do.

WE find but a portion of the officers of the *Chenango* Co. Ag. Society reported:

President—GEO. JULIAN, Greene.

Cor. Sec.—Jonathan Wells, Norwich; and a Manager in each Town in the Co.

THE following have been elected by the *Queens* Co. Ag. Society:

President—JOHN A. KING, Jamaica.

Vice Presidents—David W. Jones, Oyster Bay; Wm. L. Laing, Hempstead; Robert M. Bell, Flushing; Joseph Tompkins, Newtown; George H. Horsefield, North Hempstead; Benj. I. Donghty, Jamaca.

Cor. Sec. and Treasurer—John Harold, Hempstead.

Rec. Sec.—Lendal F. Pratt, Flushing.

Managers—Timothy Carman, Oyster Bay; Micajah M. Pettit, Hempstead; Edward A. Lawrence, Flushing; George Hulst, Newtown; William J. Mott, North Hempstead; Bernardus Hendrickson, Hempstead.

THE officers of *Sullivan* Co. Ag. Society, are LOTAN SMITH, Pres.; one Vice President from each town; Richard Oakley, Treas.; James L. Stewart, Rec. Sec.; and James E. Quinland, Cor. Sec.

### Oregon Wheat Crops.

THE Columbian, an Oregon paper, says, there is no country in the world in which wheat arrives at a greater degree of perfection than in Oregon, and certainly none in which a greater yield per acre is obtained, or a more lucrative or desirable market for rewarding the producer, with as little labor. One crop, with thorough cultivation in the first instance, will produce *two* and *three* "volunteer" successors, yielding at least, annually, two-thirds of the original production. Oats, rye, buckwheat, barley, and even corn, although but slightly cared for—all have been successfully produced, and have given evidence by the most substantial assurance, that their cultivation is not attended to without an adequate reward.

PROF. NORTON'S LECTURES.—The Country Gentleman says: "The Executive Committee of our State Ag. Society, made application to Prof. Norton's family, for the course of lectures delivered by him in this city last winter, for publication; but we regret to learn, as we do, by a letter from Prof. N.'s father, that they 'are not in such a form as to admit of their publication. They were never fully written out, having been delivered at Albany and New Haven, from brief notes.'"

BOTS IN HORSES.—A correspondent of the Southern Planter gives the following, as a simple and excellent remedy for bots in horses:—drench freely with sweet milk and molasses, well shaken together; continue it, a bottle full every fifteen or twenty minutes, according to the severity of the attack, until the animal becomes easy; then give a quart bottle full of strong salt and water, followed soon after with a quart of castor oil. This he says if administered in time, always cures. The difficulty is, with many not well experienced, to distinguish attacks of the bots from some other diseases.

## THE AGRICULTURAL PRESS.

### Breeds of Swine.

WE continue the publication of Mr. HOWARD'S valuable articles on the Breeds of Swine, by giving below a portion of No. 2. The remainder, with portraits of the Chinese and Suffolk breeds, will be given next week:

IT is to be regretted that the differences in the various breeds of swine, have not been demonstrated by exact experiments. We are, however, in possession of certain general facts of great importance in the case. For instance, many farmers have found that on the same amount and kind of food, some hogs will gain much faster than others; that some will become fat on uncooked vegetable food, or raw apples, while others require grain or meal to bring them to a slaughtering condition; that some will keep in good order and will thrive on clover or grass only, while others will scarcely live on such fare; that in some the tendency to fatten is so great, that it is necessary to keep them on very low diet to insure their breeding.

There is not only a difference in the amount of meat which different swine are capable of acquiring from an equal amount of food, but there is a great difference in the quality of the meat. Some, doubting this, may say "pork is pork." So beef is beef; but is there not a great difference in the texture and flavor of beef from cattle of different breeds? This difference is so well understood in England, that the prices of beef are to a considerable extent regulated by the breed—the West-Highlanders and Galloways taking the first rank, then the Herefords and Devons, and last the Short-horns. Breeds of swine exhibit similar and not less striking differences. Some have a thick skin, with flesh of an open, coarse texture, and unpleasant flavor; others a thin skin, with fine grained, well-flavored flesh. Some convert their food almost wholly into fat, while in others it enters chiefly into the composition of muscle. In some the fat is accumulated chiefly on the belly, and is of a soft, oily nature; on others it is laid more on the back, and is comparatively firm and hard.

Of course the breed should be chosen with reference to the purposes in view. If "lard oil" is the principal object, the animal which will give the greatest quantity of soft fat for the food consumed will be most profitable. For barreling, "clear pork" is the main object, and the animal which will give the greatest quantity of solid fat on the back and sides is preferable. This is the description of pork which is chiefly consumed in the eastern states, and in the fisheries. In the southern and western states, pork is used in the form of "bacon"—the whole of the meat is "dry cured" and smoked. Where this is the object, the clear fat which is so much prized in other cases is not desirable, but a carcass which gives a "streak 'o fat and a streak o' lean," like the Irishman's pig, is more suitable.

The swine of the United States have been derived chiefly from Great Britain, though occasional importations have been made from other countries. The British stock of the present day consists of various mixtures of the aboriginal race of that country with various Asiatic stocks—chiefly Chinese and Siamese. Not one of the present esteemed breeds, can be said to be of unmixed origin. Youatt, in his treatise published in 1846, observed that the old breeds were "rapidly losing all traces of individuality under the various systems of crossing to which they are subjected." The old stock, which "with trifling degrees of difference," it is said, "was spread over the greater part of England," is described by Martin as "large, coarse, unthrifty, with a long, broad snout, large flapping ears, low in the shoulders, long in the back, flat-sided, long in the limbs, and large boned, with a thick hide covered with coarse bristles.—They were enormous feeders but slow fatteners, consuming more food than was repaid by their flesh." But he observes that the "general system of crossing now pursued tends to the establishment of a uniform race throughout every county, that is a race presenting the same outstanding characteristics."

### Much Labor on Little Land.

*The Farmer's Companion* in an article on Small Farms, marks out the following course for the farmer of small capital to pursue:

You have 100 acres clear, 50 of which you keep as pasture, and for meadow. Make up your mind to work only 25 acres; the other 25 being put down to clover, or clover and timothy, as you best can. You have manure enough in and about your farm for six acres. This year, haul that on to your land, plow it and put in corn; with a little ashes, and, if you can get it, slaked lime or plaster to every hill. Plow *twice as deep* as usual; and drag twice as long, with a long toothed drag, till the land is like a garden If you have got 35 bushels of corn to the acre before, we can warrant you now 70 or 80; for you cultivate and hoe the corn twice as much likewise. You double your crop at a very little increased cost. Having no more manure, you must depend on deeper plowing, and better dragging for the other 10 acres, for *this* year; not forgetting to sow a little more seed than usual, if it is oats or barley. In the fall, sow wheat where the corn was, *with the same care*; and next spring, manure the *next* 6 acres for corn.—Yes, but you may manure 10 or 12 acres; for you have had 25 more acres for hay, or oat straw cut green for fodder, and can keep 25 more cows through the winter; and knowing the value of the manure—that it is as important to you as the very soil itself—you will take much better care of it.

Thus, every two or three years, all your land will get a dressing of manure, and every year you will have a *different* crop on it.—Every year *it* will improve, and *you* grow rich, with about half your work. But after a while, sow a few acres of this land with clover and timothy; and break up as much of your old grass. You will get double the crop of hay on the new piece; and a good crop of grain on the old piece. In one word, of all men in the world, a small farmer should work a small piece of land; work it thoroughly well; keep all the stock he can to make manure; keep the manure dry, and he will not be a *small* farmer long. We have tried it and we know it. For the rest, take and read a good farmer's newspaper.

### Fatting Sheep.—Quiet and Salt.

WE find the following statements in the *Genesee Farmer* for Febuary:

In fatting animals, the less exercise permitted the better. Exercise is doubtless necessary to insure the *health* of all animals; but we must recollect that fatting is, in itself, an abnormal condition, that all animals, rapidly accumulating fat, are more or less diseased. The celebrated breeder, BAKEWELL, understood this fact, and was in the habit of turning his sheep into marshy meadows for the purpose of getting them diseased. In such a condition they matured earlier and laid on fat with surpassing rapidity.

Salt is good for all animals, and probably is, in some form or other, necessary to *health*; but we know that salt is not good for fatting animals, and should never be given if the object be the accumulation of fat.—Experiment agrees with theory on this point. We recollect when conducting some extensive experiments on sheep, a practical friend urged us to give them salt, assuring us that his sheep did much better with than without salt. The sheep on which we were experimenting were doing well at the time, averageing about 2 lbs. increase each per week.—To please our friend, we gave the sheep salt, of which they partook freely, but in the fortnight during which they were allowed salt, *every sheep lost weight.* We would give them as much water as they would drink; if fed roots, they will require, and will drink less.

### New Premiums.—A good Idea.

WE find the following in the *Boston Journal.* It is a capital suggestion, and worthy of adoption by Agricultural Societies:

IN the report of the Committee of Needlework, at the late fair of the New Hampshire State Agricultural Society, the suggestion was made that "large quantities of embroidory and expensive work were offered for premiums, and but little needlework which was of practical utility." Acting upon this suggestion, Mr. Whiton sent the $20 to the officers of the society, with the request that it might be offered in premiums for the best specimens of *patching* and *darning*. This is truly practical, and the New Hampshire girls will now have an opportunity of showing their skill in a description of needlework of far more importance and interest to the hard fisted yeomanry of their native State, than fancy quilts, embroidered ottomans, tapestry, &c. We imagine that those excelling in this new department will be in great demand to grace the homes of the young farmers of New Hampshire. We are glad to notice this provision for the award of premiums for excellence in those acquirements which will fit the daughters of our farmers for the practical duties of life.—Many who can tastily embroider an ottoman, it is to be feared, would be completely at a loss to know how to neatly darn the heel of their father's stockings, or sew a patch upon his homespun pantaloons.

### Take Care of your Cows.

THE Coudersport *People's Journal* has the following item of advice, which should be heeded by all who intend profitable dairying next summer:

As a general thing, our people do not winter their cows with care enough. They should make their stables warmer; and build more sheds around the yard. It is too late now to build the sheds for this winter, but much may be done to tighten up the stables. Cows *well* taken care of for the balance of this winter, in warm stables, well cleaned and littered—with plenty of salt—will be worth at least a quarter more next summer for milk, than those that are poorly housed and carelessly fed.

This is a pressing need to be attended to at once, and if neglected, will be felt all next season. With a few good cows, well taken care of, every farmer can coin money as certainly as the gold-diggers of California, and much more pleasantly.

### Cutting Corn Fodder.

WE extract the following experiment in keeping cows from the Pa. *Farm Journal:*

Enos Smedley of this county, and of many years experience as a dairyman, informs us of his great success the present winter in keeping his cows on corn-fodder, cut and crushed by a horse-power and machine. His plan is to cut off a foot or eighteen inches of the butts before putting it through the machine. This is worked on the barn floor, with a one horse power, and the cut fodder discharged through a funnel into the entry below, contiguous to the cow stables. Here it is emptied into a large box made for the purpose, and holding about 34 bushel baskets full. This is well mixed up with an equal number of *quarts* of meal, and the whole slightly moistened. He has 34 cows fastened up in separate stalls, and one bushel, heaped up, is found sufficient for a cow at a feed, and they are fed twice a day, eating it up clean. Under this management they are improving finely, and wintering as well as they usually do on the best hay.

One sheaf of fodder cut up, making two good feeds, is worth here, about three cents, making 21 cents per week. Sixteen quarts of meal per week for each cow is worth 32 cents. Total for keep of cows each, per week, 53 cents. This is cheap wintering,

and a strong illustration of the great advantages of cutting food for stock. Such evidence of what *has been done*, is worth pages of theory in convincing farmers of the great loss they sustain in feeding hay and fodder uncut. Not only will one-half or two-thirds in quantity be sufficient, but there is a great saving in respect to waste. Those of us who have been used to feeding cattle in barn-yards, out of cribs, know that not less than about one sheaf to each animal is a sufficient allowance, and that when either corn-fodder or hay is fed whole, a considerable portion is dragged out over the yard and lost.

Hay is now worth from $18 to $25 per ton, and by this plan of feeding corn-fodder, a saving of some tons and the price of several machines may be effected in one winter. We have found, in our own experience, that when corn-fodder is fed, merely cut, without crushing, a very considerable amount is left uneaten. The sharp and tough edges of the stalk do not admit of proper mastication, and, indeed, is apt to make sore mouths. The machine used by Enos Smedley is of Potts' patent. Urmy's patent is said to be able to cut and crush from sixty to one hundred bushels per hour.

### Recipe for Curing Sores.

A WRITER in the Genesee Farmer, who signs himself "R. R.,' and dates at Centre Lisle, gives us the following recipe for curing sores:

Take two and a half drachms of blue vitriol, four drachms of alum, and six drachms loaf sugar; or we will say, blue vitriol the size of a walnut, alum a size larger, and sugar the size of a hen's egg.—Pulverize and turn into a glass bottle. Add one pint of good vinegar, and one tablespoonful of honey. Cork, and shake the mixture three or four times a day; and when dissolved, it is fit for use.

This wash will remove film from horses eyes; will cure king's evil, and most kinds of fever sores; will destroy proud flesh, and cause the sore to heal. It is great for hoof rot in sheep and may be applied to any sore with safety. The sore should be kept clean and washed twice a day with the mixture, until completely healed. For the eye it may be diluted in soft water one-half, but should in all cases be used as strong as the patient can bear. For hoof rot in sheep, add as much gunpowder as vitriol; pare away all the affected part of the hoof, wash freely every few days, turn the sheep into fresh pasture, and you have a cure.

### Use of Lime and Marl.

THE English agriculturists have used lime extensively, and for a long time, and have acquired a great deal of experience relative to its application. Prof. NESBIT recently lectured on the subject before the London Farmers' Club, stating a number of ascertained facts of interest — of which a report is found uncredited among the selections of an exchange.

In speaking of *liming and marling*, he said it made little difference, generally, whether calcareous matter was applied in the form of chalk disintegrated by frost, marl, quick-lime, or disintegrated limestones. Limestone is burned, and thus reduced to fine powder—it very soon returns to a carbonate, precisely the same state as before burning, except that its mechanical condition is entirely changed to that of fine powder. This, he regards as the chief object of burning. For lime acts beneficially for many years in a soil, long after all traces of its caustic nature have disappeared.

Some limestones contain considerable quantities of potash, and of phosphate and sulphate of lime, which sometimes add much to their value. Here analysis becomes of great use.

As to the rationale of its action, he regards it as operating in several ways. First, in dissolving the alkalies, for the use of growing plants, a result which had been found by trying the experiment during a period of six months in the laboratory. Secondly, in effecting a slow decomposition of organic matter in soils for the same use; which is strikingly shown by the fact that new land, or newly broken fields, are altogether the most benefited by its action. The same operation takes place upon manures in the soil. The ammonia which has been absorbed, is fed to plants through the assistance of lime. Hence on hard cropped land, which has been nearly exhausted of organic constituents, lime is of little use. On the other hand, if soils are deficient in lime, even a manuring of guano, will be of little comparative use. "If you go to such a place as Exmoor," says Dr. Nesbit, "where the land has not been turned up within the memory of man, and where the soil contains only enough lime for a chemist to swear by, you will find the use of any other manure of no avil without it. I have observed myself, on certain parts of that moor, where lime had been put, turnips were splendid; but the instant you passed the line up to which the lime had been applied, the crop entirely failed. If you were to take a handful of slaked lime, and inscribe your name on the soil, you will be able to trace, three or four years after, the exact spot where it was marked." He quotes the old proverb as containing much truth—

> "The use of lime without manure,
> Will always make the farmer poor."

He states, (what has also been discovered in this country,) that there may be a complete absence of lime in soils resting upon limestones—and mentions cases where the limestone has been within six inches or a foot of the surface, and not the thousandth per cent. of lime in the soil itself; and adds that in some of the south-eastern counties they are actually calking the Chalk Downs to great advantage.

# Orchard and Garden.

### THE ISABELLA GRAPE.

AMONG the large variety of native grapes, the Isabella is universally acknowledged to possess all the requisite qualities in regard to hardiness, productiveness and flavor for the Northern States. It accommodates itself to all dry soils, and is grateful for the slightest cultivation. But yet, how few are there who enjoy its fruits; even those who cultivate them seldom have a supply that will last over November, when in fact they can be kept till mid-winter.

How many unsightly outbuildings could be covered with it, such as barns, stables, &c., and I venture to assert, that, under ordinary good treatment, they will yield a revenue equal to the interest on the amount invested in the buildings, and at the same time will improve the place.

I know of a single vine about eight years old, which has yielded, according to the statement of the owner, five to six bushels annually—and this vine costs the owner every year 25 cents for pruning, and one wheelbarrow load of manure. It covers an outhouse, which without it would be an eyesore to the inmates and passers-by. The manure is taken (for it, and for the vines in the garden) from where it would otherwise lay for years and infect the atmosphere with poisonous gases. E. G.

### GENESEE HORTICULTURAL SOCIETY.
ANNUAL MEETING.

ABSENCE from the city prevented our attendance at the annual meeting of this Society, and the proper officer has furnished no report of proceedings. We find the following in the Daily American:

The "Horticultural Society of the Valley of the Genesee," held its annual meeting on the 5th inst. There was a very good attendance of members. The show of winter fruit was large and of great value. Officers for the year 1853 were elected as follows:

*President*—JOHN J. THOMAS, of Macedon

*Vice Presidents*—L. Wetherell, Rochester; H. P. Norton, Brockport; R. G. Pardee, Geneva; M. Jeffrey, Canandagua; Samuel Shadbolt, Wheatland.

*Corresponding Secretary*—H. E. Hooker.

*Recording Secretary*—Jas. Vick.

*Treasurer*—J. H. Watts.

A committee was appointed to arrange and report the regular Committees of the Society. There will be several exhibitions during the year.

### LIMING ORCHARDS.

THE Orleans Republican has an account of "A Michigan Farmer," Dr. T. H. BAILEY, of Adrian, from which we extract the following

In traveling through Dr. B.'s orchard with him on the 21st of October, my attention was called to notice one tree with plenty of apples on one side and but very few or none on the other. The Doctor informed me that in sowing lime under his trees three seasons previous, he sowed under the tree on the side where the apples grow, but not on the other, as he had no more lime, and the result was as has been stated. The trees are set 28 feet apart, the land is manured and cultivated for the growth of trees and for fruit. No crop was sown or planted in the orchard, nor was grass or weeds allowed to grow there. The trees were finely formed with three main branches growing out from the trunk about 6 feet from the ground. It is but justice to say that as handsome an orchard, as fine, fair fruit, as great a variety and of as good quality as I ever saw or tasted was on the Lenawee county premium farm, for the year 1852.

### THE ESPIRITU SANTO.

THIS beautiful flower appears to be a description of lily, possessing a bulb root, long oval leaves, and a stock from three to four foot in length. The Espiritu Santo is one of those rare flowers that is said to be found only on one particular part of the Isthmus, short distance from Panama. It requires little earth for vegetation, growing among heaps of stones, with the fibres alone covered, the bulb being almost entirly exposed.

The plant possesses little beauty beyond what is contained in the flower itself, which is of a most elegant and peculiar formation. The outward part, which is smaller than a pigeon's egg, resembles a curious shaped vase, on opening the lid of which the most perfect and beautiful *fac simile* of a dove is found within. The head is turned over its back, appearing as if it were about to take its farewell of earth and soar to some brighter region.

No person can see this extraordinary flower for the first time without a deep feeling of wonder and admiration at the perfection and beauty displayed in its formation, and every succeeding time it is met with, the observer gazes upon it with increased admiration and curiosity.

Of all the really beautiful plants or flowers we have seen, we recollect none so beautiful as the *Espiritu Santo*, or "Holy Spirit," and we are sure that if a specimen could be sent to the United States or England it would be looked upon as an invaluable curiosity.—*Panama Star*

### TRENCHING GARDENS.

One of the most important operations for the gardener to perform is to trench-plow—or spade his garden. This ought to be done at least eighteen inches deep; two feet would be still better. Such parts of the garden as are enclosed by gravel walks in small plots, or encumbered by shrubbery or plants, must be spaded. For this purpose we have a new kind of spade, made expressly for us. The handle is two feet eight inches long, the blade 15 inches long, seven inches wide at top, and 5 inches at bottom, making the whole length four feet. An iron peg stands out on the lower part of the handle, as in a ditching spade, for the foot to rest on when necessary to push the blade further into the earth.

With the common garden spade we take the first spit in the trench about ten inches deep, beginning at one end of the plat, and working to the other. We then follow with the trenching spade about ten inches deeper, making 22 inches in all. This undersoil we are careful to leave in a rough state on the top, to be pulverized by the winter's frost, and enriched by the snows and rain. Coarse manure should always be dropped on the bottom of each trench, also on the top of the plot, as fast as 3 or 4 feet in width are spaded. Thus the top and bottom will be undergoing an enriching process at the same time, and by Spring form a first rate garden soil of twenty to twenty-two inches deep. By adding bone dust, ashes, guano, and re-spading about 12 inches deep in the Spring, we never failed of producing the best of vegetables, fruits and flowers.

Our trench-plow has the share and mould board narrower than those of the surface plow, with a high standard and arching beam. It is twenty-one and a half inches from the point of the share to the lower side of the beam. To this plow is attached a dial clevis, which is gauged enough on one side to enable the off horse or ox of the team to keep clear of the open furrow turned up by the furface plow. He can thus walk all day on hard even ground with his mate, and work quite as much at his ease. Walking in a deep fresh turned furrow is very tiresome to the off animal, and ought never to be permitted by a humane plowman. With both plows we can turn the soil up well to the depth of 20 inches.

When we began gardening 29 years ago this fall, we had no such implements to work with. It is only four years since that we could obtain them.

Before trenching so deep, we suffered greatly during every dry summer; but since turning the earth as above stated, the severe drouth scarcely affects us, although the soil we cultivate, we think rather susceptible to drouth. Perhaps we owe something to the amelioration of the soil thus turned up; but our readers may be assured nothing can take the plac of stiring the soil deeply. It invariably pays well the extra expense.—*Journal of Rural Affairs.*

### LIMA BEANS.—GUANO.

LAST spring we appropriated a small patch of ground for the purpose of making an experiment with Peruvian Guano upon Lima Beans.

The soil chosen for this purpose is a sandy loam of moderate fertility, which we surface plowed and subsoiled to the depth of 16 inches, and harrowed very fine. The hills were then laid out with a line 3½ feet apart. We applied the Guano at the rate of 300 lbs. per acre, dividing it into four separate applications, in the following manner: First, we mixed two-thirds Guano with one-third plaster of Paris and charcoal dust; then took a gill of this composition and incorporated it in each hill, in a circumference of 14 inches, and from 2 to 7 inches deep, stirring it well into the soil with a spade. We worked the ground between the rows three times during the season, and hoed them well, dividing the balance of the Guano into three parts, mixing one part into the soil each time around the hills.

The worms made some havoc among the beans as they came up, which forced us to replant in several instances; but we had a tolerable good stand at last of from three to four vines in each hill. We poled them with white birch poles about 15 feet long.—The vines ran to the top of the poles during the season, then turned and ran down nearly to the ground, and were covered with the most abundant growth of pods and beans that we have ever seen; though we have cultivated those beans for many years with all the different kinds of manures in general use, and on soil much richer than that on which we made this experiment. The weight of the vines was so great as to break down several of the poles. We made no exact measure of the ground planted or the quantity of beans that it produced, inasmuch as they were used by our family during the season; but we ascertained enough to prove to our entire satisfaction, that Guano is one of the best, if not the very best manures which can be used for their production, as the fruit borne corresponds with the enormous growth of the vine. We presume that the vines averaged at least 27 feet in length.

To grow a full product of Lima beans requires a climate at least one month longer than ours, for many unripe pods are always left upon vines in this latitude. The coming season we intend to use much shorter poles, and pinch off the ends of the vines as soon as they reach the tops, so as to stop their growth.—*N. Y. Agriculter.*

HORTICULTURE is that great gift of God to man, which makes desert places into gardens, and so beautifies the abode of men as to resemble Paradise. Buildings without Horticulture, are but landmarks in a wilderness.

AN irritable and passionate man is a downright drunkard.

# Mechanic Arts, &c.

### ERICSSON'S ENGINE.—A TEST OF FAITH.

THE New York Evening *Post*, in reply to a suggestion that it has been humbugged; and to an enquiry whether it really puts faith in the success of the new motor, says:

The strength of our faith may be judged from the fact, that we have contracted with Capt. Ericsson to furnish us with a Caloric Engine, as soon as it can be made, for the use of the Evening *Post*, and it is already in a state of considerable forwardness. The patterns are prepared by Captain Ericsson, and the machinery is making by Messrs. Hogg & Delamater. It is to have sufficient power to drive one of Hoe's rotary presses at the rate of 10,000 impressions an hour, and four job-office presses, with a reserve force of two or three horse power, and yet is to occupy only the space enclosed in a cast iron box, six feet square and between five and six feet high. It is to be finished, and in operation by the middle of April.—If it succeeds, of which, of course we have no doubt, we shall feel proud of the distinction which will properly belong to the journal that first avails itself of so important an improvement. If it fails, we mean the world shall know it, and the reasons why, if we can ascertain them."

### SHIP BUILDING.

DARIUS DAVIDSON, a celebrated naval architect, of Boston, proposes to construct an immense steamship, 700 feet in length. She is to be driven by 16 seperate engines, having a total of 5,000 horse power, at the average speed of 25 miles per hour, and to have berths and state rooms for 3,000 passengers! Those figures seem large ones, but we are traveling towards their realization.

Three thousand passengers is a great number to be on board a single ocean steamship, but one half that number have, if we mistake not, already been carried out on a single trip of some of the California steamers. Seven hundred feet is a great length for a sea-going vessel now, but not nearly so great as half that length would have been considered fifteen years ago. The 350 feet we have—the 700 feet we may yet have.

Where are the passengers to come from, say the doubting? Put the passengers at $20 to $25 and you will see! If 250 per week offer themselves at $125 fare, it is not unreasonable to expect 500 at 75, or 1000 at $50 or 3000 at $25, and when the figures are made, the "Leviathan" will carry the palm by all odds, both of profit to the owners and comfort to the passengers. All that prevents the experiment is the fear that the passengers and freight will not offer, because the people cannot be made to believe that such a vessel would be safe. There are merchants and monied men who are personal believers in the project, but they want confidence that they will be sustained in the undertaking.

It is worthy of notice that the largest ocean steam ship now plying on the Atlantic, is near precisely the same proportion in length breadth and depth, as is recorded to have existed in Noah's Ark. The dimensions of the Atlantic steamers are, length 322 feet, bredth of beam 50 feet, depth 50 feet. The dimensions of the Ark were—length 300 cubits, brodth 50 cubits, depth 30 cubits. It will be seen, therefore, that the Ark was nearly twice the size in depth, length and bredth of these vessels, the cubit being 22 inches. Both had lower, upper and middle stories.

After all the experiments of forty-two centuries which has elapsed since the deluge, the ship builders have to return to the model afforded by Noah's Ark. — *Newburyport Herald.*

GREAT IMPROVEMENTS IN STEEL.—Great improvements have recently been made in England, in steel, especially in cast steel.—Messrs. Blake and Parkin, of Meadow Steel Works, Sheffield, are making steam-engine piston-rods, said to bear more than double the strain of ordinary cast-steel of same thickness, by combining two tempers of different degree of hardness in one bar—the soft part being inside, the outside being harder, thus combining the two requisites of stiffness and toughness. This peculiar steel is now used extensively by engineers for making their screw taps. It can be made with the hard temper inside and the soft temper outside for medal dies, mint dies, &c. Samples are ordered for the Bank of England and the Royal Mint, for their dies. Most of the large engineers in this country and in the United States are bringing this core-annealed steel into use for engine piston-rods and screw taps. The price is said to be about the same as ordinary cast-steel.

HOW TO MAKE OLD OAK.—The appearance of old oak may be obtained by exposing any article of new oak to the vapors of ammonia. Every variety of tint may be procured, according to the duration and temperature of the volatile compounds. A new oak carved arm-chair, exposed to the vapors of ammonia, will in about twelve hours have all the appearance of having been made 200 years before.—*Kidd's Own Journal.*

THE GREATEST WORK OF ALL.—The Great Pyramid in Egypt is 800 feet in height, and its base covers thirteen acres. Its weight is estimated at six millions of tons, and its erection would occupy 3,000 men twenty years. If it was broken up, the materials would rear a wall around the whole empire of France ten feet high and two and a half feet thick.

### IMPROVED GALVANIC BATTERY.

THE Boston Journal states that Mr. FARMER, of the Municipal Fire Alarm Telegraph of Boston, has invented an improvement of the galvanic battery, which promises to be important. The peculiarities of the new battery, and its points of difference with Grove's are thus pointed out:—Grove's battery requires to be kept constantly clean, and at most will last but three or four days, while the battery of Mr. Farmer has been in action *three months and twenty-eight days without interruption or renewal of acid.* It is constant. The Grove battery, when first put in action is very intense, but rapidly diminishes its force and becomes variable, while in Mr. Farmer's there is scarcely any perceptible change. It is more simple in its form, and requires no attention, while Grove's is generally taken down at night and set up again the morning. Mr. Grove's requires zinc in a peculiar form, which has to be amalgamated often with mercury.—In Mr. Farmer's the zinc may be used in any form, and when once amalgamated, remains so. There are other peculiar advantages which we cannot mention without going into a description of its arrangement. But the greatest point is that it *saves about fifty per cent*, in the battery expense. The battery invented by Mr. Farmer is successfully used by daguerrotypists in Boston, and is pronounced to be superior.

# Domestic Economy.

### HOME-MADE BREAD.

WE find the following in the American Artisan, a New York city paper:

Mrs. B. (the respected widow of Mr. B., some years since an extensive and opulent merchant in this city,) becoming reduced in circumstances, with four children to support, took a small thread and needle store in Washington street, in a house fitted up by a sister of Mr. A., an eminent baker of some thirty years' standing in New York.—Having purchased 7 lbs. of flour wherewith to make a batch of bread for her children, she innocently enough (on its withdrawal from the oven) placed it on the counter to cool. Some parties called in accidentally to make some trifling purchase, and remarking the nice fresh looking loaf, exclaimed:

"Oh! Mrs B., what beautiful looking bread. Will you sell me a loaf?" She replied:—"It was intended for my children, but to please a customer, I will sell it."

The proceeds and profit on that one sale enabled her to purchase 14 lbs. more, which was speedily converted into Domestic Bread, and as rapidly sold. Progressing thus, and finding such a demand for this description of bread, she was soon enabled to purchase a barrel of flour, and finally (after some few years extraordinary success in the business) she purchased 500 acres of land in Michigan, 300 acres of which, five years ago, were sown with wheat and in a high state of cultivation. On this 300 acres she raised in one year $6,000 worth of wheat.

Store bread is generally fermented by potatoes, while Homemade Bread is raised by yeast alone. It has been proved that Homemade Bread can be put into sponge and baked in six or seven hours, whereas the Store Bread bakers require ten hours to produce a well baked batch. *It requires a scientific baker to spoil a batch of bread fit for customers.* The only difference in the time occupied in the baking arises in the modes of fermentation. Boss bakers want to suit the palate and sometimes the eye of the customer, and a poor man when he sits down with his family—hungered—if he gets a *big* loaf of bread he is satisfied; he don't care about the loaf so long as he can cut off ten or twelve good slices; but if he were to take Homemade Bread he only could cut off six. The latter, however, really goes much farther and is cheaper than Store Bread. The "upper tons" use the Homemade Broad, caring not about the size of the loaf, but the poor are deceived, not knowing the difference in the qualities or substance of the one as compared with the other. Sour Bread, which is the kind usually made in this city, arises from the additional fermentation required to produce it. Baker's Bread looks one-third larger than Homemade, and to the uninitiated in these matters, especially the poor man, is more tempting than any other. "*Splendida quam honesta,*" (splendid rather that honest.)—*Voice of the People.*

BUCKWHEAT CAKES.—The griddle on which cakes are baked should never be touched with grease: Firstly, because it imparts a rancid taste to the cakes. Secondly, if a cooking stove be used it fills the kitchen, if not the whole house, with the smell of burnt grease—to say nothing of the parade and boasting to one's neighbors by betraying what we have for breakfast. Wash the griddle with hot soap suds, scour with dry sand, and when heated for use, rub it well with a spoonful of fine salt and a coarse cloth; it will then be ready to receive the cakes.—After each cake is removed, the salt rubbing must be repeated. If the first did not succeed, try it again, and you will ever after follow the advice of an old housekeeper.

PARSNIP WINE.—Take fifteen pounds of sliced parsnips, and boil until quite soft in five gallons of water; squeeze the liquor well out of them, run it through a sieve, and add three pounds of coarse lump sugar to every gallon of liquor; boil the whole for three quarters of an hour; when it is nearly cold, add a little yeast on toast. Let it remain in a tub for ten days, stirring it from the bottom every day; then put it into a cask for a year. As it runs over fill it up every day.

# Educational.

## THE SCHOOLS OF NEW YORK.

THE Annual Report of the Secretary of State, who is by law the Superintendent of Schools, is a document of much interest and value. Its great length precludes its insertion in our columns, and we must be content with an abstract.

There are in the State 11,587 school districts, being an increase of seven within the year. The average length of time during which schools have been taught by licensed teachers, was seven months and fourteen days. The number of children between the ages of four and twenty-one years is reported at 1,100 613, of whom 832,481 have attended school some part of the year, leaving 268,132 who did not attend the common schools. The number of unincorporated, private and select schools included in the districts was 1,472, having an average attendance of 31,767. Thirty schools for colored children are reported, at which 4,416 scholars receive instruction. The Report presents the following financial exhibit:

| | |
|---|---|
| The amount of money received by districts the preceding year, as stated in reports of trustees, was | $987,971 41 |
| Collected by district tax for same purpose, | 429,010 99 |
| Do by rate bills under the act of 1851, | 224,979 71 |
| Local funds applicable to same object, | 24,326 26 |
| Paid for teachers' wages in colored schools besides the public money, | 1,265 90 |
| Collected to pay the tuition of 1,219 children exempted from rate bills, | 5,437 29 |
| Collected by tax to supply deficiencies in rate bills, | 8,324 45 |
| Total expenditure for teachers' wages during the year, | $1,681,316 01 |

LIBRARY MONEY.

| | |
|---|---|
| The amount of public money expended for district libraries during the year, was | $99,579 50 |

COLLECTED BY TAX ON DISTRICTS FOR OTHER PURPOSES.

| | |
|---|---|
| For purchasing school house sites, | $20,750 21 |
| " building school houses, | 209,255 17 |
| " hiring do | 5,856 84 |
| " repairing do | 73,725 86 |
| " insuring do | 3,846 10 |
| " fuel, | 76,989 17 |
| " book case, books, and apparatus, | 14,141 12 |
| " other purposes, | 73,354 04 |
| | $477,918 51 |
| Add teachers' wages, | 1,681,316 01 |
| " library money, | 99,579 50 |
| Total amount expended for school purposes during the year, | $2,249,814 02 |

WHOLE AMOUNT OF PUBLIC MONEY RECEIVED AND DISBURSED.

| | | |
|---|---|---|
| Received from all sources by town superintendents, during the year reported, (ending July 1, 1852,) | | $1,348,367 09 |
| Apportioned for teachers' wages, | $1,190,622 78 | |
| Do. for libraries, | 52,293 32 | |
| | | 1,242,916 10 |
| Leaving unappropriated, | | $105,450 99 |

The increase of expenditure for the past, as compared with the preceding year, is $364,987 86. One hundred and thirty thousand dollars have been appropriated from the income of the school fund for the support of schools the coming year, which is five thousand dollars less than the amount appropriated the previous year. The practical productive capital of the Common School Fund, is stated at $5,521,196 75.

Nearly ever since the adoption of the first Constitution, the principle that education is a concern of Government, and properly could be justly taxed for its support, has been acquiesced in by the people, and made more or less effectual by various laws. The laws of 1849, distinctly affirmed the principle, which was twice sanctioned by the people. Such was the subsequent opposition that the law of 1851 took its place. This is a compromise between the conflicting interests and opinions, between the exclusive property theory and that which previously obtained, of property paying a part and those most benefited the remainder. The Superintendent does not advise any change at present, but clearly demonstrates that a per cent. tax is preferable to raising a fixed amount, as is now done in the sum of $800,000. The desire is expressed to have the law so amended as to re-invest that department with appellate jurisdiction that parties aggrieved may have redress without a resort to the courts of law.

Much attention is bestowed upon the relative claims of colleges, academies and common schools upon the public fund, a subject fraught with many difficulties, and one too upon which much thought and theory has heretofore been expended. In relation to these conflicting interests he remarks as follows:

"There are two ways of removing this inequality. The one is to deprive academies and colleges of all share in the public moneys. What would be the effect of this? Wealth would still sustain these institutions, but necessarily in diminished numbers, as the cost of tuition in them, increased to counterbalance the withdrawal of the public aid, would exclude not only poverty, but that moderate competency which, united with effort and energy, now not unfrequently attains their benefits. Higher education would thus become the luxury, and the additional *power* of the wealthy. If the sons of the poor and those in middling circumstances, were not excluded from the learned professions, and from all occupaions demanding a higher grade of learning, they at least would start both in the attainment and the practice of those professions, on no equal footing with the educated sons of the rich; and they would require double talent and double industry to ensure equal success.—Is the idea to be for a moment tolerated in a government which has enough for the reasonable wants of all? Are the public prepared to surrender, for the benefit of a small portion of our population, the treasure which they have been pouring for half a century into the coffers of our academies and colleges? Shall the monopoly, and hence the double power of learning, be made an appendage of the aristocracy of wealth."

To obviate the objections which are now urged, the plan is proposed "of distributing among those institutions, as much money as now—and more, if necessary—but require them to repay every dollar thus received, *in gratuitously educating such pupils as the State shall designate.*"

To carry out this plan he advises that the common school districts of the State be arranged into as many academy districts, as there are now, or may hereafter be, academies. Let each academy then be required to receive annually from the common schools in its district, and gratuitously educate a pupil for every $—— received from the State: a college to receive pupils from the free departments of a certain number of academies, on the same footing. The selection of the pupils should evidently be made on the basis of educational qualification and general merit. The Report says:

"The Free Academy in the city of New York presents, a practical exemplification, in a simple locality, of the plan above proposed for the whole State. It receives its pupils from the common schools on the basis above suggested, and it *educates them gratuitously.* Within its halls, the marks of caste and the distinctions of wealth, elsewhere so pervading—pervading the mansions of the living and even the mausoleums of the dead—are for once ignored. The sons of the rich and the poor—neither of them degraded beneficiaries, but the honored cadets of a parental government—meet on ground where neither has vantage. Sitting on the same benches, pursuing the same higher branches of science, drinking from the same rich fountains of classic literature, cultivating the same elegant tastes and personal accomplishments, the undersigned saw with emotions he will not attempt to describe, the representatives of almost the extremes, and of every intermediate point, in social and pecuniary condition—the sons of the merchant whose vessels visit every ocean, and of the employees of his store-houses and his wharves—of fathers whose names are historic in professions, in literature, in arts, and in arms, and of the obscure and toiling mass whose sinews support this social superstructure above them.

"If it is urged that the change would result injuriously to the pecuniary interests of the academies and colleges, it is answered, if they receive the same amount of aid from the State as at present, it makes little difference to them whether it goes to cheapen the tuition of their entire number of pupils, as it now does, or whether it makes the tuition of a portion free, and slightly increases that of the others. Such would be the effect of the change, if the number of students remained the same as at this time. But the number would undoubtedly so increase by the accession of an entirely new class, as to prevent a rise in tuition, and at the same time to overbalance the comparatively small additional cost to the institutions themselves, accuring from the increase of scholars."

The education of teachers, and a higher standard of qualifications are warmly commended as subjects of vital importance to the advancement of the schools of the State. The plan of Normal Schools commends itself to the attention of all as one of the most efficient means for the needed improvement in the qualification of school teachers. Three thousand two hundred and thirty pupils have received the benefits of its instruction, and are now doing duty as teachers in the departments for the instruction of common school teachers in the academies; in the larger schools of the cities and villages, which become model ones to others; and are beginning to be felt in the body of the common schools of the State.

An additional Normal School, to be located in the western part of the State, is recommended. It is believed the necessary buildings would be furnished by the State, and its other expenses need not be very heavy.

The public schools of New York City have receivd their merited share of attention, particularly those connected with the Asylum and charitable institutions, and a share of the funds for their benefit is recommended.

Defects having been found in the reports of the County Clerks, of a character so serious as to put the department to much inconvenience and loss, it is recommended to change the law so as to devolve the duty of making these reports upon a chairman of the board of town Superintendents. To effect this object it is proposed

"That the town superintendents be required to meet on the first Wednesday in August in each year, and to elect one of their number "Chairman of the Board of Town Superintendents," who shall hold such place until the next annual meeting of the board; that it be made their duty then to compare and correct their reports and deliver them to their chairman; that the latter be required within twenty days to make out and forward an abstract of the same to the State Superintendent, receiving the per diem allowance of a town superintendent, while necessarily employed in discharging this duty.

Other benefits besides the direct one above indicated, would result from this arrangement."

These are the leading features and recommendations of the report, which may safely be characterized as an able document, worthy of the department from which it emanated, and of the great cause which it advocates. It should be placed in the hands of all interested in the cause af popular education.

As Dante is said to have combined in his immortal poem the fulness of the middle ages, Burke combined in his own character the poetry of the British aristocracy.—*Bancroft.*

---

By sympathy we make others' miseries our own; and so by relieving them, we at the same time relieve ourselves also.

ATTACKED BY WOLVES.—A RUSSIAN STORY.

"O! now then we've got a wolf story." I think I hear half a dozen voices exclaim, "for only see, in this picture, how hard the wolves are trying to get into the sleigh where that poor woman and these children are, and how fast the horse is running to get away from them. Now Willie, you read it, won't you, and we'll all keep just as still as mice. What! is there no story? Why Mr. Thorne! how could you cheat us so? it really is too bad!"

Ah, ha! my little friends, but did I promise you a story? Sometimes we give you stories without pictures, so what matter is it if we now and then give you pictures without stories, for they say it is a poor rule which won't work both ways. But see! doesn't the picture tell its own story, just as plain as day? There the horse is, running with all his might, the wolves are following, and the poor creatures in the sleigh are almost frightened to death. Is it not a story of itself?

"But Mr. Thorne," I think I hear you ask, "did such a thing ever happen?"

Ah! now you are asking a close question, but I will answer it, as well as I can. I am not sure, that is absolutely sure, whether the event, intended to be represented by the picture, ever happened or not, though it is said to be true; but others very similar have taken place, so that I can see nothing improbable in this. It is said to have happened in Russia. Russia, as you know, is a very cold country, and many parts of it are wild and barren, and are dreadfully infested by wolves, and in cold weather, as there is little food to be got, wolves are exceedingly ferocious.

Well, it is said that a woman, with three children, one an infant, started in a sledge—which is a kind of sleigh—to go some distance through one of those wild districts, and while passing near a dark forest of pines, they were beset by a pack of hungry wolves. The horse exerted all his strength, for the wolves made a dreadful howling, but he could not run quite fast enough, and so the poor mother, almost crazy with fright, threw one of the children out, which was immediately devoured by the greedy monsters. Soon the wolves were after them again, and then she threw out the second, and urging the horse on with all her power, she hoped at least to save herself and the infant; but they soon got that child also, and had almost seized the woman, when she reached a settlement to which the wolves dared not come; but on telling her fearful story, a peasant was so indignant, to think a mother should sacrifice her children in such a manner, to save her own life, that he immediately clove her asunder with an ax he held in his hand; so that, after all, her death was almost as frightful as the death of her children. Poor woman, she hardly knew what she was about. Indeed, we could not tell how we should ourselves act under such circumstances: but as there are few wolves in our country now, probably none of us will ever be placed in so frightful a situation.—*Youth's Casket.*

# Natural History.

## A PET FISH.

Mr. J. G. PHINNEY, at the dye-house in this city, has a large water tank of the capacity of several hogsheads, from which he procures a supply of pure water for use in his business. About six years since he obtained and placed in the tank a brook trout, of a few inches in length and has since fed it regularly with scraps of meat until it has attained a weight of six pounds, and a length of some eighteen inches. The tank is fed by a spring and the overflow carried off by a pipe so that the supply of water is constant, cool, and pure, and Sir Trout lives and enjoys life like a philosopher—another Diogones in his tub. This fish, although approached by its owner, and always coming at his call, is shy in the presence of strangers, and when he sees only strange faces above him, usually retires to the bottom of the tub. We paid a visit to this finny celebrity Monday last, and approaching his domain alone, we found him suspended mid-way in the crystal fluid, slowly moving his fins to and fro, his beautifully spotted back gleaming in the light. As usual, he took no notice of his strange visitor, although invited to acquaintance by such advances as crumbs thrown on the water; but when Mr. Phinney appeared with some strips of raw beef steak, his apathy gave place to the utmost activity. He would dart from the bottom and throw himself clear out of the water if a piece of meat was held above, and almost always succeeded in catching it. He is an unsocial fish, and small ones, even of his own kind, are at once devoured if placed with him. His last exploit in this line was killing and devouring a chub eight inches long. A man not long since was drinking from the tank, not knowing that it was tenanted, when the trout made a spring at his face, and severely bit his lip. An old angler can not view his fine, plump proportions, without a desire to throw a fly on the water, and try how he would feel at the end of a rod.—*Kennebec Journal.*

## WHAT A WHALE DOES.

THE noise of a whale spouting can be heard at least a mile. He throws the water from twenty to thirty-five feet high. After giving one blow, which the whale does when he is clear on the surface of the water, he instantly goes under. He usually rises in from one to two minutes, but sometimes he is under five minutes. Once as I sat on the bowsprit, watching two or three who were playing about, one passed within a few yards of me, blew a blast with his water-trumpet, and down he went. I had a good opportunity of seeing him, and got a fair view of the breathing pipe. It was a round hole in the top of his head, with a slight rim round it, and apparently about two inches and a half in diameter. This one as near as I could judge, was from sixty to seventy feet in length. The top of his head and "shoulders" was broad and flat, and near or quite twelve feet across. His back instead of appearing round was nearly level, and showed room enough for a quartette of Highlanders to have danced a reel thereon. 'Twould have been rather a slippery, floor, though, and I think a dancer would have wanted nails in his shoes.—*Boston Post.*

## IMMORTALITY.

ONE of the chief distinguishing features of the Christian Religion is the clearness with which future things are revealed, especially those that relate to the destinies of individuals after passing from this scene of action. That problem which heathen sages tried in vain to solve—that question which they often asked, and which as often returned unanswered,—"If a man die, shall he live again?"—in the Inspired Volume receives a clear solution and satisfactory answer. The pages of the New Testament more particularly bring "Immortality to light."

What can be more glorious than the assurance that the life commenced here is to progress interminably—becoming holier and happier, the mental and moral powers increasing in capacity and excellence continually, exempt from decay or dissolution, from fatigue or annoyance?

But little, indeed, is said in the Scriptures, in regard to the manner in which individuals will pass Eternity; but the doctrine of Immortality is clearly set forth, and it is distinctly announced that the righteous shall enjoy the most perfect felicity. No language is more grand, no imagery is more superb, than what we find in the Scriptures concerning the Heavenly World. The locality is full of glory and beauty; the society is holy and happy; the conditions of existence are calculated to insure repose and tranquility of mind. All physical evils are banished—death is no longer feared; sickness is unknown; tears, save those of joyful gratitude, are forever wiped away; hunger and thirst distress no more; and sin, the cause of all misery, finds no entrance there. All mental trials are past; all spiritual conflicts are over. The Divine Glory is more radiant than the sun, and the Divine Benevolence sheds bliss unutterable on every beautiful soul. Doubtless the Bible descriptions of Heaven are figurative, but they are so because the reality can not be otherwise described.

It were useless to speculate on the several circumstances and employments of individuals among the saved. It is enough to know that each one possesses an existence as enduring as that of the Deity, to be unmarred by any thing that can annoy or disturb. God,—angels, saints, all concur in unceasing efforts to promote the happiness of even the meanest disciple. To secure this result, the strength of Omnipotence is pledged. The details of enjoyment must be felt to the rapturous experience of the favored ones. But this much, it may be said, is reasonable, that the thinking, spiritual nature, being unchanged by the circumstance of death, will derive its pleasures from the same sources that it did in this world. The contemplative man will still delight in reasoning, the benevolent man will rejoice in the happiness of others, the affectionate soul will continue to exult in the satisfaction of loving and being loved.—If this view is correct it furnishes a powerful reason for training the mind and heart properly while in this world.

The Bible teaches that every human being shall possess immortality, or exemption from annihilation, but the kind spoken of above is to be enjoyed by those only who have a preparation for it, indicated by the right reception of JESUS CHRIST as their Savior. This transcendent blessedness is not to be earned, or acquired in any way, except as a free gift through the grace of GOD.

Does this unbounded existence stretch away before every living soul? Is its eternal character to be decided by the brief years of this trial scene? Is happiness unending more desirable than ephemeral pleasures? Is it not then the dictate of wisdom to live for a blessed Immortality? Who, that calmly ponders these weighty matters, will deliberately choose "the pleasures of sin, for a season," at the untold sacrifice of holy delights, ever new, ever satisfying?

What gratitude should swell the heart of the recipient of so precious a boon towards Him, who, by infinite sufferings, made it possible for mankind to obtain it, after it had been forfeited by sin! No wonder that angels and saints vie with each other in praise and adoration of so glorious a Being. Life is a blessed gift, even in this unhappy sphere; it has many sunny spots, many sweet remembrances; but ETERNAL LIFE! to comprehend what that is we must patiently wait for the majestic unfolding of its ecstatic experiences. J. W.

Lockport, N. Y., Feb., 1853.

## SONNET.

BY WM. EDWARD KNOWLES.

From the deep chambers of the silent tomb,
A voice calls hourly for the gifted ones:
And at the call the sadden'd spirit dons
The garb of sorrow, in its hour of gloom.
The cheerless night, and clouds of darker shade,
Draw round as if in mockery of grief;
And the sad heart, when the last prayer is said,
Unlocks the fount of tears, to find relief—
Ah! it is sad to see the aged fall
Beneath the stroke of Him who thinkest best;
But sadder yet to see the sable pall
Close round the young, and fold them to their rest—
Yet weep not, friend, for they shall wake again,
Wake with their God, on the eternal plain!

For the Rural New-Yorker.

## MAKE HOME PLEASANT AND CHEERFUL.

Of course it is the desire of every one who has a home, to have a pleasant and cheerful one, and as near perfect as may be. I will ask how this can best be done? Now let us look at the matter in its true light. Every family needs a *dwelling*; but few families, however, have such dwellings as are calculated to make home what they desire. It is a fact that not one house in ten, built even in these days of improvement, is constructed and finished as it should be, in order to have things handy and convenient for in-door operations. Quite too many, when they make up their minds to build a new house, make too headlong a beginning—and often *proceed* in this manner, till they come to the construction and arrangement of the inside. When they have proceeded thus far with their new building, they find they have been to work without a plan,—or what is about the same thing, *with* but a mere crude one. It is an easy matter to erect the frame work for a house, and enclose it; little planning or head-work is needed thus far,—but to arrange inside rooms, so that they may be convenient and handy for "housework," etc., needs a well drawn plan, from some one competent; and no one is *more* competent to have a *voice* in the matter than the housekeeper herself. She knows better than any one the *size* she wants her rooms, and how they ought to be arranged to each other to have them easy of access. It is necessary for the person intending to build, to have his plan drawn with accuracy, and every room laid out with precision, before the carpenter strikes a blow, thus saving alterations as he progresses.

There is nothing (in worldly matters) a person ought to interest himself more about, than the construction, finish, and arrangement of his house. Every husband must be aware how much fretfulness and ill-temper is caused by having unhandy rooms, and especially a small and badly-contructed kitchen. The kitchen, as every one knows, is the most important room in the house, and where this apartment is pinched, and ill-arranged, in regard to its situation to to other rooms, it is not at all to be wondered at if she does feel a *little* fretful at times.

The great desideratum in regard to building, is, to have every room in the house so arranged and fitted, as to have a place for everything, and everything in its place. If those who are well able to build expensive houses, would pay more regard to the convenience of the *inside*, and a little less for show on the *outside*,—it would be thought full as good economy. I have seen large houses with a beautiful exterior, appearing to the passer-by, to be model houses, without and within. But let him just take a peep inside the walls; perhaps the parlor and dining room are large, commodious rooms, and everything in excellent order and neatness. Next look into the kitchen and sleeping rooms—the former, may be not more than ten by twelve, with cupboard and sink in the same space; the latter, perhaps, seven by nine, with a large bed for the old people, and a truckle bed for the little ones, in this crowded space. Nearly half the houses, I presume, are built and arranged somewhat after this manner. Now what chance is there for health and cheerfulness in a house constructed after this plan.

No man can better lay out his property than in adorning and making things convenient and pleasant around his house and home. Of course it is the desire of every one who has a home, to have that home as comfortable and cheerful as may be for the female part of the household; this done, let us, (those of us who are husbands,) see that they have such assistance in their more laborious toils, as they oftentimes actually need.

It is too much the case, especially among us New Englanders, that we are so anxious to add money to our pockets, we sadly neglect that which will add to the *solid pleasures* of our firesides. This desire to accumulate property to leave for our postority, causes us to neglect to make such provision for our home circle as is required of us. As I advance in life, these things appear to me differently from what they did when I first commenced fitting for myself a dwelling place. I feel now to say with the words of another:—"Let others spend their money for balls, fashions, etc., but let me spend mine for a neat family homestead; and then let me, year by year, spend no small part of my income in adorning and improving it, till, in the decline of life, I shall have a perfect home for myself and family."

A different state of society would be the result, if we would interest ourselves more for the welfare and happiness of our families, and study to make the fire-side circle what it should be. Then might we have pleasant and agreeable homes—then might we witness our sons and our daughters returning with smiles of love and good feeling, to the parental roof—to the home of their youth, that they may make glad the hearts of their endeared and venerable parents. A. TODD.

Smithfield, R. I., 12th mo., 1852.

## SOCRATES IN NEW YORK.

SOCRATES probably knew almost all of the fourteen thousand male dwellers in Athens. At one time we behold him holding friendly converse with a priest of the dominant religion there. And next we see him arguing with the lawyers, or merchants, or laborers. Perhaps we may best realize his relations to Athens, if we fancy him returned to earth, and behold him walking the streets of New York, and taking up here his mission of reformation. Behold him walking down Wall street in the morning, and urging there with the bankers and brokers upon the transient and paltry worth of stocks in Morris Canals and Erie Railroads, and endeavoring to impress upon their minds the truth of a destiny for man somewhat higher than this. And then he catches a lawyer by the button, and tells him that there will be call for subtle eloquence at the last assize. At half past one he saunters into the Exchange, and is soon found addressing a group on the nature of the Beautiful. At two, look for him at Delmonico's, arguing the foolishness of this habit of eating—that it is a mere gratification of a want, and that the part of wisdom is to keep as far as possible from the want! At four, you shall find him in close communion and conversation at some prominent residence on Fifth Avenue. After entering into all their various pleasures and amusements, he will not fail to wind up with some good advice upon the true life—which is one of temperance, sobriety and simplicity, etc., etc. Imagine him in all these various phases, and you shall then know what Socrates was to Athens, and how he would be welcomed among us.—*Rev. Thos. Starr King.*

## POPULATION OF THE GLOBE?

THE population of the globe is supposed to be less than one thousand millions—938,000,000. A French writer, alluding to the subject, says:—"If all mankind were collected in one place, every four individuals occupying a square metre, the whole might be contained in a field ten miles square.—Thus, generally speaking, the population of a country might be packed, without much squeezing, in its capital. But the mean idea this gives us of the number of the human race, is counterbalanced by its capability of extension. The new world is said to contain of productive land 4,000,000 square miles of middling quality, each capable of supporting two hundred inhabitants; and 6,000,000 of a better quality, capable of supporting five hundred persons. According to this calculation, the population of the New World, as peace and civilization advance, may attain to the extent of 4,000,000,000. If we suppose the surface of the Old World to be double that of America (and notwithstanding the comparative poverty of the land, this calculation may be accepted, if we say nothing of Australia and the various Archipelagoes.) it would support 8,000,000,000; and thus the aggregate population of the entire globe might amount to 12,000,000,000, or twelve times the present number."

## WASHINGTON.—WASHINGTON IRVING.

THE following incident, which occurred at a breakfast table in Washington, is related by a young lady of this city, who is spending some time there. It is a touching reminiscence:

Mr. Irving said that he remembered Gen. Washington perfectly. He said there was some celebration—some public affair going on in New York, and the General was there to participate in the ceremony. "My nurse," said Mr. I., "a good old Scotch woman, was very anxious for me to see him, and held me up in her arms as he rode past. This, however, did not satisfy her; so the next day, when walking with me in Broadway, espying him in a shop, she seized my hand, and darting in, exclaimed in her bland Scotch: 'Please your Excellency, here's a bairn that's called after ye!' General Washington then turned his benevolent face full upon me, smiled, laid his hand upon my head and gave me his blessing, which," added Mr. Irving earnestly, "I have reason to believe, has attended me through life. I was but five years old, yet I can feel that hand upon my head even now!"

This little story was told with such simple earnestness, that, while I saw the narrator's own voice trembled, I saw more than one moist eye around the table—my own were—and who could help it?—*Buffalo Courier.*

FALSEHOOD could do but little mischief, if it did not fain the credit of truth.

## THE PHYSICIAN'S SABBATH.

THE address to the recent graduates of the Albany Medical College by Professor McNAUGHTEN, has in it the following truthful passage:

That physicians so often appear to neglect the ordinary duties of religion, is not always their fault—often it is their misfortune.—They have no Sabbath or day of rest, like other people. Their duties are as urgent on that holy day as on others, and sometimes more so. Not unfrequently, when they are preparing to go to church, some worthy member on his own way there, leaves his message for "the Doctor to call," or sends a servant, when the bells are ringing, who, as a general rule, leaves the message, in the most imperious style, "to come as quick as possible." In this manner. Sunday, after Sunday, a physician is kept from Church, or left in a state of mind not the best fitted for being edified when he goes there.

I trust it will not be considered out of place, on such an occasion as this, to advert to another circumstance, which, I fear, has some influence on the minds of physicians; and that is, the readiness with which many clergymen lend their influence to the propagation of every novelty in the theory or practice of medicine. From thus going out of their own department, and giving opinions on matters they do not understand, physicians are apt to conclude that their zeal in their own profession, when they show any, is fanaticism; their faith, credulity, and their opinion, on any subject, of little value.—Such a coclusion is often harsh, and often wrong. We ought not to confound the worthy, who endeavor to imitate their Divine Master, though at a humble distance, with their weaker brethren. We have weak, as well as unworthy brethren in our own profession. Indeed, every rank in life furnishes a great number of people of unstable minds, whom the poet well describes as

"Stiff in opinion, often in the wrong,
Everything by starts, but nothing long."

A physician should be sober and grave.—He has it often in his power to do much good in a quiet way, by his advice and conversation, when the minds of the patients are in the best mood to be seriously impressed.—But in giving this advice, I am far from recommending that you should be officious in such matters. Do not, on your part, encroach on the proper domain of the clergy, nor make your religion a mere means of promoting your worldly prosperity. Of the two characters, the hypocrite is less respectable than the sceptic. The one is a rogue; the other may be simply—fool.

## DO WE SLEEP ENOUGH?

GOOD, honest people cannot endure to find the yellow sunshine on the walls of their dormitories when they rise, and society will not tolerate early retiring, for night is the time for pleasure-seeking—the season for social and festive gatherings, and the hour of inspiration for poets. So, between the two, Sleep, who is but a modest, easily-frightened spirit, has very narrow quarters appointed for her accommodation. The philosophical study how they can lessen their allowance of sleep with impunity, and the men of energy stir up the slothful and encourage the ambitious, by citing the cases of such as occur in their reading or experience, whose hours of nightly rest have been contracted within briefer than the ordinary limits.

Now, we have not a doubt that a man might, by diminishing the amount of his daily eating to the very minimum that would sustain nature, and by driving from his table every article of animal food—by commencing each morning with his severe labors, and assuming those of less difficulty with the progress of the day—by total abstinence from unnecessary excitements, and a scrupulous observance of exercise and regimen—might school himself to a smaller amount of sleep than we of grosser habits, who rather court than shun excitements, and seldom think of taking exercise until disease has taken us in hand and stimulated our ideas on the subject, could possibly live under.—But as the world goes, and particularly as the young of this generation are going, we are quite confident that the majority of us do not sleep enough.

We are too continually "grinding in the mill"—we rest too little, and labor too constantly—we toil too much, without remission—we do not stop to wood and water often enough to make our best speed on the road.—*N. Y. Times.*

WASHINGTON'S PUNCTUALITY.—Washington was a minute man. An accurate clock in the entry at Mount Vernon, controlled the movements of the family. At his dinner-parties, he allowed five minutes for difference of watches, and then waited for no one. If members of Congress came at a late hour, his simple apology was, "Gentlemen, we are too punctual for you," or, "Gentlemen, I have a cook who never asks whether the company has come." No one ever waited for General Washington. He was always five minutes before the time; and if parties he had engaged to meet, were not present at the season appointed, he considered the engagement cancelled, and would leave the place, and refuse to return. Noble trait! May it become a national one.

No man should be delicate about asking for what is properly his due. If he neglects doing so, he is deficient in that spirit of independence which he should observe in all his actions. Rights are rights, and if not granted, should be demanded. The selfish world is little inclined to give one his own, unless he have the manliness to claim it.—The lack of the proper fulfilment of this principle has lost to many, fortune, fame and reputation.

# For the Ladies.

For Moore's Rural New-Yorker.

## THE DEAD.

THE dead!—whom call we so?
They that breathe purer air, that feel, that know
Things wrapt from us!—*Hemans.*

We lay them away in their low green graves,
From the light of the golden sun;
And we know they have reached a summer clime,
That the crown they have sought is won.

We know that the ills and the toils of life,
Which darkened their spirits are o'er;
That the beautiful flowers which faded here,
Will bloom in that land evermore.

There the spirit-sword in its shining sheath,
Ne'er corrodes with the rust of care;
And the quenchless thirst, and the weary heart,
Are no more for the dead to bear.

They lift us as morn-birds on drooping wings,
Flie away ere the set of sun;
As the midnight stars in their beauty dim,
As flower-leaves are folded at noon.

They sported with us on the sunny plains,
In the long bright years agone;
Ere the soft eye closed, or the faltering step,
To darkness and silence went down.

We have dreamed of joys which the earth holds not,
Which are like to the joys above;
We have laid our hearts in their tenderness
On the altar of earthly love.

But how may we welcome a stranger guest,
To the soul's still beautiful shrine;
Or rear there a temple of *living worth*,
Which passion e'er deems divine.

For the rainbow angels of love and trust
In the cold world may not abide;
But our beautiful, holy dead will stay,
For aye, as they passed from our side.

We have naught but burning memories left,
For the lonely and clouded hours;
With them, life's dew to heaven went up,
As the dew from morning flowers.

We sit by their graves at the twilight hush,
'Mid the shadows of even tide;
And read there the tale which the gray stone tells,
How they lived, how they loved and died.

But we may not mourn though the shroud and knell
With the anguish of life are fraught;
Yet of the chastening dower which they bring,
Is spirit-life immortal bought.

Camillus, N. Y., Jan. 30, 1853. C. S. BROOKS.

## THE OPPORTUNITIES OF WOMAN.

MISS CATHARINE BEECHER makes an appeal in behalf of poor woman, through the columns of the Independent. Her suggestions are timely:

Has Woman a profession? Certainly she has; and its duties in dignity and importance yield to those of none of the professions of man.

The training of the human mind in childhood and youth—the care of the human body in infancy and sickness—and the conservation of the family state—these are the distinctive duties of Woman's profession.

Is Woman's profession made honorable, like the professions of the other sex? Certainly not.

What lady of high position and education would, unless driven by poverty, become the educator of young children as a profession, for which to receive compensation as her brothers are compensated in their professions?

What lady of this class would engage as the nurse of infancy, or of the sick, for compensation, as men engage in their professions?

Above all, what lady would become a domestic assistant in a family without deeming it the depth of degradation?

No; it is the great aim of the humble classes so to rise as to be entirely exempt from the performance of these duties, while in their estimation the term "lady" is nearly synonymous with the expression "one who does not work."

With the other sex it is very different.—Every inducement is thrown around these most important duties to tempt all classes to seek them. Although nine-tenths of our lawyers, physicians and clergymen never attain high places, or secure such wealth as other callings offer, these professions are thronged.

And why? Because they are made honorable—the sure pasport to the first class in society.

How have these professions been made honorable? Chiefly by endowed institutions that secure the highest course of education, on moderate terms, to all who enter these professions.

Is there any reason why the same method should not be employed to render the duties of Woman's profession honorable?

Suppose there were now, three or four hundred endowed institutions, for Woman, as there are colleges and professional schools for man, and that there were hundreds of professional chairs to which Women could aspire as instructors of their own sex in their most sacred duties, and that to attain these high honors and the connected emolument a woman must be qualified, theoretically and practically, to give scientific and experimental lectures on the three departments of Woman's profession—the training of the human mind—the care of the human body, and the entire round of domestic duties—would not the same stimulus exist to lead Woman to honor her profession, and to prepare herself for it, that now excites her brothers to seek the liberal professions?

Why should Woman seek the profession of Man? Would it not be better to elevate and dignify her own? Is there not enough work for Woman in her own profession? The Census shows that there are now over two millions of children who have no teachers at all, while there are probably as many more under the care of men who are far better qualified for other callings.

Four millions of children not taught at all, or taught by men less qualified than woman for such duties! Here is work enough for an hundred thousand women—to say nothing of the other departments of Woman's profession.

These remarks are designed to direct attention to an effort soon to be made by the ladies of this city, which aims at once to elevate woman's profession, and to educate the millions of neglected children of our country.

The details cannot now be presented.—The aim all will approve. Wise and efficient women are engaged in carrying it forward, and the names of those selected as managers are pledged that the measures to be adopted will be both judicious and practical.

## BRIDAL CHAMBERS.

WE would call attention to a prominent feature in all this great, increasing, and vulgar display in hotels and steamboats. This is the "Bridal Chamber." In each new boat, or hotel, this is furnished more sumptuously than any preceding it. And, so soon as a *bride* enters a hotel or a steamboat, the coming is *buzzed about*, in spite of all the delicacy or discretion of captains, hosts or hostesses, all the eyes of all the impertinently-inquisitive are directed to the "bridal chamber," and all their tongues are busy with gossip and speculation. A "bride" must be rather *leaden*, to endure this without annoyance, and rather *brazen*, to receive it complacently. Is this an *improvement* in American manners?

Regarding domestic relations as sanctities, we would guard them from the coarsely-suggestive mystery of the Asiatics, and the no less coarsely-suggestive publicity of some Europeans. In England, births and promises of birth among the "nobility and gentry" are "gazetted." In Germany, lovers go into newspapers about their betrothals and holiday presents to their beloved Gertrudes and Wilhelminas, and are particular upon the wedding wardrobe and baby linen; and husbands expatiate in the same field, upon the hopes, consumations, sufferings, recoveries, churchings and christenings of their ever dear Sophias and Gustafinas. More dignity, more delicacy, more respect for woman, *have been* the rule among Americans. Is that rule infringed by the pompous display of these *public* "Bridal Chambers?" *Brides* who do not wish to blush before too much company, will be discreet in avoiding them.—*Philadelphia Ledger.*

## MARRIAGE.

DR. FORBES WINSLOW speaking of marriage, says:

"Nothing delights me more than to enter the neat little tenement of the young couple, who within perhaps two or three years, without any resources but their own knowledge or industry, have joined heart and hand, and engaged to share together the responsibilities, duties interests, trials, and pleasures of life. The industrious wife is cheerfully employed with her own hands in domestic duties, putting her house in order, or mending her husband's clothes, or preparing the dinner, whilst, perhaps, the little darling sits prattling on the floor, or lies sleeping in the cradle, and every thing seems preparing to welcome the happiest of husbands, and the best of fathers, when he shall come from his toil to enjoy the sweets of his little paradise. This is the true domestic pleasure. Health, contentment, love, abundance, and bright prospects, are all here.

But it has become a prevalent sentiment, that a man must acquire his fortune before he marries, that the wife must have no sympathy nor share with him in the pursuit of it, in which most of the pleasure truly consists; and the young married people must set out with as large and expensive an establishment as is becoming to those who have been wedded for twenty years. This is very unhappy; it fills the community with bachelors, who are waiting to make their fortunes, endangering virtue and promoting vice; it destroys the true economy and design of the domestic institution, and inefficiency among females, who are expecting to be taken up a fortune and passively sustained, without any care or concern on their part—and thus many a wife becomes, as a gentleman once remarked, not a 'help-mate,' but a 'help-eat.'"

## HOW TO CHOOSE A WIFE.

"A PLACE for everything, and everything in its place," said the patriarch to his daughter. "Select a wife, my son, who will never step over a broomstick." The son was obedient to the lesson. "Now," said he, pleasantly, on a gay May day, to one of his companions, "I appoint that broomstick to choose me a wife. The young lady who will not step over it shall have the offer of my hand." They passed from the splendid saloon to the grove; some tumbled over the broomstick and others jumped over it. At length a young lady stooped and put it in its place. The promise was fulfilled; she became the wife of an educated and wealthy young man, and he the husband of a prudent, industrious and lovely wife. He brought a fortune to her and she knew how to save one. It is not easy to decide which was under the greatest obligation; both were rich and each enriched the other.

I THINK any one who has had occasion to inquire, in particular cases, what portion of the price paid at a shop for an article really goes to the person who made it, must have been astonished to find how small it is. It is of great importance to consider the cause of this. It does not arise from the extravagant remuneration of capital. I think it proceeds from two causes; one of them is the very great, I may say, the extravagant portion of the whole produce of the community which now goes to mere distributors.—*J. S. Mill.*

CENSURE is the tax a man pays the public for being conspicuous.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, FEBRUARY 12, 1853.

*TO AGENTS AND OTHERS.*

☞ *Back numbers from 1st Jan. can still be supplied. Additions to clubs received at club price. New subscribers can begin with the year, or this No. It is not too late to form new, or add to old, clubs.—We this week add several hundred to former edition, to supply all who wish to commence with present No. Agents and others, please continue your reports.*

☞ *Fractional parts of a dollar may be remitted in postage stamps, or we will return change in same medium, if preferred by agents.* Feb. 5.

## Noteworthy Events and Items.

As we are unable to give all the news of the day or week, in detail, we shall occasionally string together paragraphs on important topics, under some such heading as the above. There are many subjects of temporary interest, upon which we would like to remark, but want of space generally limits us to a simple record of facts.

Among the noteworthy events of the past week, is the holding of the first Annual Meeting of the U. S. Agricultural Society, at Washington. An abstract of the proceedings will be found on our second page. Judging from the reports we have seen, we think the deliberations of the Meeting will produce good results,—that the Society has become a "fixed fact," and that its organization may be rendered temporarily, if not permanently, useful. The project to establish another Department of the Goverument, under the title of the Agricultural Department, is the most important practical item discussed by the Society.

The marriage of the Emperor of France, mentioned in our foreign news, will attract attention. It is a novelty for one in Louis Napoleon's position to "marry for love," or mate with any one below royalty. There may be affection in his choice, but it savors more of passion and policy. The espousal of one belonging to the middle circles will perhaps render him more popular among the masses; and, as the time may not be distant when he will have greater need of the favor of the French people, than of kingly countenance, this unexpected marriage may prove, personally, a wise measure.

Congress progresses at the usual pace in law making. Our synopsis embraces the gist of its proceedings. Much speculation abounds relative to Gen. Pierce's Cabinet, *that is to be.* The daily political papers are having a happy time — making a new Cabinet daily, for the amusement of their readers. All the good timber has been exhausted, and some of the journals are building of very poor material. We trust the incoming President will soon relieve the anxiety of correspondents and editors.

The Annual Meeting of the N. Y. State Agricultural Society, is now (Wednesday) in session at Albany. As the proceedings will be looked for with interest by many of our readers, we have taken measures to secure a correct report in time for our next number. The meeting is one of considerablo importance, and we trust its proceedings will be characterized with harmony and good feeling throughout — that the interests of the Society and the Agricultural community will be promoted by its deliberations.

## The Difference.

Newspaper publishers are frequently reminded of the fact that "there's as much difference in people as in anybody." A case in point. An agent, residing not fifty miles from here, in remitting payment for some twenty-five new subscribers, (at $1.25 each,) sends $2 for one man — stating that this amount was sent by request, that the subscriber would not have the paper at the club price, but insisted upon paying $2. Another man residing in the same place — who prefixes to his name the euphonious and honorary title of *Colonel* — sends us $1 for the Rural one year, with a request for us to hand the money to a political contemporary, if we cannot comply,—because he don't pay more than a dollar for any paper! The dollar goes to the political publisher, and we hope the economical Col. will get the value of his investment.

Proper economy is commendable, but whether taking a paper merely because it can be had at a certain price, (without regard to its intrinsic value,) is economical, is quite problematical,—Undoubtedly a great majority of our subscribers, who, we suppose, take the Rural because they consider it a good investment, would object to the Colonel's criterion.

Fine Wooled Sheep.—Such of our readers as are interested in fine wooled sheep, particularly those desirous of purchasing, will do well to consult the card of Messrs. McAllister and Rosier, in this weeks Rural. Without entering into a controversy relative to the merits of the different kinds, they are prepared to supply either. They come forward with a strong pledge, which an acquaintance of some years gives us the assurance will be fulfilled.

See also advertisement of French Merino sheep, and other stock, offered at auction by Mr. Powers, of Farmington. †

The Farm — Advertised by Mr. Goodin, of Kenton, Ohio, is worthy the particular attention of those who wish good soil and location, in a Western State. There are also, several excellent Western New York farms offered for sale, as will be seen by reference to next page.

## Letter from Albany.—Mr. Klover at the Gov'ner's "Sorry."

Bulls Head, Albany, Feb., 1853.

Dear Mr. Moore:—I told you when I got down here, and had time, I'de rite to you all about every thing I seed, and I should have ritten afore, only I had to rite to Susan,—you know Susan; Oh, she is such a nice girl, and my heart jumps right up now, while I rite about her—and sister Jule; but I rote to Susan first, and a good deal the longest letter.

I found Dad down here, away up in a little seven by nine room, not bigger than our wheat bin. Dad, you know, is a "*member,*" and I'me down here to see him and git a little of the glory. Dad and I are the first members ever sent out of our family, and may-be, if Dad don't come again, I shall, for you see how it kinder runs in the blood.

We go up to the House, thats what they call the great room where the members set, all crammed iuto rows, on little red cushions, and little dirty tables before them. But as I wan't elected to the inside I cant "come in;" so I go up into the gallery, and look on. When the clock marks 11, the Speaker, thats the man that is sort of head man, —I dont know why he's called speaker, for there are lots of men that speak a great deal more than he does,—well, he takse the chair, as they call it, which is going up iuto a kind of pulpit, and knocks away with his hammer, and every body sits down, aud a minister gits up and prays, and they all go to work. Dad thinks it a good thing that somebody prayed for them, even if each prayer dus cost three dollars.

But it aint what I set down to write about now, but about Dad and I going to the Govners *sorry* last night. I tell you it was a real buster. Such lots of people. You see the Govner and his wife stand in the front room, near the door. Well, you go up stairs, and pull off your overcoat or cloak, and brush up your hair and put a few drops of cologne on your handkerchief, though Dad thinks it hasn't a very inviting kind of a smell; then you go down, and start to make your bow to the Govners wife, but the first thing you run agin is a dapper kind of a fellow in reggimentals, who comes bobbing up to you and asks your name and puts you through a presentiment. Dad says the fellow is faultless all below his shirt collar, but I am sure I thought he considered himself some punkius, for he seemed to be iu every body's dish. So we bowed to the Govner and his wife, and then weut on into the jam. There was quite a quantity of fellows with military dress on, aud they seemed to think they ware pretty considerable smart chaps. But Dad and I thought they would have looked better with boots on instead of pumps. A General with two great epperlets on his shoulders and patent leather pumps on his feet; want that queer? The women all looked various, and were dressed in the same way. Some of 'em had nothing on their earms or necks, ever so far down, and Dad thought they wore Bloomer dresses rong end up. I'me sure they didn't look modest, if they be fashionable.

Well, everybody got into everybody's way, and stepped on somebodys toes, and stood up and looked round, and felt queer, for you couldn't do a thing. They got up a dance in the other room, and hugged and whirled round, and kicked up their heals, and first one fellow would run a girl across the room, and then she'd run him back agin. Dad said that was the essence of dancing, but to my mind I shouldnt like to see Susan or Jule, or any of my kin or kind daucing that kind of a dance with anybody but me. Besides all that I think the poetry of hugging is enjoyed in a quiet state.

There was a fine supper, for the Govner feeds his family first rate on such occasions, and some of 'em put into the good things pretty sharp, I tell you. Dad thinks there aint much poetry in seeing a beautiful woman eating oysters fried and stewed at such a time. I tell him people differ.—If I stay here long, I'll write you agin, all about a great many other things. Yorn alway,

Ried Klover.

## Woman's Rights.

Much is said and written upon the subject of Woman's rights. It is a subject of more than ordinary interest. Wronged indeed has woman been, by the lords of creation, if all the oppression with which they are charged as exercising toward her be true. That woman has rights is unquestioned No man of sane mind would deny them the right to the high and holy duties of mother, sister, wife, companion and friend; duties which go far toward engrossiug all their time, if not all their talents. There are many places of trust, honor and profit, which they could undoubtedly fill quite as well as can the other sex. That they are using the proper means to attain the rights they claim, is apparent from the talented advocates of their own sex who have undertaken the defence of their long-neglected cause.

Coming up from Albany a few day since, we received from Sarah Pellet, of Syracuse, a small work entitled "Woman's Rights commensurate with her Capacities and Obligations." It is a series of tracts, designed to advocate the enfranchisement of woman, and contains essays, letters, and speeches, from some of the most prominent advocates of opinions consonant with the object to be attained. It was published for Sarah to sell upon the cars, and in public places, she claiming, as she undoubtedly has, the right to exercise the privilege of a book-pedler. The work is interesting, and we wish her abundant sales, and would advise our bachelor friends to become purchasers when opportunity occurs. †

P. S.—After getting this number to press, and working a few thousand, a regular *smash up* occurred — spoiling much of the type, rules, &c., on this and the 55th page. We reset some articles, and substitute new matter for others, to avoid detention — and hope the pages will prove readable.

# Congressional.

### Synopsis of Proceedings.

Tuesday, Feb. 1.—*Senate.*—Several resolutions and petitions were received and referred, several private bills passed, and the Pacific Railroad bill discussed.

*House.*—The House were in Committee of the Whole on the Army appropriation bill, and had a discussion on tobacco chewing, &c.

Wednesday, Feb. 2.—*Senate.*—The Private Warehouse bill, the Tehuantepec resolutions and the Emigrant Route (to the Pacific) bill were the principal topics of discussion. No action was taken on either of them.

*House.*—The proposition to lower the standard value of the coinage was a subject of discussion. After which the bills granting lands for the construction of railroads in Missouri and Wisconsin were taken up. Attempts were made to lay the latter on the table, but they were unsuccessful.

Thursday, Feb. 3.—*Senate.*—After disposing of some private claims, the Senate proceeded to a further discussion on the Private Warehouse bill. The bill was postponed, and that for reorganizing the Navy came up, to which Com. Stockton reported sixty-six amendments, but being small matters they all passed. Mr. Brodhead's substitute for the Pacific Railroad bill was then bro't up.

*House.*—In the House a number of petitions, asking protection to Americans abroad, were referred to the Committee on Foreign Relations—The Coinage bill came up again, and was debated until the morning hour expired. The bill introduced last session to remove the duties from railroad iron was laid upon the table. The Army bill was before the House when it adjourned.

Friday, Jan. 4.—*Senate.*—The bill granting right of way through the military reservation near Niagara for a ship canal, was considered and passed. The Warehouse bill came up again.—Amendments important and unimportant were proposed; some were adopted, some not; and the bill finally passed. A communication from the President, in relation to the Postal treaty with Great Britain was received, containing a note from the Postmaster-General, in which he gives it as his opinion that Great Britain has violated that instrument. Adj.

*House.*—Nothing of interest done in the House.

Saturday, Feb. 5.—*Senate.*—The Navy bill was read a third time and passed. Mr. Davis introduced a bill to regulate the rights of fishing, and the rights of disposing of the proceeds of the fisheries, in and between the British North American Provinces and the United States. The House bill granting land to Arkansas and Missouri for a Railroad from the mouth of the Ohio, *via* Little Rock, to the Texas boundary, near Fulton, with branches to Fort Smith and the Mississippi river, was passed.

*House.*—A joint resolution providing for printing and binding the returns of the last census occupied the session, and passed.

# Literary Notices.

The Knickerbocker Magazine for February came promptly to hand, per McMahon, of the Waverly News Room. This number is, as usual "rich and racy," and confirms us in the oft-expressed opinion that Clark's Knickerbocker is an "institution" worthy of patronage by the people. New York: S. Hueston; $3 per annum.

—We observe — what we will mention for the benefit of our readers — that the Home Journal, edited by G. P. Morris and N. P. Willis, is sent with the Knickerbocker for $4, remitted to either publisher.

Reports of the Committees for 1852, of the *Massachusetts' Horticultural Society,* with the schedule of prizes for 1853, a neat pamphlet of 36 pages, has been received from Eben Wight, Esq., Secretary of the Society. The reports on Gardens and on Fruits, are of a valuable character. The prizes for 1853 amount to over $2,500, and will be likely to awaken active competition.

The Illustrated News, published by Messrs. Barnum and Beach, New York, and edited, we believe, by Rev. Dr. Griswold, is regularly received. Both the literary matter and the subjects for engravings are well chosen, and, considering the price, the latter are very well executed. Terms, $3 per annum.

The Westminster Review for February contains among other articles, four on American topics, viz: History and Ideas of the Mormons, Daniel Webstor, Amorican Slavery and Emancipation, and American Contemporary Literature. New York: Leonard Scott & Co. Dewey, agent.

A Round of Christmas Stories, by Charles Dickens, has just been issued in a shilling volume by Stringer and Townsend, New York. Thoy are gems of stories, and will be read with interest.

Steam Power in the United States.—The Mechanical Review, published in New York, gives a table of statistics of the number of steam engines and locomotives produced in a year at the different establishments in the United States. Their power is equal to 713,113 horses, which is equal to the physical labor, at the present time, of 7,154, 390 men, and in the fourteenth century of 257,626,734.

☞ The Supreme Judicial Court of Berkshire, Mass., have decided that hotel keepers are liable for the valuables which may be stolen in their houses from their guests. This decision was in the case of a gentleman who had $500 stolen from his trunk in the Marlboro Hotel, Boston.

☞ The "Democracy" of Oswego had a ballot for Post Master and Collector, on Saturday evening. For Post Master, S. R. Beardsley received 222 votes, and W. Summer 213. J. Bently received all the votes cast for Collector.

# Legislature of New York.

### Synopsis of Proceedings.

Tuesday, Feb. 1.—*Senate.*—The Pacific Railroad bill was discussed at some length, but without action. The bill relative to unclaimed deposits in New York Saving's Banks, was also before the Senate.

*Assembly.*—Were in Committee on chartering a People's Ferry Company between New York and Williamsburgh.

Wednesday, Feb. 2.—*Senate.*—The Railroad Consolidation bill was further debated, but no question was taken.

*Assembly.*—In the Assembly, certain resolutions were offered by Mr. Loomis in regard to the canals, which created some feeling. The bill to preserve the purity of Elections was discussed. Various reports, resolutions, and notices were before the House.

Thursday, Feb. 3.—*Senate.*—A resolution passed authorizing a commission to codify the Militia laws of this State.

Friday, Feb. 4.—*Senate.*—There was an exciting debate over a petition signed by J. O'Sullivan, and presented by Mr. Conger. The consideration of the Atlantic and Pacific Railroad bill was continued.

*Assembly.*—Some nine or ten bills of no general interest passed the House, which adjourned to Monday.

Saturday, Feb. 5.—*Senate.*—Petitions, reports, and notices of bills occupied the Senate. Nothing very note worthy occurred.

# News Paragraphs.

☞ The thirteenth class of teachers for the West, organized under the auspices of the Board of National Education, meets at Hartford on the 18th of March, and leaves for the West on the 27th of April. The intervening six weeks are to be spent in iustruction under the charge of Miss Mary Swift. The applicants for situations as teachers, are to apply in person to Miss Swift, at South Hadley, Mass. The teachers are expected to continue their labors at the West for at least two years, when they are at liberty to get married, or anything else that they choose.

☞ A Long Island paper says that while learned Senators are discussing the "Monroe doctrine" in its application to Cuba, Central America, &c., we beg leave humbly to submit to Members of both Houses, the propriety of using letter paper which does not contain the "Crown" stamp. Let the "Monroe doctrine" have practical force with reference to Congressional paper. The paper makers of "Bath," it seems, have literally colonized both Houses of Congress, for the members write home to their constituents on paper bearing Victoria's stamp.

☞ It appears by the report of the Secretary of the Treasury, that the imports of pig, bar and other iron into the United States during the fiscal year ending 30th June, 1852, amounted to 335,149 tons. To form a proper conception of this prodigious import, it is only necessary to state that it is an average receipt of about 1200 tons for each and every day in the year. The Secretary states that the imports for the year ending June 30, 1845, were only 102,723 tons; so that in seven years the imports of iron have increased four and a half times.

☞ Some two hundred girls, all Americans are employed in ornamenting and finishing porcelain ware in the city of New York. All of them except four are employed in the process of burnishing the gold after it comes from the furnace, and the painting is all done by experienced male artists. The gilding of china ware is done in New York to a considerable extent. Importers find it cheaper to buy the white ware in France and England, and have it ornamented in this country. The duty on the increased value of the ware is thus saved.

☞ The publication of school books, says a Western Magazine, is the most profitable branch of a bookseller's business. Irving and Prescott, Bryant and Willis, Bancroft and Hilliard, "pale their intellectual fires" before Webster's and Comly's Spelling-book, First Readers, Productive Grammars and School Geographies. Looking to the practical, there is scarcely a firm in business that would not prefer the copywright of Noah Webster's Spelling Book to Daniel Webster's Speeches.

☞ We met a friend of ours, says an exchange, the other morning in the street, just from the mountains, where he was born and raised, who observed to us that he was fifty years old the Saturday preceding, and had never taken a dose of medicine in his life! This induced us to ask him if he had escaped the lawyers as well as the doctors, whereupon he replied that he had never had a lawsuit of any kind, sued or been sued in court, or before a magistrate.

☞ The following is supposed to be the number of newspapers in the world:—Ten in Austria, fourteen in Africa, twenty-four in Spain, twenty in Portugal, thirty in Asia, sixty-five in Belgium, eighty-five in Denmark, ninety in Russia and Poland, three hundred and twenty in other German states, five hundred in Great Britain and Ireland, and eighteen hundred in the United States.

☞ One of our exchanges says that Miss Harriet Hosmer, of Boston, now at *Rome,* under the tuition of Mr. Gibson, has modeled already a large bust of Venus, to Gibson's infinite amazement and delight; he takes all Rome to see it, and says there is not a sculptor in Rome who could do better, while there are many who could not approach it.

☞ A correspondent of the Ogdensburg Sentinel gives the amount of butter and cheese sent from Madrid Station by railroad to Boston the past season, as follows:—Butter, 10,301 packages, weighing 474 tons. Cheese, 5,768, weighing 276 tons. The same writer says there were 1,000 packages of butter for sale at Madrid on the 25th of January.

☞ Seventeen States, at least, have passed Homestead Laws. Of the Southern States, Georgia exempts twenty acres, not exceeding in value $350; Florida exempts forty acres, not exceeding in valuo $400: Alabama one hundred acres, $500; California, *the land of gold,* $500; South Carolina forty acres, $500.

☞ It is estimated that 3,000 persons are constantly employed in Washington market, New York, and the aggregate yearly sales of produce exceed twenty-eight million dollars. It is among the largest produce markets in the world.

# News Brevities.

—— Australian gold is said to be worth more than £4 per ounce.

——A canal is proposed between the Dead Sea and the Gulf of Akabo.

—— Mr. Sears C. Walker, the astronomer, died at Cincinnati a few days since.

——The name of the Perinton Post Office in this county, has been changed to Fairport

—— There are 757 Smiths named in the Philadelphia Directory, and only 362 Browns.

—— The total number of emigrants tha arrived at New York in January, was 6,601.

—— An exchange paper states that thre are four millions of three cent pieces in circulaton.

—— Insurances have recently been effeced in England on $20,000,000, now on the wayfrom Australia.

—— The town of Rutland, Vt., is said tohave turned out a million of dollars worth of marble the past year.

—— An attempt to light the town of Bash, in Switzerland, with gas from carbonized wood has entirely failed.

—— The weather in the South of Europe isremarkably mild. Everything that can bloom is in blossom.

——On the opening of navigation two first class steamboats will be put on the line between Toronto and Rochester.

—— The amount of gold entered at the Custom House in New York during the month of January, is $5,849,548.

—— Abraham Miller, who was with Wolfe at the taking of Quebec, is still living in Canada, at the age of 115 years,

—— In South Carolina all the newspaper publishers have adopted the rule of requiring payment in advance from their subscribers.

—— Several freshets are reported on the Merrimac and Contoocook Rivers, New Hamphshire, threatening serious damage to bridges, &c.

—— A wedding frolic among the lowest class of miners in Australia, costs frequently $1,500. Money there is literally as cheap as dirt.

—— Eight shares of the Cleveland, Columbus and Cincinnati Railroad Company sold in New York, on the 21st ult., for $131 per share.

—— The Central Bank of Troy, capital $200,000, is fully organized. J. L. Van Schoonhoven is President, and James Buell, Cashier.

—— The late Prof. Maginnis, of the Rochester Theological Seminary had secured a policy upon his life to the amount of $5,000, for the benefit of his family.

—— Professor Guyot, of Cambridge, is about to deliver a course of lectures before the Smithsonian Institute, on the harmonies of Nature and History.

—— The first *gilt* sign ever used in this city, may be seen over the door of Mr. Roswell Hart's coal office, on Sophia street. It was painted for Mr. R.'s father in 1817.

—— The Florida Indians, it is said, do not exceed 600 in all, 260 of whom are warriors, and 250 runaway slaves, who have adopted the Indian habits.

—— The toll on a barrel of flour from Buffalo to Albany, was 35 cents from 1835 to 1837; 31 cents from 1846 to 1850 inclusive, and 23 cents for 1851 and 1852.

—— The venerable Dr. Nott, of Union College, was in New York city a few days since. He is nearly a hundred years old, and is quite feeble, but in otherwise good health.

—— It is stated, as an example of the facility of communication with Boston by Railroads, that no less than eighty-five members of the Legislature go home and return daily.

——The Wesleyan, a fine looking weekly paper, formerly printed at New York, has been removed to Syracuse. It is the organ of the Wesleyan Methodist denomination.

—— Cincinnati and Louisville are now connected by Railroad, by the way of Union, Indianapolis and Jeffersonville, and the run might easily be made by daylight.

—— It is stated that an immense mountain of marble exists in the Salt Lake Valley. The marble is of nearly all colors, in very large slabs, and of the best quality.

—— The present naval force of Great Britain consists of five hundred and forty-five ships of war. Of this number one hundred and eighty are armed steamers.

—— The editors of the Springfield Republican has been presented by a lady with a piece of cake, in perfectly good condition, which was twenty-six years old last July.

—— The States of Georgia and South Carolina have got into a dispute concerning territory.—Georgia claims the exclusive jurisdiction of the Savannah river which South Carolina denies.

—— All the Hydes in the United States, or as many of them as please, are to meet at the United States Hotel in Boston, on the 16th inst., to make arrangements for securing an unclaimed inheritance.

—— Mrs. Julia Gardiner Tyler, wife of ex-President Tyler, has published in the Richmond Enquirer a letter in reply to the recent address of the Duchess of Sutherland and other English ladies.

—— The presenters of the splendid carriage to Gen. Pierce, have found the horses to match it. They are a fine pair of bays, which they procured of Mr. Otis, of Jordan, Onondaga county, New York, fo $800.

—— The San Francisco Custom House returns for the year past, show that there have arrived at that port from sea, about 66,000 passengers; departures 23,300; of these 58,000 were males, and 5,500 females, and 1,700 children.

—— Upwards of £400,000 in gold have been shipped from England to Russia, mostly for wheat purchased at Odessa, where transactions have recently been made to the extent of nearly 100,000 quarters per week.

—— Thompson's Bank Note Detector quotes the circulating notes of the Merchants and Mechanics' Bank of Oswego, at one per cent discount, arrangements having been made to place the Bank on a more solid footing.

—— G. F. Nesbit has shown to the Post-master General an embossed stamp for pre-paid envelopes, which has been accepted, and the manufacture will at once proceed. None will be ready for delivery under three months.

# Foreign Intelligence.

## Arrival of the Atlantic.

The Collins steamship Atlantic reached New York, Feb. 7, bringing Liverpool dates to Jan. 26.

There is an impression that soon after the reassembling of Parliament, Lord Palmerston will bring forward a motion for the increase of the army.

An influential meeting was held at Birmingham on the 21st, in behalf of the Florentine prisoners, Madiai and wife. A petition to the Queen was voted, soliciting her Majesty to remonstrate with foreign powers against persecutions for religious opinions. A similar large meeting was held in London, on the 25th.

More favorable weather appears to have set in, in England, and the anxiety of farmers for their crops, have in a measure been relieved.

France.—On Saturday, the 22d, the various functionaries of State presented themselves at the Tuilleries, to receive from the Emperor the announcement of his intended marriage.

His address is considered very able, and although the Bourse fell suddenly, it soon recovered.

The Emperor said that his alliance was not in accordance to old traditions; that he would not humble himself to go a royal wife hunting—that royal alliances were always unfortunate, and often substituted family interests for those of the nation at large.

He speaks as follows of his wife:

She who has become the object of my preference, is of high birth. French in heart, by education, by the remembrance of blood shed by her father for the cause of the Empire. She has, as a Spaniard, the advantage of no relations in France, to whom it might be necessary to give honors and dignities. Endowed with all the qualities of the soul she will be the ornament of the throne as, in the days of danger, she will become one of its courageous supporters. A devout Catholic, she will address to heaven the same prayers as myself, for the welfare of France. Good and gracious, she will receive. I have the firm hope, the same position of the Empress Josephine.

I come, then, Messieurs, to say to France, that I have preferred a woman whom I love and respect, to any unknown lady whose alliance would have brought advantages, mingled with sacrifices, without disdaining any one by it, called by my feelings, but after having consulted my reason and convictions.

In short, in placing in dependence the qualities of the heart, and family happiness, above dynastic prejudices and the calculations of ambition, I shall not be less strong, because I am more free. Ere long, proceeding to Notre Dame, I shall present the Empress to the people and the army.

The marriage was to be celebrated on the 30th of January. The Empress' mother's name was Kirkpatrick, and she came from Scotland.

Belgium.—From Belgium we learn that all foreign officers have been dismissed from the army, by order of the Government.

A company of Genoese merchants have been formed to start a line of steamers, to sail monthly, between Genoa, New York and Monteviedo.

Another Madiai case has occurred at Genoa, Daniel Mazzinghi having been sentenced to three years imprisonment for preaching.

Turkey.—Omar Pacha took Grohano by storm but in attempting to surprise the capital of Montagergo, in the mountains, he was repulsed.

Markets.—Liverpool, Jan. 26.—The improvement in cotton advised by the Canada fully maintained. The three days sale have been 20,000 bales. The market closing with a firm tone.

Breadstuffs have been very quiet, with a decline of all articles. Wheat is quoted 1d@2d lower. Flour, 6d per bbl. down, with a languid demand. Indian corn 6d@1s lower. The business has been very small.

Provisions—McHenry's circular reports the business fully equal to the imports, with a good tendency in bacon, beef, lard and cheese.

Australia.—The Overland mails bring Sydney dates to Oct. 15th, Melbourne 25th, and Adelaide November 6th. Flour at Melbourne was worth £40 to £47 per ton, and four pound loaves brought 2s 6d. Gold was valued at £3 7s to £3 10s 6d per ounce. Emigration continues large. The news from the diggings was of mixed character. Some were doing well, but many were dissatisfied. Farm labor was very scarce. The Sydney papers apprehend temporary inconvenience, if supplies of breadstuffs do not arrive from America.

China.—Hong Kong dates to Nov. 29, say in the early part of the month the rebellion was successful, but latterly rumor states the Imperial troops have gained decisive advantages. The transit through the disturbed districts was uninterrupted. American credits, 4s10d 4s9 3-4d.—Freights from Canton to New York, $10 for tea and $25 for silk. Shanghai dates to the 25th of November state that the import market was favorable. Transactions in teas had been large, and prices were maintained. The exports show a deficiency of 2,000,000 pounds as compared with the previous year. Silk was lower, and the export amounted to 20,000 bales.

Insanity and its Causes.—The statistics of the Ohio Lunatic Asylum furnish food for reflection to those who enjoy the sound use of the reflecting faculty. That institution contains 150 males and 151 females—total 301. Aside from physical ailments, "spirit-rappings" take the lead among the causes of insanity. Of this class of lunatics confined there are 26—equally divided between male and female. Next in order comes "religious anxiety," which has 22 victims—17 males and 5 females. "Disappointed affection" numbers 12 males and 6 females. "Domestic unhappiness." 9 of each. "Pecuniary," 18 males. "Domestic affliction," 2 males and 17 females. "Intemperance," 9 males and 1 female. "Ungoverned temper," 1 male and 2 females. "Fright," 1 each, &c., &c.

Canals and Railroads.—The State Engineer, in his annual report, compares the business done last year on the Erie Railroad, with that of the canals, and shows that it would require two double track roads to perform it, the cost of which, deducting for the less length of the canal, he estimates at fifty millions of dollars. To do the business which the enlarged canal is capable of performing, would require nine tracks, and would cost over one hundred and twenty millions of dollars.

Mortality in Congress.—Several members of this Congress—three Senators and four Representatives, and also one head of a department—have died since the commencement of the first session. Six were from Eastern States: Whitcomb, Webster, Upham, Rantoul, Thompson, Fowles and Andrews are of the number. Vermont never before lost a Senator in Congress who died at the Capitol.

## Latest Counterfeits.

Thomrson's Bank Note Reporter has the following latest counterfeits:

2's on the Bank of Westfield, N. Y.—excellent imitation of genuine.

10's on the Waterbury Bank, Ct.—vig two females, one leaning on a kind of stone table, and stalks of grain in her hand; the other has a hat on and a sprig in her hand, calling a goat—cottage in the back ground—large medallion (10) on each side of vig.—ten in the two right hand corners—poor portrait of Washington on same end—large ten across left end—letter A—filling up and signatures engraved.

5's, 10's, and 20's on the Bank of Ulster, N. Y., altered from genuine 1's, are said to be in circulation.

5's on the Central Bank, Worcester, Mass—vig rail-cars, dock, boat, &c.—female on right end—Indian on the left—not like genuine.

20's on the Marine Bank, Buffalo, N. Y., spurious—vig shipping near a wharf, on which are store-houses—between the names of the officers, a boat containing men about striking a whale—the arms of the State on left end, coarser than other portions of the bill.

20's on the Hartford Bank, Washington county, N. Y.—letter A. June 1, 1849—vig. small State arms, with figure 2 each side—female on left end, with two above and below—well calculated to deceive.

5's on the Tremont Bank, Boston, Mass., spurious—vig. eagle with spread wings, &c.—poor impression.

50's on the Central Bank, Conn., altered from twos—large 50 on upper right and lower left corner—bust of Jackson on the lower right corner and spread eagle on upper left—locomotive and cars below—exceedingly well done.

Wool.—The New York Shipping List of the 28th ult., says, "all descriptions are scare, except pulled, which is in moderate supply. Holders remain firm, and although sales are light, prices are well maintained. About 40,000 lbs pulled have been sold at our quotations. Some small parcels of Foreign have been disposed of on private terms."

## News Clippings.

☞ The Columbia, Tenn., Intelligencer tells of, perhaps, the most remarkable family in the United States, who reside in Maury county, the head of which is Mr. John Kennedy, living about eight miles north of that place. He has eighteen children living, seventy-four grand children, and fifty-one great grand children—in all, *one hundred and forty-three!* There has not been a single death in this family since the year 1806. Altogether, we think Mr. Kennedy's a remarkable family.

☞ Rev. Sylvanus Judd, Unitarian clergyman at Augusta, Me., died at that place last week, after a brief illness. Mr. Judd was well known as the author of "Margaret, a New England tale," "Richard Edney," and other works. He was a man of genius, and his writings have found many admirers.

☞ The express train which carried the Europa's mails from Boston to New York, was five hours and five minutes in making the distance of 236 miles, nearly 41 miles per hour—or, 47 per hour running speed. This is considered the greatest speed ever made in this country, for a long distance.

☞ It is estimated that in the year 1852, there were 204,991,595 lbs. of coffee consumed in the United States, being 20,765,995 lbs. more than in 1851. The estimated weight of stock on hand in the different ports which import the article, on Jan. 1st, 1853, was 39,146,570 lbs.

☞ It is calculated that from a hundred and twenty to a hundred and fifty thousand turkies, and an enormous quantity of eggs, were exported to England for consumption new year week, from the ports of Boulogne, Calais, Cherbourg, Havre, and some others of the French channel coast.

☞ From the returns made by the President of the Long Island Railroad to the Comptroller of the State, we find that on the 8th of July, 1852, there was brought into Brooklyn over this road, 41 tons of eels and 83 tons of fish.

# Advertisements.

### NEW VARIETY OF SWEET CORN.

Messrs. Hovey & Co., No. 7, Merchants Row, Boston, would respectfully inform their friends and the public, that they have purchased the entire stock of the OLD COLONY SWEET CORN, raised by the Rev. A. R. Pope, and described by him in the Magazine of Horticulture, Volume 14, page 529.

It is a true hybrid and the most remarkable variety ever produced. It was raised in 1847, from the Southern White Corn, impregnated with the early Sweet Corn of New England. The ears are of remarkable size, containing sixteen, eighteen or twenty, and sometimes twenty-four rows each. In its productiveness it is unsurpassed, a single stock planted after the middle of June, producing six ears. It is the richest, sweetest and most delicious corn known. An analysis of it, and several other sorts, by Dr. C. T. Jackson, shows that it is more abundant in saccharine matter than any other variety, its composition being "dextrine, sugar, and phosphates," while the common varieties contain considerable "oil and gluten."

It has been exhibited before the Massachusetts Horticultural Society for three years, and has not only received the commendation of the Society, but has been awarded the following prizes:

1850. For a new variety of Sweet Corn,.....$2,00
1851. For a *new* variety of Sweet Corn, called the Old Colony,.....8,00
For superior specimens of the Old Colony Sweet Corn, Silver Medal,.....5,00
1852. For fine specimens of Old Colony Sweet Corn,.2,00

The Committee on Vegetables, of the Massachusetts Horticultural Society, in their Report for 1852, remark, "That the Old Colony Sweet Corn, raised by Mr. Pope, we recommend as worthy of cultivation by all."

The Old Colony Sweet Corn, though not as early as the Common Sweet, is sufficiently so to produce a perfect crop in New England. Two sowings, one in May and the other in June, will supply the table from July until frost. All who have eaten it, pronounce it the most luscious variety, and an invaluable addition to our esculent vegetables.

☞ Single ears, 25 cents each. The trade supplied on reasonable terms. 163w4

### A Desirable Country Residence For Sale.

David Thomas, near Aurora, Cayuga Co., N. Y., wishing to retire from the care of his farm, offers it with all its extensive improvements for sale. It is pleasantly situated near Cayuga Lake, contains 118 acres of land, has a spacious and comfortable dwelling, with a laborer's cottage, and various out-buildings, together with extensive orchard and fruit-gardens, and a large ornamental and kitchen garden; the whole forming a completely furnished, comfortable, and desirable farm-residence, which is offered at the low price of $60 per acre. 163–3t

### FARM FOR SALE IN MACEDON.

A fertile Farm, under a high state of cultivation, situated 1½ miles from Macedon Centre, where a flourishing Academy is located; one mile from the Syracuse and Rochester Railroad, and two miles from Macedon locks, on the Erie canal. Seventy-five acres are under cultivation, and twenty-five covered with a heavy growth of valuable timber. The farm is watered by permanent springs,—has good orchards of the best varieties of apples, pears, peaches, &c.,—and comfortable and commodious buildings. It will be sold for $45 per acre. Inquire of J. B. Sands, Canandaigua, or on the premises, of L. TAFT.
Macedon, N. Y., Jan. 29, 1853. 163–3t–cow*

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Feb. 9, 1853.

The bad weather and roads have had a depressing tendency on our markets, and prices remain in *statu quo*.—The better sleighing of yesterday gave a little animation to our streets.

Flour—The home price and demand stands unchanged.

Grain—Wheat is nominally $1,18. A sale of some 3,300 bushels in store, was made on Friday at these figures.—Other grains unchanged.

Provisions—No change of note from last weeks quotations. Cheese 8½c. per lb.

Seeds—$6,50 is paid for Clover seed, and $2@2,50 for Timothy.

In other articles we hear no change demanding attention

### NEW YORK MARKET.

NEW YORK, Feb. 7.

Ashes—Market without change, and quiet. $4 62½@$6 83¼ for Pots. Pearls, $5 75.

Cotton—Market firmer; a fair inquiry for shipping.

Flour—A dull and easier market for extra and State Flour. Prices irregular; influenced by the unfavorable news by the Atlantic. The better grades steady, but inactive. Canadian is very dull and nominal. Sales Western Canal 1500 bbls. at $5 31@37½ for common to straight State; $5 56¼@63¾ for Michigan and Indiana; $5 62½@75 for common to good Ohio. Rye Flour quiet and heavy; $4 50 for fine. Corn Meal quiet and heavy; $3 50 for Jersey.

Grain—Nothing has been done in wheat, and the advices by the steamer has unsettled the market. Quotations would be nominal. Rye heavy and in moderate demand; sales 2000 bu. at 70c. Barley heavy and more plenty; sales 2500 bu. on p. t. Oats plenty and heavy; 49@50 for State and Western; 45@47 for Jersey. Corn lower, and the market much depressed and dull. The demand for home and eastern trade limited. Sales 12000 bushels at 65c. for mixed Southern; 66@68 for good to prime white; 66@67½ for Southern yellow.

Provisions—Little doing in Pork and prices nominal. $17 12@25 for new mess; $15 87@$16 for do. prime.—Beef dull but firm. Sales country mess $9 50@$11 25; do prime, $5 50@$6 12½.

Dressed Hogs—Steady and not plenty, and quiet; 8@8¼c.

Butter and Cheese—Unchanged.

Stocks—Rather better. Money easy. Exchange firm, 9¾@10. Harlaem 68¼.

### NEW YORK CATTLE MARKET.

NEW YORK, Jan. 31.—At Washington Drove Yard—At market 1,500 Beeves (500 Southern and Western, remainder from this State.)

Prices steady at from 6 to 9c per lb. Market closed very dull, and about 100 left over.

At Browning's—Offered 3,000 Sheep and Lambs. All but 350 sold at from $1,75 to $3,75@6. 150 extra sold at from $7 to $9.

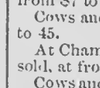
Stores—Working Oxen—$81, 85, 91, 91@125.
Cows and Calves—$22, 28, 30, 32@10.
Yearlings—None.
Two years old—$18, 19, 22@24.
Three years old—$25, 30, 31, 37@18.
Sheep and Lambs—3,280 at market. Many of them very large. Extra, $5, 6, 7@10; by lot, $2.50, 2,75 3@4.
Swine—125 fat hogs at market, and taken by Mr. J. Russel, of West Cambridge, at 6½c. per lb.

### BRIGHTON CATTLE MARKET.

BRIGHTON, Feb 3.—At market 900 Beef Cattle, 20 pairs Working Oxen, 35 Cows and Calves, 3,850 Sheep and 570 Swine.

Prices—Beef Cattle—The prices of last week for a like quality were not fully sustained, and a few remain unsold. We quote a few choice extra cattle $6,50@7; 1st quality $5,50@6,25; 2d do, 4@5,50; 3d do. $4@4,75.
Stores—Working Oxen—No sales noticed.
Cows and Calves—$25, 29, 31 42@55.
Sheep—Several hundred sheep, ordinary quality, and cost high in the country, remain unsold; sales were made as follows:—$2,75, 3,50, 4,25, 5, 6,50@9.
Swine—Small selected lots 6@7½c; old hogs 6½@7. At retail from 6½@8c.

### French and Spanish Merino Sheep.



THE undersigned have been engaged for some time in purchasing, breeding and selling fine wooled Sheep of both the French and Spanish varieties. We have just returned from the west, where during the fall and winter we have sold over one thousand sheep, in Ohio, Michigan and Illinois, scattering over those growing States just the animals needed by the farmers and wool growers to enable them to shear fine flocks, and reap a golden reward for their labor. During the present month we shall select from among the best breeders in New England, a flock of choice sheep embracing both French and Spanish, which will be offered for sale at Akron, Ohio, as early as March first. We are not only dealers, but breeders, having raised many that would meet the approbation of the best judges. No pains have been or will be spared to furnish all with whom we deal, sheep that can be guarrantied, pure of their kind and breed, and in all respects as they are represented. We shall be prepared to furnish desirable animals of either variety at our farm, and all orders addressed to us at Gaines, Orleans Co., N. Y., will meet with prompt attention.

J. J. McALLISTER & ROSIER.
Gaines, Feb. 1, 1853. 163w2*

### STOCK AT AUCTION.

Working Oxen, Fat Oxen, Steers, Horses, Sheep and Hogs for Sale!

THE subscriber will offer for sale at Public Auction, at his residence in West Farmington, on Saturday, February 12, 1853, at 10 o'clock, A. M., the following property, viz:—17 yokes working oxen, all of the very best quality, young, well matched, and in high order. 10 head fat oxen, that are heavy; also, 6 four years' old steers that are fat; 6 first rate horses, 2 matched pairs. 100 French Merino ewes, better than can be found in this State; 100 Lambs; 100 hogs of all sizes, from the size of a rat to 500 lbs., and to top off with, 1 pair of goats! 50,000 extra quality Shingles put up in quarter bunches.

I will give 4 months credit, on good endorsed notes, made payable at the Ontario Savings' Bank, in Canandaigua, with interest. MELVIN POWER.

P. S. I will pay the highest cash price for 100 extra quality cows.

West Farmington, Feb. 5, 1853. 263w1

### CLOVER AND TIMOTHY SEED.

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by
163-tf J. BARALJE & CO.

### A BARGAIN FOR SOME ONE.

WHO'LL HAVE IT?

THE undersigned being desirous of embarking in other business, has determined to dispose of his farm. The land is beautifully located about ⅝ mile from Kenton, the county seat of Hardin county, immediately on the great thoroughfare connecting Lake Erie with the Ohio river, which makes it one of the best markets on the railroad between the two points. In addition to this, arms will undoubtedly be built at an early day from Kenton north to the Ohio and Pennsylvania Railroad, connecting Pittsburg, with the Great West, and south, connecting Philadelphia, New York, Boston, and Baltimore with the States of Indiana, Illinois, and Missouri, and eventually the Pacific Ocean, thus making Kenton, a prominent and enviable point for business, markets, &c. The tract contains 180 acres with about 100 acres cleared and under a fine state of cultivation. There is also two good young bearing orchards of selected and choice grafted fruit upon the farm. The buildings are a large two story brick house, 40 by 60, a good frame tenant house 18 by 36, a magnificent barn 50 by 82, together with stables, sheds, wood, wash, smoke and poultry house, &c., and in fact all the requisite out-buildings that could well be desired for a comfortable and easy life. There is also four good wells of good water upon the premises. About 40 acres of this land might easily be laid out into lots, joining as it does the additions of the town. The population of Kenton is from 1,500 to 2,000, which, together with the county, is fast increasing doubling as we have our population every three or four years. I will dispose of my land on easy terms, giving an indisputable title for the same.—Price per acre $50; for further particulars, terms of payment, &c., call upon or address post-paid.
Feb. 1, 1853. J. K. GOODIN, Kenton, Ohio.

### FARM FOR SALE.

A SMALL Farm of twenty acres, under good cultivation. Seven acres fall plowing done; remainder corn-stubble and meadow; all tillable, good land: situated in East Penfield, eleven miles from Rochester, near the Free-will Baptist Church—pleasant and desirable location. Good dwelling house, newly fitted up, and outbuildings good. Fruit abundant; large orchard, all grafted when small, of choicest fruit. Peaches of the choicest kinds; quinces, cherries, plums, grapes, and shrubbery tastefully arranged.

The above is a part of the Abram Becker farm. If not sold will be rented with or without the land. Inquire of the subscriber near the premises.
163–3t* TRUMAN MATTISON.

### IMPROVED FARM FOR SALE.

ONE HUNDRED and forty-five acres of land, highly cultivated, on traveled road, in one of the healthiest and pleasantest spots in Western New York—one and a half miles from the village of Wyoming, Wyoming Co., N. Y. The soil of this rich Valley is unsurpassed by any in the Genesee country—about one half is wheat land, twenty-five acres wood land. The Hornellsville, and Attica Railroad runs within six miles of the house, and affords a good market for every thing produced.

The house is a cobble stone, two story building, in good condition, recently improved, which cost over $2,000.—There is a large barn and horse barn, also, a good grafted fruit orchard, containing apples, cherries, plums, and peaches.

To a person having a family of children to educate, the Wyoming Academy, an old and flourishing institution, affords superior advantages, within one and a half miles of the house—altogether this is a most desirable farm and will be sold cheap.

Stock and farming implements can be had with the farm if desired. Apply to WILLIS KEMPSHALL, Wyoming, Wyoming county, N. Y., or application for information may be made to D. M. DEWEY, Bookseller, Rochester.
161eow3 J. B. DEWEY, do.

### FARM FOR SALE.

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.
JOSEPH ARMSTRONG.
Pittsford, Monroe Co., N. Y., Jan. 7, 1853. 158–tf

### Farm Implements for California.

BURRALL'S Prize Reapers, Mowers, Threshers and Separators, Clod-Crushers, Field-Rollers, Cultivators, Horse Powers, &c., &c. All *warranted* of the best material and workmanship—strong, compact and reliable—expressly for that market.

Made and sold cheap for cash by
THOMAS D. BURRALL.
Geneva, Ontario Co., N. Y. 159–8w.

### AMERICAN ELOQUENCE.

WILBUR M. HAYWARD having published Webster's Great Orations, would invite public attention to the same. The volume contains the Eulogy on Adams and Jefferson; the Landing of the pilgrims; the Bunker Hill Monument; and the Reply to Hayne. These productions of America's Master Mind will live and be read forever. The eloquence and example of Webster is a rich and exhaustless legacy, of which every American can feel proud, and for which he should be grateful. The work is embellished with a fine and accurate likeness of the great Statesman and Orator. It should be in the hands, and its sentiments of lofty patriotism on the hearts of all who boast of the American name. It is now for the first time in a form accessible to all. Price—Single copies 37½ cents. 3 copies $1. It can be mailed to all parts of the Union, and Canadas. Readers of the Rural, send in your orders.
Address, WILBUR M. HAYWARD,
163–tf No. 4, Burns Block, Rochester, N. Y.

### OLD ROCHESTER NURSERY.

TWENTY THOUSAND OSAGE ORANGE Plants at $10 per thousand. This plant proves perfectly hardy here and makes the best Orchard fence known.

30,000 Northern Spy Apple trees.
3,000 Fine Dwarf Pears, of large size.
5,000 Giant Rhubard, very low by the 1,000. Must be sold to clear the ground.

One dozen very large Maple trees, root pruned last spring; 1 doz. Scotch Larch; 1 doz. Laburnum; and several fine Norway Spruce, Scotch Fir, &c.,

Together with a large general assortment of hardy Orchard Fruits and Ornamental Trees, Shrubs, Dahlias, and a general collection of bulbs, box edgings, &c.

The assortment is very complete, comprising the leading hardy items requisite for elegance or utility. Orders carefully filled, packed, &c., for any distance.

Nursery, corner of Norton and North Clinton Streets.—Office 36 Front-st., Rochester, N. Y. Catalogues gratis.
117-tf. SAM'L MOULSON.

### PROF. BROWN'S NEW STORE,

With New Goods, and Enlarged Accommodations

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

Gentlemen's Furnishing Goods.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

Hair Work of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

Fishing Tackle.—Sportsmen, call and see.

To Ladies.—A lady will be in attendance in the front Store.

☞ Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,
[129–tf] No. 26 Buffalo St., Rochester, N. Y.

### Erection of Lightning Rods.

L. P. BERTHRONG & Co., offer their services to the public for this work. They assure their patrons that the work shall be carefully and faithfully done. The patronage already received demands their gratitude, and shall be fully merited in future. They will put up rods both in city and country. Orders may be left at 55 South Fitzhugh St., or at J. B. Dewey's Store, 61 Buffalo St.
L. P. BERTHRONG & Co.
Rochester, July 13, 1852. 133–tf

### BUFFALO TYPE FOUNDRY,

N. LYMAN, Founder, Seneca-st, 2d door from Pearl St., would call the attention of Printers and Publishers to his complete assortment of PRINTING MATERIALS to which he is constantly making additions. Materials of every description furnished at short notice, and on the most reasonable terms. Presses, Cases, Chases, Composing Sticks, Ink, &c., together with everything required in an office, constantly on hand.

Old Type taken in exchange for new, at nine cents per pound. 121-tf.

The Rural New-Yorker, published at Rochester, N. Y., we consider the very best agricultural newspaper in America.—*Ladie's Repository, (Cincinnati.)*

### Emery's Patent First Premium 1852, RAILROAD HORSE POWER,

Threshing Machines, Separators, &c., Western New York Agency.

### E. D. Hallock, Agricultural Warehouse, No. 50 State St., Rochester, N. Y.

THE Subscriber, late from the Albany Agricultural works Warehouse and Seed Store, where he has been engaged for the past six years, has secured the sole Agency for the sale of Emery's Patent Railroad Horse Power for Rochester and vicinity, so widely and favorably known throughout the country, and which has without exception, taken every highest premium awarded in the States of Ohio, Michigan, and in New York, for the best Railroad Horse Powers in 1850, 1851, and again in 1852, also at the Provincincial Fair of Canada, recently held at Toronto, was awarded a Diploma and £2, of which the judges highly commend the principle and workmanship of this Power, now offer them at manufacturer's prices, with the transportation added, and subject to the warrantee as follows:

"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded."

For further particulars see Circulars and Catalogues, which are furnished gratis on application to the subscriber.

The attention of the Farming public is solicited, and a careful investigation into the construction of this Power and its comparative merits, as well as price, is requested before purchasing elsewhere.

The Wheeler power is also offered *ten* dollars cheaper than heretofore by any other agency, and subject to same warrantee as given by others for the same kinds. Samples will be kept constanly on hand, and to insure promptness and avoid disappointments in supplying them, farmers are requested to send in their orders at as early a date as possible.

He will keep for sale, Emery's Seed Planters, the best in use; Circular and Cross Cut Saw Mills, Feed Mills, Corn Stalk and Hay Cutters, Corn Shellers, Churning fixtures, &c., adapted to the Power.

Also, Reapers, Mowing Machines, Grain Drills, Plows, Harrows, Cultivators, Corn Shellers, Hay Cutters, Fan Mills, and Agricultural and Horticultural Implements generally. He will be prepared to furnish dealers with Dunn and Taylor's well known Scythes; also, Manure, Straw and Hay Forks, Snaths, Rifles, and other haying tools, at manufacurers' prices, wholesale and retail.

Particular attention is called to A NEW PLOW, which is believed to be the best cast-iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any plow heretofore sold in this vicinity, while the price is less than for any other equally well finished.

The "uniform one-price, cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time will allow. Farmers and others are invited to call and examine the stock of Machines and Implements,—and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.
E. D. HALLOCK, 50 State street, Rochester.
Oct. 5, 1852. [145–tf]

### Important to Farmers

### PORTABLE MILL.

[From the Ohio Farmer, December 2, 1852.]

Ross' Improved Patent Conical Burr Mill Stones.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few week's since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,
2d story Phenix Building, Aqueduct-st.,
154–tf opposite the Arcade, Rochester, N. Y.

### CARY'S ROTARY FIRE ENGINE PUMP.

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.
No. 2 will raise 100 gallons at 120 revolutions.
No. 2¼ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.
76-tf. CARY & BRAINARD.

### American Seed and Implement Store,

NO. 4 MAIN STREET, CURTIS' BLOCK.

*Garden and Nurseries at Monroe-st. Plank Road Gate.*

(Over five Tons of Garden Seeds grown in 1851.)

THE Proprietor of this establishment has been extensively engaged in growing and selling Seeds for the last twenty-four years, with every facility for a successful business, and a determination that not an article shall leave his Store but such as will prove satisfactory to the purchaser. He therefore expects that his efforts will be appreciated and meet the approval of his customers.—Over Fifty First Premiums have been awarded at the State and County Fairs for Vegetables grown at his Garden.

**Garden, Field and Flower Seeds** of all kinds and of first quality.

**Fruit and Ornamental Trees,** Shrubs, &c., Green House and Hot bed Plants in their season.

**Farm Tools** of every description. Emery's Railroad Horse Powers, Thresher, and Separator. Seed Drills, Corn Planters, Machine Belting, &c.—Wholesale and retail at Manufacturer's prices, adding transportation.
C. F. CROSMAN,
April 1, 1852. 118-8w. Rochester, N. Y.

### "SPEED THE PLOW."

### Genesee Seed Stoe and Ag'l. Waehouse.

THE subscribers beg leave most earnestly to call the attention of the farming community to the fact that they have just received a supply of the most popular and modern improved implements used in Agricultural and Horticultural pursuits.

They would particularly invite all interested, to the well established Mass. Eagle Plows, in a series of 24 different sizes manufactured by Ruggles, Nourse & Mason. Also the latest and most improved kind of Seed Planter, invented by the same firm.

We have also on hand the well known Curtis or Albion Plow, of various sizes and extra manufacture.

Wheeler's Horse Power, Thresher and Saw Mill.
Hussey's Celebrated Grain Reaper.
Pennock's Wheat and Grain Drill.

As also a complete assortment of Field and Garden Seeds, both domestic and imported.
72 JOHN RAPALJE & Co., Irving Block,
65 Buffalo-st., Rochester

### FARMERS, LOOK HERE!

### The Great Difficulty Surmounted.

T. S. Steadman's Clover and Grass-Seed Reaper.

IT has long been a question among Farmers why there could not be a machine constructed for the purpose of gathering Clover seed, that should gather the heads only, and leave the stalks upon the ground where they should be, thereby saving a vast amount of labor and time in transporting the stalks to the barn and out again to the field for manuring purposes.

The subscriber would respectfully announce to the farming community that *he has* removed all the obstacles which have hitherto prevented a machine of this kind from doing the work satisfactorily, and now offers his Reapor to the public, in the firm belief that it will give entire satisfaction. The machine will gather from eight to ten acres daily, gathering only the heads, and doing it in the finest order. Only one horse is used—moving it with perfect ease through the stoutest clover.

For farther testimonials in regard to my Machine, I would respectfully refer you to the following gentlemen: Hiram Frisble, Holley; L. J. Waters, Buffalo: Wm. Hatch, Holley; Sylvester King, do; Martin G. King, do. John Berry, do.; Nelson Hatch, do.
T. S. STEADMAN,
Holley, Orleans Co., N. Y. 153–4t–1am*

### MARSHALL'S BOOK BINDERY,

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

# Poetical.

## EVERGREENS.

BY W. H. C. HOSMER.

Come to the House of Prayer,
Where willing knees to Providence are bowed,
For Earth is mantled in a snowy shroud,
And seems no longer fair;
And though we cannot view
The violet, peeping from the velvet sod,
Maidens have decked the holy House of God
With wreaths of Emerald hue.

Sin-smitten mortals, come!
The green festoons that do the walls adorn—
Fresh as when watered by the dews of morn—
Are eloquent, though dumb;
For the leaf-laden bough
That Winter fades not with his frosty breath,
Is like the spirit, living on when Death
Touches with ice the brow.

Come to the House of Prayer,
Poor human toilers in this world of strife—
Gaze on those emblems of eternal life,
And learn a lesson there;
For those green garlands tell
The dying Christian of a brighter shore,
Where blinding tears will dim the eye no more,
And shapes Angelic dwell.

*Wayne Sentinel.*

# Rural Sketch Book.

## A GLEAM OF SUNSHINE

### ON THE PATHWAY OF A MONEY LENDER.

BY T. S. ARTHUR.

Mr. EDGAR was a money lender, and scrupled not in exacting the highest "street rates" of interest that could be obtained. If good paper were offered, and he could buy it from the needy seeker of cash, at two or even three per cent. a month, he did not hesitate about the transaction on any scruples of justice between man and man.

Below one per cent. a month, he rarely made loans. He had nothing to do with the question as to whether the holder of bills could afford the sacrifice. The circle of his thoughts went not beyond gain to himself.

Few days closed with Mr. Edgar, that he was not able to count up gains as high as from thirty to one hundred dollars. Not acquired in his trade; not coming back to him as the reward of productive industry; but the simple accumulation of large clippings from the anticipated reward of others' industry. Always with a good balance in bank, he had but to sign his name to a check, and the slight effort was repaid by a gain of from ten to fifty dollars, according to the size and time of the note he had agreed o discount. A shrewd man, and well acquainted with the business standing of all around him, Mr. Edgar rarely made mistakes in money transactions. There was always plenty of good paper offering, and he never touched anything regarded as doubtful.

Was Mr. Edgar a happy man? Ah! that is a home question. But, we answer frankly, no. During his office hours, while his love of gain was active—while good customers were coming and going, and good operations being effected—his mind was in a pleasurable glowing. But, at other times, he suffered greatly from a pressure on his feelings, the cause of which he did not clearly understand. Wealth he had always regarded as the greatest good in life. And now, he not only had wealth, but the income therefrom was a great deal more than he had any desire to spend. And yet he was not happy—no, not even in the thought of his large possessions. Only in the mental activity through which more was obtained, did he really find satisfaction; but this state was only for a short duration.

Positive unhappiness, Mr. Edgar often experienced. Occasionally losses, careful and shrewd as he always was, were inevitable. These fretted him greatly. To lose a thousand dollars, instead of gaining, as was pleasantly believed, some sixty or seventy, was a shower of cold water upon his ardent love of accumulation; and he shivered painfully under the infliction. The importunities of friends, who needed money, and to whom it was unsafe to lend it, were also a source of no small annoyance. And, moreover, there was little of the heart's warm sunshine at home. As Mr. Edgar had thought more of laying up wealth for his children, than giving them the true riches of intellect and heart, ill weeds had sprung up in their minds. He had not loved with an unselfish love, and he received not a higher affection than he had bestowed. Their prominent thought in regard to him, seemed ever to be the obtaining of some concession to their real or imaginary wants; and, if denied these, they reacted upon him in anger, sullenness or complaint.

O no, Mr. Edgar was not happy. Few gleams of sunshine lay across his path. Life to him, in his own bitter words, uttered after some keen disappointment, had "proved a failure." And yet he continued eager for gain; would cut as deep, exact as much, from those who had need of his money, as ever. The measure of per-centage was the measure of his satisfaction.

One day a gentleman said to him—

"Mr. Edgar, I advised a young mechanic who has been in business for a short time, and who has to take notes for his work, to call on you for the purpose of getting them cashed. He has no credit in bank, and is, therefore, compelled to go upon the street for money. Most of his work is taken by one of the safest houses in this city; his paper is, therefore, as good as any in market. Deal as moderately with him as you can. He knows little about these matters, or where to go for the accommodations he needs."

"Is he an industrious and prudent young man?" inquired Mr. Edgar, caution and cupidity at once excited.

"He is."

"What's his name?"

"Blakewell."

"O, I know him. Very well; send him along, and if his paper is good I'll discount."

"You'll find it first-rate," said the gentleman.

"How much shall I charge him?" This was Mr. Edgar's first thought, so soon as he was alone. Even as he asksd himself the question, the young mechanic entered.

"You take good paper, sometimes?" said the latter, in a hesitating manner.

The countenance of Mr. Edgar became, instantly, very grave.

"Sometimes I do," he answered, with assumed indifference.

"I have a note of Leyden & Co's. that I wish discounted," said Blakewell.

"For how much?"

"Three hundred dollars — six months;" and he handed Mr. Edgar the note.

"I don't like over four months' notes," remarked the money lender, coldly. Then he asked—"What rate of interest do you expect to pay"

"Whatever is usual, Of course, I wish to get it done as low as possible. My profits are not large, and every dollar I pay out in discounts is so much taken from the growth of my business, and the comfort of my family."

"You have a family?"

"Yes sir. A wife and four children."

Mr. Edgar mused for a moment or two. An unselfish thought was struggling to get into his mind.

"What have you usually paid on this paper?" he asked.

"The last I had discounted cost me one and a half per cent. a month."

"Notes of this kind are rarely marketable below that rate," said Mr. Edgar. He had thought of exacting two per cent. "If you will leave the note and call round in half an hour, I will see what can be done."

"Very well," returned the mechanic. "Be as moderate with me as you can."

For the half hour that went by during the young man's absence, Mr. Edgar walked the floor of his counting room, trying to come to some decision in regard to the note.—Love of gain demanded two per cent. a month, while a feeble voice, scarcely heard, so far away did it seem, pleaded for generous regard to the young man's necessities. The conflict taking place in his mind was a new one for the money lender. In no instance before, had he experienced any hesitation on the score of large discount. Love of gain continued clamorous for two per cent. on the note, yet over and anon the low voice stole in pleading accents to his ear.

"I'll do it for one and a half," said Mr. Edgar, yielding slightly to the claim of humanity, urged by the voice that seemed to be coming nearer.

Love of gain after slight opposition, was satisfied. But the low penetrating voice asked for something better still.

"Weakness! folly!" exclaimed Mr. Edgar, "I'd better make him a present of the money at once."

It availed nothing. The voice could not be hushed.

"One per cent.! He couldn't get it done as low as that in the city."

"He is a poor young man, and has a wife and four little children," said the voice.—"Even the abstraction of legal interest from his hard earnings is defect enough; to lose twice that sum, will make a heavy draught on his profits, which, under the present competition of trade, are not large. He is honest and industrious, and by his useful labor is aiding the social well-being. Is it right for you to get his reward?—to take his profits, and add them to your already rich accumulations?"

Mr. Edgar did not like these home questions, and tried to stop his ears so that the voice could not find an entrance. But he tried in vain.

"Bank rates on this note," continued the inward voice, "would not much exceed nine dollars. Even this is a large sum for a poor man to lose. Double the rate of interest, and the loss becomes an injury to his business, or the cause of seriously abridging his home comforts. And how much will nine dollars contribute to your happiness? Not so much as a jot or tittle. You are unable, now, to spend your income."

The young mechanic entered at this favorable moment. The money-lender pointed to a chair, then turned to his desk, and filled up, hurriedly, a check. Blakewell glanced at the amount therof, as it was handed to him, and an instant flush of surprise came to his face.

"Havn't you made a mistake, Mr. Edgar?" said he.

"In what respect?"

"The note was for three hundred dollars, six months, and you have given me a check for two hundred and ninety dollars, forty-three cents.

"I've charged you bank interest," said Mr. Edgar, with a feeling of pleasure at his heart so new that it sent a glow along every nerve and fibre of his being.

"Bank interest! I did not expect this sir! replied the young man, visibly moved. "For less than one and a half per cent a month, I have not been able to obtain money. One per cent, I would have paid you cheerfully. Eighteen dollars saved! I could not have saved it—or, I might say, have received it—more opportunely. This is a kindness for which I shall ever remember you gratefully."

Grasping the money-lender's hand, he shook it warmly; then turned and hurried away.

Only one previous transaction had, that day, been made by Mr. Edgar. In that transaction, his gain was fifty dollars, and much pleasure had it given him. But the delight experienced was not to be compared with what he now felt. It was to him a new experience in life—a realization of that beautiful truth, "It is more blessed to give than receive."

Once or twice, during the day, as Mr. Edgar dwelt on the little circumstance, his natural love of gain caused regret for the loss of money involved in the transaction to enter his mind. How cold, moody and uncomfortable, he instantly became! Self-love was seeking to rob the money-lender of the just reward of a good deed. But, the voice which had prompted the generous act was heard, clear and sweet, and again his heart beat to a gladder measure.

Evening was closing in on the day following. It was late in December, and winter had commenced in real earnest. Snow had fallen for some hours. Now, however, the sky was clear, but the air keen and frosty. The day, to Mr. Edgar, was one in which more than the usual number of "good transactions" had been made. On one perfectly safe note he had been able to charge as high as three per cent per month. Full of pleasurable excitement had his mind been, while thus gathering in gain; but now, the excitement being over, he was oppressed. From whence the pressure came, he did not know, A cloud usually fell upon his spirits with the closing day; and there was not sunshine enough at home to chase it from his sky.

As Mr. Edgar walked along with his eyes upon the pavement, his name was called.—Looking up, he saw, standing at the open door of a small house, the mechanic he had befriended on the day before.

"Step in here just one moment," said the young man. The request was made in a way that left Mr. Edgar no alternative but compliance. So, he entered the dwelling.—He found himself in a small, unlighted room, adjoining one in which a lamp was burning, and in which was a young woman, plainly but neatly dressed, and four children, the youngest lying in a cradle. The woman held in her hand a warm Bay State shawl, which, after examining a few moments, with a pleased expression of countenance, she threw over her shoulders, and glanced at herself in a looking-glass. The oldest of the children, a boy, was trying on a new overcoat; and his sister, two years younger, had a white muff, and a warm woolen shawl, in which her attention was completely absorbed. A small child had a new cap, and he was the most pleased of any.

"O, isn't father good to buy us all these; and we wanted them so much," said the oldest of the children. Yesterday morning, when I told him how cold I was going to school, he said he was sorry, but that I must try and do without a coat this winter; for he hadn't money enough to get us all we wanted. How did he get the money, mother?

"To a kind gentleman, who helped your father, we are indebted for these needed comforts," replied the mother.

"He must be a good man," replied the boy. "What is his name?"

"His name is Mr. Edgar."

"I will ask God to bless him to-night, when I say my prayers," innocently spoke out the youngest of the three children.

"What does all this mean?" asked the money-lender, as he hastily retired from the room he had entered.

"If you had charged me one per cent on my note, this scene never would have occurred," answered the mechanic. "With the sum you generously saved me, I was able to buy these comforts. My heart blessed you for the deed; and if the good wishes of my happy family can throw sunshine across your path, it will be full of brightness."

Too much affected to reply, Mr. Edgar returned the warm pressure of the hand which had grasped his and glided away.

A gleam of sunshine had indeed fallen along the pathway of the money-lender.—Home had a brighter look, as he passed his own threshold. He felt kinder and more cheerful; and his kindness and cheerfulness flowed back to him from all the inmates of his dwelling. He half wondered at the changed aspect worn by everything. His dreams that night were not of losses, fires, and the wreck of dearly cherished hopes; but of the humble home made glad by generous kindness. Again the happy mother, the pleased children, and the grateful father, were before him, and his own heart leaped with a new delight.

"It was a small act; a very light sacrifice on my part," said Mr. Edgar to himself, as he walked, in a musing mood, towards his office on the next morning. "And yet, of how much real happiness has it been the occasion! So much that a portion thereof has flowed back upon my own heart."

"A good act is twice blessed." It seemed as if the words were spoken aloud, so distinctly and so suddenly were they presented to the mind of Mr. Edgar.

Ah, it he will only heed that suggestion, made by some pure spirit, brought near to him by the stirring of good affections in his mind! In it lies the secret of true happiness. Let him but act therefrom, and the sunshine will never be absent fsom his pathway.—*Gleason's Drawing Room Companion.*

---

THE London Times told us, not long since, that there were one hundred thousand persons in the city of London, the "centre and core of British civilization," who rise every morning without knowing where to get a meal during the day, except from "a passing job or crime." And this frightful picture is not overcharged, as all know who have been there. Can any man truly say this, or anything like it, of our country, North or South?—*Gen. Cass.*

---

FRIENDSHIP is more firmly secured by lenity towards failings, than by attachment to excellencies. The former is valued as a kindness which cannot be claimed; the latter is exacted as the payment of a debt of merit.

## PEA SOUP.

Of all the P's in Johnson's Dictionary,
Pe-tard, Pe-ruse, Pe-ruke, Pe-titionary,
Pea-cock, Pe-culiar, Pe-dant, and Pe-nal,
Pe-remptory, Pe-nates, and Pe-tal;
Pe-cuniary, Pe-riphery, and Per-ish;
Pe-rennial, Pe-trescent, and Pee-vish;
The P I most approve of all the group,
Is Pea, the son of Pod, and sire of Soup!

BOYS TAKE YOUR FUN.—Nothing equals a boy except a girl. The frolicking, harum-scarum, high glee times of boyhood, happy they were. Perhaps you never broke steers and colts, never slid down hill, over fences, across the ice on the meadow, never skated among the huge fires on the ten-acre pond, on a clear winter's night, drawing the prettiest girl in all the town after you, holding upon a stick. If you never have, you never was a boy! How many years does a man have to live to pile up as much happiness as jumpt out of a boy in a single old-fashioned, gingerbread, molasses candy, wrestling, bat and ball playing town-meeting day? Boys, go it, while you are young? Bring out your sleds and skates, roll up snow-balls as huge as Atlas, play "tag," and make the most of your legs!

---

"How many rods make a furlough?" asked a father of his son, a fast urchin, as he came home one night from the town school.

"Well, I dont know," was the reply of the young hopeful, "but I guess you'd think one rod made an *acher*, if you got such a tanning as I did from old vinegar-face this afternoon."

---

"BILL, what did yer jine the Mexican war for?"

"For glory."

"Did you get it?"

"I rather think I did—two crutches and a wooden leg."

---

MARRIED.—At Peoria, Illinois, Rev. Mr. Pierce married Mr. Henry W. *Seine* and Miss Maria Ellen *Hurd*. The bride was but fifteen. This is fulfilling the advice that children should be *seen*, and not *heard*.

---

A MAN called upon an unfortunate tradesman to pay a demand. "I can never pay it," said he, "I am not worth a farthing; but I will give you a *note*—I am not so poor yet but that I can sign a *note*."

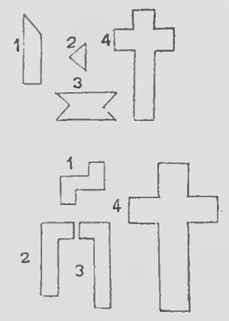
---

THE Editor of the Kennebec Journal in dunning his subscribers, says, "he has little responsibilities thrown upon him just now, which he is obliged to *meat*."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

## TWO PUZZLES.



1.—CUT out of a piece of card, five pieces, similar in shape and size to the annexed figures, viz. one piece of fig. 1, three pieces of fig. 2, and one like fig. 3. These five pieces are then to be so joined as to form a cross, like that represented by fig. 4; but of coarse larger in size.

2.—This is a variation from the preceding puzzle, and is much more complex in its different parts. Cut out of a stiff card three pieces, in shape like fig. 1, and one like fig. 2, and be very careful to make them in exactly the same proportion to each other; next cut out one piece like fig. 3, and then endeavor to arrange them so as to form the cross shown in fig. 4.

For Moore's Rural New-Yorker.

## A MUSICAL ENIGMA.

I am a sentence composed of thirty-four letters.

My 34, 16, 32, 3, 17, 18 is a favorite musical instrument.

My 22, 33, 20, 29, 33, 26, 21 is a term used in music.

My 9, 32, 31, 10, 27, 28, 29, 31, 5 is the title of a charming little song.

My 25, 9, 7, 15 is one of the parts in vocal music.

My 2, 29, 6, 23, 12, 33 is the name of a late composer of music.

My 1, 9, 20, 14, 16, 33, 28, 30, 8, 23 is an ancient psalm tune.

My 24, 21, 27 is indispensable to a Piano Forte.

My 11, 12, 13, 21, 30 is very important to know in singing.

My 4, 16, 33, 19, 21, 33 is the author of an instruction book for the Piano Forte,

My whole is the first line of a very popular song.

Rochester, Feb. 1, 1853. SALLIE.

## ANSWER TO ENIGMA, &c., IN NO. 6.

Answer to Geographical Enigma.—*William Shakespere.*

Answer to Charade.—*Home-ward-bound.*

## TO AGENTS AND OTHERS.

ENCOURAGED by the brilliant success which has thus far attended the publication of MOORE'S RURAL NEW-YORKER, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* PREMIUMS. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

## SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the RURAL NEW-YORKER from any one town in *the State of New York*, IN PROPORTION TO ITS POPULATION, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in BOOKS or AGRICULTURAL IMPLEMENTS, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Ag'l. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the RURAL and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

MOORE'S RURAL NEW-YORKER is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The RURAL NEW-YORKER, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

### TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the NEW-YORKER is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

VOLUME IV. NO. 8. ROCHESTER, N. Y.—SATURDAY, FEBRUARY 19, 1853. WHOLE NO. 164.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper,**

**CONDUCTED BY D. D. T. MOORE,**

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

### THE DIGNITY OF LABOR.

THERE is to the well-balanced mind, a charm, an unalloyed pleasure imparted by well-directed labor. WEBSTER says in one of his speeches, "It is *employment* that makes a people *happy*," and he expressed the noble sentiment of his heart. Look at the laborer as he goes to the field at early morn. His night's repose has been refreshing and invigorating. The sun, peeping over the eastern horizon, makes the dew-drops among the leaves and blades of grass sparkle like a myriad of flashing gems.—The feathered songsters are tuning melodies innumerable. The blossoming flowers send out their rich aroma and scent the air with sweetest perfume. With all these and a multitude of other surroundings, how else can he go to his day's labor than with a heart overflowing with pleasant thoughts.—He sees a wonderful display of Infinite Wisdom in every thing around him, and his heart glorifies GOD for his goodness. He has drank from the fountain of love and the moments pass on swiftly and pleasantly.—His day's toil ended, he re-enters his family circle with his mind enriched by the tho'ts of the day, and he reaps a double reward of happiness and pleasure in both imparting and receiving. Thus he toils, adding each day some new beauty, some useful idea, some noble thought to his well-stored mind, as he strives for that independence which is both physical and mental. He spurns the idea of living upon the earnings of another, whilst his heart and hand is ever open to relieve the unfortunate. Other occupations bring their trains of thought and development, leading to the same great end.

It may be asked, why are not all those who toil, happy? One reason may be given that wealth is made the great end and aim of their existence, and their whole powers are mainly directed to the accomplishment of this sordid desire. The mind is thus debased and made to grovel in the dust while they strive for the power to turn every thing they touch into gold. Thus the Creator's designs are attempted to be frustrated; hence, their minds, instead of being a garden of enjoyment, are scorched by the burning sands of care and disappointment, till they become deserts of blasted hopes, over which may sweep the pestilential winds of passion and lust unstayed and unchecked.—We must seek for wealth only as a means of doing good, not as an end of our existence. Noble examples to excite within us a love for the nobility of toil are met at every turn. Great deeds are not accomplished, nor do we arrive at greatness in any thing, except thro' severe toil. That is the talismanic key—the *open sesame* that shall unlock the glories of success to the longing gaze of the ardent.

Think not, then, ye mere men of starch and broad-cloth, of hair and smoke, that labor is undignified, that the toil of the hand, the heart, the head, is possessed of no power. Put away your silly notions and stand up like God-made men and labor diligently for the advancement of yourselves and your fellow men to a higher state of moral, mental and physical excellence. No, no, let none fear or be ashamed to embrown their hands with toil, nor think there is no work for them to do, no harvest to reap in which they may participate.

Young man, remember that "whatsoever thy hand findeth to do, that do with all thy might." Who can tell but that some tho't, while driving the plow or pushing the plane, may peer in upon the mind, which, if nursed into being and carried out in its effects, may be the means of rousing a nation, or even the whole world, to some great purpose! Then despise not your calling, nor faint in well doing therein, for there "all the honor lies." Explore the recesses of your own mind, withal, and bring out the native ore, purify it of its dross, cast it into coin, that it may speed the cause of human progress. Go with stout hearts into the wilderness of unexplored truth and help clear away the rubbish of falsehood and error, and open the rich mines of wisdom yet concealed.

Yes, you may toil with your hands and yet accomplish much of mental toil by a judicious improvement of your moments, and such improvement is the more lasting, effective and valuable. Remember the words of Solomon, that, "Happy is the man that findeth wisdom, and the man that getteth understanding, for the merchandise of it is better than the merchandise of silver, and the gain thereof than fine gold."

T. E. W.

### DEEP TILLAGE.—MR. REDPATH'S ESSAY.

MESSRS. EDITORS:—I have read the valuable Essay on Draining by N. DAVIDSON REDPATH, as far as published in your columns, with interest and profit, and yet there are some of the directions given for constructing drains, that to my mind are quite objectionable. One or two I will notice.—Under the head of "Stone Drains," the writer says:—"After the completion of the conduit, the drain is filled up with small stone to within about twelve inches of the surface; sods turned with the grass side down, are laid immediately above them to prevent the surface soil from penetrating downwards."

If the above rule is followed in draining a heavy soil, or in fact any soil, it will preclude the most important part of good tillage, viz., deep plowing; for if the stones of the drain are within twelve inches of the surface, and the covering, whatever it may be is still above that, it would not be safe to disturb the soil more than seven or eight inches deep, which is entirely too shallow to prevent the crops from being injuriously affected by the extremes of wet and dry weather. Heavy soils must be plowed at least ten inches deep, to ensure a healthy, vigorous growth to crops, especially in an extreme drouth, and if the earth was stirred twice ten inches deep in most cases, it would be far better. At least that has proved to be the case in cultivating the heavy soil that constitutes my farm.

Again, the writer speaks of tile drains being laid two feet deep, and one foot of gravel or small stones placed above the tile, and then adds:—"This will allow a sufficient depth of soil above, for the operation of subsoil plowing." Now, this I do not understand, how subsoil plowing can be performed where there is not a sufficient depth of soil above the drains to admit of good surface plowing.

It is evident that the author's method of draining is based upon a system of shallow tillage, for he again, in his plan of an undrained field, ridged and furrowed, allows the water-furrows to be only six inches deep. I am well aware that it would be extremely difficult to form a set of rules for draining that would be applicable to all the different soils and situations, and have not made the above remarks with a desire to criticise, but have been prompted to do so by dear-bought experience. A little of that experience I will relate. Sixteen years ago I employed a man from "the old country," who professed to understand the business, to put in some stone drains upon a wet piece of ground containing about two acres. These drains were laid so as to leave but about twelve inches of soil above them, so that plowing could not be more than eight inches deep without disturbing the drains. But to raise wheat upon this land it was necessary to mix a portion of the subsoil with the soil, otherwise the wheat would be destroyed by the rust, and in order to save the wheat from the rust, the plowing had to be so deep as to disturb all the upper stones of the drains; and although they continued to do good work some years after that, they finally got clogged in the winter when the field was in wheat, and about two acres of the wheat was destroyed, and now drains had to be put in before the land could again be tilled.

A few words upon the plan recommended for furrowing and ridging undrained fields. This method of getting rid of the surplus water was adopted by myself more than twenty years ago, but after a few years I found it advisable to change from six-inch plowing and six-inch water-furrows, to ten or twelve-inch plowing, and from sixteen to eighteen-inch water-furrows; and after trying both ways, have no hesitation in saying that the latter method is far better than the former, for many reasons. A few I notice. Clayey land, plowed in the fall, six inches deep, and a six-inch water-furrow, will all run together, making a mortar bed when wet, and a hard impenetrable soil when dry, and in neither case can a fair crop be expected,—while deeper plowing and a water-furrow so deep that the water can have a free passage *below the soil* will render the soil open, light and friable, and a good crop can be expected. Crops will be much less affected by wet weather, for the more water that passes quickly through the soil, the better; neither will they be affected by dry weather. Wheat will be liable to be injured by the winter, and also be liable to rust, when the former method is adopted, but little danger is to be apprehended from either winter or rust if the latter is practiced.

Deep tillage possesses so many advantages over the common method that it must ere long be more extensively practiced than it is at present, and it would be very unwise to place obstructions in the shape of drains so near the surface as only to be partially benefited by the expensive operation of draining. Therefore, all drains should be placed at least two feet below the surface, when the situation of the ground and the character of the soil will possibly admit.

Troy, Mich., 1853. LINUS CONE.

### FARMING A PAYING BUSINESS.

MR. EDITOR:—Under this head appeared an article and a statement of farming accounts, in No. 158 of the NEW-YORKER, from the pen of my good friend and neighbor, D. P. KNEELAND. The assertion is daily made by intelligent farmers, that farming does not pay under the present high prices of land and labor. That it does not in very many instances, is very certain, but the cause is generally quite apparent. The truth is, very few farmers know, with any kind of certainty, how the account stands with them, having never kept any account of their farming receipts and expenses. Such persons probably would be very much disappointed should they for one year keep a regular account of their farming operations. Were this method generally adopted, I think the number of farms that "don't pay" would be very much reduced. I do believe this to be a very great auxiliary to successful farming. Such a statement as D. P. K.'s, coming as it does, from one who keeps the "documents," states what he knows, and is in every qualified to judge in the premises, goes very far to show what may be done in the way of improving our system of agriculture, and the consequent profits of the farm.

Before seeing his article, I had hastily prepared a statement of my own farming operations, thinking to place it at your disposal, at some convenient opportunity. I do not claim my system of farming to be any thing superior or worthy of imitation, but think the result shows a very fair paying business. Besides the profits in cash, the farm has other profits not to be computed in that way. The freedom and independence, the blessing of health, the peaceful pleasure of the fireside, the quiet of a rural home, and an approving conscience, are all the peculiar profits of the farmer, too valuable to be reckoned by dollars and cents. And to any man who does not value these, or has no taste for the bleating of lambs and the lowing of cattle, and can see no beauty in a good cow, or a good ox, or who may consider these things beneath his dignity, and that farming "won't pay," my advice is, to try some other business more agreeable to his taste, for he certainly will find farming an "uphill business."

FARM RECEIPTS FOR 1852.

| | |
|---|---|
| 950 bushels of wheat at $1.12½ | $1068,75 |
| 750 " of corn at 62½ cents | 468,75 |
| 20 acres of corn stalks at $5 per acre | 100,00 |
| 30 tons of clover and timothy hay at $8 | 240,00 |
| 210 bu. barley at 62½ cents | 131,25 |

| Milk, eggs and poultry used in family | 32,87 |
| Rent of house to live in | 75,00 |
| " " to tenant | 30,00 |
| 75 cords of wood for fuel at $1 | 75,00 |
| Horses for family use | 20,00 |
| Premiums rec'd on stock at County Fair | 8,00 |
| Total receipts | $4593,25 |

FARM EXPENSES FOR 1852.

| | |
|---|---|
| Interest on capital in farm, 205 acres at $75 | $1076,25 |
| Interest on $2,000 in stock and tools | 140,00 |
| Taxes | 30,00 |
| My own time | 400,00 |
| Depreciation of farming tools | 100,00 |
| 100 wethers, average cost $1,62½ | 162,50 |
| 1 yoke of working oxen | 100,00 |
| 1 farm horse | 120,00 |
| 1 dry cow | 17,50 |
| Blacksmith's bill | 23,35 |
| Cash paid for labor by the month | 204,00 |
| " " by the day, job and chopping | 92,83 |
| Use of thrashing machine | 37,68 |
| Wages of girl in house, one year | 65,00 |
| " " fourteen weeks at $1 | 14,00 |
| Board of laborers | 178,50 |
| 164 apple barrels at 33cts | 54,12 |
| Incidental expenses for repairs, &c | 50,00 |
| 3 tons of shorts at $10 | 30,00 |
| Hay, corn stalks, straw, pumpkins, and grain fed out on farm | 515,00 |
| Grain, beans, potatoes, &c., for seed | 101,00 |
| 3½ bushels of clover seed, $5 | 17,50 |
| Lime and plaster | 4,00 |
| Insurance on house, barn, produce, &c | 6,00 |
| Total expenses | $3,539 23 |
| Balance in favor of Farm | 1,054 02 |

This shows an interest of more than 13 per cent. on all capital invested, besides paying me $400 per year for my own time. Forty acres of this land is timbered, so that only 165 acres is actually improved, and 30 of this I bought a few years since when it was considered worn out, and would yield scarcely enough to pay for tilling it, and the last crop that grew on it was left without harvesting,—not being considered worth it. This part of the farm is now equal to any of it. I anticipate increasing my profits still more in future. I expect greater produce from the same land. I am not one of that class of farmers that suppose the land of Western New York is running out, and becoming so much exhausted that we shall have to give up raising wheat, and are going to be run over by the great West; the fact is, we are but just in our infancy:—"nor doth it yet appear what we shall be" when the true science of agriculture is understood as it ought to be, and I may say will be, at no very distant day.

As to myself, I consider the result of my farming operations (though it may be nothing more than a fair one,) depending very much upon two things; first: the careful saving, and judicious application of all the manure of the farm; and second: personal attention to the concers of the farm, believing in the old proverb,—

"He that by the plow would thrive,
Himself must either hold or drive."

Concerning my management of manure, I may give you some account hereafter. At present no more. K.

Le Roy, N. Y., February 1st, 1853.

### CONDENSED CORRESPONDENCE.

#### Fattening Pigs.

EDS. RURAL:—As I have been in the practice of fattening spring pigs, for the last fifteen years, I send you, by way of trying my hand, a few lines on the subject. Some of my neighbors contend that it is not profitable; that it takes as much to fatten a pig as it does an old hog. I am not ready to admit that to be the case, provided the hog is made to weigh with the pig in proportion to his age. But in order to be successful, a good breed is necessary, and good keeping. For the term of years above named, I have slaughtered but two or three pigs, that have fallen short of 200 lbs. at the age of from seven to nine months, but have had them weigh 240, 260, 275 and 300 lbs. I slaughtered six the 16th of last December that averaged 280 lbs. at the age of eight months and eighteen days, the heaviest one weighing 312 lbs.

My rule is to keep no more than I can keep in a thriving condition, except such as are kept for breeding, which should be kept in good condition, but not fat. One of my neighbors that disapproves of fattening pigs, has this season killed nine hogs, that were not far from eighteen months old, which averaged 244 lbs., the heaviest one weighing 280 lbs., being the same as my pigs averaged. Another killed six, which had been wintered over, that averaged 266 lbs., as I was informed. I keep a dairy of sixteen cows, and feed my pigs what whey they will eat, and a little corn, to keep them in shape, until September, and then increase the corn, as the slops diminish. The neighbors alluded to, keep dairies, of about twenty-five cows, and are in as favorable circumstances for fattening pork, as I am, and as they sometimes ask the question, if I think it is profitable to fat pigs, if they are not satisfied with the above, I will simply say, that I cannot afford to keep a hog ten or twelve months for nothing.—S. G. B., *Verona, N. Y.*, Feb. 4, 1853.

#### New Disease in Cattle.—Inquiry.

EDS. RURAL NEW-YORKER:—A disease of late prevails among the cattle, which is new to me and my neighbors. It first appears as a swelling over the left kidney, close to the back bone; puffs up like a water blister, or more like wind. When the hand is laid on it, it will apparently move—is very soft, and the animal appears to be in pain when touched on the swelling. They are also very thirsty—have noticed their going to the watering trough four or five times a day—chews its cud regular, eats with a good appetite, discharges some from the eyes and nose; its coat rather rough. Pass the hand over the hair, it lies smooth readily, but rises again in a few minutes. The animal manifests much uneasiness—licks itself, especially on the swelled parts. The swelling, in two or three days, leaves the back and works down the side towards the flank.

My fatting cattle are fed on low land hay, composed of Timothy, Red-top, White clover and wild grass, with mill feed and oil meal. Thinking the oil meal might be the cause I left off feeding it, but in a few days

discovered the same on my cows and store cattle which had been fed on hay alone, with salt twice a week. The moving of the swelling on my fat cattle, I think, is caused by currying, as I have them curried twice a day. My cows and store cattle are not curried at all, and the swelling remains in the same place, namely, over the left kidney; and, what to me is singular, all swell on one side.

If any person can name the disease, and give its cause and remedy, he will confer a favor.—A SUBSCRIBER, *Barry, N. Y.*, Feb.

### Raising Lopped Horns, &.

EDS. NEW-YORKER:—Can you inform me through the RURAL how to change the form of the horns of cattle. I have a matched pair of 3 year old steers, except that their horns do not turn up alike.—S. B. J., *Aurelius, N. Y.*, Feb, 8. 1853.

REMARKS.—Keep your steer in the stable with a weight of three or four pounds attached to the horn, and so arranged by pulleys, as to draw it in the direction desired. This will secure the change in form in a few weeks time.—EDS. RURAL.

## AGRICULTURAL INTELLIGENCE.

### N. Y. State Ag. Soc.—Annual Meeting.

FRIEND MOORE:—The Annual Meeting of the State Agricultural Society has just closed a very interesting, and it is to be hoped, a profitable session. The attendance from different parts of the State was liberal, and composed of men who have long been identified with the active work of the Society.

Western New York contributed largely to the winter exhibition as will be seen by the premium list. In the fruit department, Monroe county stands pre-eminent, numbering amongst its contributors, E. S. HAYWARD, Brighton; F. W. LAY and ROBERT BROWN, Greece; J. MERRITT, Penfield; J. H. WATTS, WM. BUELL, A. FROST & Co., and ELLWANGER & BARRY, of Rochester. The fruits were very fine, particularly the winter pears of Messrs. E. & B. The contributions from Rochester and vicinity, alone exceeded all the rest presented in quantity, not to say quality. Add to this a fine collection from T. G. YEOMANS, of Walworth, an exceedingly creditable one from PARIS BARBER, of Homer. Also, a select variety from HART MASSEY, Watertown, and it will be discovered at once that the vicinity of Albany contributed next to nothing to this department of the show.

I have not full notes of the exhibition of fat cattle and sheep, or of the dressed meats, poultry, grain and seeds, and will leave that part for future notice. Butter in abundance, and of fine quality was on the ground. Choice Cheese from MOSES EAMES, Watertown, and P. BARBER, Homer, received deserved notice and premiums.

Of the election of officers and other business of the society I will not say much now. They are fit subjects for more mature consideration.

It has been recommended to locate the Fair at Saratoga, which I do not consider the most favorable place that could have been named.

The exposes of the Society have been very large, and I think facts would show them unnecessarily so, but as every thing is left to the Executive Committee, and the money comes from the people, "all for Agriculture," there may be an impropriety in fault finding. More extended notes will be furnished hereafter. Yours, W.

The following are the officers of the *N. Y. State* Ag. Society for 1853:

President—LEWIS G. MORRIS.

Vice Presidents—1st district, Richard L. Allen; 2d do, William Kelly; 3d do, Geo. Vail; 4th do, John Beekman Finlay; 5th do, George Geddes; 6th do. R. H. Van Rensselaer; 7th do, Joel W. Bacon; 8th do, Silas M. Burroughs.

Corresponding Secretary—B. P. Johnson, of Albany.

Recording Sec.—Erastus Corning, Jr.

Treasurer—B. P. Kirtland.

Executive Committee—Theodore C. Peters, J. T. Blanchard, William Buel, Charles Merrill, John A. Sherman.

We give below, a list of the premiums awarded at the Winter show:

DAIRY BUILDINGS.

Horace Clapp, Houseville, Lewis county, silver cup, $50.

DRAINING.

1st. Joseph L. Swan, Fayette, Seneca county, silver medal, $20.

FIELD CROPS.

*Winter Wheat*—1. Ira Apthorp, Riga, Monroe county, 53 9-60 bushels per acre, $20.

*Spring Wheat*—1. Charles W. Eells, Westmoreland, Oneida co., 30 31-60 bushels per acre, $50.

*Oats*—1. E. M. Bradley, East Bloomfield, Ontario county, 94⅛ bushels per acre, $15. 2. Calvin Pomeroy, East Bloomfield, Ontario county, 87 1-10 bushels per acre, $10. 3. Benj. Enos, De Ruyter, Madison county, 75 9-32 bushels per acre, $3.

*Barley*—1. A. Gurnee, Watertown, Jefferson county, 282 bushels on 4 27-100 acres, $15. 2. David Hess, Fenner, Madison county, 128 46-48 bushels on 2 15-100 acres, $10. 3. R. S. Ransom, Perryville, Madison county, 104¼ bushels on 2 19-100 acres, $6. 4. B. Enos, De Ruyter, Madison county, 168 30-48 bushels on 4 4-10 acres, Trans.

*Buckwheat*—1. William P. Conradt, Bushwick, Rensselaer co, $10. 2. David Conradt, Rensselear county, $8.

The sample of Wm. P. Conradt far exceeded the other in quality.

*Beans*—Jeremiah Parker, Watertown, Jefferson county, 41 bushels on 1 1-10 of an acre, $10,

*Potatoes*—1. Peter Crispell, Jr., Hurley, Ulster county, 554 bushels on 1 17-100 acres, (Yam potato,) $15. 2. Jeremiah Parker, Watertown, Jefferson county, 410 bushels on 1 4-100 acres, $10.

Another statement of the potato crop was not within the rule.

Seedling potatoes, by Volney Rogers, Chatham.

*Ruta Baga*—No statement complied with the rules of the Society.

*Carrots*—N. & E. S. Hayward, Brighton, Monroe county, 690 bushels on 55-100 acres, $8.

*Flax*—1. Benj. Aikin, Pittstown, Rensselaer county, 23⅛ bushels flax seed, 445 pounds flax, on 1 16-100 acres, $10.

*Clover Seed*—Frederick N. Tobey, East Bloomfield, 30 22-60 bushels on six acres and 100 rods, $5.

FRUIT.

*Pears*—Ellwanger & Barry, large silver medal.

*Apples*—Ellwanger & Barry, Diploma, copy of Downing's Fruits. T. G. Yeoman, copy Barry's Fruit Garden. James H. Watts, Rochester, copy Thomas on Fruit. H. Frost, Rochester, copy Downing's Fruits. John S. Goold, Albany, copy Barry's Fruit Garden. P. Barber, Homer, Diploma and Downing's. Peter Barber, Homer, copy Thomas on Fruit. E. S. Hayward, Brighton, Monroe, Diploma and Downing's. Wilson, Thorburn & Teller, copy Thomas. Isaac Merritt, Penfield, copy Thomas. F. W. Lay, Greece, copy Downing. Robert Brown, Greece, Diploma and Downing. Hart Massey, Watertown, Jefferson county, Downing's Report. J. J. Thomas, Macedon, Wayne county, Diploma and Barry's Fruit.

*Grapes*—N. C. Hayward, Greece, copy Barry's Fruit Garden.

GRAIN AND SEED.

*Winter Wheat*, 5 bushels—Aaron Houghtaling, New Scotland, Albany county, Soule's Wheat, very fine, weighing 62 lbs. per bushel, $8.

*Spring Wheat*—1. David Conradt, Bushwick, Rensselaer county, $8 2. George K Eells, Clinton, Oneida county, $5. 3. R. S. Ransom, Fenner, Madison county, $3.

*Rye*—1. David Conradt, Bushwick, Rensselear county, $5. 2. W. P. Conradt, Bushwick, Rensselear county, $3.

*Four-Rowed Barley*—1. Obediah Howland, Owasco, Cayuga county, 52 lbs. per bushel, $5. 2. Samuel Morgan, Watervliet, Albany county, 41½ lbs. per bushel, $3.

*Two-Rowed Barley*—1. David Hess, Fenner, Madison county, Hess' Barley, 53 lbs. per bushel, $5. 2. R. S. Ransom, Fenner, Madison county, Hess' Barley, 51 lbs. per bushel, $3. 3. Obediah Howland, Owasco, Cayuga county, 49 lbs. per bushel, $2.

*Oats*—1. Peter Crispell, Jr., Hurley, Ulster co., 42 lbs. per bushels, $5. 2. David Conradt, Bushwick, Rensselaer county, 39 lbs. per bushel, $5 3. C. W. Eells, Westmoreland, Oneida county, 39 lbs. per bushel, $2.

*Yellow Corn*—1. Charles W. Eells, Westmoreland, Oneida county, $5. 2. Samuel Morgan, Watervliet, Albany county, $3. 3. O. Howland, Owasco, Cayuga county, $2.

*Beans*—1. R. S. Ransom, Fenner, Madison co., Canada field beans, $5. 2. O. Howland, Owasco, Cayuga county, large white beans, $3. 3. David Conradt, Bushwick, Rensselaer county, round white beans, $2.

*Peas*—O Howland, Owasco, Cayuga county, $5.

*Timothy Seed*—1. O. Howland, Owasco, Cayuga county, $5. 2. C. W. Eells, Westmoreland, Oneida county, $3.

DAIRIES.

*Butter*—1. Joshua Ballard; Homer, Cortland county, silver cup, value $15. 2. H. Worden, Jr., Lee, Oneida county, silver cup, value $10. 3. N. Hitchcock, Jr., Homer, Cortland county, $5. 4. Ira Bowen, Homer, Cortland county, Trans.

*Cheese*—1. Moses Eames, Rutland, Jefferson county, cup, value $15. 2. Paris Barber, Homer, Cortland county, cup, value $10.

FAT CATTLE AND SHEEP.

*Best fat ox, 4 years old and upwards*—A. E. Gilbert, $30. 2. Same, $25. 3 Ira Rix. $20.

*Best fat steer, 3 years old*—Robert Rome, $25.

*Best fat cow, 4 years old and upwards*—1. Augustus Ross, Preston, Chenango county, $20. 2. W. Felt, $15. 3. S. Gowdy, $10.

*Best fat heifer*—Erastus Corning, Jr., Albany, $15.

*Three years old heifer*—B. McNeil, Carlisle, Schoharie county.

The committee regret that more premiums were not at their disposal, and recommend a volume of Transactions to each of the other competitors.

*Best long wooled sheep, two years old and over*—1. Hungerford & Brodie, Jefferson county, $10. 2 E. Gazby, Dutchess county, $8. 3. Leonard Jenison, New Lebanon, Columbia county, $5.

*Long wooled, two years and under*—D. S. Baker, Ontario county, $8.

*Middle wooled, two years and over*—D. S. Baker, $8.

*Cross breed, two years and over*—1. D. S. Baker, $10. 2. B. McKneely, $8. 3. J. Winne, $5.

*Cross breed, under two years*—D. S. Baker, Ontario county, $8.

DRESSED MEATS.

*Long wooled sheep*—1. D. S. Baker, Ontario county, $5. 2. Patrick Downey, Albany, $3.

*Middle wooled*—1. D. S. Baker, Ontario county, $5. 2. Patrick Downey, Albany, $3.

*Cross breed*—1. K. Magraw, $5. 2. Patrick Downey, Albany, $2.

*Under two years old*—D. S. Baker, a premium recommended.

*Dressed Hogs*—Over 350—1. E. Corning, Jr., Albany, $5. 2. Mr. Rapp, $3.

FOWLS.

*Turkeys*—1. O. Howland, Owasco, $2. 2. O. Howland, $1.

*Capons*—1. O. Howland, $2. 2. E. S. Bliss, $1.

*Geese*—1. E. S. Bliss, $2. 2. O. Howland, $1.

*Chickens*—1. E. S. Bliss. $2. 2. O. Howland, $1.

*Ducks*—1. E. S. Bliss, $2. 2. O. Howland, $1.

Premiums recommended to carcass Hogs from Cayuga, O. Howland, weighing over 600 lbs., detained too late.

### National Agricultural Society.

SINCE the adjournment of the United States Agricultural Society, their Executive Committee have met once or twice and transacted a variety of important business.

The appointment of agents in the different sections of the Union, to solicit memberships and promote the interests of the Society generally, was assigned to the members of the committee from those sections respectively as follows:

For New England—Marshall P. Wilder, of Mass.; William S. King, of R. I; Moses Newall, of Mass.

For New York and New Jersey—Hon. John A. King, of New York.

For Pennsylvania and Delaware—Dr. A. L. Elwyn, of Penn.

For Virginia, Maryland and the District of Columbia—C. B. Calvert, Esq., of Md.

For North and South Carolina, Georgia and Alabama—Richard Peters, Esq., of Ga.

For Ohio and Indiana—Dr. Arthur Watts, of Penn.

For Wisconsin and Northwestern States—Dr. J. D. Weston, of Wisconsin.

For the rest of the Union—J. C. G. Kennedy, Esq., of the Census Bureau.

The publication of a quarterly periodical of Agriculture is contemplated, to be of a national and high-toned character. Prof. MAPES, of New Jersey: Dr. WESTON, of Mass.; Drs. ELWYN and WATTS, of Penn., and Mr. CALVERT, of Maryland, have promised to contribute original articles.

J. C. G. KENNEDY, Esq., Corresponding Secretary, is charged with the editorial supervision of this publication, and, from the vast amount of resources at his command in the Census Bureau, he will be able to furnish much valuable information.

The Committee have prepared a memorial to Congress, asking for "a portion of the money now annually appropriated to the Patent Office for the preparation of the Agricultural Report and the Collection and Distribution of Seeds," with a view to the performance of that service themselves, and, we understand, it will be presented in the course of a few days. This was thought to be all that it was expedient to solicit from Congress at the present session. At another, the establishment of an Agricultural Department, with a Cabinet Officer at its head, will be urged.

It is understood that the views of the President elect are most favorable to the interests of Agriculture, and there is reason to believe that he will not be behind his predecessors in his recommendations upon the subject.

## THE AGRICULTURAL PRESS.

### A House hath a Countenance.

FRIEND WIGHT, of the *Prairie Farmer*, has an instructive article thus entitled in his last number. We copy the concluding paragraphs:

There is in fact a sort of distant and partially intangible analogy between the separate features of the face and the dwelling. We will suppose the walls of the face and the house to answer to each other. The mouth to answer for the door, the windows for the eyes, the roof for the hair, and its overhanging cornice to have no faint resemblance in the pendant locks and ringlets which shade the countenance divine; while no one can fail at a glance to see that the chimney, though not analogous in location, is so in use and intention, to that most important and prominent feature, the nose.

Now if one really loves a head with hair shaved close to the scalp, he ought by inference to love a house without eaves or cornice; if he loves it merely *cropped* like a roundhead, he might take up with the Grecian style; but if he admires a fair shading of locks and ringlets, he will certainly have to come to some of our styles, which require a generously overhanging eave to his dwelling. If he is content with browless and dull looking eyes, he may be also content with unadorned and bare windows, and if a pug nose does not offend him, he should by all means not reject a corresponding chimney, for there are, in fact, more pug chimneys than pug noses, and we *have* even seen such, on a dwelling constructed at an expense of ten thousand dollars.

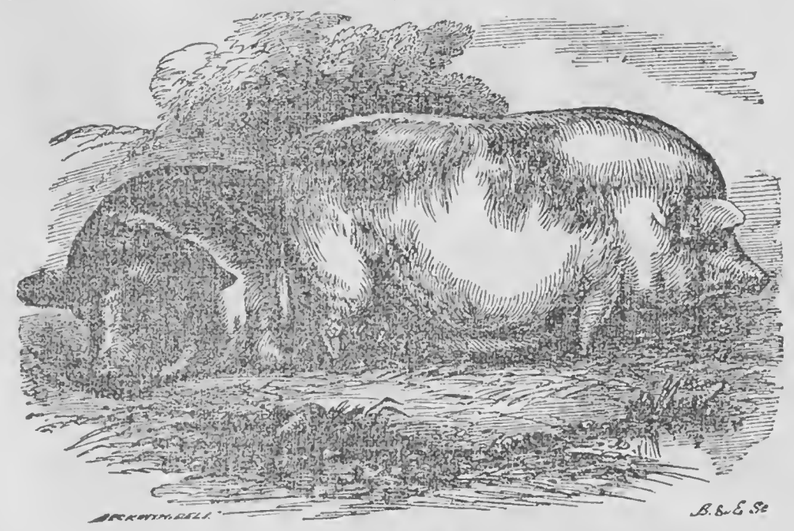
It does not lessen the use of the eyes that they are bright and sparkling; nor of the hair that it shades, in a proper degree, the face, nor of the nose that it is symmetrical. So neither is the chimney any less adapted to carry off smoke, because it is of proper height and contour, nor the windows any less useful for light if properly shaped and shaded; nor are the walls less fitted to regulate the temperature within, because suitably colored. On this last point let us stretch our analogy a little further. What colors do we not love in the human face? There are few who admire a staring white, for such belongs to the dead, and not to the living. Why should that color any more easily suit us in the dwelling? There are fewer still, who love a black or a hue so dingy that its face is in doubt; why shall we run after those wretched browns and brindles for our houses? The color which best becomes the human face, is a white, *subdued* with red, or with some of the browner or less striking hues varied to suit sex, age and condition. Mr. Downing, once advised people who were looking for colors to their houses, to examine the earth where they stand, and copy that. We would rather advise them to look at the human face, and without copying its hues to follow its obvious analogies.

A house has properly no soul, nor more has a human portrait; and yet, the first as well as the last may be made to appear as if it had one. It may at least have a living expression.

### Breeds of Swine.

BELOW we conclude No. 2 of Mr. HOWARD'S series of articles on this subject:

Before proceeding to a description of the various breeds, we will observe that the general wants of community in relation to pork, can be best supplied by two descriptions or classes of hogs; one for supplying the market with meat to be eaten fresh, and for bacoaning, as above-mentioned; the other for making fat pork for barreling, &c. This classification will therefore be adopted in the remarks which follow. We will first consider those whose special characteristic is the formation of fat. And, as having been the principal stock in changing the character of the old English, we will notice, first of all,



CHINESE SWINE.

THE CHINESE.—There are doubtless several breeds of swine in the "Celestial Empire."—Specimens brought from that country are frequently seen presenting so marked a contrast of character that no one would hesitate to pronounce them of different breeds. They vary greatly in color, from white to black. Some of the early importations made to England and thence to this country were black, and the idea appears to have been held that this was the invariable color of Chinese swine. Hence, Culley, who wrote in the year 1784, speaks of them as "the Chinese, or black breed." Youatt makes two distinct varieties of the Chinese, "the white and the black." The race, however, in all its variations, possesses the common characteristic of fattening easily. They are small boned, and acquire great weights in proportion to the bone and offal. Those brought from their native country, have seldom that perfection of symmetry which is most esteemed in animals of this kind, and which the cross-bred descendants soon acquire by skillful breeding. The pure Chinese fatten too much on the belly and too little on the back, and the fat is inclined to be soft and oily. Youatt says "they do not make good bacon, and are often too fat and oily to be generally esteemed as pork." The females are sometimes singularly prolific. The improvement which has been effected by means of the Chinese race, has resulted in the first place from lessening the bone, and increasing the aptitude to fatten of the stocks with which they have been crossed, and afterwards selecting, as a breeding stock, such as possessed the requisite points as to symmetry.

SUFFOLK SWINE.

THE IMPROVED SUFFOLK BREED.—This breed is one of the most highly esteemed and valuable in the world. The origin, according to Youatt and Martin, is the old Suffolk crossed with the Berkshire and Chinese. Youatt says "those arising from the Berkshire and Suffolk are not so well shaped as those arising from the Chinese and Suffolk, being coarser, longer legged, and more prominent about the hips." He concludes:—"On the whole there are but few better breeds in the Kingdom than the improved Suffolk." He states that the greater part of the pigs at Prince Albert's farm, near Windsor, are of this breed. Martin says this breed "stands first;" and he describes the animals as "rather small, but compact, short-legged, and small-headed; the body is round, and they fatten readily." Rham, in his *Dictionary of the Farm*, says—"Suffolk pigs are perhaps on the whole the most profitable breed in England."

For the introduction of the improved Suffolk pigs into the United States, we are indebted to the late William Stickney, of Boston. He made several importations, comprising some of the best specimens of the breed to be had in England, from 1842 to 1848. He also imported specimens of the Middlesex, and of the white Essex breeds. On Mr. Stickney's decease in 1850, a large proportion of the best of his Suffolk pigs passed into the hands of Messrs. Josiah Stickney and Isaac Stickney, of Boston, who have continued to breed them with every attention to blood and points. They are also bred by Col. Jaques and others in the vicinity of Boston.

L. G. Morris, Esq., of Fordham, Westchester county, N. Y., has bred fine Suffolks for several years, from stock first obtained from the late Mr. Stickney, and subsequently from importations made by himself from England.

The Suffolks, as before stated, are not large hogs, but attain maturity at an early age, and may be always in condition to kill from the time they are a month old. They readily weigh from 200 to 300 pounds at six or ten months old, and a proportionate weight at twelve months. The pork is so much esteemed that it generally commands from a cent to two cents a pound extra in the Boston market.

No. 3 will be given in a few weeks

### Onondaga vs. Turks Island Salt.

SOME year and a half ago, Mr. CONRAD, U. S. Secretary of War, ordered experiments to be made in packing pork, to test the relative qualities of the Onondaga solar salt with Turks Island. Each hog was cut in two on the back, and one-half packed with Onondaga solar and the other half with Turks Island salt,—the same quantity of each kind of salt being used in each case, and packed in barrels of the same quality. In short, the treatment of each kind throughout was the same in all particulars. The Washington correspondent of the *Albany Argus* says:

This pork has been packed for more than 13 months, and a few days since I saw some of it opened, and it was impossible to discover any particular difference between the two kinds of salt, or to see any difference in the quality or preservation of the meat.

This pork was put into barrels numbered from 1 to 100. The odd numbers being of one kind of salt, and the even number of the other. They were sent out, one of each kind, to every military station throughout the United States, with instructions to be opened after a given time, and certain tests of the meat to be made by a board of officers, under the direction of the officer in command. Many of these reports have been received at the Commissary's office, and yesterday I took occasion to examine them. The result is, that it is almost impossible to discover any difference. The greatest is in the loss of weight, after being boiled for an hour and a half. As a general thing, there is more loss in weight in that salted with Turks Island, than with the Onondaga solar salt. In most cases, the meat is represented as being uncommonly good. The result of this experiment thus far, is a full vindication of the quality of the Onondaga solar salt, and shows beyond a question, that it is fully equal in all respects to the best Turks Island brought to this country for packing purposes.

### Writing for the Papers.

Dr. KENNICOTT, one of the Editors of the *Prairie Farmer*, has the following sensible advice to farmers who think they cannot write, and yet "have the matter in them" for the most valuable and instructive articles:

Though necessity and love of science made me a physician, I was born a farmer, and remain a farmer still—but I am not content to do as my father did before me, plow, and sow, and reap in the old fashion, for I have learned that there are better ways, and I like to tell others so; and I have written a good deal in my day, just as I talk, and without the least reference to grammar, of which I know little, or the learning of school men of which I know nothing at all.

Now, if you are satisfied with what I write, why not write a little yourselves? You can

write, if not so glibly, yet more sensibly, and more to the purpose than I do—and for one, I think it is about time for some of you to rest from hand-labor, on rainy days, and take up this little implement of head labor —THE PEN—for your own benefit, and the benefit of your own paper and its many thousand readers.

You need not say that you cannot write, for I know better, and so do you.

Remember one truth—every article written on a scientific or practical subject does some good—to the writer, by causing him to investigate the subject, and to the reader, by conveying instruction or exciting thought. Even a badly written article, with wrong facts and false deductions, willl do good by causing inquiry and end by throwing more light on a dark subject, or placing an old one in a better light.

The great fault of most of us who labor with our hands is, that we do not THINK enough. We allow others to do our thinking, when we could do it much better ourselves if we would only try; and depend upon it, there is no way by which one can get at the true merits of a subject in which he is interested, so effectually, as to attempt to show others by *writing* about it. A writer must think, and very few who write for our press are willing to risk a mistake, and therefore they read and observe. So, you see, the thoughtful writer benefits himself as well as his readers.

### Polishing Plows.

FARMERS, remember this against the time you have new plows to polish. It is from a correspondent of the *Country Gentleman*:

To all those who are expecting to go through with the old operation of polishing a new plow, by scraping it the coming spring, I would propose the following cheap and effectual remedy:

Go to any druggist shop and procure 4 oz. of sulphuric acid, or oil of vitriol, which will cost from five to ten cents, according to the conscience of the druggist. Take a stick and wind upon the end a woolen rag, and tie it on with a coarse strong twine, making a swab; set your plow where it will be exposed to the sun, if convenient; then pour the sulpheric acid into an earthen bowl, and dilute it with an equal quantity of rain or river water. Take the swab and thoroughly moisten every part of the plow that requires polishing; work fast, lest the acid eat up your swab before you have gone over the surface, and be careful not to get any on your clothes or skin, for it is very corrosive. Let the plow stand about 24 hours, then scrape off the scales which will have arisen all over the surface wet with the acid; hitch on the team and go ahead, and in from fifteen minutes to one hour, the plow will be smooth and bright.

The rationale is this. The outer coating of the castings is composed of a mixture of sand and iron, more or less porous, thus admitting the free passage of the acid, which decomposes the iron, changing it to an oxide, and as soon as the solid iron is reached, the action of the acid terminates, or is very slight, owing to a want of surface upon which to act.

### Good Cow—Feed and Product.

A CORRESPONDENT of the *Mass. Spy*, gives an account of a cow owned by Rev. GEORGE S. BALL, of Upton, whose extraordinary productiveness, for six months in succession, shows, how much may be done by care, attention and good management, and how much the profit of stock may depend upon its management. The statement made by him we are assured, has no *guess work* about it, the whole being the result of actual measurement, with great pains taken to insure entire accuracy. It follows:

From the third day of June until the first day of November, 150 days, she gave 2,330 quarts of milk. Average per day, 15 1-2 quarts. The highest number of quarts during any one day in this time, was 21 1-2.—Also, from the same date, third of June, to the first of January 1853, 211 days, 3,058 quarts. The average per day, for nearly six months, was a very small fraction less than 14 1-2 quarts. This milk was worth 3 1-2 cents per quart. Amount, $107.03.—And, reduced to hhds. would give 12 hhds. 8 gallons 2 quarts.

Actually sold—Milk, $51.82
Butter 14,00 $65.82

besides milk and cream for family use in abundance.

The cow has been fed on grass and hay, and had the value of five quarts of wheat per day, until Nov. 1st, and since that time, the value of six quarts of wheat shorst. The feed has been changed several times. Corn meal has been tried, cobs and corn ground together, and oatmeal mixed with ground cobs and corn. The latter was found excellent feed, producing milk of good quality, and in good quantity. But for quantity, wheat shorts mixed with scalding water, until it will absorb no more, and remain the consistency of dough, well salted, was found much the best; but the quality of the milk not equally good.

The above is not sent on account of the wonderful amount of milk yielded in any one day, but for the great average for six months. The cow is not fallow, and yet gives ten quarts per day. And more, the cow was not considered by the owner anything more than a good cow, and has been made thus productive, by great care.

PAUL HILDRETH, of Greenfield, is manufacturing poplar wood into mattrasses, by means of machinery which he has fitted up for the purpose. The logs are first sawed, and after the bark is stripped off, they are placed in a machine which reduces them to very fine shavings. What an idea that, of sleeping on a "popple" bed.

# Orchard and Garden.

### GENESEE VALLEY HORT. SOCIETY.

WE gather some additional particulars of the proceedings of the annual meeting of this Society from the daily papers of the city. The following are the Standing Committees for the year:

*On Fruits:*—P. Barry, H. E. Hooker, John Donellan, J. W. Seward, E. S. Hayward, L. A. Ward, J. W. Bissell, H. N. Langworthy, L. B. Langworthy, Zera Burr, Geo. Ellwanger, and Alonzo Frost.

*On Trees and Shrubs:*—W. A. Reynolds, Wm. Webster, R. Donellan, W. King, Joseph Frost, C. F. Van Doorn.

*On Entomology:*—L. Wetherell, J. W. Seward.

*On Vegetables:*—John Donellan, James Vick, Horace Hooker, James Buchan.

*On Botany:*—L. Wetherell, Francis Trentman, Moses Long, Chester Dewey, G. H. Smith, P. Cooney.

*On Finance:*—John J Thomas, L. Wetherell, J. Vick, J. H. Watts.

*Executive Com.:*—J. J. Thomas, L. Wetherell, P. Barry, W. A. Reynolds.

It was resolved, That the principal Summer Exhibition be held on the 19th of June, in Corinthian Hall—the Autumn Exhibition on the 16th and 17th of September in the same place; and that semi-monthly exhibitions be held in May and August; weekly, in June and July, and the Winter Exhibition on the 3d Saturday in January next.

TREES BARKED BY SWINE.—*Inquiry.*—I notice this morning, that the hogs have taken the bark completely off from six of my best apple trees, extending from the roots upward one or two feet. Can you, or some one of your readers, inform me thro' the RURAL, how to save them?—THOMAS WRIGHT, *Brighton, N. Y.*, Feb. 1, 1853.

### HISTORY OF THE BORER.

THE insect which propagates this destructive worm usually lays its eggs in the month of June or July, and they are hatched in the following month of August or September; immediately the maggots penetrate the bark, eating the pulpy part next the wood. The latter part of Sept. they are not more than 1-16 of an inch in length, and are easily removed, being usually found within an inch of the top of the ground. It requires keen eyes to discover them, but it may be done in young trees by observing a little roughness where the maggot enters, and a slight discoloration of the bark at that particular spot. By the last of November, slight cuttings may be seen through some very small punctures in the bark. At this season, the worm will be found about 3-16 of an inch in length, and to have eaten in the soft bark and pulpy sap-wood, a space as large in area, as a middling sized bean. Up to this time they have done very little damage, and are easily removed with a sharp pointed knife.

Early the next spring they commence their course downward, working in the last year's sapwood, directly under the bark.—This year, their depredations are most destructive, working mainly below the surface of the ground. I have known four worms half girdle a tree four inches in diameter, eating most of the sap-wood on one side, and running their path together in various directions from the top of the ground to the junction of the roots. In the November of the 2d year they are about 3-4 of an inch in length, and may almost always be found below the point where they first entered the bark, and rarely ever beneath the wood, but in the sap-wood beneath the bark, which in usually discolored, but not broken. The next spring they turn upwards, following up some channel which they have previously made, until they are about as high as the point where they first entered; they then eat inward, indirection not usually straight, mainly upward, and rarely ever more than an inch into the solid wood of the tree.—Here they remain the *third* winter of their life, and are about an inch or an inch and a quarter in length. The next spring they turn their course out towards the bark, and when nearly through the wood, about the 1st of June, they are transformed to a perfect winged insect, which soon eats directly out through the remaining wood and bark, leaving a round hole about 1-4 of an inch in diameter, and usually from six to ten inches above the place of entrance.

I have on the 5th of June taken from a section of tree which it had spoiled, a perfectly formed insect, with about the same thickness of wood as of bark to cut through to effect its liberation. Thus they generally occupy nearly three years in the circle of life; I say generally, as I have some evidence that they are not entirely uniform, a few making the circle in two years.

I have been induced to write this sketch of the borer, as most accounts of the insect which I have seen, describe its course upward, and *only* upward, whereas, its most destructive operations are lateral and downward, during its second year, and least liable to observation, as cuttings are rarely seen, its operations being at and beneath the surface.

Of the means of prevention, or destruction, I have tried the following:—A mound of ashes round the tree only drove the insect to deposit the eggs just above them. A wash of spirits of turpentine, or strong ley, is not sure, although it will kill the eggs, yet some of them may be hatched, and when once within the bark any wash leaves them unharmed.

*A newspaper or wrapping paper wound around the tree and fastened there, is a perfect security.* I have tried it for twelve years and never have had a tree infested that was thus secured—and it is only thro' my neglect, since I first tried it, that I have been troubled. When they are in or under the bark, a sharp-pointed knife is the only sure instrument—remove them the first autumn or next early spring, if possible. This can be done only by close observation. After they have struck into the wood and are working upward, I destroy them by introducing a sharp wire, or a very small sponge fastened to the end of a small wire dipped in spirits of turpentine, which, if it touches them, is certain death, and I believe it is if the hole is wet with it. In looking for borers in the month of October, which is perhaps the best month, I advise, that when one is found, be careful to look for more in the same tree. I have usually, when I neglected to paper my young trees, found borers in perhaps one in six, and from those taken out, from four to twelve, showing that a quantity of eggs is usually deposited on one tree.—RICHARD C. STONE, *in N. E. Farmer.*

ROME BEAUTY.—This handsome apple, as we are informed by W. N. GILLETT, a correspondent of the Western Hort. Review, requires for the full maturity of its size, color, beauty and flavor, to remain long on the tree. It may be questioned, therefore, if it will prove of much value as far north as the State of New-York, where the seasons are shorter. The unusually fine growth of the tree, its early productiveness, good keeping qualities, and its fair, large handsome fruit, have probably contributed much more to its reputation than the quality and flavor.—*Country Gentleman.*

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending February 1, 1853.

CHAS. B. HUTCHINSON, of Waterloo, N. Y., for Improvement in Machinery for Cutting Barrel Heads.

Elijah H. Parker, of Proctorsville, Vt., for Improvement in Frames for Lanterns.

Geo. B. Read, of New York, N. Y., for Improved Screw Wrench.

William and Matthias Stratton, of Philadelphia, Pa., for Improvement in Portable Gas Apparatus.

Benj. Shiverick, of North Sandwich, Mass., for Improvement in Feeding Rosin in the Fires of Glass Furnaces.

Richard Solis of New Brunswick, N. J., for Improvement in Manufacture of India Rubber.

Isaac L. Pulvermarcher, of Breslau, Prussia, for Improvement in Voltaic Batteries and Apparatuses for Medical and other purposes. Patented in Austria, October 9, 1849.

RE-ISSUED.

Nehemiah Hodge, of North Adams, Mass., for Improvement in Apparatus for Discharging Water from the Holds of Vessels. Patented October 19, 1852.

### NATURAL GAS WORKS.

WE learn from the Holmes County Farmer and Free Press, (O.,) that a wonderful natural curiosity has been discovered in that county, in the shape of natural "gas works." This discovery was made on the farm of a Mr. Purdy. We take the following extract from an article giving a description of it, by a correspondent in the Farmer:

Some eight or ten rods south of the house, is a curious kind of earth, resembling dark saw-dust. The owner for some years has been aware of the existence of some wonderful phenomenon. The place on which the discovery has been made has been cultivated for a number of years, and it has been observed that in a number of places, everything planted or sown, and all kind of vegetation, would dwindle and die, and seemingly burn up. After the late rains the water was discovered to be agitated, and to bubble up in a number of places, which led Mr. Purdy and others to experiment, by collecting a bottle of this gas, and setting it on fire; when, the instant a lighted match was touched to it, the vapor ignited, and sent the bottle whizzing through the house.

I found the extent of the space from which this igneous or inflammable vapor issues, to be about two rods wide, and 15 or 20 rods in length; the soil to the depth of six inches or thereabouts, is, as above stated, loose, and resembling dark saw-dust, beneath this, is the common clay soil. Examination in this led to the discovery of small holes, perhaps half the size of a man's little finger, out of which the vapor issues. There are undoubtedly many hundreds of these holes.

### IMPROVED RAILROAD CAR SEAT.

To travellers by railroad, there is nothing more desirable, and, at the same time, so rare as a comfortable seat. To furnish this desideratum, an improved car seat has been invented by William M. Warren, of Watertown, Ct., who has taken measures to secure a patent. By this plan a person may adjust the seat in a moment of time, so as to make it convenient for sleeping on, merely by raising a hinged back, which is attached to another fixed back—the car seat being hung on pivots, so that it can be more or less depressed as the moveable back is raised. This is effected very simply by using a metal strip attached at its lower end to the cross-piece, which supports the pivots for the seat; at the upper part this strip is connected by a hinge to the adjustable back, in such a manner that when the back is depressed the seat is brought to a horizontal position, but if raised, the seat, by the action of the metal strip, is made to incline, a result due to the relative position of the hinges. The seat can likewise be made to face in any required direction, a spring securing it when adjusted.

### PENNY WISDOM.

WE would direct attention to a few miscellaneous examples of the useful application of materials long valued—the causing "a little to go a great way."

SHEET-IRON SLATES AND PAPER.—Schoolboys display great skill in breaking their slates. Shall they be allowed to continue the exercise of this interesting practice; or shall we invite them to use the new Wertemburg sheet-iron slates? A manufacturer in that country has invented a mode of applying a surface coating to sheet-iron, which enables it to take freely the mark of a slate pencil; it is said to be much lighter, and much less liable to injury, than a common slate. If we have sheet-iron slates, why not sheet-iron paper. Baron Von Kleist, the proprietor of some iron-works at Neudeck, in Bohemia, has lately produced paper of this kind from which great things seem to be expected. It is remarkable for its extreme thinness, flexibility, and strength, and entirely without flaws. It is used in making buttons, and various other articles shaped by stamping; and it is capable of receiving a very high polish. Whether the world is ever to see the *Times* printed on a sheet of iron, we must leave to some clairvoyant to determine; but, no sooner did our manufacturers become acquainted with this Bohemian product at the Great Exhibition, than they instantly set their wits to work to produce better and thinner sheet-iron than had before been made in England. In the Birmingham department before the Exhibition closed, there made its appearance a book about five inches by three, consisting of forty-four leaves of sheet-iron, the whole weighing about two ounces and a half.—We are thus getting on; the age of iron literature may yet arrive.

SAVING HEAT.—Our learned chemists have lately discovered that, in making or smelting iron, not less than seven-eights of all the heat goes off in waste; only one-eighth being really made available for the extrication of the metal from its stony matrix. What a sad waste of good fuel is here; what a provoking mode of driving money out of one's pocket! So thought Mr. Budd of the Ystalyfera iron works, in Wales. He found that the heat which escapes from an iron furnace is really as high as that of melting brass; and he pondered how he might compel this heat to render some of its useful services. He put a gentle check upon it just as it was about to escape at the top of the furnace: he gently enticed it to pass through a channel or pipe which bent downwards; and gently brought it under the boiler of the steam engine which worked the blowing-machine for the furnace. A clever device; this economised caloric heated the boiler without any other fuel whatever, and there was a saving of three hundred and fifty pounds in one year in the fuel for one boiler alone. Mr. Budd told all about this to the British Association at Swansea, in 1848; and at Edinburg, 1850, he was able to tell them much more. He stated that he had applied the method to all the nine smelting furnaces at the Ystalyfera Works; and that it had also been applied to the Dundyvan Works, in Scotland. The coal used in the Scotch works is of such a kind, that the wasted heat from one furnace is believed to be enough to heat the air for the hot blast, and to work the blast engines for three furnaces. Mr. Budd states that his plan enabled the Dundyvan proprietors to smelt ore with a ton and a quarter less cost to a ton of iron than by the old method, and he shows how this might rise to a saving of one hundred and thirty thousand pounds a year for the whole of Scotland. A pretty penny-saving this—a veritable creation of something out of a commercial nothing.

PLUMBAGO DUST.—Mr. Brockden, has taught us how to make pencils out of dust. Our black lead pencils, as is pretty generally known, are made chiefly from Borrowdale plumbago, brought from a mine in Cumberland. This mine is becoming exhausted; and a question has arisen how the supply shall be kept up. Various compounds have been suggested in different quarters, but Mr. Brockden has happily hit upon an expedient, which promises wonders. Although pieces of plumbago are scarce, plumbago dust is tolerably plentiful, and Mr. Brockden operates upon the dust. He presses a mass of the powder together, then draws out the air from beneath the particles by means of an air pump, and then presses again with such enormous force as to convert the mass into a solid block, which can be cut into oblong prisms suitable for pencils.—*Household Words.*

### IMPROVED ROOFING.

A NEW mode of roofing to supersede the use of shingles for that purpose has been invented by John McMurtry, of Lexington, Ky., who has taken measures to secure a patent. The roofing in this instance is made with planks, which are grooved in a peculiar manner, the upper lip being made narrower than the lower to admit the projections of a T-shaped plank called a capping piece, by which the lower planks are secured in their place and kept water-tight. In order to drain off any water that might otherwise remain in the crevices of the roof, and be absorbed by capillary attraction towards the centre joints, the lower planking is made somewhat concave, and a similar shape given to the under side of the top capping piece, so that a complete drainage is acquired by means of these gutters. The top of the capping piece should be preferably made oval, that being the best form to prevent the weather from warping it, and by having only one edge of the lower plank nailed down, ample provision is made for the swelling and shrinking of the wood, so as to prevent it from cracking or splitting.

### CUBIC MEASURE.

FEW persons have correct notions in regard to this measure, hence make most erroneous estimates in their computations of size and capacity. Some three years since we ordered from the cabinet maker a bureau for our little girl. It was to contain one half as much as one of the ordinary size, and we agreed to pay him $6,50 for it. About a week afterwards he told us it was all ready, and wished us to step up and see how we liked it. We did so, and were chagrined enough to find it a mere toy, eighteen inches square in front, and nine deep. The man himself looked very disconcerted, and we inquired what was the matter.

"I do not get enough for the bureau by one dollar: it is just half the size of the large ones which I sell at $15."

"How did you calculate its size?"

"By making it half as large as the common ones; they are 36 inches square in front, and 9 inches deep."

"You assert then that this is just half the size of the large ones?"

"I do."

"Will it hold half as much?"

"It don't look as if it would, but I have nothing to do with that; it is just half the size."

"Is that the only reason why you think you do not get enough for it?"

"It is; I have not otherwise counted its value."

"Would it satisfy you to receive the same proportion of $15 that it is in size to the common bureau?"

He was glad enough to assent, and at our request wrote down the agreement; which we put in our pocket, immediately tendering him $1,87½, telling him the bureau was just one-eighth the size of the other, and the money was just one-eighth the price of the other. He was astounded, and the more so when we explained and exemplified the rule. As he was a poor man we took the bureau and paid the original price; but it was not worth half the money. He had learned a valuable lesson, that as large again each way was eight times as large altogether.

The affair made some noise in the town, and caused much inquiry concerning cubic measure. A farmer who understood the subject well, remarked to us, in speaking of it, that an almost precisely similar occurrence happened to himself that fall. A neighbor falling short of hay, the previous Winter, borrowed one of his stacks of some sixteen feet in diameter at the bottom.—When he gathered in his own crop, he brought to replace what he had taken two similarly shaped stacks, each eight feet in diameter at base, and then informed his friend that he had fully paid the debt. The other told him he had only brought one-fourth of what he had taken away; but for some time failed to convince him, until at last reference was fortunately made to the number of loads, and then it was all evident enough.

Both the cabinet maker and the farmer were able to repeat the table for cubic measure with readiness, but yet know not its practical applications. As little did a friend who called our attention to a twelve-inch cubic block of iron, a few weeks since, and whom we asked its weight.

"Some fifty pounds, I suppose."

"How much do you think a cubic foot of water weighs?"

"About ten pounds."

Very much surprised was he to hear that its true weight was 62½ pounds, and that this amount had to be multiplied by the specific gravity of iron, to give the weight of a block of the metal of the same dimensions.

The fault lies with the teacher, who fails in his duty when he encumbers the mind of the child with useless lumber in the form of tables of weights and measures, without touching their meaning and practical applications. No wonder the school-room is so repulsive to the child; it would be equally so to the man. Roswell C. Smith, who has succeeded beyond any man in this country, and perhaps any other, in simplifying school-books for children, seems fully aware of this general fault. In a preface mentioning his Productive System, he cites from the North American Review:—"We have not the least hesitation in saying that two or three years in the education of almost every individual in this country have been thrown away in studying what they did not understand." This is true as it is lamentable. We need practical teaching. For Cubic Measure and its relations there should be in every school-room a set of blocks and vessels of various proportionate sizes, and the pupil thoroughly exercised in their use, thus making the study as easy as it is interesting.

### VOCAL MACHINERY OF BIRDS.

IT is difficult to account for so small a creature as a bird making a tone as loud as some animals a thousand times its size; but a recent discovery has shown that, in birds, the lungs have several openings, communicating with corresponding air bags or cells, which fill the whole cavity of the body from the neck downwards, and into which the air passes and repasses, in the progress of breathing. This is not all; the bones are hollow, from which air pipes are conveyed to the most solid parts of the body, even into the quills and feathers. The air being rarified by the heat of their bodies, adds levity.—By forcing the air out of the body, they can dart down from the greatest heights with astonishing velocity. No doubt the same machinery forms the basis of their vocal power, and at once resolves the mystery.

IT may serve as a comfort to us in all our calamities and afflictions, that he that loses anything, and gets wisdom by it, is a gainer by the loss.

PRACTICE as well as prase virtue.

# The Essayist.

## ON READING:

ADDRESSED TO YOUNG PERSONS.

It was an excellent advice given by the Apostle Paul, to his young friend Timothy, "Give attendance to reading." To young persons, whose minds must necessarily be uninformed on many useful and important subjects, this Apostolic advice is equally applicable. It is the declaration of Solomon, the wisest of men, "That the soul be without knowledge, it is not good." The uninformed mind is like a city whose walls are broken down; defenceless, and exposed to the inroads of every enemy. Besides, exposure to the numerous frauds and deceptions practiced upon the ignorant, the youth who allows the spring time of life to pass away unimproved, without acquiring a competent share of useful, general knowledge, is ill fitted, on attaining his majority, to take his place amongst his fellow-citizens and discharge the several duties which he owes either to the Church or to the State. Ignorance unfits a man from becoming a good member of civil society, or a worthy subject of the Commonwealth at large. It makes a man a cypher in the social circles; a blank in the great Creation. It extinguishes in the mind of its unhappy victim all perceptions of the sublime and beautiful in nature, and he wanders forth "with brute, unconscious gaze," unable to recognize that

> "On all that blooms beneath or glows above,
> The great Creator has his name inscribed
> In characters of inextinguishable light."

Ignorance has been called "the curse of God;" it is a curse, however, not of Divine but of mortal entailment—a curse which careless fathers hand down to their sons, and which frequently extends its withering influence from one generation to another, until it becomes, as it were, hereditary, in certain families. Thus we see, in a very natural way, "the iniquity of the fathers visited upon the children, even to the third and fourth generation." Such characters and such families cannot be otherwise than vicious. They are an incubus on the energies of society, a millstone about the neck of the national prosperity. Like avalanches, they gather strength and size in their downward course, until order falls before them and ruin triumphs in their rear.

How different the condition and prospects of those who "seek and intermeddle with all knowledge," for the purpose not only of enlightening their heads but of ameliorating their hearts. The multiplication of their ideas; the enlargement of their views, though highly desirable, are deemed, by them, of only secondary importance, when compared with the correction of errors, the purification of principles and the eradication of prejudice from their minds. The habit of reading good and useful works, thus formed in early life, becomes to the possessors a perennial source of the truest enjoyment. It matters not to them whether their lot is cast in "the void waste or in the city full." By reading good books, the wisest and the best of men become their companions and councillors; and the diligent student, like the industrious man, "stands before kings and not before mean men."

In the pursuit of knowledge they endeavor to combine the wisdom of the serpent with the harmlessness of the dove; a well-stored head, under the influence and direction of a benevolent heart. Such individuals cannot be otherwise than useful. To ameliorate the condition of their fellow men; to advance society in knowledge and religion, is to them as their meat and their drink. A good man is a public good. He eats not his morsel in quiet, but liberally gives to the poor. He considers himself a common good, a citizen of the world, and having freely received, freely he gives.—The communication of valuable knowledge to the ignorant, like the attribute of mercy, "is twice blessed; it blesseth him that gives and him that takes." In watering others he waters himself. He realizes the truth of the poet's paradox, "Teaching we learn, and giving we receive!"

Thus we see that the habit of reading, when well directed, is invaluable, especially to youth. It usefully fills up many a leisure hours, which would, in other circumstances, be spent in idleness or dissipation. It is a common saying, that "if the Devil find a man idle he generally sets him to work."—Avoid all idleness by alternating your daily labor with the acquisition of useful and entertaining knowledge. Remember that "an idle brain is the Devil's work-shop!"—In no stage of life is the habit of reading more easily or more permanently formed than in youth. It is no fiction of poetry that,

> "Just as the twig is bent the tree's inclined."

Recollect, that as the ignorance arising from early neglected education can never be fully compensated to any posterior application, it behooves you, my young friends, to give an early bias to your minds towards virtue and religion; and as you now sow, hereafter shall you reap.

The advantages of reading are many. By reading we inform ourselves of the affairs, actions, and the thoughts of all the great and good in the most remote nations and most distant ages. It forms a connecting link between the living and the dead. It binds country to country and forms the cement of society. By reading we become acquainted with the manners and customs of the most distant nations, whether barbarous or civilized. At our own fire-side, surrounded by kind friends, we may follow the adventurous traveler—

> "From Greenland's icy mountains
> To India's coral strand,"

without encountering his dangers or sharing in his fatigues.

Be careful to understand what you read. Prefer rather to have five words with the understanding than ten thousand words in an unknown tongue. If difficulties occur of a more verbal nature, Dr. Webster's Dictionary may be consulted with the greatest advantage. Make use of all the helps within your reach for the thorough understanding of your author's meaning; valuable thoughts, or ideas, like the precious metals, frequently lie deep below the surface. Apply thine heart (to use the words of the Royal Preacher,) to know, and to search, and to seek out wisdom, and the reason of things. Mark your difficulties that you may ask for an explanation from your parents, or any intelligent friend, who will be happy to inform you, if you cannot by your own study and research surmount the obstacles which may come in your way. It is related of that distinguished scholar, the late Sir William Jones, that whenever he asked his mother for an explanation of any difficulty, her uniform answer was, "*William, read for yourself, that you may know.*" By this judicious treatment, young Jones was thrown upon his own resources, and compelled to take the first step in the business of real education, namely, *to think for himself*—an important step which led to all his future greatness. Go you, my young friends, and do likewise.

Be careful what kind of books you read. Some works are more to be dreaded than the deadly Upas tree. The youth who has any regard to his future happiness and prosperity, will shun, as he would the plague, all books having a skeptical or an immoral tendency. Choose your books as you would choose your companions. Let them be the very best. He that walked with wise men shall be wise. Above all things read and pray to understand that "Book of books," which has, to use the words of the illustrious Locke, "God for its author, salvation for its end, and truth, without any mixture of error, for its matter." The Holy Scriptures, if properly introduced to the attention of the young, is better calculated to induce a habit or taste for reading than any other work to be found in our own, or in any other language. "I have carefully and regularly perused these holy scriptures," wrote Sir William Jones, on the blank leaf of his Bible, "and am of opinion that this volume, independent of its Divine origin, contains more sublimity, purer morality, more important history, and finer strains of eloquence, than can be collected from all other books, in whatever language they may have been written." The Pilgrim's Progress, by John Bunyan, is admirably adapted for the attainment of this important object. It is calculated to interest the young as well as the old. It delights the learned and the unlearned; and is one of the very few books, as Dr. Johnson has remarked, that we close with regret that the author has brought his labors so speedily to a close. It may not be unworthy of remark, that the Bible and the Pilgrim's Progress contains the purest specimens of the Saxon, of any in the English language.

It is remarked by a French writer, once celebrated, in his treatise on education, that the first work that he would put into the hands of his pupil would be, "The Adventures of Robinson Crusoe!" However absurd this may appear to some, yet it is a fact, that thousands have to attribute their taste for reading to the perusal of this very work. Its truth-like delineations, the simplicity of its style, and its sound morality will ever render it a favorite, both with young and old.

To the above list may be added Day's History of Sandford and Merton, Dr. Goldsmith's Vicar of Wakefield, the Stories of the world-renowned Peter Parley, and Chambers's Miscellany of useful and entertaining knowledge. Those, with many others that might be enumerated, are so admirably adapted by their lively, kind, and comprehensive teachings, that they prove highly provocative of stimulation to the youthful mind, and speedily render the acquirement of knowledge a pleasure, rather than a task.

N. D. R.

GEORGE WASHINGTON.

Born February 22, 1732.—Died December, 14, 1799.

What child born in this country, who has learned to run alone and talk, has not also learned to pronounce the name of Washington? I dare say scarcely one. Go where you may, my young readers, and you will hear all classes, and almost all characters, even to the most depraved, speak that name with reverence and affection. Why is it? Ah yes, why! Turn your thoughts to every part of this prosperous and happy land, and let that answer why. Not a people on the face of the earth is as happy as the people of America. Indeed, until you shall have traveled, yourselves, through other lands, you never can realize how true it is that we are thus blest. This, under God, is because those great men who founded our government founded it so well; and among all its founders none were greater than Washington, nor was there one whose image is so indelibly stamped on the great heart of America, as his. Look on him. There he stands, calm, dignified, and noble! the very impersonation of patriotism, worthy in deed, and worthy enough to be called "Father of his Country." "O Washington! Washington! how much we owe to thee," is the spontaneous exclamation of all who reflect upon our country as it was and as it is; as it is and as, but for him, it might have been.

Dear young friends, it is well that we should remember those great men whose lives were risked so freely and whose blood flowed in such willing streams, that we might be secure in the enjoyment of the unspeakable privileges and blessings which we possess. Keep them in mind. And now comes the lesson.

My young friends: those noble men who labored so faithfully to secure our country's independence, were once young as you are now, but instead of wasting their time in idleness and mischief, as many do, they sought to improve their minds, and fit themselves for usefulness. They could not foresee what great services they would be called to perform, any better than you can look ahead and see what services you may yet be called to perform; nevertheless, there was an hour of need a-coming, and when it came, as it did in that great war of the Revolution, they were prepared for it. Now, though you may never have the same kind of services to perform, yet, you will surely have work enough to tax the utmost powers of your minds. O! my young friends, there is always an hour of need, always enough for us to do; there is no time for idling. To-day we are in the midst of peril, and to-morrow our hands will be full. Indeed, there will never come a time for waste. Thousands will live after us for whose good we must labor, as those who lived before us labored for our good. So get up there, you indolent boy, and take up your neglected book; the future will need intellectual light, which your mind must help to throw into it, as the mind of Franklin shed its light for us. And you, boy, who are uttering those angry any profane oaths, stop your profaneness at once: there is work for you; a tongue is needed, to help by its eloquence in shaping the destinies of the future, as the eloquence of Otis, and Ames, and Henry, helped to shape the age in which we live. Up, all of you, and let us have no more mischief, and no more idling, for the happiness of a world is resting upon your actions. Thus, and thus only, can we show our gratitude for the self-denying faithfulness of such men as Franklin, and Adams, and last, yet greatest of all, Washington.

## PIONEER LIFE IN NEW ENGLAND.

Rev. Dr. Winton of Antrim, N. H., has just published a History of that town, in which the following picture is given of the "manner of" life of the early settlers of that town, one hundred down to fifty years ago:

"To many of the conveniences and comforts of life, the hardy generation then on the stage were strangers. Their dwellings were log houses, without glass, ill-fitted to exclude the cold. Had it not been for the roaring fires kept up in winter in the huge fire places, fed continually by great logs, which they were glad to be rid of, the inmates must have suffered. Wood and timber were so abundant that the faster they would consume them the better. Their farming utensils were clumsy; their clothing homespun and coarse, but durable; the men wore tow shirts-striped woolen cloth was reserved for Sabbaths and special occasions, and lasted year after year. In winter they wore shoes, excluding the snow by a pair of woolen leggins, fastened over the mouth of the shoe by strings. Boots were rare; great coats and surtouts rarer still. A pair of boots would last a man many years.

"In summer neither men nor women wore shoes at home; on the Sabbath the women not unfrequently carried their shoes in their hands to save wear, till they came near the meeting house, when they would put them on. They were clad, when engaged in their work, in a short gown and petticoat of some coarser material, with a striped apron, calicoes being thought quite a dressy article. The household furniture was rude and coarse; carpets, sofas, pianos were unheard of; instead of them was the spinning-wheel, both small and great, and the loom—articles, if less ornamental, certainly more indispensable. Tea and coffee were almost unknown; broths of various kinds, of corn, bean, and barley, were in constant use. In many families, hasty-pudding with milk, if milk could be had, was almost the standing supper. For a lunch in the intermission of public worship on the Sabbath, instances were not wanting of men carrying in their pockets a few cold boiled potatoes, and nothing else.

"Sometimes, in winter, families were conveyed to meeting through deep snow on an ox-sled; in summer the man, if he were the owner of a horse, rode to meeting with his wife seated on a pillow behind him; and a child seated on a pillow before him; and sometimes another and smaller child in the mother's lap, encircled by one of her arms. A party of the smart young people once assembled at a neighbor's, in early times, for a social interview. The supper, what was it? Not a modern supper of corned turkey and oysters, but *hasty-pudding and milk!* There being but three spoons, one division of three guests sat down to the table, and another division, and so on till all were served. All went off well, and it was considered a fashionable and well-managed affair.

"That age has well been called 'the age of homespun.' It was an age of hard work and simple fare, interspersed on the part of the men with trainings, musters, raisings, huskings, wrestling matches, chopping bees and piling-bees; and in the female world with quiltings, apple-parings and carding-bees. If the rude dwellings were not often animated with the faces of visitants, they were daily enlivened with the buzzing of wheels and the clatter of looms. If the inmates had fewer means of high-wrought excitement, they were not destitute of the sources of contentment and tranquil enjoyment."

Avarice and ambition are the two elements that enter into the composition of all crimes. Ambition is boundless, and avarice insatiable.

A poor man has not many marks for fortune to shoot at.

# Sunday Reading.

## THE HEART'S MELODIES.

Listen! listen! full is ever
This wide world with music true,
Naught can still it, mar it, never—
Naught that hate or wrong can do.

Gentle, humble, all who tremble
While fierce passions round them jar,
Shall hear whispers that resemble,
Angel voices from afar.

None so weary, none so lonely,
But some heart responsive gives
Beat for beat; and Love need only
Touch the chords, and music lives.

Though the world with darkness blendeth,
Though the wood be hushed and drear,
Though the lone flower, trembling, bendeth
As the cold wind moaneth near—

Morn shall come; again from blindness
All to life and glory start;
So, like light, one touch of kindness
Wakes the music of the Heart.

*Chamber's Journal.*

For the Rural New-Yorker.

## CHRISTIAN ACTIVITY.

The Christian life is not one of indolence. It is a life of toil, of active exertion, of strenuous endeavor, of ceaseless warfare.—There are no drones, no loiterers, no idlers, among the true servants of Christ. Jesus himself said: "He that is not for me is against me, and he that gathereth not with me scattereth abroad."

There is too much to be done in this world of sin and sorrow, to permit a Christian man to remain unemployed. There are too many tears to be dried; too many hungry, naked, and imprisoned, to be fed clothed and comforted; too many orphans, homeless and friendless, to be maintained; too many smitten and bereaved hearts to be comforted; too many wretched families to be restored to peace and prosperity, through the power of the gospel; too many gigantic wrongs, such as caste, war, and slavery, to be destroyed; too many precious youth to be instructed in spiritual and divine things; and too many immortal souls—souls redeemed by the precious blood of Christ—to be snatched from the flames of hell, and exalted to honor and glory—to a fadeless and eternal inheritance at the right hand of God.

An idle Christian! Preposterous contradiction! No such character can be found in the world. A Christian is a man of *deeds*. He is constantly engaged in the service of his Divine Master. He works out his own salvation. He goes about doing good, as did his Lord before him. He strives unceasingly to win souls to Christ.

And how abundant is his reward! He receives wages. He gathers fruit unto life eternal. He enjoys a present peace and satisfaction, which nothing earthly can disturb; and he has the assurance of being finally and everlastingly rewarded in the kingdom of his God. The Lord whom he serves will enrich his soul with Divine grace, and crown him with fadeless honor and immortal joy in the day of his appearing.

*

## PRAYER.

The child of flaxen hair and azure eyes, kneels when the day is done, and prays this simple prayer—"Jesus make me good."—Is he far from heaven? Nay,—its bright inhabitants look down with interest deep to see so fair a sight. And should that breath, that just heaved his little bosom, and now presses his ruby lips for exit, be the last, seraphs would bear him home. Another child clasps her burning hands and prays, then exclaims, "I'm going to Heaven"—and lo! she enters there. And was not prayer the gate?

I have seen a maiden—bitter tears had drank the brightness of her eye, and left the cold, fixed look of agony in her dark orbs. She knelt. Her lips opened with "My Father—though I claim no earthly father, neither a mothers' love or soothing hand, yet thou art my Father and knowest all my sorrows, and I come to thee. Bless now thy child, and give me grace to bear this deep affliction without a murmur. And when I have fulfilled thy will on earth, receive me where no sorrow is." She rose, and tears of joy were gathering in her eyes, and smiles were chasing smiles. That Heavenly Father had unveiled a smiling face, and given a glimpse of heaven through the entrance—prayer.

I have seen the aged man in his devotions. As his tremulous voice of age, that trembled again with feeling, went up, I felt as if his feet were on the threshhold of "the better world." O prayer! thou comforter,—soother of all sorrows,—healer of all wounds,—gate of heaven,—I love thee. And if I might defer to seek my soul's salvation, without one risk, till frosty age with furrowed cheek had come, yet would I not, for many prayers, that sweeten now life's bitter cup, were then as naught.

O, child of praying parents! dost thine aged father daily pray for thee? Thank God. And dost thy mother, weeping, nightly importune on thy behalf? Rejoice. Or is that father and that mother sleeping in the home of the dead, who gave thee up to God, and sealed that covenant with a daily prayer as long as life was given? Be comforted—nor prize thy birthright lightly,—for those pure petitions shall aid thy prayer—thy entrance into heaven.—*N. Y. Evang.*

# Miscellaneous.

## REVERIE.

BY GEORGE T. RYDER.

Calm lakelet of the quiet wood
Asleep in thy deep solitude,
Under the old trees, grand and hoary,
That stand and link their limbs above thee;
A place the heart loves, far away
From the glare of busy day,
Where the restless tide of life—
Where its turbulence and strife
Scarcely stir the still repose:
Here the stream of being flows
Gently on, in sweetest measure,
Bearing many a precious treasure,
With a soothing, lulling motion,
To its resting in the ocean.

Calm lakelet, fed from crystal fountain
In the bosom of the mountain,
Here all day, disconsolate,
The dove sings sadly for her mate,
And many a frittering bird flits by,
And loses her song in the still deep sky.

Calm lakelet, where the blue of heaven
Unruffled lies from morn to even,
And clouds of many a heavenly dye
Like heavenly thoughts, float tranquilly
Adown thy dreamy slumberous sky;
By night, away in thy caverns deep
The lustrous stars their vigils keep—
Pure lakelet, for thy purity,
Gives back again the sinless sky,
Gives back the living fires of Heaven,
The glories of the morn and even.

AFTER THOUGHT.

Calm as thy lakelet ever be
And life shall flow on peacefully,
Thy tranquil hours shall come and go
As careless wavelets ebb and flow,
By day within thy happy breast
Smiles from the unseen world shall rest,
By night, pale stars of hope and love
Shall mildly burn there from above,
More beautiful than more or even,
For earth shall wear the glow of Heaven.

[Written for Moore's Rural New-Yorker.]

## AN INCIDENT OF THE REVOLUTION.

BY C. H. STROWGER.

Capt. Oliver Clarke served under Gen. Greene during the early part of the Revolution. The company under his command were, with himself, taken prisoners by the British and taken to Philadelphia, and there thrown into prison. They were surprised while on a foraging expedition, by a superior force of the British, and taken after a desperate resistance. The sufferings of the American soldiers at Valley Forge, during the winter of 1777 were, as is well known to all American readers, extremely severe, from sickness, cold and famine. Poorly clad and nearly starved, it is almost incredible to believe that an army of raw, undisciplined troops, should have held firm to their purpose and endured the additional miseries of exposure to the rigors of a severe winter. But our brave soldiers were *men* and Americans, and persevered.

But to our story. The prisoners were all placed in a large room together, officers and privates, and forced to subsist on irregular, scanty allowances, while their conquerors were rioting in the luxuries afforded by an opulent city, and the plunder of the farming districts adjacent. Our prisoners saw that they must perish with hunger unless they obtained relief, and remonstrances were addressed to their captors, which were received with abuse and repaid with new indignities.

At last Captain Clarke formed a plan by which to make known his situation to his Commander-in-Chief, General Washington. There was a fire kept in the prison, and a little negro boy attended to briging in wood, etc. Capt. Clarke gained the services of this boy by persuasion and bribe, to supply him with paper and pencil, which the boy brought to him in the sleeve of his coat. The Captain then wrote a letter to General Washington, giving an account of their sufferings, and asking relief in some manner. The letter was folded, and the little negro brought in an armful of wood and set down by the fire. The plan was, to place the letter in the boy's stocking, when he was to proceed to the house of a widow lady in the city, and place the letter in her care. Just as the negro was taking off his stocking, an officer of the guard came in and ordered him out of the room. Captain Clarke, with great presence of mind, interfered and told the officer that it was a shame to force the boy out into the cold with cold feet, poorly clad as the boy was, he then took the boy's stockings and held them to the fire, and after pretending to warm them, commenced drawing them on the negro's feet. While doing this he slyly slipped the letter into the stocking. The boy felt the letter, and putting on his shoes left the room. That evening he carried the letter to the lady, who was to convey it to Washington. She soon sewed it in her stays, and proceeded to Washington's head-quarters, and delivered the letter. Washington perused it, and ordered a number of beef cattle to be sent for the use of the prisoners, to the British camp, under a flag of truce. The British respected the charge, and from that time the prisoners fared better for provisions. Still their position was far from being enviable; sixty persons crowded into one room, sleeping on straw and receiving the insults of an ungenerous foe, were not likely to prefer such accommodations and such treatment before *liberty*, even in camp at Valley Forge.

The prison where they were confined was built of stone, the foundations of which were sunk six or seven feet below the surface of the ground. It had a ground floor, and communicated with a large yard, which was constantly guarded with soldiers. The outside of the prison was also guarded, so that an escape was a difficult matter to effect. Upon examining the ground, however, it was resolved to attempt digging a passage under their prison walls. They had nothing to work with but a broken spade; with this they commenced operations on the south side of the prison. They could work but at short intervals, for the guard passed the door at every round, and the room was visited at every relief guard; besides this, there were other difficulties, the earth thrown out must be hidden, and the cavity itself concealed. They pursued the work faithfully, however, digging with their hands, and changing frequently, so that in the course of about two months they had a passage completed, except the opening on the outside. The night was fixed when the attempt must be made, and the Captain directed his men to follow his instructions implicitly if they would all escape. They promised to be guided by his directions, and he told them that he would first go out and examine the ground, then return and give his final instructions. He then proceeded to break the remaining ground, and arose to the surface. It was bright moonlight, and a guard was passing; he dodged down until the guard had turned his back to go the other way, then he rose and sprung to a corner where the shadow of the prison screened him from observation. He now watched the proceedings of the sentries, and found that there was one pacing a distance of several rods, the greater part of which was to the eastward of the opening. He found that one person could easily escape to the corner of the prison, from whence he could make his escape to a place of safety as he best might. Having thus made his observations, he waited till the guard was going from him, and then preceeded back to his company. They all anxiously gathered around him, and he stated the circumstances which existed, and which they must observe in their proceedings. He cautioned them not to be in a hurry—there could but one escape at a time, and that haste would ruin all. They promised to obey his directions, and he again arose to the outside, and made good his way to the house of his friend, the same lady who conveyed the letter to Washington. Here he was secreted in a pile of flax in the garret, where he remained for three days, until the hue and cry was over, and then made his way to the American camp.

Meanwhile the prisoners were making their escape one at a time. About twenty-five soldiers made their escape in this manner, and the moments began to seem ages to those who were waiting, and the anxiety and suspense became so great, that they could no longer proceed in the slow manner in which they had been doing, and they attempted to escape two at a time. The opening was too small for this, and they were delayed in rising to the surface until the guard turned, when he discovered them, and giving the alarm, rushed up and was about to bayonet one of the prisoners, a little Corporal, who had just succeeded in gaining the surface. The Corporal avoided the bayonet by a spring, and then catching hold of the bayonet, wrenched it from the musket and ran with it in his hand. The other prisoners were secured in irons, and fresh rigors added to their treatment. The little Corporal got to the American camp, and presented his bayonet as a trophy. There were several who escaped who did not fare as well as did the Corporal and Captain Clarke,—for they were retaken, and ironed two and two together, and treated with such rigor that several sunk under the cruel treatment received from the hands of their their inhuman capters.

The great moral want of the people.—What is the quality in which the masses are so deficient:—*self-restraint*, the ability to sacrifice a small present gratification for a prospective great one. A laborer, endowed with due self-restraint, would never spend his Saturday-night's wages at the public house. Had he enough self-restraint, the artisan would not live up to his income during the prosperous times, and leave the future unprovided for. Were there no drunkeness, no extravagance, no reckless multiplication, social miseries would be trivial.—*Social Tactics.*

M. Arago has estimated that about seven millions of comets frequent the solar system, which, says a writer in Frazer, fully accounts for the numbers annually discovered.

## UPS AND DOWNS OF WINTER.

What a bland, courteous old gentleman is the winter of 1852—3! Mark with what a serene look he sends the floods of sunshine up and down the valley and over the hills and through the shaggy pines along their tops till the whole universe seems all aglow. It seems quite as though next summer had come, but had forgotten to bring the birds and bees with it. The air drifts along as softly as in June. Far off to the south, just where the blue of the hills and the blue of the sky are mingling together, there spreads an autumn-like haze that reminds us of corn-huskings and orchards loaded down with fruit. Along the hill-sides, here and there, lie a few patches of snow under the lee of the fences and hay-stacks, like straggling soldiers of an army on the retreat. The warm airs have proved too much for the sturdy drifts that the storms of a few days ago were piling so heroically along the streets, and they have slipped away in silence. Nobody took note of their departure save the boy who was lucky enough to own a sled and had leisure to use it. How many a boyish heart there is lamenting the loss of the snow!

And, as if to suit the fancies of that same sad-hearted boy, lo! what a change the next twenty-four hours bring. The cold blue sky seems to look suddenly as chill as if an iceberg were hanging its sparkling peaks over your head. The wind, that has been breathing through the valley all day long,

—"from the land of the orange and vine,
Where the flowers ever blossom, the beams ever shine,"

all at once hauls round to the north, and begins to pipe through the skies like a squall in the Bay of Fundy. You go to bed shivering, and while the storm keeps up its antics out of doors, whisking around corners and shouting like a demon down the chimney, you dream of a ride in the cars, and the clitter-clatter of the wheels and the infernal screech of the whistle are racing through your brain all night. In the morning you get up and find the water in the pail a clump of polar ice. The windows are fantastically pictured over with castles and forests and tropic-looking grasses which frost-fingers have been busy in sketching while you have slept. The front door is banked with snow. Snow-drifts hide the fences, and curl all over the yard in wreaths as funnily shaped as a Turkish turban. The old cow at the barn peeps curiously out of the narrow window and wonders what all this sudden flurry means. The shade trees seem to sweat under the labors of the night, and all over the valley and up on the hills and away off in the gorges, where the waters were roaring like mad a short day ago, it is all one wide uniform sea of whiteness.

This is really an affable and most condescending winter.—*Warsaw New Yorker.*

## THACKERAY ON DICKENS.

In his last lecture in New York, Mr. Thackeray said:

As to the characteristics of Dickens' fervid pen, I think we all have reasons to be thankful to him for bringing such pleasures into our homes, and awakening in our hearts such kindly sympathies. There are many personages in Dickens' writings which make us feel better for their acquaintance.—You come away better for your contact with them. Was there ever a better charity sermon preached in the world than Dickens' Christmas Carol? It was the means of lighting up hundreds of Christmas-fires, awakening numberless social sympathies.—As for this man's love for children, that particular bump at the back part of head must be monstrous. I know two children, at least, who peruse his books ten times more assiduously than they do those of their father.

I know one girl who reads Nicholas Nickelby when she is tired and when she is rested; when she is sad and when she is happy she reads Nicholas Nickleby; when she is up and when she is in bed she reads Nicholas Nickelby; and when she has read the book through—she reads Nicholas Nickelby again. When ten years of age, she said to me, 'Pa, I like Mr. Dickens' books better than yours!' and she expressed a desire that I should write such a book. But who can? What humor, and what genial sympathy plays around that book! and who does not sympathize with Oliver Twist? Who does not delight to contemplate Mr. Micawber, amid his various fortunes? I recognize in this genial author a beneficent messenger of good; and thankfully I take my share of that happiness which he has so bountifully given to the world.

## AN ERECT POSITION.

A writer on health very justly condemns the habit of lounging, in which a large number of persons indulge, as injurious to health. He says—"An erect bodily attitude is of vastly more importance to health than is easily imagined. Crooked bodily positions, maintained for any length of time, are always injurious, whether in the sitting, standing, or lying posture, whether sleeping or walking. To sit with the body leaning forward on the stomach or to one side, with the heel elevated to a level with the head, is not only in bad taste, but exceedingly detrimental to health. It cramps the stomach, presses the vital organs, interrupts the free motion of the chest, and enfeebles the functions of the abdominal and thoracic organs, and, in fact, unbalances the whole muscular system. Many children became humpbacked, or severely round-shouldered by sleeping with the head raised on a high pillow. When a person finds it easier to sit or stand, or walk or sleep, in a crooked position than a straight one, such a person may be sure his muscular system is badly deranged; and the more careful he is to preserve a straight or upright position, and get back to nature again, the better."

# For the Ladies.

For the Rural New-Yorker.

Dear Mr. Moore:—The following lines were written by one of my school mates, who is so very timid she dared not even make an attempt at having them published. I am bolder, however, and have dared to address you, whom I have come to consider as a friend, from perusing the Rural New-Yorker, which I have actually learned to love. I trust you will pardon the seeming rudeness in thus addressing you. M. F.

Lisbon, N. Y., Feb., 1853.

## SHE IS SLEEPING.

She is sleeping in the grave yard,
Where the willow branches twine
Their drooping boughs around her—
That sister dear of mine.

The tall grass waving o'er her,
The willow branches meet,
And blend their mingled fragrance
With the violets at her feet.

She was a cherished treasure—
Too good, too pure for earth;
And she left us in her beauty,
Her innocence and mirth.

So we laid her in the grave yard,
Where the willow branches wave,
With the cold earth for her pillow,
In the dark and silent grave.

With her white hands folded gently,
Upon her pulseless breast,
And a snowy shroud around her,
We laid her there to rest.

We have reared no polished marble
Above her cherished head,
To tell to careless strangers
Where our treasured one is laid.

But the hearts of those who loved her,
Their faithful vigils keep;
They know without the marble,
The spot where Mary sleeps:

With the tall grass waving o'er her,
And the bending willow nigh,—
With the bright stars smiling sweetly,
From the overhanging sky. Bessy.

[Written for Moore's Rural New-Yorker.]

## MY THREE FRIENDS.

Kate! the laughing-eyed, and merry-hearted Kate! Her fairy form, and fairy features, are before me now. Footsteps as light as the fawn, flying from the glance of the hunter's arrow; her unbound hair steaming in the wild wind, and her eye glistening like a sunbeam stooping to kiss the cheek of a rose. Sometimes a shadow comes over her; but the bliss of her spirit soon bids it depart, and a peal of laughter rings through the clear air, like the voice of a bird.

"Free as the winds that blow,"

she spurns the love of the scholar,—

"Wild as the breeze,"

she cares little for his boasted mine of *wisdom's* wealth.

"Of her bright face one glance will trace
A picture on the brain,
And of her voice, in echoing hearts
A sound must long remain."

And I have a friend of a sober creed, deep-grounded on the sure foundation of "common sense." You see no beauty in the outward form. Helen is not what the world calls "lovely," but hers is the *true heart*, though cast in a humbler mould than my smiling Kate's. An unwavering mind, fixed in all its purposes, though unvisited by lofty aspirings for fame. Humbly she treads the path of life, resting from no toil, and shrinking from no duty, though often self-imposed.

But there is another, Eliza, no less loved than these, yet strangely different from either. Blessed with a mind of strength and beauty, fitted to shine, she dwells apart,

"Like a star
That from its bower of bliss
Looks down, yet gathers not a stain
From ought it sees in this."

To the world she is cold, even haughty, while loving those *nearer* with a mad impetuosity. Frail being! I can see her now, her pale cheek bending over the volume of knowledge, or her dark eye flashing with thought. Beautiful to these that know her, and not unlovely to others, is she.

"And yet, within the misty depths
Of her dark shining eyes,
A shadowy something, like deep thought,
In tender sadness lies."

My three friends, full well I love you. My gay-hearted Kate; my sober-thinking Helen; my lofted-minded Eliza. I love you all. E. W.

Albion, N. Y., Feb., 1853.

## MUTUAL FORBEARANCE.

That house will be kept in turmoil where there is no tolerance of each other's errors, no lenity shown to failings, no meek submission to injuries, no soft answer to turn away wrath. If you lay a single stick of wood upon the andirons and apply fire to it, it will go out; put on another stick, and they will burn: add half a dozen, and you will have a grand conflagration. There are other fires subject to the same conditions.—If one member of a family get into a passion, and is let alone, he will cool down, and possibly be ashamed and repent. But oppose temper to temper, pile on the fuel; draw in the others of the group, and let one harsh answer be followed by another, and there will soon be a blaze which will enwrap them in all its lurid splendor.

Nothing is humbler than ambition when it is about to climb.

## MARRIAGE AND STOCKINGS.

We find the following revised copy of this well-turned letter in the Troy Budget.

Troy Female Seminary, Dec. 10, 1829.

To John D. Willard, Esq.—Dear Cousin: Herewith you will receive a present of a pair of woolen stockings, knit by my own hands; and be assured, dear coz., that my friendship for you is warm as the material, active as the fingerwork, and generous as the donation.

But I consider this present, as peculiarly appropriate on the occasion of your marriage. You will mark firstly, that here are two individuals joined in one pair, who are to walk side by side, guarding against coldness, and giving comfort, as long as they last. The thread of their texture is mixed, and so, alas! is the thread of life. In these threads, however, the white is made to predominate,—expressing my desire and confidence that thus it will be with the color of your lives. No black is used, for I believe that your lives will be wholly free from the black passions of wrath and jealousy. The darkest color here is blue, which is excellent, when we do not make it too blue.

Other appropriate thoughts rise to my mind in regarding these stockings. The most indifferent subjects, when viewed by the mind in a suitable frame, may furnish instructive inferences, as saith the poet,

"The iron dogs, the peel and tongs,
The bellows that have leathern lungs,
The fire, wood, ashes, and the smoke,
Do all to righteousness provoke."

But to the subject—you will perceive that the tops of these stockings, (by which I suppose courtship to be represented,) are *seamed*, and by means of *seeming* are drawn into a pucker; but afterwards comes a time when the whole is made plain, and so continues to the end and final toeing off. By this I wish you to take occasion to congratulate yourself, that you are now through with seeming and are come to plain sailing.

Again as the whole of these comely stockings was not made at once, but by the addition of one little stitch after another, put in with skill and discretion until the whole presents the fair and equal place of work which you see; so life does not consist of one great action, but millions of little ones combined; and so may it be with your lives—no stitch dropped when duties are to be done, no widenings made, when *bad* principles are to be reproved, or economy is to be preserved—neither *seeming* nor *narrowing* when truth and generosity are in question; but every stitch of life made right and set in the right place, none either too large or too small, too tight or too loose—thus may you keep on your smooth and even course, making existence one fair and consistent piece, until having together passed the heel, you come to the very toe of life; and here in the final narrowing off and dropping the coil of this emblematical pair of warm companions, of comforting associates, nothing appears but white, the token of innocence and peace, of purity and light; and may you like these stockings, the final stitch being dropped, and the work completed, go together from the place where you were formed, to a happier state of existence, a present from earth to heaven.

Hoping that these stockings and admonitions may meet a cordial reception,

I remain in true blue friendship,
*seemly* yet without *seeming*,
Yours from top to toe,
Emma Willard.

## ART OF ARRANGING THE HAIR.

How often do we see a really good face made quite ugly by total inattention to lines. Sometimes the hair is pushed into the cheeks, and squared at the forehead, so as to give a most extraordinary pinched shape. Let the oval, where it exists, be always preserved; where it is not, let the hair be so humored that the deficiency shall not be perceived. Nothing is more common than to see a face, which is somewhat too large below, made to look grossly large and coarse, by contracting the hair on the forehead and cheeks, and there bringing it to an abrupt check; whereas such a face should enlarge the forehead and the cheek, and let the hair fall partially over, so as to shade and soften off the lower exuberance.

A good treatise, with examples in outline of the defects, would be of some value upon a lady's toilet, who would wish to preserve her great privilege—the supremacy of beauty. Some dress the hair down close to the face, which is to lose the very characteristic of hair—ease and freedom. Let her locks, says Anacreon, lie as they like; the Greek gives them life, and a will. Some ladies wear the hair like blinkers; you always suspect they will shy if you approach them.—A lady's head-dress, whether in a portrait or for her daily wear, should, as in old portraits by Rembrant and Titian, go off into shade, not to be seen too clearly, and hard all around; should not, in fact, be isolated, as if out of sympathy with all surrounding nature. The wigs of men of Charles II.'s time had at least that one merit of floating into the back-ground, and in their fall softening the sharpness of the lines of the dress about them.—*Blackwood.*

From social intercourse are derived some of the highest enjoyments of life; where there is a free interchange of sentiments, the mind acquires new ideas, and by a frequent exercise of its powers, the understanding gains fresh vigor.—*Addison.*

There are many doublings in the human heart; do not think you can find out the whole of a man's real character at once unless he is a fool.

A poor spirit is poorer than a poor purse. A very few pounds a year would ease a man of the scandal of avarice.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, FEBRUARY 19, 1853.

*TO AGENTS AND OTHERS.*

☞ *Back numbers from 1st Jan. can still be supplied. Additions to clubs received at club price. New subscribers can begin with the year, or this No. It is not too late to form new, or add to old, clubs.—We this week add several hundred to former edition, to supply all who wish to commence with present No. Agents and others, please continue your reports.*

☞ *Fractional parts of a dollar may be remitted in postage stamps, or we will return change in same medium, if preferred by agents.* Feb. 5.

## The Spirit of the Age.

Under this title a correspondent contributes a capital paper to the February number of the Wool Grower and Stock Register. We extract a portion of the article — embracing some figures showing the rapid advancement of our country, in many essentials, during the past few years, and clearly demonstrating the progressive spirit of the age — as follows:

The Spirit of the Age is one of improvement. It is eminently an age of discoveries and appliances. The progress made in Agriculture—in the Arts and Sciences — during the last quarter of a century, is without parallel in the history of the race. The public mind is almost daily interested and charmed, by the announcements made in favor of the achievements of Agriculture, Science and the Mechanic Arts, so conducive to the happiness and well being of our race.

The building of the Ericsson Caloric Ship in New York city, is a bold and fearless stride in the history of mechanics, and quite characteristic of the 19th century. In 1827 our first railroad was built. It was near Boston, four miles in length, and called the Adams railroad. It was a rude affair, but was big with promise to our country.—Now we have over 13,000 miles of railroad, costing upwards of $237,000,000; spreading like a network, over the face of our fair and beautiful country. The cost of travel is reduced two-thirds, and on many roads will doubtless soon be placed at one cent per mile! England has now 12,000 miles of railroad, built in the most permanent manner.

Ten years since, we had no telegraph lines. The first in the world was put up in the United States in 1844, between Washington and Baltimore—40 miles in length. Congress appropriated $30,000 to Prof. Morse to enable him to construct an experimental line. The system is now carried on to a greater extent in the U. S. than in any other part of the world. The numerous lines now in full operation, conveying with the rapidity of lightning,—joy, sorrow, and intelligence on every subject,—form a net-work over the length and breadth of the land. The wires—strings so attenuated that they can scarcely be perceived—extend over a distance of 16,729 miles. To illustrate the immense extent of this business in the United States, it is said that the total amount received by the Telegraph Company between Washington and New York from Jan. 1846, to July, 1852, was $385,-641,—over $68,000 taken for the last six months. The associated press of New York, consisting of seven daily morning papers, paid in nearly $50,000 for despatches during the year ending Nov. 1, 1852. They were first built in Great Britain in 1845. She has now 4,000 miles in operation. The charges for transmission are high. A message costing $1 in the United States, would cost in England $7. In Prussia the wires are generally buried in the ground, and carried across rivers in pipes. There are about 1,700 miles completed in that country—France has 750 and Germany 3,000 miles. The extension of these lines, both in Europe and America, is likely to go on rapidly, until all the principal cities are united by this novel means of communication. How wonderful, and yet how useful! The lightning becomes a swift servant boy, to run on errands; and in a few hours we converse with friends from the most distant points of our land! By means of railroads and telegraph lines, distance is almost annihilated, and the most distant points in our country, are brought in juxtaposition with each other. Good markets are opened up in places where before there were no marts of trade — little to stimulate the industry and enterprise of the inhabitants.—With them, industry and thrift cause the "wilderness to bud and blossom as the rose."

The improvements in the carrying trade — the increased facilities for getting to tide water the surplus products of the country by means of canal and slackwater navigation, is another development of the progressive *spirit of the age*. On the Erie canal alone there is 5,030 boats. Were they placed in a line they would reach from Albany to Utica, a distance of 83 miles. This fleet perform annually a journey of 11,000,000 miles, equal to 3,666 voyages across the Atlantic, or 1,375 voyages around the globe. During the business season it transports over 3,000,000 tons, an amount twenty-six times greater than all that is carried by the railroads on the banks of the canal. For six months in succession these boats take on daily and bear to market 20,000 tons, which would require about 2,500 cars to do the same. In 1850 the property sent through the Erie canal was valued at $156,000,000. It gives employment to 26,000 boatmen!

Heavy Porker.—On Tuesday last, Mr. B. E. Critchell, of the Boston Pork Store, No. 119 State st., purchased a dressed hog weighing 610 lbs.—said to be the largest yet brought into the city. It was raised and fattened by Mr. Dibble, of Hindsburgh, Orleans county.

## Meteorological Abstract.

BY L. WETHERELL.

Monthly mean, 25,86 degrees.
Monthly mean of barometer, 29 62 inches.

REMARKS.

The last half of January was much cooler than the first — and furnished pretty good sleighing. The quantity of snow has been much less than usual, thus far this winter. The week closing on Tuesday has been mild — so mild that the snow on Saturday evening had nearly disappeared — Saturday having been a rainy day. The river high and cleared of ice. It began to bail and is now about 3 o'clock on Sunday morning, and at sunrise three or four inches of snow had fallen. It continued to snow until sometime in the afternoon. Sleighing tolerable. Cleared off very pleasant Monday afternoon. Tuesday morning (8th) thermometer at 14 above zero—air very clear and fine.

[In consequence of an accident after going to press, the above appeared in only a small portion of our last week's edition; hence its publication in this number.]

## Those Premiums.—To Agents and Others.

Many friends are already entitled to specific premiums in Books, etc., for obtaining subscribers to our present volume, and we are now forwarding (by express and mail) to those who have designated the works desired. But as several have requested us to pub'ish a list of Agricultural Books, from which they could make a selection, we give below the titles and prices of such as we have recently procured. If any wish books not mentioned in this list, we will furnish them at the regular cash prices. Any of the works published by Derby & Miller, advertised on next page, will be furnished to those entitled to premiums. Indeed we will supply any thing in the book line, which can be procured here or in New York.

Johnston's Ag. Chemistry, $1,25; Boussingault's Rural Economy, $1,25; Downing's Fruits and Fruit Trees of America, $1,50; Amer. Fruit Culturist, by Thomas, $1,25; Dictionary of Gardening, by Johnson, $1,25; Farmer's Dictionary, by Gardner, $1,75; Farmer's Every-Day Book, by Blake, $2,50; The Complete Farmer and Gardener, by Fessenden, $1,25; Rural Architecture, by Allen, $1.25; Ladies Companion to the Flower Garden, by Mrs. London, $1,25; American Flower Garden, by Buist, $1,25; American Farm Book, $1; The Kitchen Garden, by Buist, 75c.; Continental Agriculture, by Colman, $1; Scientific Agriculture, by Rodgers, $1; American Lady's System of Cookery, by Mrs. Crowen, $1,25.

Youatt on the Horse, by Randall, $1,50; Youatt and Martin on Cattle, by Stevens, $1,25; Randall's Sheep Husbandry, $1,25; Morrell's American Shepherd, $1; Canfield on Sheep, $1; Youatt on Sheep, 75 cts.; The Pig, by Youatt, 75 cts.; Clater and Youatt's Cattle Doctor, by Skinner, 50 cts.; American Veterinarian, by Cole, 50c.; The Dairyman's Manual, $1; Browne's Poultry Book, $1; Bennett's do., $1; Bee-Keepers Manual, $1; Townly on Bees, 38c.

The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following works are bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture, Dana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

The Cabinet.—The eastern journals are yet busily engaged in cabinet making, for the amusement of the public, and the benefit of General Pierce. The latest structure is as follows — and we shouldn't wonder if some of the "planks" were to prove more than temporary:

Caleb Cushing, of Mass.—Secretary of State.
A. C. Flagg, of New York—Sec'y of the Treas'ry.
Robert F. Stockton, of N. J.—Sec'y of the Navy.
Jefferson Davis, of Miss.—Secretary of War.
Jas. C. Dobbin, of N. C.—Sec'y of the Interior.
R. M'Clelland, of Mich.—P. M. General.
James Campbell, of Penn.—Attorney General.

The Weather.—The week closing to-day, (Tuesday, the 15th inst,) has been one of good fair winter weather; not very cold—though cold enough, with but little snow, to furnish pretty good sleighing within the city. The river has been high, though not up to high water mark, being about two feet below this. Only two weeks more of the present winter remains, and who will not rejoice and be glad when Spring comes with all her loveliness and charms?—w.

Irish Butter.—The Boston Traveler learns that part of the cargo of the steamer Europa which sailed on Monday, for Liverpool, consisted of 622 kegs (44,000 lbs.) of Irish butter. This butter was imported here in December last, per steamer Niagara, and its owners have been unable to find a market for it in this country without sustaining a great loss.

Genesee Wesleyan Seminary.—We learn from Prof. Crow, Principal of this Institution, that the current term closes March 10th — the Summer term commencing March 24th following, to continue fourteen weeks. The catalogue places the time one week too late.

# Literary Notices.

The Life and Works of Robert Burns. Edited by Robert Chambers. Vol. IV. New York: Harper & Brothers, 1853.

This best-arranged and most complete edition of the Life and Works of the Ayrshire Bard is concluded by the publication of the fourth volume. All his letters and poems are here interwoven chronologically with the narrative of his life, giving to each a higher interest for the reader. They are published in handsome style and sold at 75 cts. per volume. Sage & Bro., Rochester.

A Hero, and other Tales. By the author of "Olive," "The Ogilvies," &c. New York: Harper & Brothers, 1853.

"A Hero," is a bit of an autobiography giving the experience of a youth in search of "a great man"—or its synonym in the Dictionaries. The other Tales are, "Bread upon the Waters—a Governess' Life," and "Alice Learmont, a Fairy Tale;" the whole making a handsome volume of some 300 pages. For sale by Sage & Bro.

Lives of the Queens of Scotland, and English Princesses connected with the regal succession of Great Britain. By Agnes Strickland, author of the "Lives of the Queens of England." Vol. III. New York: Harper and Bro., 1853.

The present volume of this valuable series contains the Life of Mary Stuart Queen of Scotland. Miss Strickland is a spirited writer, and has given much attention to historical biography. Sold by Sage & Brother.

Bleak House. By Charles Dickens. With Illustrations by H. K. Browne. New York: Harper & Brothers, 1853.

Part 11 of this serial has been received by Sage & Brother.

"Why I am a Temperance Man, a letter to a Friend; together with Smoke from the Calumet and Gleams from the Tomahawk, a series of tales and sketches, by Thurlow W. Brown," is soon to be issued by Derby & Miller, of Auburn.

The Palace Polka, composed by Mrs. Wm. Webster, of Rochester, and dedicated to Miss Mary S. Woons, of Geneva, is the title of a spirited and beautiful piece of music recently published by Firth, Pond & Co., New York. Mrs. W. is acquiring an enviable reputation as a composer of Music for the Piano, etc.

## Ithaca and Geneva Railroad.

Messrs. Editors:—It is now some months since the project of a Railroad from Ithaca to Sodus Bay was first brought before the public. A route has been surveyed between Ithaca and Geneva, in pursuance of the proposition. This survey, as is well known, contemplates a connection with a road now building from Sodus Bay to Vienna, at, or near, the latter place. The work on this road, in the vicinity of Vienna, has not been carried forward, in consequence of such proposed connection. The Sodus Company are waiting to see what action shall be taken by the Ithaca and Geneva Company in reference to it, before uniting with the Jefferson and Canaudaigua Road; fully satisfied that a connection with the Ithaca and Geneva would be much more beneficial to the stockholders of both, and more advantageous to the country along the entire route. In a former article I spoke of this as being the most practicable and feasible plan, all things considered, and have no reason, as yet, to change my views. Whether the road is built through Geneva or Waterloo, matters but little to me; for I have no selfish motive — no interests to secure, save those in common with my fellow citizens; nor would I, in any case, essay to support a cause adverse to the interests of our county or any company of enterprising men.

A Railroad through our county is necessary — indeed, indispensable to the future success and prosperity of its commercial, mechanical and agricultural pursuits. But not that only. Other, and perhaps greater interests, would be beneficially affected by it, as can be seen by any one who will take an impartial view of the subject.

The distance between Ithaca and Sodus, as "Junius" suggests, might be shortened some by running through Waterloo; but why build two roads through Wayne county, nearly parallel, and so near each other, when one could do the business? Were there none building from Sodus Bay, south, we should prefer to take in Waterloo and Lyons, but as that road is already in course of construction, and without any doubt will be completed, we should consult our interests, and the interests of the stockholders by trying to effect a connection at some convenient point. And we are happy to learn that an effort is now making to consolidate the two companies, so that the entire road shall be under the management of one Board of Directors. We hope this will be consummated, and that the point of connection may be at Lyons, instead of Vienna.

Geneva, I think, would give more business to the road than Waterloo, though the road would benefit them nearly alike. But whether the road touches at Geneva or Waterloo, or passes between the two places, it matters but little to us; only so that we can secure the business of the present Sodus and Vienna road, and have access to the business thoroughfares north and south. We are, in a commercial point of view, farther from New York City than Rochester or Buffalo, and even the merchants of Dunkirk can get their merchandise from New York quicker, and at less expense than our merchants between the lakes. And if we do not avail ourselves of the present opportunity to "throw a plank ashore," we may as well label ourselves, "Gone West," for we shall despair of keeping up with the improvements, or enjoying the increased facilities of the age.

S. Furman.

Romulus Centre, N. Y., Feb. 11, 1853.

# Congressional.

## Synopsis of Proceedings.

Monday, Feb. 7.—*Senate.*—The Senate passed the bill extending the pre-emption right to settlers upon lands not surveyed; a resolution calling for a statement of the time and money necessary to put San Francisco in a good condition of defence, and a resolution callling for copies of conventions that may have been entered into, between any of the Central American States.

*House.*—The House refused to suspend the rules to entertain Mr. Toombs's resolution looking to the repeal, in part, of the U. S. Navigation Laws. A resolution providing for an Evening Session hereafter, was adopted.

Tuesday, Feb. 8.—*Senate.*—A bill was passed granting further remedies to patentees. Mr. Seward made a speech on the Tehuantepec question.

*House.*—Nothing of interest in the reported proceedings.

Wednesday, Feb. 9.—Congress devoted the day to the business of counting the votes cast at the late election for President and Vice President of the United States. Senator Hunter, and Messrs. Chandler and Jones of Tennessee, acted as tellers. It may be intersting to some to learn that the result as pronounced by Mr. Atchison, President *pro tem* of the Senate, was, that Franklin Pierce, of New Hampshire, had been elected President, and William Rufus King, Vice President.

Thursday, Feb. 10.—*Senate.*—Sundry memorials, resolutions, &c., were received, and some private bills passed, but little else was done.

*House.*—The bills organizing the Territory of Washington and Nebraska were passed.

Friday, Jan. 4.—*Senate.*—Several private bills were passed, and several reports received, but the proceedings were generally unimportant.

*House.*—The House passed the bill for settling and adjusting the expense incurred by people of Oregon, and discussed reciprocal free trade.

Saturday, Feb. 12.—*Senate.*—The House bill regulating the fees of Judicial officers was amended and passed.

*House.*—The bill for the relief of Col. Fremont was passed. Mr. Doty presented his petition for the passage of the Air Line Railroad bill, which was appropriately referred.

# Legislature of New York.

## Synopsis of Proceedings.

Monday, Feb. 7.—*Senate.*—The Senate considered the Railroad Consolidation bill, but for lack of a quorum took no action thereon.

*Assembly.*—In the House the bill to incorporate the People's Ferry Company between New York and Williamsburg, was ordered to a third reading.

Tuesday, Feb. 8.—*Senate.*—The proceedings are unimportant.

*Assembly.*—Several bills passed to the third reading, and efforts to get a new carpet for the Assembly-room failed.

Wednesday, Feb. 9.—*Senate.*—Several bills were reported to the Senate, and the subject of Railway consolidation discussed.

*Assembly.*—The Canal resolutions of Mr. Loomis were under consideration.

Thursday, Feb. 10.—*Senate.*—Nothing of importance occurred in the Senate.

*Assembly.*—Numerous resolutions were offered, on which debate ensued.

Friday, Feb. 11.—*Senate.*—Several bills were referred and progress reported on others.

*Assembly.*—Farther discussion on the canals in the House.

Saturday, Feb. 12.—*Senate.*—The bill providing for the consolidation of the railways between Albany and Buffalo was read and passed; ayes 20, noes 6.

*Assembly.*—A stirring scene occurred in the Assembly; the resolutions relative to the Canal policy being taken up and passed, after numberless petitions of members to be excused from voting. In the midst of the objections raised to the passage of the bill, the Speaker ordered the arrest of Mr. R. Smith, for refusing to vote, which created a great hubbub, and Mr. Smith was finally released.

## Sale of the Canals.

We notice a movement on the part of certain politicians having in view the sale of the canals of the State. The strongest reason urged in favor of the measure appears to be that these friends of the canals are unable, for certain political reasons, as they affirm, to make the canals what they desire them to be, and offer this as the best plan for completing the enlargement. If it is profitable to a private company to raise funds and complete the canals it must prove a fair business for *the people*, who have an abundance of means to effect the desired end. The tax, if tax should be necessary, would not be a heavy burden, to a State as rich as the Empire State certainly is.

This disposing of our magnificent public works, which now pay a good dividend upon the amount invested, for the sake of having them completed, and rendered more productive, to our apprehension is nearly allied to the killing of the goose that laid golden eggs. It can hardly find favor with the mass of our people, whatever view may be taken of it by politicians.

Stockings By Mail.—We saw a package in the post-office yesterday, containing a pair of "blue woolen stockings" that had come all the way from a town in Michigan, and directed to a person in Seneca county. They were snugly done up in a newspaper and envelope, open at both ends. It was marked 6d postage. The weight and postage caused it to be examined and re-marked at this office. The postmaster here marked the package 65 cents—just about what the stockings are worth to sell.—*Buffalo Republic.*

# News Brebities.

—— By measurement upon the ice, Troy is just 151 miles from New York.

—— The Young Men's Association of Buffalo, have appropriated $1000 for the purchase of books.

—— There is a house in Brooklyn, N. Y., which is occupied by *over seven hundred human beings!*

—— The N. Y. & Erie Railroad is now the largest Railroad in the world—467 miles.

—— Upward of $4,000,000 have been appropriated by the Virginia Legislature for Railroad purposes.

—— Spurious fifty dollar bills on the Central Bank, Conn., are in circulation, altered from twos.

—— A new Post office has been established at Cooner, Niagara, county, with Mr. J. M. Titus at its head.

—— The favorite religious book of the Duke of Wellington, during the last year of his life, was Baxter's Saint's Rest.

—— The receipts of the State Agricultural Society, at the Albany meeting last week, were $402.39 against $154 last year.

—— Potter county, Pa., is perfectly teetotal in its character, having no licensed liquor retailers within its borders.

—— The Manchester Mirror says that counterfeit three cent pieces are quite common there.—They are clumsily executed.

—— The bill prohibiting the immigration of free negroes into the State, passed the Illinois Assembly by ayes 46, nays 18.

—— The "Christian Banking Institution" at Chicago has been closed, a jury having found that Mr. Eddy, its President, is insane.

—— The language and colloquial dialects of China are now taught in London. A professor might thrive in California.

—— A bill has been reported in the Pennsylvania Legislature to i corporate the Grand Lodge of the Philanthropic Order of Anti-Tobacconists.

—— The entire assets of a recent bankrupt were nine small children! The creditors acted magnanimously and let him keep them.

—— The total length of railways in activity in France in 1851, was 3,307 kilometres (about 2,200 English miles,) and in 1852, 3,703 kilometres.

—— So great has been the scarcity of provisions in the mining districts of California, that in some places flour has been sold at $1,50 per lb.

—— The Florida Indians, it is said, do not exceed 600 in all, 260 of whom are warriors, and 250 runaway slaves, who have adopted the Indian habits.

—— The Vermont Liquor law has received over two thousand majority in 22 towns heard from. It has been approved by a large majority in the State.

—— The New York Herald says that the returns of gold from Australian mines, for the last twelve months, indicate the yield to have been $75,000,000.

—— At the late Railroad meeting at Newburg, Mr. Doule, of Delaware county, stated that he had paid $4,000 in a single year for freight on his butter to New York.

—— The late freshet on the Susquehannah River has done considerable damage. Several bridges on the Elmira and Williamsport Railroad were carried away.

—— The Chicago and Rock Island Road, from Chicago to Lasalle, at the head of navigation on the Illinois River, 100 miles from Chicago, will be opened in March.

—— A new Post-office has been established at Swainsville, Allegany county—Joseph Doyle P. M., and another at Stephen's Mills, Steuben co., E. G. Stephens, P. M.

—— It is computed that the population of African descent, in North and South America, is 12,-370,000; of the whole number 7,500,000 are slaves, and 4,870,000 are free.

—— The portait of Mrs. Stowe, of "Uncle Tom's Cabin" notority, is on exhibition at Biddlesmith-gate, England, at two pence a peep!—That's popularity!

—— A resident of San Francisco, writing to a friend in Boston, says he had a turkey for his dinner, weighing 11¼ pound, and that it only cost him $16!

—— The Board of Alderman of the city of St. Louis, have passed an order appropriating the large sum of $500,000 for the purchase of ground for public parks.

—— The French papers are making the new Empress out to be a model of virtue — we hope she is, for there is need enough of something of the sort in the Imperial family.

—— A young aspirant for office recently sent Gen. Pierce letters urging his claims, accompanied by his daguerreotype. He is said to be apparently about twenty-four years old.

—— The death of the Australian traveler Leichardt, has been ascertained. He was killed by the natives after having penetrated 1,200 miles into the interior of the continent.

—— The Wire Suspension Bridge over the Falls of St. John River, at St. John's, N. B., has been completed. It is about an eighth of a mile in length, and about 90 feet above the water.

—— The Deaf Mutes in Vermont are to meet in Convention at Montpelier, on the 23d and 24th inst., to devise means for the erection of a monument to Rev. Thomas H. Gallaudet.

—— A Missouri paper publishes "for the information of persons abroad and the study of speculators," the amount paid for negroes at several public sales. The highest price paid was $1,150 for a man 21 years old.

—— The Bible Distributor for Mercer county, N. J., has nearly completed his labors. He has called upon 3,999 families, 425 of which were destitute of the entire Bible. He has put in circulation 2,575 Bibles and Testaments.

Sault St. Marie Canal.—The Legislature of Michigan have taken hold of this work in earnest. The proposed length of the canal is 5,267 feet. The first lock entering from below the Falls is 300 feet, constructed to lift ten feet into a basin 450 feet long. Lock No. 2 is 300 feet, and constructed to lift 11 feet to another basin of 400 feet long and 130 feet wide. Then it runs on a dead level into Lake Superior, with only a floating gate intervening, where it finds from 6 to 12 feet water. The deepest cut is 1 5 feet earth 13,5 rock.

Sperm Oil.—We understand that $1,30 has been refused for sperm oil during the last week. The last sales that have come to our knowledge were made at $1,28. The quantity in the market is extremely small. The vessels which are to arrive here within the next few weeks, will make profitable voyages for the owners.—*New Bedford Standard.*

# Foreign Intelligence.

## Arrival of the Niagara.

The Cunard steamship Niagara arived at New York on the 13th, after a long passage of fourteen days from Liverpool, whence she brings dates to the 29th January.

The political news by this arrival is unimportant. The commercial advices are an advance in Cotton, and decline and dullness in Breadstuffs. Dissensions among the English Ministry are rumored, Mr. Gladstone, the new Chancellor of the Exchequer, being already at variance with his colleagues on the subject of the Income Tax. Sir Francis Baring is mentioned as the probable successor of Mr. Gladstone. Mr. Cobden has made another series of Peace demonstrations. Lord Shaftesbury writes from Genoa in rejoinder to the reply of certain American ladies to the Stafford House Address. The call for a new trial in the case of Achilli vs. Newman has been discharged, and Dr. Newman was to be brought up for judgment. None of the gold-laden vessels from Australia have arrived, and great disappointment was exhibited. Some specimens of Canadian gold have been tested with no satisfactory result. A meeting of Mexican bond-holders had approved of the appointment of collectors at all the ports of Mexico, to prevent the revenue due to the bond-holders from falling into the hands of the Mexican Government.

The news from France is nothing. The people have almost ceased to wonder at the Imperial Marriage, though there is no lack of speculations as to the reception of the intelligence by the foreign Courts. The crown-jewels have been delivered with the accustomed state to the Minister of State. The household of the Empress is partly chosen. Should Pius IX. refuse to go to Paris to Crown the Emperor, he and the Empress will go to Rome. The contemplated alliance between Prince Napoleon Bonaparte and the Princess of Wagram has been broken off; and the Prince has been named a General of Division as a salvo for his discomfiture.

In Spain, the Electoral Committee of the Moderate Opposition was believed to be on the point of dissolution, in consequence of the last two Ministerial Circulars. The Government has concluded a foreign loan of a 75,000,000 reals, supposed to be on account of Messrs Baring Brothers.

In Germany a new Prussian loan of 20,000,000 rix-dollars has been taken by the house of Rothschild.

In Denmark, the King has approved a project for the establishment of railroads throughout Jutland.

In Italy, the Senate of Sardinia has adopted the law for the suppression of the Slave Trade. Two letters from the Madias' are published, expresive of great patience and meekness; Francisco continued very feeble.

In Turkey, the Montenegrine movements are the only interesting features. An army of 30,000 men is preparing to crush the hardy mountaineers, and is to attack them at several points.

In India, the British have met a slight reverse of fortune: an advanced post having been attacked with some success by the Burmese forces.

# News Paragraphs.

☞ The delivery of flour and wheat at tide water from the Erie canal, during the year which has just terminated, was nearly five millions of barrels from the Western States, and nearly a million from the interior of New York; which is more than a million of barrels or 25 per cent. over the preceding year; more than nine-tenths of which increased delivery was from Western States—a larger increase in one year than ever before, except in the year of the famine in Ireland. All other grains and agricultural productions follow these leading articles, and contribute to swell the volume of increase of trade on the canal.

☞ A Milk Convention, largely attended by delegations from the chief milk producing counties of New York State, was held in Westchester county on the 3d inst. Resolutions were adopted having in view a more systematic management of the milk business, that both producer and consumer may be better protected from the evils of adulteration, dilution, &c. They also recommend that a milk inspector be appointed in the city.

☞ It is remarked that the Germans emigrate mainly to the United States, and go in whole villages and communities at once, taking their clergymen with them, and having generally sent over some one beforehand, to survey the promised land and make preparation. The Central Emigration Society of Germany gives the number who sailed in 1852, as 103,318, carrying with them about £36 each, or a total of about £3,000,000.

☞ The American Colonization Society has now applications from various masters to send several slaves to Liberia, and of these, one company, numbering thirty-one persons, liberated by a lady in Virginia, has been assigned to the Pennsylvania Society. The cost of their transportation will be about $2,300, which sum the Society is endeavoring to raise by subscriptions before the 1st of April.

☞ The American Colonization Society has now applications from various masters to send several hundred slaves to Liberia, and of these, one company, numbering thirty-one persons, liberated by a lady of Virginia, has been assigned to the Pennsylvania Society. The cost of their transportation will be about $2,300, which sum the Society is endeavoring to raise by subscriptions before the 1st of April.

☞ Six large volumes constituting the Works of Daniel Webster, have already passed through *seven editions*, and another is immediately to be put to press. Two volumes of his *letters* are expected to be published in about four months.—Several hundred letters have already been collected by the gentlemen having the matter in charge, and others are coming to light daily.

☞ The Albany Register says Moses Stoddard of Amherst, Erie Co., sold four oxen, weighing 9,500 lbs. Three of them were raised from one cow, aged six, seven and eight. The largest measures 18½ hands high, across the loin. There is nothing in the State to compare with these fine cattle. Messrs. Sprague & Co., of Genesee Co., challenge competition.

☞ Fifty thousand letters were sent from the New York Post Office, one Saturday, and between eighty and ninety thousand newspapers, filling 277 bags. The Baltic also took out 30,000 letters the same day. Three years ago, the number of letters sent to California, was about 25,000 a month. Now the number is 100,000 a month.

☞ The Postmaster-General gives notice, under date of Feb. 10, that on the personal solicitation of the French Minister, the order of 24th January last, equalizing the rates of postage on all letters between the United States and France, via England, is suspended for three months.

# California News.

## Arrival of Three Steamers.

By the arrival of the steamships Ohio, Northern Light and Uncle Sam, were received the California mails and shipments of gold to the 15th ult., with later dates from Panama, Aspinwall, San Juan and Kingston.

The gold received by the Ohio and Uncle Sam amounts to a little over $2,000,000, of which $1,813,000 are in freight and the remainder in the hands of passengers. The intelligence from California is not at all encouraging. The floods still continued, and there was a great scarcity of food in many of the mining districts. The prices of provisions were enormous, and the roads were in such bad plight that no fresh supplies could be obtained in the interior without great difficulty. The travel on the Isthmus is remarkably good, passengers having crossed from ocean to ocean in twenty hours.

By these arrivals, we have also received later dates from Oregon, the Sandwich and Society Islands, and New Zealand, but there is no news.

## News Clippings.

☞ From Mexico we learn that the example of Cromwell and Napoleon has been followed by the new President, Cevalos, and the refractory Congress dispersed at the point of the bayonet, after which he issued a decree to call a Convention to meet in June to reform the Constitution, &c. The City of Mexico has at length also declared for the revolution.

☞ We are gratified to learn that, in his wild and picturesque retreat upon the Hudson, Mr. Willis is gradually recovering from the illness which took him to the tropics last winter, and that his health, so long the subject of anxious solicitude on the part of his friends, is likely to be entirely restored.

☞ The 16th annual report of the Trustees of the Ohio Asylum for the Blind, has been printed by order of the Legislature. The number of inmates is 66; in the department for boys the receipts were $1,061 63 over the expenditures, and in that for the girls $75 68. Expenses for 1852 were $7,329 64.

☞ Since the discovery of the silver mines of Potosi, there have been extracted from them not less than sixteen hundred millions of dollars!—The vein is said to be as rich now as it ever was, but it is not worked, for the want of mechanical force, such as steam and the facilities of commerce alone can afford.

☞ It is estimated that in the year 1852, there were 204,991,595 pounds of coffee consumed in the United States, being 20,756,095 pounds more than in 1851. The estimated weight of stock on hand in the different ports which import the article, on Jan. 1, 1853, was 39,146,570 pounds.

☞ The Ontario Repository states that half a dozen sportsmen, in Canandaigua, recently made an excursion into Hamilton county, where they succeeded in bringing down twenty-seven fat deer. The snow was about two feet and a half deep, and the hunting first rate.

☞ The widow of the late Wilbur Fisk, first President of the Wesleyan University, is now living in poverty. A subscription has been proposed to raise two thousand dollars, of which Mrs. Fisk is to receive the interest during her life, and then the fund to go to the College.

☞ The Law passed by the Legislature of Iowa, regulating interest on money, makes six per cent the rate of interest in all cases where there is no express stipulation in writing; but parties may agree in writing for a rate as high as ten per cent.

☞ A private letter from Key West, dated Jan. 25th, states that Mr. King's health is far better than when he left New York. His cough is easier, and he is better and stronger every way.—His physician expresses strong hopes that he will recover.

☞ A sort of stampede has broken out among the producers of hemp. The farmers want $100 per ton, but bids do not go above $80. The crop now in hand is said to be merely an average, both in quantity and quality.

☞ Some of the brokers in Paris make $20,000 monthly in mere commissions on the sale of stocks. This shows to what a height speculation is now raging in that metropolis.

### French and Spanish Merino Sheep.

THE undersigned have been engaged for some time in purchasing, breeding and selling fine wooled Sheep of both the French and Spanish varieties. We have just returned from the west, where during the fall and winter we have sold over one thousand sheep, in Ohio, Michigan and Illinois, scattering over those growing States just the animals needed by the farmers and wool growers to enable them to shear fine flocks, and reap a golden reward for their labor. During the present month we shall select from among the best breeders in New England, a flock of choice sheep embracing both French and Spanish, which will be offered for sale at Akron, Ohio, as early as March first. We are not only dealers, but breeders, having raised many that would meet the approbation of the best judges. No pains have been or will be spared to furnish all with whom we deal, sheep that can be guaranteed, pure of their kind and breed, and in all respects as they are represented. We shall be prepared to furnish desirable animals of either variety at our farm, and all orders addressed to us at Gaines, Orleans Co., N. Y., will meet with prompt attention.

J. J. McALLISTER & ROSIER.

Gaines, N. Y., Feb. 1, 1853. 163w2-wg1*

### A Desirable Country Residence For Sale.

DAVID THOMAS, near Aurora, Cayuga Co., N. Y., wishing to retire from the care of his farm, offers it with all its extensive improvements for sale. It is pleasantly situated near Cayuga Lake, contains 148 acres of land, has a spacious and comfortable dwelling, with a laborer's cottage, and various out-buildings, together with extensive orchard and fruit-gardens, and a large ornamental and kitchen garden; the whole forming a completely furnished, comfortable, and desirable farm-residence, which is offered at the low price of $60 per acre. 163–3t

### FARM FOR SALE.

A SMALL Farm of twenty acres, under good cultivation. Seven acres fall plowing done; remainder corn-stubble and meadow; all feasible, good land: situated in East Penfield, eleven miles from Rochester, near the Free-will Baptist Church—pleasant and desirable location. Good dwelling house, newly fitted up, and outbuildings good. Fruit abundant; large orchard, all grafted when small, of choicest fruit. Peaches of the choicest kinds; quinces, cherries, plums, grapes, and shrubbery tastefully arranged.

The above is a part of the Abram Beeker farm. If not sold will be rented with or without the land. Inquire of the subscriber near the premises.

163–3t* TRUMAN MATTISON.

### Farm Implements for California.

BURRALL'S Prize Reapers, Mowers, Threshers and Separators, Clod-Crushers, Field-Rollers, Cultivators, Horse Powers, &c., &c. All *warranted* of the best material and workmanship—strong, compact and reliable—expressly for that market.

Made and sold cheap for cash by

THOMAS D. BURRALL.

Geneva, Ontario Co., N. Y. 159–8w.

# Market Intelligence.

RURAL NEW-YORKER OFFICE, Rochester, Feb. 16, 1853.

BUSINESS has been fair during the past week; sleighing *passable* only. We have little change to note in market prices, except a decline in Flour and Wheat, and hence our report is brief.

FLOUR.—The price has declined, according to our quotations, — partially owing, probably, to the decline in breadstuffs reported by the last steamer from Europe.

GRAIN.—Wheat has fallen, and comes in slowly. Good samples sold yesterday at $1,12, which we consider a fair quotation. Other grains as quoted below.

CLOVER SEED is in less demand. We quote the highest figures—$6@6,50.

No particular change in provision market. Butter and cheese are in greater demand.

### Rochester Wholesale Prices.

### NEW YORK MARKET.

NEW YORK, Feb. 15.

FLOUR—Our market for low grades of State Flour is 12¼@18¾ lower, with a moderate demand for the trade and export—the latter mostly to supply cargoes. Canadian inactive and quite nominal. Sales Western Canal 2400 bbls at $4 91 for common to straight State. Corn Meal inactive 33 44 for Jersey.

GRAIN—There is but little inquiry for Wheat, and prices are entirely nominal; sales 1000 bushels white Ohio on p. t. Barley dull and heavy; 70@74c. Oats heavy and very plenty; 46@48 for State and Western. Corn lower and very quiet; sales 14600 bushels at 59@61 for unsound; 65 for good Southern yellow; 64@66½ for fair to choice white Southern—the latter for export.

PROVISIONS—Pork nominal and very quiet; $16 75@87 for new mess; $15 50 for do prime. Beef is held firmly at $9 50@$11 25 for country mess.

DRESSED HOGS—Selling at 7½@8c.

LARD—Steady and in fair demand at 9¾@10½.

BUTTER and CHEESE unchanged.

STOCKS—Variable, but better on the whole. Money market unchanged. First class paper 6@7 ₱ cent. Exchange 9⅝@9¾.

### BUFFALO MARKET.

BUFFALO, Feb. 11.

THE market for flour is very quiet, and nothing doing except to the retail trade. Prices range from $4,87½ to 5,25 for good to fancy brands. No sales of wheat or corn. Oats are selling from teams at 40c. There is a moderate business doing in seeds at previous prices—Clover $6; Timothy $2,25@4; Flax at $1,12½. There is a fair business doing in provisions. Mess Pork $17; Mess Beef $10; Smoked Hams 11c; do. Shoulders 9½@10c. Lard 11c.—Butter—Ohio 14@16c., Dairy 18c. Dressed Hogs not plenty, and prices lower—7c. would be the top of the market.

### NEW YORK CATTLE MARKET.

NEW YORK, Feb. 7.—At Washington Drove Yard—At market 2,600 Beeves (500 Southern and Western, remainder from this State.)

Prices steady at from 6 to 9c per lb. Market closed very dull, and about 200 left over.

At Browning's—Offered 3,000 Sheep and Lambs. All sold at from $3 to 4,55@6 for Sheep, and $2,50 to 4,25 for Lambs.

Cows and Calves — offered, and all sold at from $22,50 to 30@45,50.

At Chamberlain's—Offered 600 Beef Cattle; all but 30 sold, at from 6½c. for common, 8@8½c. for good fair quality, and 9c. for extra.

Cows and Calves—35 offered, and all sold at prices ranging at from $25@35 to $45, as in quality.

3,500 Sheep and Lambs offered. Sales of the former at $3,25@6, and of the latter at $2,@3,25.

### ALBANY CATTLE MARKET.

ALBANY, Feb. 8.—Woolford's Bull's Head—At market, 300 Beef Cattle. Prices extra, $6,50; 1st quality 6; 2d do. $5@5,50; 3d do. $4,50.

Cows and Calves—Few in market. Prices, from $25 to $45.

Sheep—2,100 in market—Prices at from $3, 3,50 to 6.

Swine—164 in market. Prices from $5 to 6.

### CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Feb. 9.—At market, 701 Cattle, about 651 Beeves, and 50 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices — Market Beef — Extra, per cwt. $7; 1st quality, $6,50@6,75; 2d do, $5,75@6; 3d do, $5,50; ordinary, $4,75@5.

Hides—$4,75@5 per cwt.

Pelts—$1@1,50. Calf Skins 10c per lb.

Tallow—$7@7,50 per cwt.

Veal Calves—$5, 6@7.

Barreling Cattle—$4,75@5,25.

Stores—Working Oxen—$77, 82, 86, 92, 97@115.

Cows and Calves—$21, 24, 27, 32@39.

Yearlings—None.

Two years old—$18, 19, 22@24.

Three years old—$22, 25, 30, 36@49.

Sheep and Lambs—1,180 at market, all sold; sales quick and supply short. Extra, $5, 5,25, 6, 6,25@10; by lot, $2,75, 3,25 to 4@4,75.

Swine—265 at market, mostly shoats; wholesale at 6¼c. per lb.

### BRIGHTON CATTLE MARKET.

BRIGHTON, Feb 10.—At market 850 Beef Cattle, no Stores, 13 pairs Working Oxen, 65 Cows and Calves, 1,100 Sheep and Lambs, and 1,300 Swine.

Stores—Working Oxen—Sales at $70, 88, 95@110.

Cows and Calves—Sales $19, 20, 23, 25, 31@37.

Sheep—Extra, $4, 5, 6@7; lots $2, 2,50@3.

Swine—5⅝@6¾c.; retail 6½@7½c; fat hogs 7c.

### NEW VARIETY OF SWEET CORN.

MESSRS. HOVEY & CO., No. 7, Merchants Row, Boston, would respectfully inform their friends and the public, that they have purchased the entire stock of the OLD COLONY SWEET CORN, raised by the Rev. A. R. Pope, and described by him in the Magazine of Horticulture, Volume 14, page 529.

It is a true hybrid and the most remarkable variety ever produced. It was raised in 1817, from the Southern White Corn, impregnated with the early Sweet Corn of New England. The ears are of remarkable size, containing sixteen, eighteen or twenty, and sometimes twenty-four rows each. In its productiveness it is unsurpassed, a single stock planted after the middle of June, producing six ears. It is the richest, sweetest and most delicious corn known. An analysis of it, and several other sorts, by Dr. C. T. Jackson, shows that it is more abundant in saccharine matter than any other variety, its composition being "dextrine, sugar, and phosphates," while the common varieties contain considerable "oil and gluten."

It has been exhibited before the Massachusetts Horticultural Society for three years, and has not only received the commendation of the Society, but has been awarded the following prizes:

1850. For a new variety of Sweet Corn, ..... $2,00
1851. For a *new* variety of Sweet Corn, called the Old Colony, ..... 8,00
For superior specimens of the Old Colony Sweet Corn, Silver Medal, ..... 5,00
1852. For fine specimens of Old Colony Sweet Corn, .. 2,00

The Committee on Vegetables, of the Massachusetts Horticultural Society, in their Report for 1852, remark, "That the Old Colony Sweet Corn, raised by Mr. Pope, we recommend as worthy of cultivation by all."

The Old Colony Sweet Corn, though not as early as the Common Sweet, is sufficiently so to produce a perfect crop in New England. Two sowings, one in May and the other in June, will supply the table from July until frost. All who have eaten it, pronounce it the most luscious variety, and an invaluable addition to our esculent vegetables.

☞ Single ears, 25 cents each. The trade supplied on reasonable terms. 163w4

### CLOVER AND TIMOTHY SEED.

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by

163-tf J. RAPALJE & CO.

### Manny's Patent Adjustable Northern Illinois REAPER AND MOWER.

FIRST PREMIUM MACHINE FOR 1853.

AWARDED the First Premium for Mowing and the second for Reaping, at the N. Y. State Fair, in the great trial at Geneva, N. Y., in July, in competition with eleven other machines; awarded a Silver Medal at the Ohio State Fair, for the best Reaper and Mower, and received the highest award at the Vermont and Michigan State Fairs, for the best Reaping and Mowing Machine.

The true merit of this Machine has given it a great triumph over all others, and being a perfect combination of Reaper and Mower, it comes to the farmer with double value, and it is clearly demonstrated to be the only successful combination of Reaper and Mower. As a Mower, it is as simple and perfect as though constructed expressly for mowing; and as a Reaper, it is as simple and perfect as if constructed for reaping only. All the change that is necessary from one plan to the other, is to insert or remove a loose platform.

Machines warranted to cut all kinds of grain as well as can be cut with a scythe, and to cut flax and millet, also to gather clover, timothy and flax seed, and to be well built and of good materials. This machine will cut from ten to fifteen acres per day, with two horses, and one person to tend it when mowing, and two persons when reaping. The cutting apparatus is made perfect by means of a double edged sickle, and double guards, as fully tested the last two years, and it is connected with a joint, so as to adjust itself to uneven ground, and by a level at the driver's seat, it can be raised when moving along, to cut from one inch to two feet from the ground. All side draft against the team is entirely avoided. The machine will turn square corners, and turn square about, either way. Over three hundred of these machines were in use the past season, all of which gave perfect satisfaction.

The machines are manufactured at Hoosick Falls for the State of New York, and I will have them delivered to any part of Western New York where ordered. Price of machine, where made, $125. Address Gen. R. HARMON Wheatland, Monroe Co., N. Y.

149-tf R. HARMON, Agent.

### FARM FOR SALE.

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

JOSEPH ARMSTRONG.

Pittsford, Monroe Co., N. Y., Jan. 7, 1853. 158–tf

### Emery's Patent First Premium 1852, RAILROAD HORSE POWER,

Threshing Machines, Separators, &c., Western New York Agency.

**E. D. Hallock, Agricultural Warehouse, No. 50 State St., Rochester, N. Y.**

THE Subscriber, late from the Albany Agricultural works Warehouse and Seed Store, where he has been engaged for the past six years, has secured the sole Agency for the sale of Emery's Patent Railroad Horse Power for Rochester and vicinity, so widely and favorably known throughout the country, and which has without exception, taken every highest premium awarded in the States of Ohio, Michigan, and in New York, for the best Railroad Horse Powers in 1850, 1851, and again in 1852, also at the Provincincial Fair of Canada, recently held at Toronto, was awarded a Diploma and £2, of which the judges highly commend the principle and workmanship of this Power, now offer them at manufacturer's prices, with the transportation added, and subject to the warrantee as follows:

"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded."

For further particulars see Circulars and Catalogues, which are furnished gratis on application to the subscriber.

The attention of the Farming public is solicited, and a careful investigation into the construction of this Power and its comparative merits, as well as price, is requested before purchasing elsewhere.

The Wheeler power is also offered *ten* dollars cheaper than heretofore by any other agency, and subject to same warrantee as given by others for the same kinds. Samples will be kept constanly on hand, and to insure promptness and avoid disappointments in supplying them, farmers are requested to send in their orders at as early a date as possible.

He will keep for sale, Emery's Seed Planters, the best in use; Circular and Cross Cut Saw Mills, Feed Mills, Corn Stalk and Hay Cutters, Corn Shellers, Churning fixtures, &c., adapted to the Power.

Also, Reapers, Mowing Machines, Grain Drills, Plows, Harrows, Cultivators, Corn Shellers, Hay Cutters, Fan Mills, and Agricultural and Horticultural Implements generally. He will be prepared to furnish dealers with Dunn and Taylor's well known Scythes; also, Manure, Straw and Hay Forks, Snaths, Rifles, and other haying tools, at manufacturers' prices, wholesale and retail.

Particular attention is called to A NEW PLOW, which is believed to be the best cast-iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any plow heretofore sold in this vicinity, while the price is less than for any other equally well finished.

The "uniform one-price, cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time will allow. Farmers and others are invited to call and examine the stock of Machines and Implements,—and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

E. D. HALLOCK, 50 State street, Rochester.

Oct. 5, 1852. [145–tf]

### Important to Farmers

**PORTABLE MILL.**

[From the Ohio Farmer, December 2, 1852.]

ROSS' IMPROVED PATENT CONICAL BURR MILL STONES.—Our readers will many of them remember that Ross' Portable Burr Stone Mill took the First Premium at the Annual State Fair, held in this city a few weeks since.—This admirable invention must commend itself to every one who has witnessed its operation. In the first place it is easily portable, simple in structure, does not easily get out of order, and does its work with great rapidity and perfection. It may be used for grinding the coarsest food for cattle, or the finest meal for family use. It is also well adapted for grinding wheat, rye or buckwheat. It is indeed a perfect grist mill in miniature, and we would advise every farmer, if possible, to procure one. The expense of one of these mills, with the apparatus for horse power, can not be very great; or a number of farmers might club together and procure one, which would be sufficient for all.

Mr. Ross is, we believe, a resident of Rochester, N. Y.

N. B.—Any further information relative to the Conical Mill can be obtained by letter, post-paid, or by calling at the factory of CHARLES ROSS,

2d story Phenix Building, Aqueduct-st.,

151–tf opposite the Arcade, Rochester, N. Y.

### CARY'S ROTARY FIRE ENGINE PUMP.

THE Inventor after thoroughly testing his engine pump (for the past two years,) feels confident that it is not equalled by any thing now in market, in the way of raising or forcing water—the motion being rotary, the stream is constant without the aid of an air vessel. The packing is self-adjusting, very durable, and cannot well get out of order.

These pumps are well calculated for all the purposes for which pumps or hydrants may be used, viz., Factories, Steamboats, Tanneries, Breweries, Distilleries, Railroad Water Stations, Hotels, Mines, Garden Engines, &c. The highest testimonials will be given.

No. 1 is a house or well pump and domestic Fire Engine, and will raise from 20 to 30 gallons per minute.

No. 2 will raise 100 gallons at 120 revolutions.
No. 2½ do 200 do 120 do.
No. 3 do 300 do 120 do.

The quantity raised can be doubled, by doubling the revolutions. These machines are manufactured and sold by the subscribers at Brockport, N. Y.

76-tf. CARY & BRAINARD.

### American Seed and Implement Store,

NO. 4 MAIN STREET, CURTIS' BLOCK.

*Garden and Nurseries at Monroe-st. Plank Road Gate.*

**(Over five Tons of Garden Seeds grown in 1851)**

THE Proprietor of this establishment has been extensively engaged in growing and selling Seeds for the last twenty-four years, with every facility for a successful business, and a determination that not an article shall leave his Store but such as will prove satisfactory to the purchaser. He therefore expects that his efforts will be appreciated and meet the approval of his customers.—Over Fifty First Premiums have been awarded at the State and County Fairs for Vegetables grown at his Garden.

**Garden, Field and Flower Seeds** of all kinds and of first quality.

**Fruit and Ornamental Trees,** Shrubs, &c., Green House and Hot bed Plants in their season.

**Farm Tools** of every description. Emery's Railroad Horse Powers, Thresher, and Separator, Seed Drills, Corn Planters, Machine Belting, &c.— Wholesale and retail at Manufacturer's prices, adding transportation.

C. F. CROSMAN,

April 1, 1852. 118-8w. Rochester, N. Y.

### "SPEED THE PLOW."

**Genesee Seed Stoe and Ag'l. Wachouse.**

THE subseribers beg leave most earnestly to call the attention of the farming community to the fact that they have just received a supply of the most popular and modern improved implements used in Agricultural and Horticultural pursuits.

They would particularly invite all interested, to the well established MASS. EAGLE PLOWS, in a series of 21 different sizes manufactured by Ruggles, Nourse & Mason. Also the latest and most improved kind of SEED PLANTER, invented by the same firm.

We have also on hand the well known Curtis or Albion Plow, of various sizes and extra manufacture.

Wheeler's Horse Power, Thresher and Saw Mill.
Hussey's Celebrated Grain Reaper.
Pennock's Wheat and Grain Drill.

As also a complete assortment of Field and Garden Seeds, both domestic and imported.

72 JOHN RAPALJE & Co., Irving Block, 65 Buffalo-st., Rochester

### OLD ROCHESTER NURSERY.

TWENTY THOUSAND OSAGE ORANGE Plants at $10 per thousand. This plant proves perfectly hardy here and makes the best Orchard fence known.

30,000 Northern Spy Apple trees.
3,000 Fine Dwarf Pears, of large size.
5,000 Giant Rhubard, very low by the 1,000. Must be sold to clear the ground.

One dozen very large Maple trees, root pruned last spring; 1 doz. Scotch Larch; 1 doz. Laburuum; and several fine Norway Spruce, Scotch Fir, &c.,

Together with a large general assortment of hardy Orchard Fruits and Ornamental Trees, Shrubs, Dahlias, and a general collection of bulbs, box edgings, &c.

The assortment is very complete, comprising the leading hardy items requisite for elegance or utility. Orders carefully filled, packed, &c., for any distance.

Nursery, corner of Norton and North Clinton Streets.—Office 36 Front-st., Rochester, N. Y. Catalogues gratis.

117-tf. SAM'L MOULS

## IF THOU HAST LOST A FRIEND.

If thou hast lost a friend
By hard or hasty word,
Go call him to thy heart again;
Let pride no more be heard.
Remind him of those happy days,
Too beautiful to last;
Ask if a word should cancel years
Of truth and friendship past?
Oh! if thou'st lost a friend,
By hard or hasty word,
Go, call him back again;
Let pride no more be heard!

Oh! tell him from thy thought
The light of joy be fled;
That in thy sad and silent breast
Thy lonely heart seems dead;
That mount and vale, each path ye trod
By morn or evening dim,
Reproach you with their frowning gaze
And ask your soul for him.
Then, if thou'st lost a friend
By hard or hasty word,
Go call him back again;
Let pride no more be heard!

# Rural Sketch Book.

## THE LAST FAIRY.

### A FIRESIDE STORY.

BY SAMUEL NICHOLS.

Simon was a brave stripling, an orphan from his birth, and brought up consequently in great misery. One of his uncles, himself a poor man, with more good will than means, adopted him, and brought him up as well as he was able, until he grew up big enough to act the part of a *pastour* to the hardest master in the country, with whom, for the want of anything better, he learnt submission and patience.

But Simon now entered his twentieth year, and it was time for him to seek a better condition.

They had spoken of him to Peter Hardi, who was in want of a plowboy, and it is at this time we find Simon on his way to the farm on the Beech Trees, where he was in hopes of pleasing his master, and of obtaining, as we say in the country, "good bed, a porringer, and good wages."

It was autumn, but on this particular day, the air was as warm as at harvest time; heavy clouds slumbered between the earth and heaven, and not a breath agitated the dying leaves.

Simon experienced the effect of the time, and in spite of himself he slackened his pace, and now, at one of the turns on the route he encountered old Faisie, who was burdened with a big pannier and two heavy packets.

The young man knew the peasant*ess* of old. She had a reputation all over the country of doing business with the devil; of being able to read the future, and of casting spells at will. Half feared and half respected for her age, Simon had always made it a point of being civil to the sorceress, and this time he gallantly took off his hat, and inquired into the state of her health.

La Faisie stopped, puffing and blowing.

"By my baptism, my lad," said she, "you have arrived aprepos; you must assist me by taking a little of this load."

"Willingly, if our way lies in the same direction," Simon replied.

"Take the packets," the sorceress answered. "I knew where you are going."

And, as he appeared to be surprised,

"Isn't it true that you hope to obtain a place at Peter Hardi's?" she continued.—"Verily he is in want of a plowboy. Try hard to fix yourself in that house; it will be a good thing for you, for the owner is well to do, and his daughter Annette is not yet engaged. If you show to be a good lad to her, and useful to her parents, it is not at all unlikely that you may find yourself on the road to marriage.

Simon repudiated this idea as one altogether too ambitious to be entertained by a poor lad of no family or means, but, to say the truth, it smiled at his heart, (*elle lui sourit au cœur,*) and he began to entertain it in spite of himself.

La Faisie continued, besides, to talk to him about the Hardis, whom she knew, she said, from the first, and she pointed out to him the way in which he might make himself acceptable to them.

The young man paid attention to these things without appearing to do so; he even thought within himself that the old woman could make him succeed if she chose to do so, for everybody in the parish knew that she *had power over persons and things* — as the faries of old had; but he would not have dared to ask such a service of her, under the fear that it was neither lawful nor religious.

In the meantime they went on their way slowly, owing to their burdens and Faisie's old legs, so that Simon, who had set out rather late from his old master's, began to fear that he should not reach the farm before midnight. The old woman divined his impatience, and made him take a short cut across the fields.

It was surprising how this shortened the journey. At the end of an hour Simon saw that they had left the villages behind them that he thought were yet far off. Unfortunately the sky now became troubled, thunder rumbled around the horizon, and as they were crossing a heath, all the sluices in heaven were opened upon them at once.

Simon wished to gain a little wood of poplars which stood on their right; but the old woman checked him, assuring him that he was running in the face of danger.

"But, mother Faisie, we must seek some shelter," exclaimed the young man, who felt himself transpierced with fear.

"Let us descend on this side," she answered, following the route that led towards a ravine.

But the water followed the same route, and they shortly found it above their sabots. The storm increased; the flashes of lightning chased one another in quick succession, and the thunder rolled in every corner of the heavens. Simon, who sank deeper and deeper in the softened earth, began to regret he had not followed his first idea, when La Faisie turned towards him, at a broader flash and louder report than usual, and called his attention with her stick, to two of the poplars, under which he had wished to take shelter, which were now struck by the lightning, at the same time pressing him to hasten his steps, showing him that they were on the cart route of some white lime pits.

"The white traces prove that we are coming to a smooth road, and though darkness has overtaken us, it seems to me that I can see it down there under my feet. A few more strokes of our heels and we shall find what we are in need of."

They arrived, truly enough, a few minutes afterwards, at the pits, where the lime makers gave them shelter under their shed, and before a fire that dried them in the twinkling of an eye. Only the storm continued and taxed their patience. They entered into conversation with the pitmen, who were at this moment eating their soup, which they shared with the two bolted pilgrims.

This refection came in good season, for the journey had sharpened the young man's appetite. La Faisie marked with what pleasure he drew near to the smoking soup pan.

"Well," said she, winking her eye, "what do you think now of my advice, that we had rather gain the ravine than the little wood of poplars?"

"Yes, mother Faisie," Simon replied, almost respectfully, "it is all owing to you; you know more than we others, and it is necessary that we should follow your advice."

By the time the soup was dispatched night had set in, but the storm was now heard rumbling in the distance; the old woman announced that it was time to set out, and after having thanked their hosts, they both re-commenced their route.

The sky was still clouded; at first a slight, drizzling rain hung in the air, and prevented them from distinguishing before them, but presently a few stars showed themselves from time to time, and far apart half drowned in the mist.

The old woman and the young man came to the maner marsh, and this they must traverse.

Simon knew the place of old. He sought then the old causeway, which time had sunk into the bog, but which, although almost buried under bulrushes, formed a solid road in the midst of the watery way. The little house built at the other end of it, served as a sign-post to make out the route

He saw its light from afar, and directed himself towards it, but at the very first steps he took he found himself sinking into the soft ground. He looked up, the light was now on his right! He directed his steps towards that side, and thinking he had now certainly found the causeway, he advanced anew. This time he sank up to his knees in the bog. Astonished, he again looked towards the other bank of the morass, the light had now passed to his left. It seemed to him that it even fluttered and danced along the bank as if to rally him; so he remained abashed, and possessed of fear, with one feet on the bulrushes, the other in the soft ground.

La Faisie, who had let him go his own way up to this point, resting upon her stick, now burst into a fit of laughter.

"Well, well," said she, "look at my poor, doting, silly lad; you didn't know the will-o'-the-wisp, you great Merry Andrew."

"The will-o'-the-wisp," Simon repeated, a little frightened, (for he had certain ideas of Jack o' Lanterns that had been given him in the long winter nights,) "I thought it was the light in the little guard-house.—But, by the great God, if that dosen't burn; how are we to find our way?"

"We will find it out by means of the good God's own lights, which always shine in their allotted places," said the old woman, at the same time pointing out the great polar star.

And she at once turned towards the right, without the slightest hesitation, and attained the causeway, upon which she continued to the opposite bank.

Simon wondered more and more. All this confirmed him in his ideas regarding La Faisie, who seemed to him to possess intelligence above her appearance, and he tho't within himself that the old woman was much less like a poor peasant-*ess* than she was like one of those powerful fairies whose histories he had heard related in the long winter nights.

In the meantime, they both continued their route along the fallow ground, until they came to the new mill, at which Faisie persuaded her companion to pass the night.

"At this time," said she, "every road is under water; you cannot reach Hardi's until after midnight, everybody will be asleep, and people that are disturbed out of their night's rest are not very apt to give one a good welcome. Remain at the mill, and at the peep of day I will conduct you by the best pathways."

"The proposition is a right down good one," Simon responded; "but it remains to be seen whether the miller—whom I do not know—will willingly give me the means of sleeping until the morning."

La Faisie uttered a little laugh of mocking assurance, and without a word of reply advanced towards the platform of the mill, and knocked at the door as if she was mistress of the lodgings.

A lad came and withdrew the bar, and the moment he recognized the old woman he gave her a hearty welcome, called his master, who came in great haste, doffed his cap, as to a lady of high degree, and cried out to his wife to bring the best cider and the nicest cheese.

La Faisie received all these marks of attention and politeness without evincing the slightest astonishment; she introduced her companion, at the same time, saying that they had both come to the mill to sleep there, for which the master of the lodgings thanked them: she then made herself aequainted with everything that had occurred at the mill since she was last there. The miller rendered her a full account, relating everything in detail. La Faisie gave counsel in a tone that sounded very much like a command; she spoke of repairing the flood-gates, which at this time allowed the water to escape, told them what it was necessary to do for the mare, which was a little slow, and promised to send them a new species of duck that made their nests upon the river.

After supper Simon was provided with the bed on the principal garcon of the mill, in which he slept soundly until the morning.

Before setting out the miller's wife served up to him some soup, and the miller himself made him take a small glass of cognac, which had the effect of animating him for his journey.

Old Faisie had left her pannier at the mill, and one of her packets. After following the heaths for some time, they at last gained some plowed lands, and the roof of the Hardi's house was presently seen above the top of a hill. As they were proceeding by the side of a meadow, the faggot fences of which had been beaten down by the bad weather of the night before, they saw six fine cows, who had quitted their proper pasturage, and were now wallowing in the fenny herb. La Faisie suddenly stopped.

"Quick, quick my lad, turn the beasts out, and reconduct them to the stable," she cried out, "or before two hours are passed the Hardis will have nothing of value left them but their skins. The grass of the *petit pre* is highly injurious, and the animals that eat but a mouthful of it are thrown into a bad condition for several days."

Simon did as the old woman bade him; he got the cows together and drove them towards the farm.

The young girl of the farm, who was at that moment cressing it, was astonished to see them.

"Thank this young man," said La Faisie to her, "he has just driven the beasts out of the little birch tree meadow."

"Is it possible!" ecxlaimed Annette alarmed. "May the *bon Dieu* recompense you for that action, young man! If any thing had happened to them the blame would have fallon upon me, for the animals were entrusted to my care; but I am so bothered in my head with anxiety that I hardly know what I am about."

"Has anything happened at the Beech Trees?" La Faisie demanded.

"Eh! my good savoir! don't you know it?" resumed the young girl; "it is now more than three weeks that my little brother Henriot has been down with the fever, and for the moment he is all but dead."

In thus speaking, pretty Annette's eyes were filled with great big tears, to conceal which she led the cattle back to the stable.

Simon entered the house, from which however the master was absent until the day after the morrow. He was told to await his return; and as Annette was forced to carry the milk to the town, and the rest of the members of the farm were engaged in the fields, Simon proposed to take care of little Henriet. The young girl thanked him for his humanity, and then conducted him to the child, who seemed to be suffering greatly, and to be in a very bad state. After explaining to him what was necessary to be done for the boy, Annette set out with red eyes and a swelling heart.

About half an hour afterwards, while Simon was engaged in watching the sick child, La Faisie came to him with a large sauce pan in her dand, in which smoked a decoction made of an herb she had gathered in the ditches. She told the lad to give it to his young patient to drink from time to time, and showed him how he could renew the remedy at need; then taking her leave, she advised him to be zealous and patient.

Simon executed these ordors so well, that when Annette returned from market she found little Henriot sitting up, with his eyes wide open and half inclined to smile. In the evening he was still better, and thanks to the decoction, the disease was gently yielding.

The moment Hardi returned, Annette did not neglect to tell him what the young man had done for the child and the cattle.

"I think," said she, "he is attentive, knowing, and good hearted. If he is always to be as valuable to the farm as he has been already, he will be of great assistanee to you, and a real treasure."

"We shall see abont that," responded father Hardi, who did not like to commit himself without further proof in regard to people. But what his daughter had told him of the young man put him in good humor, and he accorded to Simon much better wages than he had counted upon.

For the rest, the young man more than answered all that had been expected of him. He was an industrious laborer, and everything he did turned to the abvantago of the Hardi. To tell the truth, much of his success was owing to the advice of old Faisie, who came to the Beech Trees every week, and never failed to give him some advice. Sometimes it presented itself in the shape of a precaution to be taken against some ill that raged throughout the country, to the destruction of cattle; sometimes in the form of advice in regard to grain or fodder. One day she advised him that the twenty days' rain was on the point of setting in; upon learning which Simon made haste to gather in the wheat, and the entire harvest was consequently saved, while that of the neighbors rotted in the ground. At another time she ran to inform him that the big haystack was heated, and on the point of bursting out in flames; and the fact was that when the young man went to it with the other people of the farm, he found it smoking like a brick kiln.

The old woman let the young man take all the credit to himself for these valuable services, so that the Hardi's found him more to their liking every day.

Above all, Annette preferred him to all the other young men of the Canton, and she had already refused several excellent offers of marriage, without assigning the true reasons of doing so. Simon had divined it, and in divining it he experienced no less regard for the young girl than she had for him; but as she was rich and well-related, he could not hope to be accepted as son-in-law; a fact that caused him great grief of heart.

La Faisie, in perceiving his grief, at once divined the cause. One day, when he was returning from his work, with his spade upon his shoulder, she stopped him and brusquely told him that she knew what was the matter with him.

"You have found," she added, "that the name of Hardi does not sit well upon the lovely Annette, and you wish to exchange it against that of Simon.

"Speak lower, by your salvation," exclaimed the young man, greatly alarmed.

"Why?" said she.

"Because, if any one overhears you, I shall be turned away from the Beach Trees."

"You think so, do you? Very well, my lad; you must now set about explaining yourself without waiting any longer. Annette has the warmest regard for you; make it to be known, then, that you are an honest lad."

"I ask nothing better, La Faisie; how am I to set about it?"

"You must go at once and find mother Hardi, who is in the barn; you must tell her that it is absolutely necessary you should quit the Beech Trees; and, as she will ask you for a reason for quitting, you must tell her boldly."

Simon was a little alarmed at this expedient; but the old peasantess declared to him that it was his only means; and as he in fact felt that it was a duty he owed to his conscience, he decided to act upon it.

At the first announcement of his departure, mother Hardi made sundry exclamations of surprise, as he expected she would; but upon his candidly confessing the real cause of this resolution, she stopped short. It cannot be said that she had never thought of it, only that her idea about it had never settled down into a certainty. When she had heard all the young fellow's reasons, she told him, in a tone of friendship, that what he was about doing augmented the consideration that she could make him no reply, because the matter was in the hands of the master, of course; but that she would speak to him about it that very evening.

Scarcely had Simon left the barn, before the young girl, who had been cutting some roots in a little retreat adjoining, and who had overheard every word, left her hiding-place, and now came weeping to her mother. The two women had a long conversation, at the end of which the mother went in search of her husband. The next day, the latter called Simon in from the field, and after having made him repeat all that he had said the previous evening to his wife, took him by the hand, and warmly pressing it, declared that he could ask for nothing better than to become his father-in-law.

The nuptials were joyously celebrated, and among those that were invited to them was La Faisie, maugre the objections of several relatives, who feared that the old woman would bring harm to the young couple. At the moment she was on the point of departing, the young man presented her with a pretty new pannier filled with provisions and a new cloth cloak, which he begged her to accept as a token of gratitude for what she had done for him.

"I know very well that you do not really stand in need of them, mother Faisie," he said, with a respect that had something of fear about it, "for I have seen that everything is obedient to your will."

"That is to say that you also believe me to be a sorceress," the old woman responded, with a laugh.

"I believe that God has given you more power than he has given to others," Simon replied, timidly; "but I know of myself that you use it only to do good."

"You are right," said the old woman, more seriously; it was by means of that power that you saw me and recognized me on your route hither, it was by its means I divined that the lightning would descend upon the poplars—it conducted you to the place where the lime-burners were—it obtained you soup and shelter at the miller's, who is my debtor and under great obligations to me—it drove the cattle out of the poisoned meadow—it gave a healing decoction to the child, and it foresaw either diseases or bad weather:—but you deceive yourself if you think I hold it as a private gift from God; God has given me no more than he gives to all his creatures, only I have made use of it with more care and good will. People do well to say of me that I am the last fairy of the country, but they ought to add that my name is—Experience.

## ANSWER TO ENIGMA, &c., IN NO. 7.

Answer to Two Puzzles.—To form these crosses, the pieces must be arranged in the manner shown in the annexed figures.

Fig. 1.

Answer to Musical Enigma.—"*Oh! they tell me thou art dead, Katy Darling.*"

## TO AGENTS AND OTHERS.

Encouraged by the brilliant success which has thus far attended the publication of Moore's Rural New-Yorker, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* Premiums. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the Rural New-Yorker from any one town in *the State of New York*, in proportion to its population, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in Books or Agricultural Implements, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l. Books,) to *every person* sending payment for fifty or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for forty or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the Rural for 1852, to every person remitting payment for thirty subscribers.

4th. To every one remitting payment for twenty copies, we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in books.

5th. To every one remitting for ten copies, an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for six copies, an extra copy of the Rural and either volume of Wool Grower.

7th. To every one remitting for three copies ($5,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for one copy, ($2,) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere trictly to the following

### TERMS,—IN ADVANCE:

Two Dollars a Year. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the Rural and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

Moore's Rural New-Yorker is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The Rural New-Yorker, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

### For both Country and Town Residents.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

One Dollar per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the New-Yorker is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen.—Booksellers and Publishers.—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

## THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 9. ROCHESTER, N. Y.—SATURDAY, FEBRUARY 26, 1853. WHOLE NO. 165.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper,**

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### "TERRA-CULTURE."

#### The Wonderful Mystery Revealed!

IN presenting the following article to the public—thereby disclosing the substance of the so-called great and useful discovery in vegetation—a word of explanation may be necessary in regrd to the propriety of appropriating, or imparting to the community, that which is claimed as valuable individual property. As to our *right* and *duty* in the premises, we have no misgivings,—1. For the reason that the responsible Editor of the RURAL has never made any pledge whatsoever concerning the secret, and hence has no compunctions of conscience in regard to "disclosing the disclosures." 2. We firmly believe that the pretended discovery is of little or no value—indeed, that such of it as may be of use is not *new*, as we can (and may hereafter) demonstrate by quoting from the works of popular authors—and hence, that it is our bounden duty to expose the deception, in order that those whose interests we advocate may no longer be unwittingly defrauded of their well-earned dollars, and valuable time.

The subjoined article was written by a gentleman connected with this journal, who has listened most patiently and attentively to the "disclosures"—and who, in common with numerous other hearers thereof, has arrived at the conclusion that the pretended discovery by the theoretical Professor, ought to be made public. If this is not sufficient in extenuation, we may state that the Professor has violated his portion of the contract, and hence our associate is under no obligation. For pronouncing the pretensions of the Professor to the possession of a secret of great value, an unmitigated humbug, the vials of his wrath have been poured upon us, most profusely. These incoherent ravings are harmless, however, and certainly will not deter us from discharging our duty to the agricultural community—Hence, for the benefit of the public, and in vindication of our conclusions, we shall now and hereafter submit certain facts and statements for candid consideration.—ED.

THE Agricultural community has been kept in a state of excitement for some time past, by the announcement that RUSSELL COMSTOCK, of Mabbettsville, Duchess county, had discovered a new and valuable fact in vegetable physiology, which was of the utmost consequence to mankind. Presenting himself before Congress, the secret was disclosed to a Committee, from whom he avers he received the offer of $500,000 for his discovery. The same occurred before the Legislature of Massachusetts, and, we think, New York. All of the Committees, he avers, pronounced the discovery of incalculable importance, but with none was he able to make a satisfactory bargain.

He next urged the matter upon the attention of the New York State Agricultural Society, who appointed a Committee to hear the disclosures, and report their value to the Society. Overwhelmed by the magnitude (?) of the subject, the Committee were unable to make a report at the time, but subsequently the late A. J. DOWNING, Esq., who was one of the Committee, responded to the numerous calls of the public, and submitted a lucid, and we doubt not satisfactory, disclosure. [For Mr. DOWNING'S disclosure, see article on next page, entitled "The Great Discovery in Vegetation."]

If any still doubt the immense importance of the disclosures, will they step with us into the lecture room, and listen to the weighty secret,—hear the great discoverer "disclose his disclosures," as the Professor euphoniously terms his revelations.

Before you stands the veritable Professor himself; around him are arranged, in admirable disorder, sundry roots, twigs and saplings, with here and there an ear of corn, or the cob on which corn has grown, and a few old and apparently well-read books.—With an appearance of wisdom which would grace a Solomon, he announces that, many years since, in looking over the pages of a "School Botany," he caught what had escaped the attention of the author,—a fact in vegetable physiology which he believes to be of incalculable benefit to all who live by tilling the soil. In LOUDON'S "Encyclopedia of Agriculture," he also found a corroboration of the fact, since which time he has, by much labor, wrought the whole into a system, which is as universal in its application as are the plants which are subject to this newly discovered law.

Picking up a small peach tree, he will go on to illustrate that, at the point where the root merges into the tree, the point between the ground and the air, is what may be called the *seat of life* in the plant, or tree. If this *seat of life* in planting is set too low into the ground, so as to be covered up, the tap root dies; the tree from being a seedling becomes a sucker, merely an offshoot from the original tree—forming roots above the "seat of life," which changes its nature, and subjects its to all the blighting diseases of which farmers and horticulturists so much complain. This principle he applies to every tree and plant; and, by some process of reasoning unintelligible to common comprehension, insists that the same effects are very sure to follow any departure from the rule, by either putting in trees or plants too deep, or not setting them far enough into the ground.

Should some hearer, less credulous than any other, venture to ask an explanation, or the application of the discovery to any plant not before named, the Professor is sure to give all the facts before related, winding up with an exhibition of some of his favorite trees.

The prevention of the potatoe rot, raising wheat without winter-killing, and many of his theories concerning growing crops, are but efforts to make the system of cultivation conform to the great mystery of the "*seat of life*." The burden of his discovery is, that Nature terra cultures,—therefore, follow Nature. Trees for fruit or ornament need no trimming or cultivation, more than to let them grow as nature designed.

Such is, substantially, the whole theory of "Terra-Culture;" and should the reader consider it a "most lame and impotent" affair, we shall not attempt to controvert his conclusion. H. C. W.

### FARMERS' CLUBS.

EDS. RURAL:—I have been a subscriber to your interesting and valuable paper but a short time, but I must say, I like it; and I wish that every farmer and his family in our country had a taste for just such reading as it contains. I think your promise to improve, if possible, with the new volume, has been well kept, as each succeeding number seems of increased interest.

I have read with much interest, your remarks on the formation of Farmers' Clubs, (vol. 3, No. 45;) also those of the Farmers' Companion, in addition to yours. Most heartly do I agree with you both, that the formation of such associations would be interesting and useful to all concerned. But with your permission I propose to suggest an improvement which might be applied, I think, with much benefit to the Club proposed by yourself and also that of the Companion. To make clear what I wish to say on this point, I will simply state the process of forming a Farmers' Club, which I would like to see formed in every rural district in our State and country.

Let a dozen or more farmers in any neighborhood meet at the house of one of their number, and organize themselves into an association for mutual improvement, (to be called the Social Farmers' Club of the Town, &c.) Let the conditions be that each one, on becoming a member, shall pay the sum of $2, $3 or $5 annually. This fee to constitute a fund to be expended in subscriptions for agricultural publications, for the benefit of the Club, of which the RURAL should be one, together with the whole list given in a recent number, under the head of "Agricultural Exchanges," and many others. Now would not this be an improvement? as it would form a kind of circulating library, the papers being exchanged as soon as read. In this way each member would obtain five or ten times as much agricultural reading as otherwise he would feel able to take.

The meetings should be commenced about the 1st of November, and continued weekly till April, when they could be dispensed with till the next fall. Each member should take his wife, and if possible attend all the meetings. Let them assemble in the afternoon, all take tea and spend the evening. Each one in turn entertaining the Club at his own house. A Chairman, Secretary and Treasurer would constitute the officers. Some question relating to the farmers' profession (being proposed at a previous meeting,) should be discussed, in which all the members will be expected to take part. The ladies, in the mean time, if they do not care to take part or listen to the debate, can retire to one of the parlors, and debate questions of their own invention. Before leaving, let the stock and premises be viewed, and all the improvements about, and others suggested, if there be room for any.

A thousand questions relating to agriculture will suggest themselves for conversation and discussion, and it would really seem that any one might be improved by such interchange of ideas. Another very important thing gained by such Farmers' Clubs would be a social friendly visit, of which all our farmers are more or less fond. It would not interfere with any man's business, or with any existing Agricultural Society, but might be an auxiliary to both.

Come then, farmers, let us hear of the formation of scores of Farmers' Clubs yet this winter, and let your Secretaries report for publication all new ideas suggested, or old ones that would seem to be of interest.

J. C. ABBOTT.

Richfield Springs, N. Y., Feb. 10, 1853.

SOUTH DOWN SHEEP, OWNED BY WM. RIGDEN, BRIGHTON, ENGLAND,

FOR WHICH THE FIRST PRIZE ($100 AND SILVER MEDAL.) WAS AWARDED AT THE SMITHFIELD CLUB CATTLE SHOW.

Our engraving above represents three superior specimens of South-Down sheep—the very "perfection of the article"—and illustrates what has been and may again be accomplished by judicious management and long continued care and attention. The South-Downs are rapidly gaining favor in this country, as they are easily acclimated, and their mutton is generally considered superior to that of larger breeds. We give below a description of the perfect South-Down by Mr. ELLMAN, the founder of the improved breed:

The head small and hornless; the face speckled or gray, and neither too long nor too short: the lips thin, and the space between the nose and the eyes narrow; the under jaw or chap fine and thin: the ears tolerably wide and well covered with wool, and the forehead also, and the whole space between the ears well protected by it as a defence against the fly.

The eye full and bright but not prominent. The orbits of the eye, the eye-cap or bone not too projecting, that it may not form a fatal obstacle in lambing.

The neck of a medium length, thin toward the head, but enlarging toward the shoulders, where it should be broad and high and straight in its whole course above and below. The breast should be wide, deep, and projecting forward between the fore-legs, indicating a good constitution and a disposition to thrive. Corresponding with this, the shoulders should be on a level with the back, and not too wide above; they should bow outward from the top to the breast, indicating a springing rib beneath, and leaving room for it.

The ribs coming out horizontally from the spine, and extending far backward, and the last rib projecting more than others, the back flat from the shoulders to the setting on of the tail; the loin broad and flat; the rump broad and the tail set on high, and nearly on a level with the spine. The hips wide; the space between them and the last rib on either side as narrow as possible, and the ribs generally presenting a circular form like a barrel. The belly as straight as the back.

The legs neither too long nor too short; the fore-legs straight from the breast to the foot: not bending inward at the knee, and standing far apart both before and behind; the hock having a direction rather outward, and the twist, or the meeting of the thighs behind, being particularly full; the bones fine, yet having no appearance of weakness, and of a speckled or dark color.

The belly well defended with wool, and the wool coming down before and behind to the knee and to the hock; the wool short, close, curled and fine, and free from spiry projecting fibres. These characteristics constitute a perfect South Down.

### CONDENSED CORRESPONDENCE.

#### A Carrot Story.

FRIEND MOORE:—I am compelled by the duty I owe to the people of this world and the rest of mankind, to again urge upon farmers the importance of raising carrots. I sowed last spring seventy-two rods of ground to carrots, and I raised 350 bushels. I could now sell them for twenty-five cents per bushel, a trifle over $82. The seed cost $1.25, the labor of fitting the ground, sowing, tending and digging, cost $20; deduct that from $82 and you have $60,75 for the use of the land. This will pay for the land at $135 per acre. There may be something more profitable, but I am contented with this.

We see by this the decided folly of paying $50 to $100 per acre for a farm, and then running over and half tilling, in the usual way. Manure well, plow very deep, ridge twenty inches apart, sow with a drill in the top of the ridges, and keep the ground *perfectly clean* through the season. Take this course and death and destruction awaits every Canada Thistle. By the by, mine was only about one-half or two-thirds of a crop. —JOEL HOUGHTON. *Adam's Basin, N. Y., February, 1853.*

#### Indian Corn as a Green Manure.

EDS. RURAL:—Farmers are endeavoring to enrich their wheat lands by plowing under various green substances, such as clover, buckwheat, &c.,—generally leaving Indian corn out of the question. We hear sometimes of their land being *clover-sick*, having been sown to this crop until it fails to produce its usual effect, making some different course necessary. Would not a change to green corn, which on good land will produce

GOOD HOGS.—The Batavia Times says that Mr. GEO. COLE, of Alabama, recently sold ten hogs of his own raising, in that village, the aggregate weight of which was 4,833 lbs., averaging 483 lbs. each. The heaviest weighed 572, and the lightest 438. The Times says: "The hogs were very fat—neatly butchered, and altogether, considering the number, it is the finest, heaviest, and best specimen of pork, raised by one man, ever seen in this market, and produced more money to the owner than any ten hogs ever sold here." Mr. COLE intends doing somothing larger next year.

PASSION has its foundation in nature; virtue is acquired by the improvement of our reason.

fifteen or twenty tons of stalks to the acre, be a good one? It may be sown with a drill, every other tooth down — which leaves the rows eighteen inches apart, and takes five pecks of seed to the acre — from the 1st to the 8th of June.

If any one doubts this, let him satisfy himself by sowing a few acres the coming season. Plow it under the last of August or 1st of September: roll thoroughly, then harrow lengthwise of the furrows, and sow to wheat in due season. Those clover-sick lands will be cured effectually, we predict.

Were my word law, every farmer in the State cultivating ten or more acres of land, would be required to sow a portion of it to corn, to cut as green fodder for his cows and farm teams. A greater amount of pasturage can be procured cheaper in this way than n any other.—O. M. BAKER, *East Gaines, N. Y., Feb.* 11, 1853.

### Plan, for a Corn Crib.—Rats.

EDITORS RURAL:—Mr. W. N., of Albama. asks in your paper, how he shall head off the rats from his corn crib. I will tell him and the rest of your many readers how mine is built, and if they will do likewise they will not be troubled any more with rats or mice in their corn. Take 3 by 4 scantling 9 feet long for the back and 9 ft. 10 inches for the front; frame through 2 feet from the bottom; sills of the same size 6 feet long. frame cross pieces on the top to keep it from spreading and to serve as rafters for the roof. Set these 3 feet apart on stones, cover bottom and sides with fence boards, one inch apart; secure a sheet of tin, which will cost about eight cents, around each post close below the sills; set the crib east and west, it will be less exposed to the wind; build any length you wish. There should be two doors for every 12 ft. of crib on the highest side of the crib, the one you wish to unload at, to let down whilst filling, some three feet wide. Always sort your corn in the field, then drive your wagon along side and scoop the corn into the crib. You will of course arrange a door at the bottom of one or both ends of the crib to take the corn out, and will likewise place it as near the barn door as convenient for the purpose of shelling. It must not stand near a fence or building, you must never put any thing under or against it, and, my word for it, you will never have a rat or a mouse in your crib.—S. GILLETT. *Stafford, N. Y.,*

### Feeding Chess to Sheep, &c.

ENS. RURAL:—D. D. S., Clarkson, N. Y., inquires in regard to the effect of chess in producing abortion in Cows and Sheep.—Early in February, 1849. I purchased 118 ewes, quite thin in flesh, and at once commenced feeding some twenty bushels of chess, which had been separated from a damaged wheat crop.—afterwards I gave them buck-wheat till spring. The Sheep did remarkably well, and in spite of storms, crows, and other misfortunes, 109 lambs were saved. During the time of feeding chess, about three weeks I think, two ewes slipped their lambs, but I did not then think it was owing to the chess, and do not now. Every shepherd is aware that this misfortune will sometimes occur in flocks, for reasons which he cannot satisfacturily solve. D. D. S. ought not to raise chess in his wheat, (the writer does not now,) but if that is his, or his neighbors practice, I do not think they need fear to feed it.—W. B. P., *Prattsburgh, N. Y., Feb.* 14, 1853.

### "Honor to whom Honor is due."

MESSRS EDITORS:—"Tax Payers" in No. 7 of present vol., seems ignorant of the object for which the "Dog Law" was designed, viz, to make dogs pay their own way, taken in a mass. But I fear the law is not of that high moral tone it should be. Dogs, like animals of a taller growth are not all of equal respectability. The Board of Supervisors, our local "Legisture," reversing the old maxim, "those who dance must pay the fiddler," impose a tax upon the upright to pay for the "sprees" of the doers of evil. Carlo goes of an evening, into Pink's master's sheep pen, kills, dresses and eats a hearty meal of mutton, and poor little Pink, who did all he could to prevent the foul deed, sees the identical money he paid as a poll tax, paid back to him for Carlo's supper. — THEODORE, *Spencerport, N. Y.*

### Liquid Manure, Stables, &c.

Mr. EDITOR:—Can you give through the columns of the RURAL the most efficient plan for saving the liquid manure of animals, and how to construct a stable with reference to that object in the absence of a convenient location for a cellar? Would a tank made under the barn, pay, and what would be the best mode of constructing it? —D. W. J.—*Lockport, N. Y.*, Feb. 14, 1853.

REMARKS.—We shall commence, probably next week, the publication of a valuable Essay on the use of Liquid Manures in European Agriculture. Any of our correspondents who have made experiments in saving or applying such manure, would confer a favor by giving the information desired.—EDS.

### Red Cedar Hedges.—Inquiry.

EDS. RURAL:—I saw in No. 6 of present volume, an article on Red Cedar for farm fences. I for one would like to know more on the natural habits of the tree—whether it is of fast or slow growth, and how it is propagated. I hope your correspondent will give us more light on the matter.—S. L., *Van Buren, N. Y., Feb.*, 1853.

REMARKS.—Our correspondent referred to, is on his way to California, from whence we expect to hear from him, but meanwhile information from others on this subject, will be gladly received.—EDS.

## AGRICULTURAL INTELLIGENCE.

### County Agricultural Societies.

TOMKPKINS CO.—The officers for 1853 are the following:

President—J. R. SPEED, Caroline.

Vice President—S. H. Purdy, Ithaca; S. Robertson, Dryden; C. Purdy, Enfidid: J. Woodward, Hector; W. C. Woodworth, Ulysses; Levi C. Beers, Danby; James Puff, Newfield; J. P. Hart, Groton; Charles Merrell, Lansing; D. C. Roe, Caroline;

Corresponding Secretary—Alfred Wells.

Treasurer—Norman Crittenden.

Secretary—N. Crittenden.

ESSEX COUNTY.—Officers of the society for the present year:

President—WINSLOW C. WATSON, Port Kent.

Vice Presidents—David Judd, Elizabethtown: Harry Gliddon, Elizabethtown: Norman Page, Chesterfield: Chilion A. Trible, Crown Point: William S. Flack, Essex: Monroe Hall, Jay: Phineas Norton, Keene: Brewsser M. Hodskins, Lewis: Absalom P. Morse, Minerva: George W. Goff, Moriah: Alexander Ralph, Newcomb; Daniel Ames North Elba: Jacob Parmerler, North Hudson: James H. Pierce, St. Armand: Erastus B. Potter, Schoon; Thomas Delano, Ticonderoga; Samuel Root, Westport: Paul B. Boynton, Willsborough; Artemas Beach, Wilmington.

Secretary—George S. Nicholson, Elizabethtown.

Treasurer—Levi D. Drown, Elizabethtown.

SARATOGA CO.—As the next State Fair is to be held here, we give the Executive Committee in full.

President—SILAS G. SMITH, Stillwater.

Vice Presidents—Samuel G. Eddy, Stillwater; Jessee H. Mead, Galway.

Treasurer—Reuben S. Burtis, Halfmoon.

Corresponding Secretary—Cramer Vernam, Mechanicsville.

Rec. Secretary--J. A. Corey, Saratoga Springs.

Executive Committee—Arnold Harris, H. P Woolley, Ballston; John Gilchrist, Thos. Low, Charlton; R. R. Kennedy, N. C. Sweet, Clifton Park; A. B. Martin, J. Ellworth, Corinth; Charles Rockwell, Z. I. Delong, Day; Ira Beecher, Samuel Bachellor, Edinburgh: James Fuller, John Whiteside, Galway: G. L. Waring, John Gilford, Greenfield; W. W. Rockwell, Jas. Myers, Hadly; Lewis E. Smith, A. S. Comstock, Wilton.

DELAWARE COUNTY.—Officers of the Delaware Co. Agricultural Society, for 1853:

President—SAMUEL A. LAW, Meredith.

Vice Presidents—Martin Keeler, Jr., Kortright; Geoge D. Wheeler, Deposit; Hiram Olmstead, Walton; Henry Dowie, Andes; Silas White, Franklin N. M. Blish, Stamford; and Alex. Mable, Delhi.

Secretary—Alfred Redfield, Delhi.

Treasurer—M. L. Farrington, Delhi.

RESULTS OF DRAINING.—It has been remarked that, "to apply manure to undrained land is to throw money away," an illustration of which is furnished by a statement in the Transactions of the New York State Agricultural Society, where seven acres of low wet land, manured annually at the rate of 25 loads to the acre; produced 31 bushels of oats per acre, bu., after being thoroughly underdrained at a cost of about 60 dollars for the whole, the first crop of oats, without manure, was 89½ bushels per acre.

## THE AGRICULTURAL PRESS.

### Carrots for Cows and Horses.

A CORRESPONDENT of the Hancock Courier, who says he has much experience in the management of farm stock in one of the best grazing districts of New York, thus replies to an article, copied from the Western Agriculturist, against the use of carrots as food for cows:

To convince the writer of the error his prejudice may have led him into on the subject of carrots, I wish him to observe, in any experiment of using them for milch cows, that if he will follow the rule of feeding the roots sprinkled with salt, to his cows, directly after milking, morning and evening, he will find his butter have a bright yellow color, a richer flavor than when fed on ordinary food, and entirely free from the "carroty taste" of which he complains, and the cows will give more and richer milk than when fed on any other food. The cows, of course, must have access to good hay or pasture at the same time. Before farmers condemn so valuable a root, as food for stock of any kind, they should experiment and ascertain its excellent qualities, else they may throw error broadcast upon the world, to the injury of others, who might have been materially benefited. For let it be borne in mind that by proper cultivation *one thousand bushels* of carrots may be raised on one acre.

L. Cook, of Windall, Mass., says:

I have always believed them worth as much as oats, by the bushel, to feed horses, which are the only animals I keep. Four or five tons of them I sold at from $12 to $15 per ton; at $12 I could sell them all any day, and the sum would amount to $192. Add to this $4, a sum for which I sold the tops as they lay in the field, and four more dollars which I hope to get as premium, and the sum would amount to $200. Deduct from this $75 paid for labor, and $25 more for the cost of seed and my own care and skill—the last being a charge I make from habit—and it will leave $100 as the net income from the three-fourths of an acre.

### Silesian Merinoes.

THE following well-put and pithy article is from the *Wool Grower and Stock Register* for Febuary:

"What's in a name?"

MR. EDITOR:—A beautiful daguerreotype representation of four Silesian Merinos, adorns the pages of your Oct. No. They are, to my fancy, the very beau ideal of perfect sheep; and are moreover, the fac simile of some superior animals bred and cultivated in this section of the State. But what breed of sheep does a New York farmer possess, that can so closely resemble the beautiful models of the Silesian Merinos? Well, at the hazard even of "losing caste," I will venture to proclaim it. They, too, are Merinos. But instead of the prefix of Silesian, they have that of Saxon. They are Saxon Merinos,—pure, unmixed Saxon Merinos. And the name of Saxon, I suppose is alone sufficient to condemn them, in the estimation of many of your readers.

But mark me, Sir;—I am not going to recommend them to the farmer:—no such thing. I merely design to state a few facts in vindication of this abused race: and intend to urge sincerely and strongly, the culture and high estimation of the Silesian Merino. I am persuaded from the representation and account of this breed, that they are the perfection of the article; complete in form, beautiful in fleece, and satisfactory in constitution and size,—their weight being about 100 lbs., and their fleeces from 4½ to 6 lbs. This probably, is about the the natural standard of selected sheep;—attained and maintained by fair, reasonable, proper care. There seems to be nothing artificial about them;—no hot-bed influence to bring them up to their present standard. The care, skill and attention exercised by any one who merits the title of a good husbandman, will doubtless maintain their present character.

Not so, in my view, with the French Merinos. They have been forced, as I think, beyond their natural constitutional tendencies, to a point as to size and fattening propensities, that cannot be maintained, by such attention and skill as they will receive at the hands of our ordinary farmers.

The proprietors of these foreign sheep proclaim the fact that the Spanish and Saxon sheep have declined in this country, from their original position almost to a state of comparative worthlessness.—Suppose we allow this. With the same want of perseverence and skill in breeding, where, I ask, will the French and Silesian Merinos be, a few years hence? And what reason have we to expect better attention to them than to their Spanish and Saxon predecessors.

The public spirited importers of these foreign sheep, have, at great expense, traversed the Atlantic twice 3,000 miles;—and traveled twice 1,000 miles, more or less, through France, Spain and Germany, and have ultimately found, at a high cost, in the culture of a skillful, persevering breeder, the Silesian Merino. Well, Mr. Editor, I can take you in thirty minutes ride from the table on which I now write, and show you a flock of 60 or more Saxon Merino ewes,—pure bloods—derived from ewes bought at large prices, in New York and Boston, at the importers auction sales, and bucks purchased at same time at $100 to $300 each.—The blood has been kept pure as the Silesian farmer has kept his; and as to size, they weigh from 80 to over 100 lbs., and yield 4½ to 6 lbs. clean washed wool, that cannot be surpassed for beauty and fineness, by any wool imported from Germany or Australia. Not a buck has been used or purchased from any other flocks, for 25 years.

I have made these suggestions, merely to illustrate the fact, that skill and perseverence will preserve and continue all the characteristic excellencies of the Saxon, and consequently of the Spanish Merino; and thus exhibit the true cause of the decline of our fine wooled sheep, during the past 15 or 20 years. I trust it may impress the conviction, that the splended French, and beautiful Silesian sheep, will be comparatively worthless in a few years, experiencing the same neglect to which the Saxons have been subjected.

A new thing interests and pleases. For a while the French and Silesian sheep will be popular, and receive merited attention. But when some new object or interest attracts notice, they will be neglected, and begin to decline.

But where is Silesia? It would not do to import Saxon sheep. The name alone would be fatal to the enterprise. Silesia is in the north-eastern portion of Germany, and lies along the line of Saxony, side by side, seperated only by an imaginary line. Now the Silesian sheep are no more like the Saxon sheep, although both are derived from the Spanish Merino, and many have been reared from five to fifty miles apart, than Monroe county sheep would be like Livingston county sheep, both counties lying side by side, and the sheep derived from one common stock, and reared perhaps five to fifty miles apart. Verily, Mr. Editor, "What is there not, in a name?"

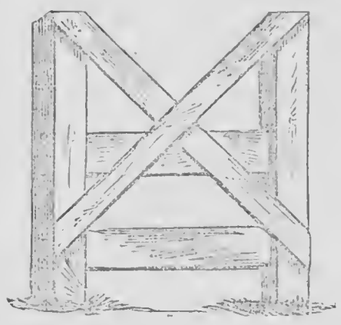
FARMER D.

### Feeding Boxes for Sheep and Cattle.

IN answer to an inquiry in the Genesee Farmer, Mr. S. JEWETT, of Middlebury Vt., furnishes the annexed drawings and description of a feeding rack and box for sheep and cattle — the best within his knowledge.—Such matters are in season, just now, and these may meet the wants of some of our readers:

SHEEP-RACK.

The sheep-rack is the same as used in France, under cover, and is fastened to the building. I use them altogether now, and consider them superior to all others which I have seen. They are built similar to the common horse-rack and manger. The trough in front of the rack is to catch the hay that may drop from the rack, and for feeding them their grain. It stands two feet high, and is seven inches wide on the bottom.—The slats, or uprights, are of good oak timber two inches wide, three-fourths of an inch thick, and twenty-six inches long. They stand three inches apart in the rack. No hay is wasted in this manner, and the wool is not worn off the head and neck of the sheep.



FEEDING BOX FOR CATTLE.

The box for cattle stands in the open yard, and is well constructed to feed poor hay, straw and other coarse fodder. It is six feet square, and the four posts the same in height. The four sides alike. It will be seen that four cattle can eat out of the box, one on each side; and as their heads come in competition, it makes them more greedy. By this means they work up considerable coarse fodder during the day.

### Reclaiming Swamp Lands.

THE *N. Y. Tribune* has an article on this subject, called out by an inquiry of Mr. GREELY, from which we extract the following:

To reclaim these lands, the chief requisites are: first, to drain; secondly, to drain well; thirdly, to drain thoroughly—for unless these lands are well and thoroughly drained, it is useless to expect much improvement. And besides, it pays well to make frequent, ditches, for the proceeds of these drains, conveyed to the uplands, are equal to the best manures. After the lands are sufficiently drained they should be thoroughly broken up. Where the lands will admit, this can be done with the least expense, by the plow; otherwise with the bog hoe, ax and hook. You cannot expect to eradicate the wild grass, brakes and weeds, with their strong roots firmly planted in the soil, by merely bushing over and sowing over a little grass seed: yet I have seen this same thing attempted, and people wondering why they did not succeed. I have usually planted with corn or potatoes one or two years, and then stocked with hay. Two years planting are better than one, and three years better than two; for the wild stuff is better subdued. You inquire how much lime to the acre is necessary, the expense, &c. Most of the New England farmers have not the means for purchasing foreign and expensive manures, and have to depend upon their own resources. Ashes, made from burning the bogs, roots, &c., found in the swamps, with what wood ashes are made at the house, afford a good substitute for lime, and I am fully of the opinion for neutralising the soil and for supplying the necessary alkalies, are far preferable.

Our necessities call out our inventive faculties, and force us to depend upon such materials as we may have in our possession, and we are thus enabled to make a good poudrette from our night soil, pure guano from our henneries, and phosphates from the bones of the kitchen. A good absorbent and deodoniser may be obtained by sifting the charcoal from wood askes and charred peat, both of which are good substitutes for plaster, (gypsum) and at trifling expense. The only article that seems necessary to purchase for manure in the interim is salt, and this may be supplied, to a considerable extent, from waste brine, &c. Salt and brine, the residuum of fish (pickled) can usually be purchased of almost every country merchant at a trifling expense.

These waste lands, once thoroughly reclaimed, are invaluable, for they are capable of producing a succession of good crops without the aid of cultivation or manures. One piece that I have taken good crops of grass from, for some five years, actually produces a larger crop every season it is mowed. A little attention to the clearing out the ditches once in three or four years is all the care necessary, and this pays well to cart upon the upland to manure the plow fields, or for a top-dressing to the moorings.

### An Enormous Corn Crop.

EIGHT *hundred bushels* of shelled corn and *twenty* tons of superior pumpkins are certified, by *estimate* from measuring a portion of the field, as the yield of *five* acres of land in Susquehanna Co., Pa. It was grown by GEO. WALKER, and took the first premium of the Pa. State Agricultural Society at its Fair for 1852. Mr. W. makes the following estatment to the Society:

I plowed *five acres* of green sward, for corn, the beginning of May, and hauled one hundred loads of manure on the same.—After the manure was spread the ground was well harrowed, and planted the last of May, in rows 3½ feet apart, running north and south, and 3 feet apart in the rows, running east and west; from three to five grains in the hill. Two bushels of lime, mixed with three bushels of plaster, was applied to said five acres very soon after it came up. A plow did not enter the field after the corn was planted. The ground was kept loose and mellow, and the grass and weeds subdued by the use of the cultivator, making but little use of the hand hoe. A specimen of the corn was exhibited at the State Fair at Lancaster, in October, being of the white flint species, eight rowed, small cob and long ears, more than one foot in length.

In addition to the enormous yield of *one hundred and sixty bushels to the acre* of shelled corn, the same field, containing five acres, produced twenty tons of superior pumpkins, some of which weighed more than 41 pounds. Said field is situated on one of the highest hills in Susquehanna county, being an oak, pine, beech and sugar maple ridge—soil a sandy loam.

The Society should have required actual measurement both of the land and entire product, so as to substantiate this remarkable crop, beyond question.

## THE GREAT DISCOVERY IN VEGETATION.

BY THE LATE A. J. DOWNING.

IT is one of the misfortunes of an editor to be expected to answer all questions, as if he were an oracle. It is all pleasant enough when his correspondent is lost in the woods, and he can speedily set him right, or when he is groping in some dark passage that only needs the glimmer of his farthing candle of experience, to make the way tolerably clear to him. But correspondents are often unreasonable, and ask for what is little short of a miracle. It is clear that an editor is not only expected to know everything, but that he is not to be allowed the comfort of belonging to any secret societies, or any of those little fraternities where such a charming air of mystery is thrown over the commonest subjects.

We are brought to these reflections by a letter that has just come before us, and which runs as follows:

DEAR SIR—I have been expecting in the last two numbers, to hear from you on the subject of the great discovery in vegetation, which was laid before the committee of the State Agricultural Society at its annual meeting in January last. You were, if I mistake not, a member of that committee, and of course, the fullest disclosures of the secret of the genl. man who claims to have found out a new "principle in vegetation," were laid before you. No formal report, has, I think, been published by the Society. The public are, there ore, in the dark still Is this right, when the discoverer is now urging the legislature of this state to pass a bill giving him a bonus of $150,000 to make his secret public, for the benefit of all cultivators of the soil? Either the thing is pure humbug, or there is something in it worthy of attention. Pray enlighten us on this subject? Yours, &c.

Yes, we were upon that committee, and nothing would give us greater pleasure than to unburden our heart to the public on this subject, and rid our bosom of this "perilous stuff" that has weighed upon us ever since. But alas! this gentleman who has been urging his great discovery upon the attention of congress and the legislature for ten or twelve years past, put all the committee under a solemn vow of secrecy, though we protested at the time against his expecting that a horticultural editor should preserve silence touching anything that is told him *sub rosa*.

And yet we would not treat our correspondent rudely—for his letter only expresses what a good many others have expressed to us verbally. We shall, therefore, endeavor to console him for the want of the learned dissertation on vegetable physiology which he no doubt expected, by telling him a story.

Once on a time there was a little spaniel who lived only for the good of his race.—He had a mild countenance, and looked at the first, enough like other dogs. But for all that he was an oddity. Year in and year out, this little spaniel wandered about with a wise look, like the men that gaze at the stars through the great telescopes. The fact was, he had taken it into his head that he was a philosopher, and had discovered a

great secret. This was no less than the secret of *instinct* by which dogs do so many wonderful things, that some men with all their big looks, their learning, yes, and even their wonderful knack of talking, cannot do.

It was curious to see how the little spaniel who had turned philosopher, gave himself up to this fancy that had got into his head. He had a comfortable kennel, where he might have been well fed, and had a jolly time of it like other dogs.

But no, he was far too wise for that. He had, as he said, found out something that would alter the whole "platform" on which dogs stood, something that would help them to carry their heads higher than many men he could name, instead of being obliged to play second fiddle to the horse. If the community of dogs in general would but listen to him, he would teach them not only how to be always wise and rich, how to be strong and hearty, but above all, how to preserve their scent—for the scent is a pleasure that dogs prize as much as some old ladies who take snuff. In short, the knowledge of this wonderful discovery would bring about a canine millennium—for he assured them that not only was every one of them entitled to his "day," but that "a good time was coming," even for dogs.

And why, you will say, did not our philosopher divulge for the benefit of the whole family of dogs? "It is so pleasant to do something for the elevation of our race," as the traveled monkey thought when he was teaching his brothers to walk on their hind legs. All the dogs in the country could not but owe him a debt of gratitude, since they would soon become so wise that they might even teach their masters something of instinct. And then they would be so happy—since there would not be a downcast tail in all the land—for the whole country would be in one perpetual wag of delight.

Ah! dear reader, we see that you, who put such questions, know nothing either of philosophy, or the world. As if the people who discover why the world turns round, and the stars shine, throw their knowledge into the street for every dog to trample on. No, indeed! They will have a patent for it, or a great sum of money from the government, or something of that sort. It would be a sorry fellow who should think that every new thing found out is to be given away to every body for nothing at all, in that manner. To be sure, it would, perhaps, benefit mankind all the more, but that is only half the question. "If you think the moon is made of green cheese," said our curly philosopher to his friends, "you are greatly mistaken. I am well satisfied, for my part, that that is only a vulgar error. If it had been, JOHN BULL would have eaten it up for lunch a long time ago."

So our philosopher went about among his fellow dogs, far and near, and spent most of his little patrimony in waiting on distinguished mastiffs, Newfoundlands, and curs of high degree. He went, also, to all conventions or public assemblies, where wise terriers were in the habit of putting their heads together for the public good. Wherever he went, you would see him holding some poor victim by the button, expounding his great secret, and showing how the progress, yes, and the very existence of dogs, depended upon the knowledge of his *secret*—since it would really explain in a moment everything that had been dark since the days when their great-grandfather were kept from drowning in the ark. Only let the congress of greyhounds agree to pay him a million of money, and he would make known principles that would make the distemper cease, and all the other ills that dog-flesh is heir to, fade clean out of memory.

Some of the big dogs to whom he told his secret, (always, remember, in the strictest confidence,) shook their heads, and looked wise; others, to get rid of his endless lectures, gave him a certificate, saying that Solomon was wrong when he said there was nothing new under the sun: and all agreed that there was no denying that there is *something* in it, though they could not exactly say it was a new discovery.

Finally, after a long time spent in lobbying, and after wise talks with all the members that would listen to him, yes, and after exhibiting to every dog that had an hour to give him, his collection of dogs' bones that had died solely because of the lamentable ignorance of his secret in dog-dom, he found a committee that took hold of his doctrine in good earnest—quite determined to do justice to him, and vote him a million if he deserved it, but, nevertheless, quite determined not to be humbugged by any false doggerel, however potent it might have been to terriers less experienced in this current commodity of many modern philosophers.

It was a long story, that the committee were obliged to hear, and there were plenty of hard words thrown in to puzzle terriers who might not have had a scientific education seized in their youth. But the dogs on the committee were not to be puzzled; they hold of the fundamental principle of the philosophic spaniel, tossed it, and worried it, and shook it, till it stood out, at last, quite a simple truth, (how beautiful is deep philosophy,) and it was this—

THE GREAT SECRET *of perfect instinct in dogs, is* TO KEEP THEIR NOSES COOL.

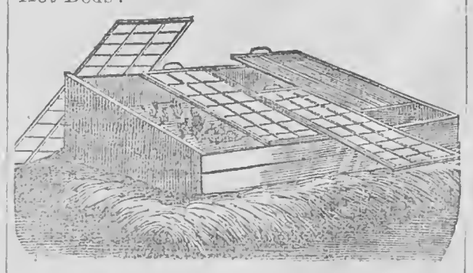
Of course, the majority of the committee were startled and delighted with the novelty and grandeur of the discovery. There were, to be sure, a few who had the foolhardiness to remark, that the thing was *not* new, and had been acted upon, time, out of mind, in all good kennels. But the philosopher soon put down such nonsense, by observing that the fact might, perchance, have been known to a few, but who, before him, had ever shown the PRINCIPLE of the thing?

And now, we should like to see that cur who shall dare to say the canine philosopher who has spent his life in studying nature and the books, to such good results, shall not have a million for his discovery?—*Horticulturist for* 1851, p. 153.

# Orchard and Garden.

## HOW TO MAKE A HOT BED.

THOUGH little explanation seems necessary after an examination of the annexed engraving, yet we will give condensed directions for the formation and management of Hot Beds:



The frame of the hot bed is made of two inch plank, nailed to upright posts in each corner. Ten feet long and six feet wide is a good size—the back may be 30 inches high and the front one-half that, to give a proper slope of roof for shedding rain and throwing the light and heat upon the plants. For the sashes to rest and slide upon, a strip 6 inches wide is placed across the frame, even with the edge of the same. The sashes are made in the ordinary way, but without cross bars; and the panes of glass are set to lap on each other one-fourth of an inch, so as to shed the rain. For the preparation of the bed we find the following directions given by Mr. BARRY:

Hot beds should occupy a dry situation, where they will not be affected by the lodgment of water during rains or thaws. They should be exposed to the east and south, and be protected by fences or buildings from the north and northwest.

Where it is intended to merely grow plants for transplanting to the garden they may be sunk in the ground to the depth of 18 inches, and in such a case require not more than 2 feet of manure; but when forcing and perfecting vegetables is designed, a permanent heat must be kept up, and the bed must be made on the surface, so that fresh and warm manure may be added when necessary. A depth of three to four feet of manure will in such cases be wanted. Manure for hot beds requires some preparation. It should be fresh stable manure, placed in a heap, and turned and mixed several times, promoting a regular fermentation. It is thus made to retain its heat a long time; otherwise it would burn and dry up, and become useless.

The mold should be laid on as soon as the bed is settled, and has a lively regular-tempered heat. Lay the earth evenly over the dung about six inches deep. Radishes and lettuce require about a foot of earth. After it has lain a few days it will be fit to receive your plants, unless the mold has turned to a whitish color or has a rank smell, in which case add some fresh mold for the hills, at the same time vacancies should be made to give vent to the steam, by running down stakes.

Those who wish to force cucumbers, &c., should begin, if the weather is favorable by the first of March. For raising plants, the middle is time enough.

## WHEN TO PRUNE.

A CORRESPONDENT has furnished us with the following text: "At what times in the year should the different kinds of pruning be performed, in the cold latitudes of the north and in the milder climates of the south?"

We hold that pruning in general, in our northern climates, is safest after the severe frosts of winter are over, immediately before the swelling of the buds. When performed early in the winter, or in the autumn, as is practiced properly in mild climates, the ends of the cut shoots dry up, shrivel and die: losing the buds intended to make leading shoots, and leaving dead points that require much labor to prune off afterwards; or if large branches are cut off, leaving a broad, fresh surface, the wood and bark dry up and require a long time to heal. We perform most of our pruning in the month of March, although a great deal of the less exact nursery pruning is done in February. Southward, as the winter is mild and spring early, we should prefer pruning very early in the winter or immediately after the fall of the leaf, because *activity* in the functions of the tree commences early, or scarcely ceases, as we must believe it does during out intensely cold weather, and by pruning early we economise the sap and strength of the tree.

"*Pruning in the season when the leaves are on.*" The only pruning we hold to be sound, safe, and commendable, at this season, is that of the *finger and thumb*, in other words *pinching*. It is quite inconsistent with good management to rear a crop of good shoots and then cut them away. This can only be avoided by nipping superfluous and misplaced shoots at two or three inches growth, before they attain to woodiness.—This economises the force of the tree and turns it into a channel where it will promote, instead of frustrating the ends we are aiming at. For instance, if we plant a young tree, and have pruned it with a view to a certain form, and contrary to our expectations a shoot breaks out at an unexpected point, and assumes a vigorous habit and robs all other parts, it would evidently be unwise to tolerate this intruder until it arrives at full growth and then cut it away. Too many trees are thus managed, by the neglect of summer pruning or pinching.—We admit, however, that there are cases in which the summer pruning, or entire lopping off or cutting out branches of considerable size, may be judicious and safe. For instance in the case of neglected orchard trees, in a luxuriant state, with dense heads in which the fruit is deprived of air and light. In such cases branches may be thinned out and the cut surface heals over more rapidly and smoothly than at any other time. But it is unsafe to produce any very sensible diminution of foliage, as it arrests the growth of the tree.

All pruning in the growing season, tends to arrest growth. Nurserymen know that a slight pruning of stocks before budding, will so arrest growth as to make the bark adhere freely; when, before the pruning, it lifted freely. It is on this principle that most all pruning, to promote fruitfulness, must be done at a point of a greater or less activity of growth. Late spring pruning is often resorted to as a means of subduing a superabundant vigor, and it has the same effect as root pruning to a certain extent. —*Horticulturist for Jan.*

WHITE BLACKBERRY.—This fruit is noticed in a late number of Hovey's Magazine, by ROBERT MANNING. He says the color is like that of a very ripe Sweetwater grape; shape like the black; berries slightly smaller: flavor good. Its most remarkable property is "its productiveness, in which, (says R. Manning) it far surpasses anything else of the kind I have ever seen. The fruit is borne on long clusters, two of which come from every bud; and on two of these, fifty berries have been counted as the product of a single bud." In consequence of the poor success which has attended all attempts to improve the blackberry by seedlings, R. Manning recommends that it be crossed with this pale variety.

# Domestic Economy.

## "DRIPPING" MARROW BONES.

IT may not be generally known to all our good housewives that nearly all the bones in the body of a fat animal, are "full of marrow," and that a large quantity of the best "dripping" may easily be obtained from them; yet such is the fact. To obtain it, take all the large bones, as those of the legs, the thick parts of the shoulder blade, and those constituting the pelvis, (these three kinds are the best,) and the spine, (the ribs are hardly worth the trouble,) break them up into small fragments, by splitting the thick, or joint ends, breaking the flat portions, &c., put them into a quantity of water, boil them two or three hours, (or longer, if you wish to make soup of the liquid,) and the fluid marrow will be found on the surface, and may be collected at pleasure. The liquid makes an excellent soup, for those who are fond of the article.

H.

ICELAND MOSS.—A lichen, occasionally employed in invalid diet, to form a jelly which possesses certain tonic and nutritive properties. In the sterile island whose name it bears, it is however an important article of food, as a substitute for wheat-flour. It is washed, dried in the sun, and reduced to powder, by stamping in strong bags, after which it only requires sifting to make it applicable to the ordinary purposes of meal or flour. The plant consists of upright leaves, of the peculiar membranous texture common to lichens: these are soft and pliant when moist, but rigid and brittle when dry. The organs of fructification are sprinkled over the exterior surface like small black warts, and the edges of the leaves are fringed with short hairs. The whole plant is smooth and shiny, and inclines to a reddish hue towards the roots.

FOR PICKLING EGGS.—If the following pickle were generally known, it would be more generally used. It is an excellent pickle to be eaten with cold meat, &c. The eggs should be boiled hard (say ten minutes.) and divested of their shells; when *quite cold* put them in jars, and pour over them vinegar (sufficient to quite *cover* them) in which has been boiled the usual spices for pickling, tie the jars down tight, with bladder, and keep them until they begin to change color.

EXCELLENT AND CHEAP CAKE.—Two pounds and a half of flour, three quarters of a pound of sugar, three quarters of a pound of butter, half a pound of currants, or a quarter of a pound of raisins, quarter of a pound of orange peel, two ounces of carraway seeds, half an ounce of ground cinnamon, or ginger, four teaspoonfuls of carbonate of soda, mixed well with rather better than a pint of new milk. The butter must be well melted previous to being mixed with the ingredients.

ECONOMICAL FAMILY PUDDING.—Bruise with a wooden spoon, through a colander, six large or twelve middle-sized boiled potatoes; beat four eggs, mix with a pint of good milk, stir in the potatoes, sugar and seasoning to taste; butter a dish; bake half an hour. This receipt is simple and economical, as it is made of what is wasted in most families, viz., cold potatoes, which may be kept two or three days, till a sufficient quantity is collected. It is a weekly dish at our table. A teaspoonful of Scotch ship marmalade makes a delicious seasoning.

A FEW drops of creosote on brown paper, put in the holes of rats, will drive them away. Nux vomica and oat meal is a sure poison.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending February 15, 1853.

Horatio Allen and D. G. Wells, of New-York, N. Y., for Improved Adjustable Cut-Off Gearing, for Puppet Valve Engines.

John Briggs, of Boston, Mass., for Improvement in Railroad Car Seats.

Darius C. Brown, of Lowell, Mass., for Improvement in Machines for Manufacturing Harnesses for Looms.

Joshua C. Cary, of Richmond, Va., for Improved Adjustable Heading Lever in Spike Machines.

Richard M. Leslie, of Philadelphia, Pa., for Improvement in Paging Books.

Louis F. Shephard, of Alhambra, Ill., for Improvement in Artificial Teeth.

Rand B. White, of Meriden, N. Y., for Improved Saw-Setting Machine.

David and Herman Wolf, of Lebanon, Pa., for Improvement in Seed Planters.

RE-ISSUE.

Edward Hamilton, of Bridgeport, Conn., Assignor to H. B. Goodyear, Administrator of Nelson Goodyear, deceased, for Improvement in Excluding Dust from Railroad Cars. Patented May 27, 1851. Re-issued Feb. 15, 1853.

DESIGN.

Chas. Waterman, of Meriden, Conn., for Design for a Sewing Bird.

## NEW CORN SHELLER.

MESSRS EDITORS:—I have to-day witnessed the operation of an improved Corn Sheller, which is being introduced into this and adjoining States. It is said by judges of such machines, to be a superior article, and seems, to me, to combine simplicity, durability and perfection of work in a greater degree than any which I ever examined.

It is a frame 23 by 30 inches square and about 2½ feet high. The shelling apparatus consists of a horizontal, concave cylinder, 17 inches long, about 10 inches in diameter at the ends, and perhaps 7 in the centre, faced with thick plates of cast iron armed with spiral rows of teeth. Near to the cylinder, and immediately in front of it is a steeply inclined breast beam, on which the cobs pass out at the side of the machine, separated from the corn. Two springs play freely just above the breast beam, which holds the ears against the cylinder until shelled. The springs are independent of each other, thereby enabling it to shell large and small ears at the same moment—they can be regulated by means of a screw, to shell damp or dry corn, at pleasure. It is adapted to hand or horse power—one hand or two, and is said by those who use them, to run as light, with one man to turn, as the common hand shellers. One great and important advantage claimed for this sheller, is the fact that it will shell the ear perfectly clean at the ends; and is capable of shelling from 30 to 50 bushels per hour.

It was patented June 12, 1849, by JACOB MUMMA, living near Mt. Joy, Lancaster Co. Pa., and has been awarded several first premiums at different State Fairs.

Greencastle, Pa., Feb. 1853. E. R

## PENNY WISDOM.

SILVER IN LEAD.—If a ton of lead contains three ounces of silver—one ounce in twelve thousand ounces—will it pay to dig out this silver, mechanically or chemically? Will it save a penny? Mr. Pattinson, a manufacturing chemist at Newcastle, says and shows that it will; although, before his improvements were introduced the attempt was a losing one, unless the lead contained, at least twenty ounces of silver to the ton. Nearly all lead ore contains a trace of silver, which becomes melted and combined in the ingot or pig of lead. Vast are the arrangements which the manufacturers are willing to make to extricate this morsel of silver from the mass in which it is buried; huge furnaces, and melting vessels, and crystalizing vessels are provided, and elaborate processes are carefully conducted. The lead, itself, is all the better for losing its silvery companion: while the silver makes its appearance afterwards in the form of dazzling tea-services, and such like.

COAL DUST.—Coal proprietors are, perhaps necessarily, very wasteful people.—They accumulate around the mouths of their pits large heaps of small coal, which formerly rendered service to no one, and in some parts of the country they burn this coal simply to get rid of it. But thanks to the Legislature, it sometimes does good by interfering in manufacturing affairs. It ordained that locomotives should not send forth streams of smoke into the air, and we are thus freed from a nuisance which sadly effects our river-steamers and our steamer-rivers: while, at the same time, coke being used as a non-smokeable fuel, and the supply from the gas-works being too small, coke-makers have looked to the heaps of small coal at the pit's mouth: and the result is, that thousands of locomotives are now fed with coke made from the small waste coal at the collieries. The railway companies get their coke cheaper than formerly; the coal owner makes something out of a (commercial) nothing; and the ground around the coal-pits is becoming freed from incumbrance. And what the coke makers would leave, if they leave anything, the artificial fuel makers will buy; for in most of the patent fuels now brought under notice coal-dust is one of the ingredients.

GELATINE.—How to get a pennyworth of beauty out of old bones and bits of skin, is a problem which the French gelatine-makers have solved very prettily. Does the reader remember some gorgeous sheets of colored gelatine in the French department of the Great Exhibition? We owed them to the slaughter-houses of Paris. Those establishments are so well organized and conducted, that all the refuse is carefully preserved, to be applied to any purposes for which it may be deemed fitting. Very pure gelatine is made from the waste fragments of skin, bone, tendon, ligature, and gelatinous tissue of the animals slaughtered in the Parisian abattoris: and thin sheets of this gelatine are made to receive very rich and beautiful colors. As a gelatinous liquid, when melted it is used in the dressing of woven stuffs, and in the clarification of wine, and, as a solid, it is cut into threads for the ornamental uses of the confectioner, or made into very thin white and transparent sheets of *paper glaze* for copying drawings, or applied in the making of artificial flowers, or used as a substitute for paper on which gold printing may be executed. In good sooth—when an ox has given us our beef, and our leather, and our tallow, his career of usefulness is by no means ended: we can get a penny out of him as long as there is a scrap of his substance above ground.—*Household Words.*

## STOVES ON STILTS.

WHAT is the philosophy, we should be glad to know, of setting a stove intended to warm the whole body, on stilts? Some are not satisfied with the excessively long shanks with which the manufacturer has endowed them: but forsooth they must put them upon a table, or a pedestal almost as high.—Don't people know, that we do not want to *eat* the fire, but only to use it for the warming of those indispensable parts of the system—the feet? Is it not as absurd to place a fire on a level with the head, as it would be to dump a looking-glass upon the floor for our feet to contemplate their image in?

No, no; the common practice is absurd. Reform it altogether. Hot air ascends.—If the lower stratum in a room is not heated by a fire near the floor, it will not be heated at all. You may have a roaring furnace at the ceiling, and yet all the time an ice-house below. Philosophy is obstinate, and has decided that light, warm air shall float. You cannot, with all your persuasion, coax it to diffuse an agreeable warmth near the floor, where the feet are condemned to be, but by making a fire there. One might as well hope to benefit the humble classes of society by being charitable to the wealthy. You must labor *in the sphere* you intend to help: and if you want to have your feet warm and dry—a very comfortable and salutary thing—you must not put coals of fire on your head, but at the opposite extremity.—*Newark Advertiser.*

## PLASTER CASTS OF LEAVES AND FLOWERS.

THE leaf, as early as convenient after being gathered, is to be laid on fine-grained moist sand, in a perfectly natural position, with that surface uppermost which is to from the east, and to be banked up by sand, in order that it may be perfectly supported.—It is then, by means of a broad camel-hair brush, to be covered over with a thin coating of wax and Burgundy pitch, rendered fluid by heat. The leaf is now to be removed from the sand, and dipped in cold water, the wax becomes hard, and sufficiently tough to allow the leaf to be ripped off, without altering its form. This being done, the wax mould is placed in moist sand, and banked up as the leaf itself was previously; made thin, due care being taken that the plaster be nicely pressed into all the interstices of the mould, by means of a camel-hair brush. As soon as the plaster has set, the warmth thus produced softens the wax, which in consequence of the moisture of the plaster, is prevented from adhering to it, and with a little dexterity it may be rolled up, parting completely from the cast, without injuring it in the least.

Casts obtained in the manner thus described are very perfect, possessing a high relief, and form excellent models, either for the draughtsman or for the moulder of architectural ornaments.—*Scientific American.*

## TANNED GELATINE OR ARTIFICIAL HORN.

A MANUFACTORY has been established in Paris for the construction of a variety of ornamental articles with this substance. The gelatine is usually obtained from bones by treating them with a weak solution of muriatic acid, and is afterwards tanned by the common process, as in making leather.—Upon becoming hard and dry, it assumes the appearance of horn or tortoise-shell, and is employed for the same purposes as those natural productions. It is softened by being boiled in water with potash, when it may be formed into any shape, and the figure preserved by drying the articles between moulds. In the soft state, it may also be inlaid with gold, silver, or other, metals, and it may be streaked with various colored materials, so as to resemble the finest and most beautiful woods. It is probable that this substance will soon be brought very extensively into use, on account of its elegance and cheapness.—*Scientific American.*

THERE is a hog on exhibition at Cincinnati, of such size and fatness, that Professor SOMERINDYKE says that if his tail was lighted and kept properly trimmed, he would burn for a year; and with such brilliancy as to light a large portion of the city. Where's your sperm whale now?

# Educational.

LANGUAGE—NO. 3.

In this communication, I design to introduce a few of the attributes, characters, or qualities of language, that may prove instructive.

1st. *General Principles.*—These are not only found in all languages, but are the same in all. Among these are the agreement of subject and predicate; (Nominative and Verb;) of the attribute; (adjective,) and the thing described or limited; adjuncts, (modifiers of all kinds, adverbs phrases, &c., consisting of a preposition and its object, &c.,) used to explain, limit, or define the word, phrase, or sentiment to which they belong. So far, therefore, as general principles are concerned, all Treatises on Grammar should be constructed alike; and the Rules of Syntax, that relate to this part of grammer, should be essentially the same for every language.

2d. *Peculiarities.*—These are those particular forms of expression, (exceptions to general principles,) that belong only to a particular language, or at most, to few, and are not the same in all. They are, first *Idioms*, or idiomatic forms of expression; i. e, such as occur in our language to the exclusion of others; as the *impersonal* use of the pronoun "it," in such phrases as, "it rains," "it snows," &c. Also that puzzling form of the imperative mode, which Mr MURRAY very classically denominated the imperative of the first or second person; as, "Let me love," "let him love," &c. The *Idioms* of each language being peculiar to itself, require peculiar, or particular rules of syntax; i. e. rules limited to the language to which the Idiom belongs. 2d. Anomalies. These consist of those uncouth terms, "methinks," "methought," "me seems," &c., which, as their name imports being "out-laws," form no part of grammar, and neither are, nor were ever intended to be, subject to any rules of syntax.—The business of the grammarian, therefore, is not to parse them, (they were never intended to be parsed,) but simply to explain and leave them.

Down East, Feb., 1853.

## THE FORCING SYSTEM.

THE Educational Committee of Boston, offer a prize of $250 to the teacher who will present at least two children, averaging less than seven years of age, and who will read and spell the best.

We had thought the forcing, hot-house system was pretty well exploded in the minds of all sensible men; and lo, here it starts up in Boston, the place of all others where we should least have expected it. The competition produced by the public school system in large cities, requires repression rather than stimulation. The struggle in the schools in this city, to produce the most pupils fit for the High School, is rather productive of evil than goood. The mental powers of the pupils—especially of the ablest among them, those who should be rather held in than spurred forward—are tasked to their utmost extent; the hours between school, and the evenings, are employed in study; the grain is prematurely exhausted the physical constitution is enfeebled, and obstructed in its proper development; and the smart child grows at length into a pedantic, feeble and not overly intellectual man.

The great fault of the public schools in this city, and doutless also in Boston, is this undue forcing of the mental powers of the more studious and intelligent children.—And for parents, or their representatives, to offer a premium to induce further forcing, more active stimulation on the part of teachers, shows a degree of folly little short of madness.

Why is it, that intelligent children so often fail to realize in manhood the promise of their youth? Because they are not only allowed, but encouraged, to task their intellects beyond their strength, and to mope in the house over their books during play-hours, when they ought to be out in the fresh air, romping, playing ball, sliding skating, riding, &c.

Take two men of naturally equal mental power. Give one a fine, well-developed physical frame, and the other a weak, puny body, and the result will be, that the former will far outshine the latter in all the pursuits of life. For the brain connected with a vigorous body, partakes of the general vigor of the system, and fed by warm and generous blood, acts with a vividness and an endurance which the brain of a weak, unhealthy man cannot realize.

Therefore, if you would have your children exhibit the full degree of mental power of which their natures are capable, see to it that they have full time and opportunity for active, vigorous sports. Discourage the perpetual round of lessons to be learned out of school, which are the curse of childhood.—Look at your pale, lean, cadaverous children: and rest not till a different course of treatment has restored the color to their cheeks, the roundness and vigor to their limbs.—Even if they do not succeed in getting so much book learning—what of it? They will have something infinitely better—yes, *infinitely* better—"a sound mind in a sound body; which makes able, resolute, high-minded, wise men and women—something far better than mere learned, hopeless fools.

And even as to mere book learning, we are not certain but that they will have more even of this at the age of twenty-five, than if an opposite course had been pursued.—For the mind of a young person, whose physical constitution has been properly developed, acquires all kinds of knowledge very rapidly, and retains it too. We question, for that matter, whether a country boy, who only goes to school for three or four months in the winter, does not learn as much in that time as a city boy does in the whole year.

But in cases where considerable book learning is necessay, as in preparing for a profession, let a good groundwork first be laid in early years, by the development of the physical powers. Let not the weight of study be laid upon the frame until it has been tolerably well developed. And, even then, let the student learn that haste is not always speed. Let him continue to devote several hours each day to the long walk—or, which is much better, (for thinking too often accompanies even rapid walking,) let him ride (not drive,) play quoits or ball, or exercise moderately in a gymnasium. So far from his studies being retarded by such a course, they will be accelerated.

Man is a three-fold being, of body, mind and soul, and vainly do we attempt to cultivate one of his elements to the exclusion of the others. Bodily and spiritual development—health and goodness—are necessary to the proper development of the intellect. If we could build up either body, mind, or soul to the exclusion of its companions, we should build up something more or less a monster, not a true, harmonious, well-developed man. Let every wise parent then see to it that his child receives a proper education in all the three great departments of his nature, and not allow him to be manufactured (as far as possible) into either a mere animal, a mere pedant, or a mere devotee. But strive to make him, by a proper and harmonious cultivation of body, mind and spirit, something more than an animal, as to the physical, something more than a pedant in the intellectual, and something more devout than a devotee in the spiritual—in other words, a perfect, full-proportioned Man.

## THE BEAUTIFUL.

THERE is more true poetry in the following than some writers get into a hundred stanzas of faultless rhymes:

Who loves not a little child's appreciation of the beautiful? Its innocent eyes see what ours, long trained, always fail to notice, the loveliness and perfectness of humble things. We, grown, full of learning and tricked out with fashion, think that to see grand sights we must go to Europe, gaze on Alps towering over Alps, ambitious for the nearer smile of Heaven. Muse in the midst of the sombre splendor that haunts dim cloisters in old cathedrals. Watch the sunbeams braiding their light into wreaths of gorgeous dyes, and hanging them over the grand brow of some ocean iceberg.

Pity we could not borrow the spirit of the little child, and feel that everything made by the Father, whether it kiss the ground, or gem the sky, is well worth seeing, and beautiful of its kind. Pity we had not the faith of "one of these little ones," to read a miracle in the changing dew-drop.

Go where ye will, the broad earth bears the beautiful; it springs like hope from sorrow over the ashes of the dead. It lies nestling upon the bosom of the mother. It is with us when we open our eyes to the morning, and the curtain of night shuts its visions in our hearts. It springs like the flower from the bud, out of a happy thought. It floats down like Elijah's mantle, and angels fold it about us when we kneel at the the shrine of prayer.

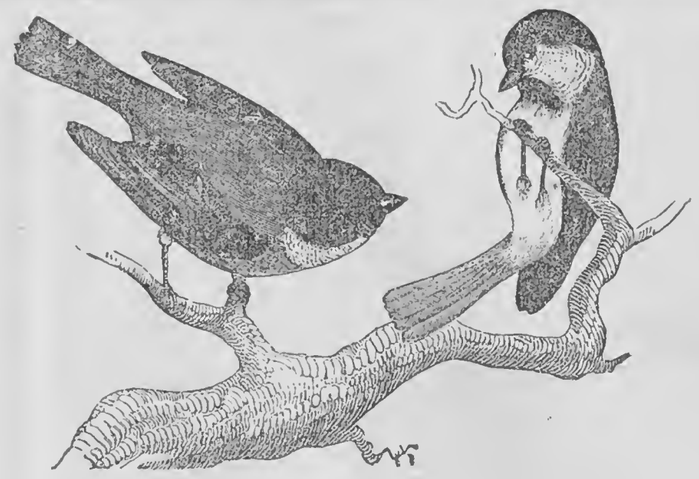
Oh! tell us where the beautiful is not? Nay! we recall the aspiration. We would have the beautiful forever in our sight, as was the pillar of fire by night and cloud by day, to the heaven-led Israelites.

And when we come to the last hour, we would have no gloomy fears about our dying bed but beams, many and bright, falling from Eternity upon us, making at the last even death beautiful.—*O. Branch.*

## DON'T BE MELANCHOLY.

IF we would habituate ourselves to look upon the pleasant side of things, to rejoice over what we have, and grieve not for what is not, we should find ourselves much more pleasantly handled than we usually are.—We conceive it to be a shame, and, when regarded in its connections, a sin, to be moping about under such bright skies and over such pleasant fields with "the blues" on.—Boys should be taught to cover up their melancholy thoughts as they would bury out of sight their dead canaries. Girls should be educated to the notion that "the dumps" are not genteel, and that to be sad when there is no good grounds for it is vulgar. Just as the tree is bent, &c. A generation we hope for, who will hold it a religious duty to reflect the happy face of nature from their happy faces. Everything so universally wheels into the right line at last and proves that "it is all for the best," that we verily believe a very long face ought to be put down as a nuisance in the street, and a bore within doors; and if that were not sufficient to abate it let it be authoritatively announced that it will be considered the black flag thrown out as a token of an evil conscience. Sorrow is sacred, and grief is not always to be avoided. But melancholy is a humbug, a sham, and a—, a—, an improper thing generally, and,—mind, we speak with a reservation to avoid the anathemas of young ladies and poets,—in our opinion a very unpleasant mental habit.—*N. Y. Times.*

THE way to gain a good reputation, is to endeavor to be what you desire to appear.



BLACK CAPPED TITMOUSE OR CHICKADEE.

THIS little fellow is a great favorite with all, being among the few birds that remain with us during the whole year, in winter approaching the house to pick up crumbs of bread and the refuse of the pantry. At such times, he becomes very tame. You may see him almost any day, at this season of the year, whether you live in town or country, as he seldom fails of visiting the wood-pile, apple-tree, currant or rose bushes, and sometimes resting upon the window sill, and if a few crumbs of bread are thrown out to him, he is sure to renew his visit, bringing some of his companions with him, when it is very curious and amusing, to see how cheerful and happy they are, while, with their little naked feet, they hop about on the snow, and among the frozen branches, often repeating their few lively notes, which sound very much like pronouncing the word *chick-a-de-de.*

This bird is found as far north as the region of Hudson's Bay, where they are seen in great numbers about the habitations of the traders in winter, in search of food.

About the middle of April they build their nest, choosing the deserted hole of a squirrel or woodpecker. The female lays from six to eight eggs, and raises two broods in a year.—*Youth's Casket.*

For the Rural New-Yorker.

## INSTINCT OF THE LOWER ANIMALS.

AMONG the many amusements which natural history affords, is the study of the instinct of the lower animals. This endowment seems, in some of its manifestations, to partake of the character of reason; and here and there a writer has confounded it therewith. But I am inclined to think that it is wholly an innate principle, bestowed by infinite wisdom, as a substitute for judgment and other capacities of mind. The fact that the beaver accommodates his habitation to the peculiarities in situation of the spot selected and the circumstances of the adjacent country, I cannot regard, as Smellie does, as an evidence of rationality on the part of this amphibious architect. The same instinct which taught the first beaver to build his structure with the same degree of skill that is now exhibited, would, it is reasonable to suppose, teach him to adopt his house to the position of things about him, and to emigrate when the necessities of the case required it.

There is a vast difference between the understanding of man, and any manifestation of the lower animals. ADDISON, in No. 120 of *The Spectator*, says: "One would wonder to hear skeptical men disputing for the reason of animals, and telling us it is only our pride and prejudices that will not allow them the use of that faculty. Reason shows itself in all occurrences of man's life; whereas the bruto makes no discovery of such a talent, but in what immediately regards his preservation, or the continuance of his species. Animals in their generations are wiser than the sons of men; but their wisdom is confined to a few particulars, and lies in a very narrow compass. Take a brute out of his instinct, and you find him wholly deprived of understanding."

Some writers speak of two kinds of instinct, *pure* and *improved*. As an example of pure instinct, Smellie cites the young bird opening its mouth when the parent bird comes fluttering to the nest, or when any noise is made in its vicinity—just as we once saw a young crow open its mouth, when a naughty playmate of ours whistled in its face and then flung a quid of tobacco down its throat! The same author gives as an example of educated instinct, or instinct taught by observation, a honey bee deepening its cells when cramped for room. But this does not strike us as a happy illustration, for wherein is the greater display of instinct in the geometrical beauty of the cell as originally constructed, or in the simple process of its augmentation? Would not the same instinct which guided it in building a cell without a model, hint a method of removing the difficulty when that cell became too small.

However, there are examples, numerous and striking, of instincts which seem to be improvable by experience and observation; and in a paper under contemplation, on the power of cultivation in the lower animals, I may revert to this branch of the subject.

Before concluding, I wish to say a few words on the great lesson taught by the instinct of animals—the lesson that there is a God. In ADDISON'S essay, from which I have already quoted, the author gives it as his opinion that "the arguments for Providence drawn from the natural history of animals," are demonstrative; and after referring to the peculiar fitness of every turn and twist of muscle and fibre in each animal, to promote the comfort or convenience of that particular animal's mode of living, as an evidence of Omniscent design, he launches into the subject of instinct, and makes it very plain that its origin is divine. The principle which teaches insects and some kinds of fishes to cast their eggs at hap-hazard, and to immediately forsake them; the serpent, the crocodile and some other animals to make nests, therein deposit their eggs, and then leave them; and most birds to sit upon and hatch their eggs and tend the helpless offspring, must be an emanation from infinite intelligence. The same must be the case, ADDISON thinks, with that instinct in the hen, which prompts her—an animal too stupid to know the difference between an egg and a piece of chalk—to turn her eggs, that no part may suffer from lack of vital heat; to leave them but a short time in cold weather, when in pursuit of food, and longer in warm weather when on the same errand; and to assist the chick in breaking the shell when the period for its egress arrives. But it seems needless to pursue this subject farther; for instinct, in all its diversified manifestations, is pregnant with divinity. "I look upon it as upon the principle of gravitation in bodies, which is not to be explained by any known qualities inherent in bodies themselves, nor from the laws of mechanism, but according to the best notions of the greatest philosophers, is an immediate impression from the first Mover, and the divine energy acting in the creatures."

J. C.

Buffalo, Feb. 4th, 1853.

## WONDERFUL TREES.

AMONG the remarkable trees in the world, the following, of which we have compiled brief descriptions, are some of the most curious:

THE DWARF TREE.—Captains King and Fitzroy state that they saw a tree on the mountains near Cape Horn, which was only one or two inches high, yet had branches spreading out four or five feet along the ground.

THE SACK TREE.—There is said to be a tree in Bombay called sack tree, because from it may be stripped very singular natural sacks, which resemble 'felt' in appearance.

THE TALLOW TREE.—This tree is found in China. It is called the tallow tree, because a substance is obtained from it resembling tallow, and is used for that purpose. It grows from twenty to forty feet in height.

THE GREAT CHESTNUT TREE.—On the one side of Mount *Ætna*, there is a famous chestnut tree, which is said to be one hundred and ninety-six feet in circumference, just above the surface of the ground. Its enormous trunk is seperated into five divisions, which gives it the appearance of several trees growing together. In a circular space formed by these large branches, a hut has been erected for the accommodation of those who collect the chestnuts.

THE SORROWFUL TREE.—At Goa, near Bombay, there is a singular vegetable—the sorrowful tree—so called because it only flourishes in the night. At sunset no flowers are to be seen; and yet, half an hour after, it is quite full of them. They yield a sweet smell, but the sun no sooner begins to shine upon them than some of them fall off, and others close up; and thus it continues flowering in the night all the year.

LACE BARK TREE.—In the West Indies is found a tree, the inner bark of which resembles lace or net work. This bark is very beautiful, consisting of layers which may be pulled out into a fine white web, three or four feet wide. It is sometimes used for ladies' dresses.—*Journal of Education.*

LOCKE was asked how he had contrived to accumulate a mine of knowledge so rich, yet so extensive and deep. He replied that he attributed what little he knew, to not having been ashamed to ask for information, and to the rule he had laid down of conversing with all descriptions of men, on those topics chiefly that formed their own peculiar professions and pursuits.

# Sunday Reading.

## PRAYER FOR THE ILL AT EASE.

When sickly thoughts or jarring nerves invade
My morning sunshine or my evening shade;
When the dark mood careers without control,
And fear and faintness gather on my soul,
O Lord, whose word is power, whose gift is peace,
Bid my spent bosom's tides and temples cease:
Bid thy blest Jesus walk a stormier sea
Than ever chafed the azure Galilee;
Or, if too soon my spirit craves for ease,
Hallow the suffering that thy love decrees;
Work my soul's faith from out my body's fears,
And let me count my triumph in my tears

*Lord Carlisle*, 1851.

For the Rural New-Yorker.

## THE GOOD MAN.

OUR estimate of the good man, is not that expressed in the loose thoughts and careless judgment which many persons entertain. A real, hearty, jovial fellow, exuberant with the spirit of fun and joke, whose eyes are wet with tears when he hears a tale of suffering, whose hands are ready to give when he sees an object of distress, whose honesty in business is unquestionable, yet who will drop a rude oath, engage in a gambling scrape once in a while, and when with boon companions, occasionally get tipsy, with the same laughing, easy nature that he would assist a friend or discharge a business transaction; how often such a person passes in certain circles for the good man. But he is far from being either the ideal or the fact of the character of the really good man. He may have excellent traits, worthy of admiration, but when mingled with the evils he commits, he forms, as a whole, no example for children to copy nor for adults to imitate. An individual holds up an apple before me, and bids me observe how perfectly sound it appears. And so it does, on the side that meets my vision. But on the other side, there is the rot of decay. Is it a good, sound apple? Sound it is in one part, but while it is corrupt in another, is it, as a whole, a sound apple? Certainly not. One thing you are sure of, that if the knife be not applied to the corrupt portion, the corruption will spread through its whole substance, leaving nothing sound save the germs of goodness within. So with the persons to whom we have referred. They can not be called good men, so long as they are compounds of vice and virtue. They do not stand where the good man safely stands.—The ground they tread is treacherous. For how many of these easy, jovial men; men of impulse, but not of principle; men of feeling, but not of judgment; have floated carelessly along, until evil has predominated over all their habits, and they have gone down to a grave of ruined reputations, of blighted hopes, of suffering bodies, of troubled minds, and of distressed friends. There are many such manly wrecks stranded on the shores of human life, whose memorial is not that which sacred history has given to Joseph of Arimathea, "*he was a good man and just.*"

By the good man, I refer to the genuine Christian; to the man whose conscience is as sensitive to wrong, as the eye is to light; whose actions spring from unwavering principle alone; who loves virtue and walks in it, because it is right to do so, and refuses to obey evil, because it is wrong to do so; whose word is a sacred obligation with him, always fulfilled so long as he has power to fulfil; whose sympathy is large, ever flowing in active and refreshing streams to refresh and encourage the fainting ones about him; who loves to see others happy, and does what he can to increase their enjoyment; who, in all the relations of husband, parent, brother, sister, child, friend, neighbor, citizen, is kind, gentle, obliging, just and true; whose culture is so great, that he is careful not to utter a word that will excite unnecessary pain; who loves to be a peace-maker among his friends, stilling the storm of passion by the voice of reason and kindness; whose reverence for God is a deep sentiment of his soul; whose fellowship with the Savior is ardent and sincere; whose worship is to him a spring of clear, cool water, to which he joyfully comes to refresh himself with new vigor; such an individual is the *good man*, the *Christian* man, the glory of humanity, whose outspoken words and divine life form a divine argument for virtue, for liberty, for the rights of man. He may err at times; for who is entirely free from infirmity? but, his erring will be of the judgment, not of will and intention. Yet he is the good man, acknowledged as such in the Court of Heaven and so recognized by every true instinct of humanity. For of him will be written on the page of each conscience and of all moral influence, *he is a "good man and a just."*

M.

TO preserve the entire liberty of one's judgement, without being prepossessed with false reasons, or pretended authority, is a strength of mind whereof few are capable.

# Miscellaneous.

[Written for Moore's Rural New-Yorker.]

## RESIGNATION.

They do thy will; the thistle and the thorn,
The earliest branded curses of the ground,
And daisy meek, unconscious of the harm
Its spreading does, and poisonous growing plants,
Do all thy will. Thou gavest them life and strength.
Thy sunshine blesses, and thy gentle showers
Drain kindly to their roots, and moistening dews
Lie shiningly upon their noxious leaves,
As on the fairest rose. They do thy will;
Thy springs create them, and thy summers keep,
Thy autumns blast them, and thy winters sweep
At word of thine, their frail existence by.

The fountains, and the gayest sounds of streams
Grow hushed and still as icy footsteps come,
And chains as chill arrest their hurried course,
As bind the sluggish flow of duller streams.
Thou mak'st the dark clouds gather, and the winds
Howl mournfully among the rocking pines
Their dirge. The spring month opens, and its breath
Steals soothingly across the half-bared hills,
And banks of lingering snow in hollows hide,
Give place to springing grass and early flowers.

They do thy will; Our Father, teach our hearts
To draw their patterns from these, ordered things;
To look on wisely and submissively,
And when at last thy great command shall come,
To bid our last adieu to earthly things,
To go in quiet from the sky of life,
As dimmed stars, in the brightness of the morn.

Victor, N. Y. E. C. Woolston.

Written for Moore's Rural New-Yorker.

## THE COLUMBUS GROUP.

Happening to pass down Broadway during a visit to New York, not long since, I called to see the model of the above group, at the store of Williams, Stevens & Williams. It is proposed to raise by subscription and a sale of lithographs of the work, about one hundred and fifty thousand dollars, the net proceeds of which would be enough to erect the group at Washington. The model was designed, and is to be executed, by Aristodemis Costoli, professor of Sculpture in the Academy of Fine Arts, Florence. The height of the model is about two feet, I should think, from recollection; though that of the proposed work, with the pedestal, is about forty.

Columbus stands in the centre, with his left hand holding a veil just raised from America, represented by an Indian maiden, grasping an arrow in her right hand and a quiver slung at her shoulder. She is shrinking away as if startled, and apparently about to rise for flight from another female form representing Europe, sitting at his right, to whom Columbus is unveiling the dark daughter of the West, in all her native gracefulness. Europe is designed to show the true woman, majestic in her port, and every lineament expressive of the high tone, and thorough cultivation of the spirit within.

Farther back at the right of the noble Genoese, who stands between her and his newly found, but long sought inamorata, sits Asia, the embodiment of all that is physically beautiful, voluptuous, and passionate. She is less absorbed than Europe in the wild beauty of the setting sun.

Behind, and with her back to the discoverer of the new world, and almost regardless of the event that is to have such an influence on the destiny of man, sits Africa.

I am wholly ignorant of art, and not particularly intimate with nature; but after looking awhile, those clay figures seemed to possess an influence like that we feel in the presence of one whose truthfulness to all that is good draws us irresistibly to himself. They rose before me clothed in a beauty invisible to the mere passing gaze. As irregularities of face or form are lost in the beaming soul-beauty ever discernible in one who in spite of nature's scanty gifts, in spite of our feeling of repulsion, winds around the heart a chain of love, and leads us away willing captives; so what at first to my uneducated eye seemed defects of feature or position were all forgotten, when I had become, as it were, acquainted with those forms, and caught the idea of the work. At first I thought the America lacked the nationality of feature one should find in such a work; but probably that would be developed in the marble which would allow more space for correct expression than is possible in so small a model of clay. I imagined too, at first, that Asia should have been in a position to obtain a full view of America; and Africa so placed that the spectator could catch the whole at a glance. But as Europe alone took a deep interest in the beautiful maiden across the sea Asia caring little for aught that did not minister directly to the pleasures of sense, and benighted Africa turning her back upon the civilized world, I now think the relative position of the several figures a good one. Asia clasping the hand of Africa, seated on a lion with her left, while her right rests on the shoulder of Europe, and America rivalling one of her own wild flowers, with Columbus in their midst,—is there not here enough for a master hand to develop a glorious production of art?

Suissac.

## MARRIED AND GIVEN IN MARRIAGE.

An Australian correspondent of the Alta California gives quite an interesting account of the British convict system in Van Dieman's Land, and thus describes the marrying mania which exists among the convicts who are out of service, and the reason thereof. He writes:

"But the only care of the government seems to be to get these people off their hands as fast as possible, and another method has now been hit upon in finding a ready market for thousands of the convicts, and thereby relieving the exchequer of the expense of maintaining them; and I presume the man that first devised it was made a baronet by the British Government. It is neither more nor less than encouraging between the convicts and the free portions of the inhabitants, 'matrimonial alliance.' In these, young ladies alliance themselves to old men, and young men marry old women. I will explain: A female convict, by becoming the spouse of a freeman, is entitled to all the rights and privileges of a free woman. As long as she keeps with her husband, the bonds of matrimony are the only bonds to which she is subject.

"The same with a male convict. By marrying a free woman, he becomes by virtue of his office as 'husband,' as free as the Governor himself, as long as he conducts himself to the satisfaction of his better half. The consequence of this clever stroke of policy is, that marriages of this description are continually coming off with wonderful rapidity. Any old man can get in this accommodating country, as young a lady for his wife as he pleases; that is, if he is not over scrupulous as to her past character—which is never in Van Dieman's Land, by the by, taken into consideration. He has many to choose from, not one of whom will spurn his offer. So anxious are they to escape from Government, that I question whether one of them could be found who would refuse her hand, even to Old Nick himself.

"On the other side, any Australian lady, verging on fifty can be supplied, if she require it, with as youthful a husband as her heart can desire. There are before her men of every age and condition to select a partner from—parsons, doctors, clerks.—tradesmen, and laborers; few will hesitate a moment when she broaches the subject. The vast majority, to get out of Government power, would marry the Witch of Endor herself if that would accomplish it.'

## MEN OF SUBSTANCE.

We often use the phrase, that such a man was "a man of substance," meaning thereby that he was a man of wealth. Better that we applied the term in reference to substance of genius and force of character, and uprightness of mind, and purity of thought, for it unfortunately happened, that in the kingdom in which these "men of substance" were to be judged, no cognizance would be taken of the weight or bulk of the mere goods of this world, because they did not attach to humanity. A man's worldly substance could not constitute a claim to merit there; by their spiritual substance would they be adjudged. Herschel and Newton were men of intellectual substance; Fenelon and Wesley, of spiritual substance; Howard, of benevolent substance. Without some such substance, at the bar of future judgment, the possession of all the doubloons in money broker's vaults, would not make us look any thicker than thin mush. Some men were weighty in substance because of their riches; some because they were fat; but the weightiest of all was the high, noble-minded man, influenced largely by spiritual force; for all are men weighed in the moral world according their energy, morality, goodness of heart, greatness of soul, and Christian humanity. All man's selfishness, assumption, pretension, oppression, etc., detracted from the true substance of the man, and would be deducted from his weight accordingly.—Wellington, when he was born, perhaps did not weigh more than ten pounds, but when he died he weighed down England and more than half of Europe. The same thought might be applied to our own Thomas Jefferson; and so of Newton, who hung lightly on the steel yard when he went on his tour of investigation among the plants; but before he died weighed the plants upon the steelyard of his logic.—*T. Starr King.*

## HONESTY.

A Quaker, passing through a market, stopped at a stall, and enquired the price of citrons.

"I have none," said the honest countryman, "that will suit you; they are decayed, and their flavor is gone."

"Thank thee, friend; I will go to the next stand." "Hast thou good fruit to day?" said he to the dealer.

"Yes sir; here are some of the finest nutmegs of my garden. They are small, but rich of their kind."

"Then thou canst recommend them?"

"O, certainly, sir."

"Very well. I will take two."

He carried them home, and they proved not only unsound, but miserably tasteless.

The next morning he again repaired to the same place. The man who sold him the fruit the preceding day asked him if he would like some more.

"Nay friend, thou hast deceived me once, and now, although thou mayest speak the truth, still I cannot trust thee; but thy neighbor chose to deal uprightly with me, and from henceforth I shall be his patron. Thou wouldst do well to remember this, and learn by experience that a lie is a base thing in the beginning, and a very unprofitable one in the end.

Fortune can take nothing from us but what she gave.

## A STORY FOR RURALISTS:

### GOOD MANAGEMENT VS. BAD MANAGEMENT.

(*Concluded from page 76, this No.*)

As they neared the house, Mr. Lee was accosted by a man awaiting his return. "I called for to settle up that little account with you, 'squire; shouldn't be particular, but I talk of going away, and I thought 'twould be handy to pick up enough so as not to be put to it for money to pay my expenses, ye see—thought 'twould be well enough to 'square off.'"

"Well, yes, ahem; how much is there due, Mr. W.?"

"Have you looked over *your* account, 'squire?"

"No, not lately."

"O, well, your books will tell, I suppose."

"I believe I didn't put *that* on the book, (be careful, Jerry, you have no book) but I made a minute of it on a piece of paper.—Do you remember anything of a piece of bluish white paper, with figures on it mother?"

"I have seen several such pieces, and I will bring them to you." Mrs. Lee left the room and soon returned with a handful of bits of paper, but the desirable one was not in the parcel; the children were now called in—they had been having a fine frolic with Aunt Fanny, removing an ox sled, which the last snow of March had left as an ornament near the front door. "I wish you'd mind your —— I was going to move that myself," said Mr. Lee, with some impatience; he did not say *when*, but he would have done it, I dare say, the first good sledding.

"Children, come in, and tell me if you have seen anything of a piece of bluish white paper round, with figures on it.—George, do you know anything about it?"

"No, sir—but I will look where you say."

"Well, take all the drawers out of the secretary, move everything and see if it is there. William, you go and look in all the table drawers, while I look in my pockets." The drawers were emptied of their contents and after, with much satisfaction, spying all the wonders, the children returned from their fruitless search. They finally concluded that it was no where to be found. Fanny Lee thought she perceived a gleam of satisfaction light up the half-shut grey eyes of the visitor, as this conclusion was settled.

"We must fix it the best way we can," said Mr Lee, as he took down pen and ink from the shelf.

"I guess we can fix it," said Grey Eyes. "I calculate to do what's right always."—At this moment, to his great relief, Mr. L. remembered putting some figures upon the cellar door, and those might be the very ones; he at once proceeded to the door; but woe to the housewife who erases figures in house-cleaning—there were no traces of chalk now.

"What have you for a bill against me, Mr. W?"

"Why it amounts to eighty-four dollars."

"Zounds! Mr. W., you are surely mistaken, surely."

"Well, well, you know you've something agin' me that has got to come out on't."

"Yes, yes, but how you can have charges against me, to that amount, is more than I know.

"Now Mr. W., just read over the various items, as you have them."

Mr. Lee was perfectly sure many of these were unjust, but as he had nothing to bring forward to disprove the same, and as W. agreed with him on his own side, he was not a little perplexed.

"Wall, I guess you had better settle it now, Mr. Lee—I am, you see, uncommon particular about my business—keep things square and fair—posted up, and always sure my dates are right."

"Yes sir, but I have those very same charges of yours, somewhere, on a piece of paper, and I am positive, sir, you have charged me thirty dollars more than you agreed. All I ask of you, is to let the matter rest where it is, until I find that paper."

"You see, Mr. Lee, just now I am fixed. I am going away, and I felt obliged to leave my business with a lawyer, but I hated to put to trouble an upright man like yourself, so I rode over from town a purpose to save you from any hard feeling. I want you to be satisfied."

Mr. Lee was fully aware that he was now in the hands of a "Shylock," but he had not a particle of proof to bring against his demand.

"I'll tell you what. I'll do, Mr. L. I'm short, and must have the cash, but I shall be round here about a week or so, and if you find your account, bring it over to me, and I'll pay you back the money if I'm wrong; ain't that fair enough, Mr. Lee? I call myself putty ginrous there!"

Very reluctantly, Mr. Lee paid the demand, and as his visitor was stepping into his wagon, he again says—"A week hence if you find any flaw, I'll fix it right for you—good-day sir."

For several days Mr. L's spare time was spent in fruitless search for the paper, until one stormy evening, he took from a peg in the kitchen an old hat, which he had ceased wearing; and there, tucked away under the lining with several others of considerable value for company, was the identical paper, soiled and worn, so as to be hardly readable.

It plainly proved, as Mr. Lee was before convinced, that he had overpaid it by thirty dollars.

Early the next morning he hastened to the village to rectify matters with W.; but true to his character, "Old Gray Eyes" left for the West, as he intended, the very night he received the money.

He was, as Dickens says of Mr. Smallweed, "a two-legged, money-getting, species of spider, who spun webs to catch unwary flies, and retired into holes until they were entrapped." Knowing the careless business habits of Mr. Lee, he succeeded in his purpose, with but slight difficulty.

"I am unlucky," said Mr. Lee, as he returned, "but I will let it go, and say nothing about it."

For a moment only, a tear glistened in Fanny Lee's dark eye, as she gave the parting word and kiss to her dearly beloved brother and his family.

A week after Fanny's departure, a box arrived containing presents for the children.

"Why, what is this queer thing?" exclaimed Billy, as his father was reading the letter.

The "queer thing" was a neat mahogany writing desk, containing a day-book and ledger and some little memorandums to be filled.

"Why, this is *father's present*," said Mrs. Lee, as she read the letter which her husband passed to her while he examined the desk and its contents.

"This, my dear brother," said Fanny in the letter, "this present, please accept, and if well used, it may prove a sort of leather patch upon your pocket; and should a kind Providence permit me to meet you and yours, years hence, may I find it well filled."

Six years—how rapidly do they pass, and yet how many events may be crowded in a briefer space of time. Six years have passed since Fanny left the old homestead, and now a bright, blazing fire burns on the hearth, and the family are seated round it, all but Mr. Lee and Fanny, who were busy writing at a table, a little back. The children—how happy they look—Mrs. Lee sits in the easy chair trying to smile, but 'tis a sad smile.

"Well, Fanny," exclaims Mr. Lee, "I never should have thought it, how thankful I am you have come." (Aside to Mrs. Lee.) "Isn't it time for the children to go to bed mother?' "Yes, eight o'clock good night." The two eldest were permitted to remain a short time longer.

"As I was going to say, Fanny, I don't know what I should have done if you had not come. I did not think it was half so bad, but I never had the heart to look difficulties fairly in the face as you have. Well, it is better to know the worst, even if one can't see where it has gone; I am sure you've been prudent, Ellen, and worked hard all the time, but I don't know but farming is poor business, after all."

"Let me see your books, now, brother," said Fanny, "perhaps it is not so bad as you suppose."

"O dear! Fanny, I may as well tell the whole, I have never made a mark in those books—I meant to, but I put it off and off, and finally I let it go."

A look of sorrow, accompanied with a deep sigh, was Fanny's only reply, and as she sat, and with a clear head reduced his tangled affairs to order, he exclaimed.

"Fanny, you would make a *capital lawyer*; there, I didn't mean to say so, for I *hate* lawyers, cheating rascals! Ah, they have got more out of me than they ever will again!"

"Why did you meddle with them, then?"

"I—I didn't, but you see others—"

A tittering and whispering between the boys caused the father to leave the remark unfinished.

"What pleases you, William? What are you laughing for?"

"Nothing, only I was thinking Aunt Fanny would make a better lawyer's *wife*."

It was now Fanny's turn to smile, and *blush* too.

"Eh, I guess I know something—George Prentice told us about it!"

"About what?" exclaimed Mr. L., with unfeigned surprise."

"About Aunt Fanny—how she is going to marry his uncle, Mr. Prentice's brother, a lawyer!"

Aunt Fanny was still busy, and it was thought best for the boys to go to bed.

"Why, Fanny, why didn't you tell us about this before," said Mr. L., as the boys left; "I never dreamed of such a thing!"

"As you did not think much of these neighbors, when I was here last, perhaps you will object."

"I always said Prentice was a fine man; I only thought—but no matter now, what I thought. To tell you the truth, sister, everything he puts his hand to prospers. If I had anything to do *with* now, I would manage this farm as near like him as I could, for I believe he is a safe man to follow. But I want you to tell me just what to do—you see just how my affairs stand—my indebtedness is so much; I did think of moving in town and taking boarders, but it would be too hard for Ellen, and we could not afford to hire help. What would you advise me to do, Fanny?"

It is none of *our* business *how* matters were settled—it is enough for us to know that Mr. L.'s affairs *were* adjusted to the satisfaction of all parties, and Mr. L. remained on the farm; and if for a short time the family felt the pressure of poverty, it only bound them closer together.

"Sweet are the uses of adversity."

'Tis true 'twas rather late in the journey of life, to learn to "stop and know what link in the chain was lost;" but Mr. L. *did* conquer difficulties, and learn, though late came the knowledge, that *difficulties* are not *impossibilities*.

Mr. Lee *borrowed* Mr. Prentice's "subsoil plow," the next spring, (bad management, that borrowing,) but then it is "all in the family" now, and Mr. Lee takes some pardonable vanity, in speaking of "my sister, Mrs. Prentice."

Mrs. Lee is in feeble health, but Ellen is a good deal of help, and saves her mother many steps, and Mr. Lee is never tired saying, "she is just like my sister, Mrs. Prentice." One thing more—Mr. Lee would as soon "let the sun go down on his wrath" as to neglect to open and shut that writing-desk, and see that all was right there, before the clock tolled the hour for retiring.—M. F. D.—*N. E. Farmer.*

# For the Ladies.

Written for Moore's Rural New-Yorker.

## GUARDIAN SPIRITS.

BY IDA FAIRFIELD.

I know that they are near me,
That their wings of light are spread,
A safe-guard from all danger,
O'er my unconscious head.

I know that in life's pathway,
Mid its briars and its thorns,
They are strewing all the blossoms,
Which that rugged path adorns.

By their soft and gentle chidings
When my spirit weakly wars,
With the sins which thus besetting
God's purer image mars:

By the blessed calm which stealeth
O'er my spirit when I pray,
By gushes of glad music
Which brighten all my way:

By the fadeless founts of beauty
Which open to mine eyes,
When shut to earthly visions
They look beyond the skies:

By the deep and deathless yearning
Of this immortal soul,
For the life that is eternal,
The surely promised goal:

By these and other tokens,
I know that they are near,
That their viewless mission seeketh
To counsel and to cheer:

To guide me when I'm erring—
Sustain me when I'm weak,
And a home at last in heaven,
For my spirit to bespeak.

Independence, Feb., 1853.

## MISS STRICKLAND'S MARY STUART.

In speaking of the third volume of the "Queens of Scotland," just published by the Harpers' and (recently noticed in the Rural) the Buffalo Advertiser says:

This is a book which none but a woman could have written, and it bears throughout the impress of those mental peculiarities which are her best title to interest and esteem. A peculiar elegance of taste, a nice sense of propriety, a greater fondness for particular facts than for general views,—a preponderance of feeling over logic, will be recognised by every one who peruses the pages of this gifted authoress. Women make better biographers than historians, they are so much more susceptible to the feeling of personal interest that attaches to the fortunes of an individual, than cognizant of the wider concatenation of events and causes that go to make up that complex thing, the common life of a great nation.—Not that the female mind is incapable of the patient and laborous research required of the historical writer; for the evidence of antiquarian taste and antiquarian toil in this volume, would demonstrate the contrary.—But the distinguishing mark of the feminine intellect in its quick susceptibility to emotion, and particularly to refined emotion; and the affections seem to be governed by laws the direct reverse of those which regulate the faculty of philosophic vision—the former require a definite picture addressed to the imagination, while the latter seeks after broad, comprehensive general views, quite destructive of that well defined individualism on which fancy may dwell till it kindles and glows with the warmth of feeling,

In expressing our opinion that the work of Miss Strickland is eminently feminine in its character, we are far enough from meaning to say that it is only fitted to interest female minds. A beatiful exhibition of the qualities which endear the sex to us in the domestic circle, cannot be otherwise than pleasing in literature. In literature, as in life, genuine womanly qualities delight us in woman, though nothing would more thoroughly sicken us, if we should see them aped by man. A piece of embroidery, or a silk purse in process of fabrication by snowy hands and delicate fingers, make on us a very pleasing impression, compared to what would be felt if we should behold a whiskered biped trying to emulate any of those elegant feminine employments, by which the sex contrive to diffuse an air of grace over themselves, and of refinement and comfort over their homes. Miss Strickland is a genuine woman; and following out the tastes and instincts that appear so charming in her sex, she has collected a vast amount of curious information respecting the apartments, the furniture, the toilette, the manners and the social observances of the times about which she writes, and the readers of her work will find much of its charm to consist in the feminine elegance and tact, the downright housekeeper's skill with which she arranges her pretty articles, and contrives, by a studied negligence to attract attention to the profuse specimens of literary handiwork, which seem to have been dropped, as if by accident, into every nook and corner of her elegant pages.

Childhood's Tears.—There is sometimes a moral necessity for the correction of children notwithstanding the pain which a profusion of their tears will often give us. The great rule is, never to correct in anger, but with the firmness which is founded on the deliberations of reason. The sorrows of children, however, are exceedingly transient, and have often been the subject of poetical remark, but in no instance with more beauty than in the following simile by Sir Walter Soott:

"The tear down childhood's cheek that flows
Is like the dew-drop on the rose;
When next the summer breeze comes by,
And waves the bush the flower is dry."

If you are disquieted at anything, you should consider with yourself is the thing of that worth, that for it I should so disturb myself, and lose my peace and tranquility?

ROCHESTER, FEBRUARY 26, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER.—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is ordered.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ SEE Terms, Premium List, &c., on last page,—and notice to Agents and others on next page.

## About Giving Credit.

THE editor of the Agricultor, writes us a politely-severe letter—stating that we mis-credited an article on "Trenching Gardens" to the "Monthly Journal of Rural Affairs," instead of that paper. After speaking of his own principle (about which a word presently,) and alluding to the injustice done the Agricultor, he asks us to "look to this in future, and save us (him) from the vexation of its recurrence!"

In response, we offer this material averment in proof that we are not guilty of the heinous offence charged:—The article to which allusion is made was copied into the RURAL from a Barry county (Mich.) paper, and we gave credit as therein attached. We never received the number of the Agricultor containing it, and of course never saw the article in that print. This is our defence, or explanation; and we assure our friend (without questioning his sensitiveness or politeness in the premises,) that our endeavor is to credit all articles properly,—but as we live out here in the suburbs, a great way from Gotham, we are not sufficiently posted to divine the precise paternity of floating articles, or those improperly credited.

Now, as we have neither time nor inclination to write letters (and cannot afford the expense of an amanuensis—having only the limited income of our legitimate business,) we will add a word, thus publicly, by way of improvement. Our friend writes,—"It is a principle with us to give credit to our cotemporaries for all articles we may deem worth copying, and also to give the correct credit." This is an admirable platform—but our friend's *practice* is not quite as commendable. For example, last week's Agricultor (the only one before us,) contains a portion of Mr. HARMON'S statement, as given in a late number of the RURAL; but our "specs" are so very dim that we can discover no allusion whatever to the source from which it was obtained. Now we care not a straw for this "abstraction;" we only cite it to show that the Agricultor is not immaculate. Like certain other editors, he dwells in a *glassy* domicil—a "crystal palace," if you please.

The RURAL is so generally purloined from—in many instances by "those who know the right, yet still the wrong person"—that we can bear to have its best articles tattered, torn, or purloined bodily and headed as original in other papers, with some degree of complacency. As to writing to all who extract without giving credit, or credit improperly, that were an Herculean task. But when we, or others who aim to act uprightly, are arraigned by those who are themselves at fault, we cannot restrain the old Adam. For instance, the *New England Cultivator* has recently been lecturing such honorably conducted journals as the Maine Farmer, Mass. Plowman, and Valley Farmer, about giving credit! Now, inasmuch as the the N. E. C. purloins from all quarters, and rarely gives credit, we consider the complaint superlatively frigid! This same N. E. C., has abstracted so extensively from the RURAL and other journals, that we dare not copy from its pages, and give credit, lest injustice should thereby be done to some of our contemporaries. He has purloined several of our leading articles (recently one on "Wintering Stock,") giving them as original—and we have had the *pleasure* of seeing them credited to the N. E. C.! But—our complacency is evaporating, and we beg to "drop the subject."

"TERRA-CULTURE"—The reader will observe by reference to preceding pages, that we this week commence the fulfilment of our promise relative to "disclosing the disclosures" of "Prof." COMSTOCK. We shall probably continue the developments—giving the opinions and experience of correspondents who have heard the disclosures. The article by DOWNING is particularly rich, and worthy of careful perusal. Of course no intelligent reader will fail to discover who is personated by the little spaniel, or to enjoy the rich satire of the whole statement. Meantime, it is perhaps unnecessary to advise the "great discoverer" to keep his nasal protuberance as cool as possible!

Seriously, we have no patience with this pretender; and regret that a few editors publish his bombastic and would-be eulogistic accounts of his theory. And we are determined that if any of the readers of the RURAL hereafter make a losing investment in "Terra-culture" lectures, it shall not be our fault. We purpose to publish the substance of all that is known on the subject.

BUTTER FRAUD—Some of the Boston papers bring to light a new cheat in the adulteration of butter. Rennet is put into butter milk, which turns it to cheese, and this is worked into butter for market, increasing the quantity about thirty per cent. The fraud may be detected by melting the butter in the oven. The Boston Herald says this fraud is quite extensively practiced in Franklin county.

## Literary Notices.

ETHAN ALLEN and the Green Mountain Heroes of '76. With a sketch of the early History of Vermont. By HENRY W. DE PUY, author of "Louis Napoleon and his Times," "Kossuth," &c.

THE fame of the Hero of Ticonderoga will commend this volume to all interested in the early history of our country, and, in connection with its plain, straight-forward style, ensure its wide circulation. No portion of the Union has a history more replete with stiring events, than that in which occurred the scenes described in this work. It was for one hundred and fifty years the grand highway between the French Province of Canada and the English Colonies. "There too," says the preface, "the most powerful and threatening army sent out to crush the freedom of this country, began its march in triumph, and there ended it in most disastrous defeat." ALLEN, MONTGOMERY, STARK, WARNER, and ARNOLD figure boldly in this arena of conflict. From BEADLE & BRO., Bufialo whose advertisement will be found in another column.

"THE PALACE POLKA,"—a new and spirited piece of Music, composed by Mrs. WM. WEBSTER, of this city, and dedicated to Miss MARY S. WOODS, of Geneva.—has recently been published by FIRTH, POND, & Co., of New York. It is issued in the usual tasteful and superior style of the publishers named; the title page is handsomely executed, paper fine, notes clear and correct—important items in the estimation of the musical public

Mrs. WEBSTER has also recently composed several fine marches, which have been favorably received. Among them we may mention the "Revere March," dedicated to Mrs. P. G. BUCHAN; the "Crystal March," to Capt. A. BOODY, and the "Brighton March," to Mrs. J. W. BISSELL.

GRAHAM'S MAGAZINE for March has some new features which are worthy of notice. The steel engravings are omitted, and instead we have fine wood cut portraits of a triad of Painters—FUSELI, WILKIE, and CRUIKSHANK. There are besides some sixteen illustrations of articles in the body of the work. It contains 124 pages, which will hereafter be the size of the work. $3 per year, with large reductions to clubs. Address Geo. R. Graham, 134 Chesnut street, Philadelphia.

THE WOOL GROWER AND STOCK REGISTER for February is one of the most readable numbers of that cheap and valuable monthly yet published. Its engravings are really embellishments, and the matter such as will interest every owner of domestic animals. The W. G. is given as a premium to every person who remits $2 for the RURAL, previous to the 1st of May.

HAYWARD'S edition of WEBSTER'S Bunker Hill Oration, Eulogy on Adams and Jefferson, Address at Plymouth, and Reply to Hayne in the U. S. Senate, in one volume, with the best portrait of WEBSTER, is now out and meets with a rapid sale. We are glad that our friend's first venture in publishing succeeds so encouragingly, and hope he may always give us works as worthy of purchase as this. No. 4, Burns' Block, Rochester.

BLACKWOOD'S MAGAZINE for February has been received. Its principal articles of interest on this side of the water are:—A review of McIntosh's "Book of the Garden," a continuation of "Lady Lee's Widowhood," some "Supplementary Chapters to the History of John Bull," a humorous political article, and a sketch of the Life of Bernard Palissy, the Potter. DEWEY agent.

## Club Terms of the Rural.

"FRIEND D. D. T. MOORE:—Enclosed I send $15 for the undermentioned ten subscribers to thy much esteemed RURAL NEW-YORKER. I, however, claim the privilege of sending, at least, the balance of twenty, according to thy proposed terms of 20 copies for $25, &c. But those names I have obtained, not wishing to wait longer, I send the full amount for a club of ten only, to make thee safe if I should get no more subscribers. * * * Success to the RURAL! I hope it will have many readers in Minnesota, as elsewhere. I shall use some exertion to induce subscriptions—perhaps from other places, as well as St. Anthony."

The above letter (just received from friend WALES, of St. Anthony's Falls, Minnesota,) we consider a model in its line; and we commend its style and justness as worthy of general cultivation. We frequently receive orders for from 8 to 12 copies of the RURAL, at the lowest club rate, the writers stating that they *will, intend to,* or *may* comply with our terms, &c., hereafter. Now, where this pledge or intention is fulfilled, all proves right—but in other cases, which we admit are not *very* frequent, our terms are departed from, and we not only lose our just due, but are sometimes charged with wrong in the premises, for sending ten copies in one case for $2,50 less than in another. Without questioning the honorable intentions of our frends, we request that all who order only ten copies follow the example of our Minnesota subscriber, by sending the full price; and if the club is afterwards completed, they need forward only $1 per copy for the second ten.—This is the course pursued by many agents, and is the only correct one.

Our aim is to adhere as rigidly as possible to published terms,—and we cannot consistently and honorably publish one thing and do another. The RURAL is as low priced as it can be afforded: hence the requests of those who wish us to depart from established rates, cannot be complied with. Those who form clubs previous to the 1st of May, will receive premiums as offered on last page; and the getters up of clubs which have been, or may yet be, commenced, can complete them any time within the period named,—thus taking advantage of the lowest price, and securing their premiums.

☞ Tuesday last was the hundred and twentieth anniversary of WASHINGTON'S Birth Day.

## Congressional.

### Synopsis of Proceedings.

MONDAY, Feb. 16.—*Senate.*—Several amendments were adopted to the Deficiency bill, and Senator DOUGLAS delivered his promised speech on the Monroe doctrine. He was in favor, says the N. Y. Times, of meeting at once the question of the colonization of the Bay Islands, which he claimed presents a practicable issue on this doctrine. The act of colonizing at that point, he held to be a violation of the express terms of the treaty of 1850, and in direct contempt of the Monroe policy. He had voted against the Clayton and Bulwer treaty because it was in violation of that doctrine, but was opposed to declaring in advance what we would or would not do, or binding the Nation in any way as to events which might arise in future. Mr. DOUGLAS proceeded to discuss the questions arising from the Central American difficulties; spoke of Cuba in moderate terms, and was followed by Mr. Cass. A running debate ensued, and the subject was postponed until Saturday.

*House.*—The House discussed a bill in relation to swamp lands, which was finally laid on the table by 116 yeas and 50 nays: and the House adjourned.

TUESDAY, Feb. 15.—*Senate.*—The Senate had the Deficiency bill under consideration. Mr. GWIN'S amendment, giving California $300,000 of the duties collected in that State prior to her admission into the Union, was adopted. The GARAY resolutions were considered by Messrs. HALE, MASON and BROOKS.

*House.*—The Senate bill to amend the Silver Coinage was passed. The bill provides that on and after June 1, 1853, the weight of the half dollar shall be 192 grains, and the smaller pieces in their respective ratios; that silver coin shall be a legal tender for sums not exceeding $5; the bullion to be purchased by the Treasurer of the Mint with the bullion fund of the Mint; silver to be paid in exchange for gold in sums not less than $100; gold or silver deposited for coinage may be cast into bars or ingots, stamped, with an additional charge upon the depositor; and a new gold piece of the value of three dollars is to be coined from time to time, according to device and shape to be fixed by the Secretary of the Treasury. The House concurred in some of the Senate amendments to the bill to prevent frauds on the Treasury.

WEDNESDAY, Feb. 16.—*Senate.*—The Deficiency bill with the amendment to increase the salary of Mr. KENNEDY, Superintendent of the Census, from $2,500 to $3,000 was passed. The Reciprocity bill was postponed. The House then went into Committee on the Civil and Diplomatic Appropriation bill.

THURSDAY, Feb. 17.—*Senate.*—Resolutions were introduced in relation to the California Mails, Clerkships, Postage, and the qualities of the Western coal-fields. The Pacific Railroad bill was taken up, when Mr. BELL concluded his remarks, begun on the 5th inst., and was followed by Mr. SMITH; both in favor of the bill.

*House.*—The House had under consideration the Canadian Reciprocity bill, and notice was given of sundry amendments.

FRIDAY, Feb. 18.—*Senate.*—Mr. BRODHEAD'S substitute for the Pacific Railroad bill, namely, to strike out all after the enacting clause, and insert provisions for a survey of the various routes, was voted down. The bill meets with powerful opposition.

*House.*—After some private business, the Civil and Diplomatic bill came up again in Committee, where it appeared that the appropriation for the two House of Congress reaches upward of $1,186,000, of which $12,330 are for newspapers.

## Pennsylvania Correspondence.

GREENCASTLE, Franklin Co., Pa., Feb. 18, '53.

FRIEND MOORE:—The temperature of the present winter here, has been unusually mild. We have had but one "spell of weather," and that a very short one, when ice froze sufficiently thick to be suitable for filling ice-houses. During the fall, and the two first months of winter, we were frequently visited with heavy rain storms, which necessarily made it very bad getting about—but notwithstanding the wet weather and bad roads, our farmers managed to secure their uncommonly large crops, and many of them have marketed their produce, which, fortunately for them and the country, has commanded a good price.

Wheat has been selling here, delivered at the mills, at from $1 to $1.06 and $1,08; some few sales at $1,10, but $1 has been the average price per bushel. Corn 50 cents, oats 33⅓, potatoes from 25 to 50, mostly at the latter price; clover seed from $5.25 to $5,62. There is a large quantity of this seed raised in this region of country—probably over 2,000 bushels were grown in this (Antrim) township alone, the past season.

The farmers are bringing their farms to a high state of cultivation by means of lime and clover; the clover they mostly plow in when in a green state—but in slate and light soils, it is found far better to cut it off and make hay, than to plow it in. By plowing it in, in such a soil, it leaves it entirely too loose to produce a good crop. To the heavy limestone lands, of which this valley is mostly composed, green crops plowed in are a very great benefit, as they not only serve as manure, but loosen the soil, and prepare it the better to receive and nourish the roots of the grain.

F. R.

A GOOD FARM—Is offered for sale at auction Those who wish to purchase a valuable homestead at a probable low figure, are referred to advertisement, next page.

☞ California news reaches us now only 18 days on the route from San Francisco to New York. The last is not important.

## Legislature of New York.

### Synopsis of Proceedings.

MONDAY, Feb. 14.—*Senate.*—Mr. BEEKMAN presented a letter from DANIEL ULLMAN and others, requesting the acceptance of a bronze cast of the HENRY CLAY medal, which was accordingly received.

*Assembly.*—The Assembly occupied a large portion of the day in a debate upon a resolution of Mr. BURROUGHS, censuring the Speaker for his course toward Mr. R. SMITH. Mr. KENNEDY offered a substitute, which was accepted, exonerating the Speaker from any intention of wrong; but a resolution declaring that the Speaker has no power to arrest without the order of the House, was rejected—Ayes 38, Noes 55.

TUESDAY, Feb. 15.—*Senate.*—Mr. BARTLETT reported the Atlantic and Pacific Railroad bill complete, and it was discussed.

*Assembly.*—Nothing worth notice.

WEDNESDAY, Feb. 16.—*Senate.*—Mr. VANDERBILT presented a memorial containing certain Constitutional amendments concerning the Canal Enlargement.

*Assembly.*—The Senate resolution for a codification of the Militia Law was concurred in.

THURSDAY, Feb. 17.—*Senate.*—The Senate resolved to adjourn from Saturday to Wednesday, in honor of WASHINGTON'S birthday. The bill relative to Common Schools in New York, was recommitted.

*Assembly.*—The Assembly went into Committee on the New York Pilot bill.

FRIDAY, Feb. 18.—*Senate.*—The Senate was mainly occupied with private bills.

*Assembly.*—The bill incorporating the New York Agricultural College was passed. Mr. CHAMBERLIN reported against any change in the law to punish seduction, and a motion to recommit was lost by a large majority.

SATURDAY, Feb. 19.—*Senate.*—No quorum in the Senate.

*Assembly.*—Several bills were introduced, also resolutions, which lay over. The Canal Committee resolutions were taken up and debated by Messrs. BURROUGHS and HOLLEY, and then, for lack of a quorum, the Assembly adjourned, to meet again on Wednesday morning.

SATURDAY, Feb. 19.—*Senate.*—The Senate got through with quite a lot of business, but not much of it of public interest. A bill granting a pension to BETSY NORTON, a widow over 90 years old, to continue for life, unless she shall marry again, was passed without amendment. Mr. HALE'S resolution calling for information as to whether any complaints have been received from Mexico of a violation of the eleventh article of the treaty of peace, on account of Indian depredations, was taken up and adopted. The Pacific Railroad bill was then taken up and discussed.—Many amendments were offered and several were passed.

*House.*—Mr. BAYLEY'S amendment to the Civil and Diplomatic Appropriation bill, which was necessary to enable the incoming administration to change our Ministers abroad, if they should deem proper, was adopted by the Committee of the Whole. An amendment was also adopted making Fern a full mission. Also one sending a Charge to Switzerland.

Both Houses adjourned to Wednesday.

## Letter from Illinois.

TISKILWA, Bureau Co., Ill., Feb. 15, 1853.

INDIAN towns are proverbially handsome—that is, so far as nature is concerned. In some respects, Tiskilwa is not altogether unworthy of having been a favored home of our red brothers. It is situated in a valley, here nearly half a mile wide, and bounded on each side with high steep bluffs. Bureau creek meanders lazily along, turning, every two or three miles, the wheel of some mill. Several streamlets flow from springs, issuing from long, deep, and narrow gorges in the bluff, and gradually wind their way into the valley stream.

One of these has been christened "Shady Dell." At its mouth, once stood the wig-wam of Shabony, the chief of the Patawatomies. The pebbly stream, the blue grass lawn, studded with scattering trees, and the stately bluff, render it a picturesque spot. The old chief must have had an eye to the beautiful, when he chose this place for his lodge. Yet the useful, was blended with the beautiful. The tall bluff on the south, shut out, or tempered the noontide rays. And before the white man broke down their "Maine law," when water was their only beverage, what a treasure was this crystal stream, perpetually gliding by his door. How often he must have bathed his weary limbs in its cool waters, or bent down and slaked his thirst.

But at length the whites came, and the Indian departed. A portion of this savage Eden, is now occupied by Dr. G.'s pigs and calves; and the rest seems in summer to be the favorite haunt of the village cows.

The Chicago and Rock Island Railroad is located through our valley, and is now in a rapid course of construction. Before another winter, we expect to see the locomotive and the whizzing train.

L. D. W.

☞ The two new Terirtories, for the establishment of which bills are before Congress, are thus described:—One is the Territory of Nebraska, to embrace all the territory lying west of the State of Iowa and Missouri to the Rocky Mountains, running south to Utah, and north to lattitude 43 deg. The other is the Territory of Washington, which is to embrace all of Oregon lying north of the Columbia River, eastward to the Rocky Mountains on the line of 46 deg. north, from the point where the river touches that parallel of latitude.

## News Brebities.

—— The Hindoos have 26 native papers.

—— The cars on the Rock Island railroad are running reuglarly to Ottawa.

—— In England there are 4,600 miles of telegraph, and in the United States 23,000.

—— There are one hundred and six postoffices in California.

—— By measurement upon the ice, Albany is 145 miles from New York.

—— The census of California shows the population to be 224,400.

—— Madame Sontag and Ole Bull are soon to give a series of Concerts in New York together.

—— Ice has risen in London to 18s per cwt. retail; four months since it sold at 14s a ton.

—— The Comptroller advertises for a loan of $467,000 at four per cent., payable in 1868.

—— The number of convicts in all the New York State Prisons, is 1688. Quite a formidable army.

—— Egyptian mechanics begin to work at five o'clock in the morning, but they never work in the evening.

—— There are three thousand omnibuses in London, and they each carry about three hundred passengers daily.

—— The State of Texas has thirty thousand inhabitants over 20 years of age, who can neither read nor write.

—— The amount of iron pipes laid by the city of Lowell, for the supply of water to be used in case of fire, is 14 841 feet.

—— The number of births in the State of New Jersey during the past year, was 10,683; marriages, 2,683; and deaths, 6,371.

—— The Buffalo Express says that a strong effort is making at Albany, to erect a new county from parts of Erie and Chautauque.

—— Beloit, Wis., has full 3,000 inhabitants, and yet for the quarter ending on the 1st of February, there were only eleven interments.

—— A new Post Office has been established at East Farmington, Ontario county, N. Y., and Edward Nichols, appointed Post Master.

—— Wheeling contains a population of 16,000, 150 manufacturing establishments, and does $8,000,000 worth of manufacturing annually.

—— It is said that the Astor Library will be opened to the public in June next, with about 100,000 volumes on the shelves.

—— The people of Burlington, Vt., have rejected the city charter, and adopted a village charter instead. Anything for improvement.

—— The sugar crop of Louisiana, it is said, will be larger for 1852 than ever before. It will reach fully 280,000 hogsheads.

—— Two dollar bills on the Connecticut Central Bank, so ingeniously altered to fifties as to be likely to deceive in nine cases out of ten, are in circulation.

—— Mrs. Eunice Peck, who traced her descent from John Rogers the martyr, who suffered at the stake in 1555, died at Royalton, Vt., on the 3d inst., aged 65 years.

—— Ex-President Van Buren will accompany his invalid son, Martin, Jr., to Europe next month. He will be the first Ex-President who has ever visited the old world.

—— It is now announced that gold and auriferous quartz have been found in New Zealand, and a belief prevailed that the Island teemed with treasures.

—— It is predicted that nothing will be done by Congress at the present session, in regard to a Pacific Railroad, unless it be to appropriate $160,000 for a reconnoissance.

—— A "curious woman" in Rockville, says the Hartford Courant, counted the stitches she took in making a shirt. The number was fourteen thousand four hundred and thirty-five.

—— A young Indian in New Jersey, lately saved two boys, in two instances, when they had fallen through the ice while skating, and when all their other companions ran away.

—— The Minnesota Pioneer says there is now in Minnesota Territory, a gentleman who is a forerunner for 125 families in Massachusetts, who will emigrate in one colony in the spring.

—— The deaths of Viscount and Melbourne and the Earl of Tyrconnel, with that of the Earl of Oxford, makes no less than three peerages that have become extinct within the last fortnight.

—— The buttons on the coat of John Hancock were of silver, of American manufacture. The device, a shepherd shearing his sheep—the motto, "you gain more by our lives than by our deaths."

—— Prof. Goadby, who lectured in this city last fall, is at present delivering his lectures on insect structure and functions, in Toronto. He is a scientific man, of remarkable gifts and acquirements.

—— A company of twenty men at Buffalo, have purchased the exclusive right to use the caloric engines on the lakes, and have made arrangements for a number of heaters and propellers.

—— The Calais (Me.) Advertiser says there is now on exhibition in that city, a log raised in Milltown, which stands seven feet six inches high, girths six feet eight inches, and weighs 1200 lbs. He is only eighteen months old.

☞ A census of the city of Cincinnati has just been taken by the well known Mr. Cist. The present population is 150,119, having increased from 120,300 in 1850. The increase has been at the rate of 10 per cent. per annum since 1840.

☞ The Newark (O.) Times says the coming wool crop is being bought up at enormous prices. We have been informed that full one-half of the clip has been bought at from thirty to sixty, and some even as high as sixty-three cents per pound.

☞ The aggregate amount of coin and bullion imported into this country from 1821 to 1852 inclusive, is $273,871,366. Exports during the same period $252,163,219. Excess of imports over exports, $21,708,147. The exports in 1851 and 1852 were $58,772,289.

☞ The Cooperstown Freeman's Journal says: An interesting fact was mentioned to us by the Pastor of the Presbyterian Church of this village. Of the nine deaths which last occurred in that congregation, the youngest was 55, the oldest 93; the average of the nine was over 77.

☞ We learn that the Rochester, Lockport and Niagara Falls Railroad has done a flourishing business this winter. The great harvest of that road must, however, be in the summer, but that it is prospering is a fact evinced by the high value of its stock. It cannot fail to prove one of the most satisfactory investments of capital in the State.

☞ The House has passed a bill repealing that part of the tax of last session which exempted $200 of personal property from taxation. Everything must now be taxed except churches, &c., specially exempt. We presume the Senate will concur. It will increase the basis of taxation probably *fifty millions* of dollars.—*Ohio State Jour.*

# Foreign Intelligence.

## Arrival of the America.

The America was at Halifax on the 17th with Liverpool dates to 5th inst.

ENGLAND.—The news from England is quite devoid of interest. Cotton continued to advance, but a decline had occurred in Breadstuffs. Dr. Newman, defendant in the celebrated case of Achilli vs. Newman, has been sentenced to a fine of £100, with imprisonment till payment. A Reform banquet was held at Manchester on the 3d inst. Messrs. Cobden and Bright were present, and the former gentleman proposed a banter at great odds, against the possibility of a French invasion of England. The bet, it is said, has been taken. A Naval Militia is talked of. The loan guaranteed by the government for the West India Islands, has been taken by a London Insurance Company, the Atlas.

FRANCE.—From France we have accounts of the celebration of the Imperial nuptials in magnificent style, at Notre Dame. The Emperor and Empress retired to St. Cloud after the ceremony. The Empress has devoted a quarter of a million of francs, the gift of the Emperor, to the Maternity Society and the Hospital for incurables, each of which Institutitions receive one-half of the sum named. The Emperor endorses the gift in behalf of "our much-loved wife, the Empress EUGENIE." Imperial projects on a scale of lavish expenditure are on foot. Among others, several new Palaces are named. Modifications of the present Ministry are looked for. Legitimist circles are circulating a letter from Changarnier, declaring that a European war is inevitable.

The intelligence from the rest of Europe is not worthy of note. Austria has concluded a Treaty of Commerce with Prussia, for twelve years.

From Prussia we have another version of the manner in which the Cabinets of St. Petersburg, Berlin and Vienna recognized the French Empire. They called for the observance of existing Treaties, and the maintenance of the present territorial limits of the European States.

The war in Montenegro continued with unabated ardor, and rewards were offered for every Turk's head brought into the camp of the insurgents.

The Overland Mail brings details of the war in Burmah, but there is nothing of particular interest.

## Later.—Arrival of the Pacific.

THE Steamship Pacific arrived at New York on the 21st, with Liverpool dates to the 9th inst.—The news is without special interest. We give the most important items below:

Burritt will visit Cork in a few day, to agitate for cheap ocean postage.

All was tranquil in France. The balls at Paris will be suspended during Lent.

Belgium is on the point of entering into close relations with Russia.

Austrian and Russian troops are concentrating on the Turkish frontier, but as yet have committed no act of hostility. In Montenegro the Turks are gaining the advantage.

The rest of Europe was quiet.

MARKETS.—The arrivals of the week are pretty large of foreign wheat and flour; a fair demand for wheat at 1d to 2d advance upon the depressed rates of last week, for white, wheat and full prices for better descriptions.

There was also an improved sale for flour, at an amendment of 6d per sack and barrel.

Indian Corn—on the spot little inquiry. Yesterday a number of floating cargoes sold at 1s per quarter reduction from recent prices.

There are no fresh arrivals at calling ports, but a fair number are near at hand.

Western Canal flour 25s 9d@26s 6d; Canadian 25s@26 6d; Ohio 27s@28s.

Wheat 6s 8d@7s 1d for red and mixed; 7s@7s 6d for white.

Corn 32s 6d@33 for yellow; 35@36s for white.

Provisions.—Pork active, Beef in good demand and willingly met by sellers. Bacon inquired for. Lard quiet.

☞"While Mr. Thackeray," remarks the London Weekly *News*, "is expressing gratitude for the honors thrust upon him at New York, an American writer, not less widely known, Mr. W. C. Bryant, is making the most modest of visits to London, his arrival even not having been mentioned by any other journal than our own. When an English author, even such a one as Mr. Tupper, visits the United States, he raises a cloud of dust before he has been there a week, but when such men as Irving, Prescott, Bancroft, Cooper and Bryan, cross from their side of the Atlantic, the fact is barely chronicled in our journals, and the greetings awaiting them are confined to one or two literary parties."

☞We understand that the proposition to give 160 acres of land to every officer and soldier who served either on land or water in the war of 1812, is gaining friends daily in both Houses of Congress. The friends of the measure argue that if even the recruits of Mexico who were in service but a week before the close of the Mexican war received 160 acres, the volunteers of 1812, who served three months, are justly entitled to the same.

THE FRENCH NAVY.—No less than twenty ships of the line are now building in the French dockyards, and for the greater number of them screws have been ordered. In addition to these, there are 18 frigates, and fifteen other vessels of different classes building, which are to be all propelled by screws.

A Milk Convention, largely attended by delegations from the chief milk producing counties of New York State, was held in Westchester co. on the 31 inst. Resolutions were adopted having in view a more systematic management of the milk business, that both producer and consumer may be better protected from the evils of adulteration, dilution, &c. They also recommend that a milk inspector be appointed in the city.

— There is considerable competition between the different cities on Lake Erie, in the matter of trade, and in their annual exhibits each one strives to outdo the other. Cleveland, Toledo and Sandusky are endeavoring to show their superiority of each other. Sandusky claims to have exceeded Toledo in the comparative value of the commerce of the two ports, by $2,381,947, but ventures no comparison with Cleveland. Railroads are doing much toward the building up of those thriving towns of the lake shore.

— The Journal of Commerce states that a new steamship company has been organized to open a route between New York an l Australia, via Panama. The capital will be $3,000,000, with liberty to increase it to $4,000,000.

— The West Jerseyman says that New York speculators are in Burlington county, N. J., contracting for poultry of the "capon" breed to be delivered in May, at 25 cents per pound. Anticipation of a throng in the city during the World's Fair is the reason of this exorbitant price for poultry.

## Washington Matters.

WASHINGTON, Feb. 20, 1853.

Mr. Marcy is at Willard's Hotel awaiting the arrival of President Pierce. The belief that he goes into the Cabinet strengthens. It is settled, indeed—if it can stay settled—in spite of the powerful and well organized opposition of the Dickinson men from the South, Southwest and West. If Pierce should be compelled to abandon him, he will appoint Dickinson or nobody from New York. The appointment of Marcy is bitterly offensive to Cass. Good authority says that all the southern appointments depend upon contingencies to be considered after Mr. Pierce's arrival.

The present administration will not negociate the treaty relative to a joint protectorate of the Mosquitos.

Mr. Weller is to move a reconsideration of the vote on Mr. Soule's amendment to the Pacific Railroad Bill. Mr Gwin threatens to defeat the Appropriation Bills until that bill has passed.—The subject will be continued to-morrow, when Mr. Houston intends to speak against Mr. Cass and the Filibusters if he gets an opportunity.

The Union is severe upon the Whig Clerks who sold out to Democrats, and says the purchasers can't keep the offices. Prices of Clerkship may interest applicants. A $1 200 Clerk an active Whig, sold out recently for $200. A $1 600 Clerk holds at $500 a year. The market is well stocked, and sales are quick.

Mr. Cassavant, dentist, who was whipped a few days since by Mr. Wall clothier, for addressing a lady unintroduced, returned the compliment by cowhiding Wall on the Avenue, opposite Brown's, this morning.

Inflammation has taken place in Mr. Fuller's case, and his symptoms are dangerous.

## Foreign Items.

— Manchester now sends its street sweepings by railway trucks into Lincolnshire, thus virtually sending manure to raise its meat.

There is a report that the East India Company intend to increase the number of Europeans in its army. The total of the Indian army is, at present, no less than 322 000 men.

George Crisp is delivering lectures at the Polytechnic Institution on the subject of Ericsson's new motive power.

A disposition to strike for higher wages seems to be generally prevalent in England. Some of the shipwrights have already struck, and even the farm laborers of Wiltshire.

The first flax from the South of Ireland was opened at Cork, with a good deal of ceremony, on Friday, the 4th inst.

There were employed in all the ports of France, during 1852, (outwards and inwards,) 240, 778 ships, having an aggregate tonnage of 11,734,325, and crews amounting to 1 241,254 men.

The round of official fetes in honor of the Imperial marriage is now pretty nearly exhausted. On Monday evening 7th, the great fete at the Luxembourg came off. It was one of the most magnificent displays that has been seen in France for a long time, and brought back to the recollection those famous days when the splendor of the French Court was at its height. For three whole days it kept the gay city of Paris in a whirl of excitement, and gave an astonishing impetus to very many branches of trade.

A letter at Lloyd's reports that the ship Maries, on her passage from Liverpool to Calcera, when 12 miles from the equator, in lon. 19 W., met with a remarkable convulsion of the sea, similar to what might be caused by the eruption of a submarine volcano.

The waves continued boiling for about fifteen minute, all command over the ship being lost, and the wind blowing from all parts of the compass. Shortly after, a quantity of wreck and fragments of a screw steamer were passed.

THE BRITISH INTEROCEANIC CANAL COMPANY.—A Company has been advertised for constructing an Atlantic and Pacific Junction Canal thro' the Isthmus of Darien, at a cost of £15,000,000 sterling. This route, it appears has been actually surveyed, but some superficial observations lately made have led to the assumption that if the levels should prove such as they are supposed to be, a canal capable of passing the largest vessels, without locks, might be excavated for the sum specicified.

The London Times says of this:

"That the revenue to be derived from a Ship Canal between the Oceans would be such as to repay a very heavy expenditure is a conclusion long since arrived at by those who have most thoroughly investigated the question, but whether an outlay of £15,000 for a work that must be subsidiary to the Nicaragua Canal, every foot of which has been the subject of the most precise estimates, and which can be built so as to admit large ocean steamers such as the North Ern Light, for less than £4,000 000 will be found profitable, is a point upon which there would seem little difficulty in forming an opinion.

"The shares of the proposed Company are to be of £100 each, with a deposit of 10s, and a conditional concession of the line has been obtained from the Government of New Grenada, to whom the sum of £24,000 is to be paid within twelve months of its date."

WHAT IS A SNOB?—Thackeray, in one of his lectures, said there were not as many *snobs* in this country as in his, but there were *some*. If the reader will follow us through his definition of a "snob," and then look round upon the community, he will begin to suspect that the class is "large and respectable." Said Thackeray:

"A *Snob* is that man or woman who are always pretending, before the world to be something better—especially richer or more fashionable—than they are. It is one who thinks his own position in life contemptible, and is always yearning and striving to force himself into one above, without the education or characteristics which belong to it; one who looks down upon, despises, and over-rides his inferiors, or even equals of his own standing, and is ever ready to worship, fawn upon, and flatter a rich or titled man, not because he is a good man, a wise man, or a Christian man; but because he has the luck to be rich or consequential."

A WOMAN'S INFLUENCE.—A Washington correspondent of the New York Commercial attributes the loss of the New York mint bill to a woman. It seems that Mr. Price, of New Jersey, who was in favor of the bill, was stopped in the lobby by a lady, who held him by the button until after his name had been called and the vote declared. The result was 87 to 88. The vote of Mr. Price would have made a tie, and the Speaker was in favor of the bill. It is not stated whether the detention was a cunning ruse, or merely an act of thoughtlessness on the part of the lady, but the fact proves that woman have some influence in the legislation of the country.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Feb. 22, 1853.

THE past week, with fine sleighing, has been favorable to business and has been well improved, as our thronged streets bear witness. Foreign advices have been unfavorable for our staple, flour, though the recent news by the Pacific is more favorable.

FLOUR—No change to note, but little being ground and that for home consumption

GRAIN—Wheat has fallen off somewhat, $1,03@1,06 being about the limits. Corn in demand at about 69 cents. Other grains exhibit little change.

SEEDS—In Clover there is a speculative feeling, though the opinion gains strength that the supply is light; $6,50@7 is paid for medium. Large is not plenty, and sells for more. We notice some Timothy not very good, and find it selling at $2.50@2,75. Extra would command $3.

PROVISIONS—Very little change has been seen in this department. Supply good and in the main, prices better.

In other markets, Wool and Hops appear to be buoyant, with an upward tendency. No other matters worthy of note, at home or abroad.

### Rochester Wholesale Prices.

### NOTICE.

WANTED, a young man, or one with a small family, who has had experience in farming and is competent to act as foreman on a large farm,—who is a good horseman and knows how to take care of a large stock, and can come well recommended. Also, two other good laboring men, with small families, and acquainted with farm work. Houses to let to accomodate two or three small families, and plenty of employment.

Call on or address the subscriber at Walworth, Wayne Co., N. Y. ELIAB YEOMANS.

Walworth, Feb. 21, 1853. 165w3*

### AMERICAN ELOQUENCE.

WILBUR M. HAYWARD having published WEBSTER'S Great Orations, would invite public attention to the same. The volume contains the Eulogy on Adams and Jefferson; the Landing of the pilgrims; the Bunker Hill Monument; and the Reply to Hayne. These productions of America's Master Mind will live and be read forever. The eloquence and example of Webster is a rich and exhaustless legacy, of which every American can feel proud, and for which he should be grateful. The work is embellished with a fine and accurate likeness of the great Statesman and Orator. It should be in the hands, and its sentiments of lofty patriotism on the hearts of all who boast of the American name. It is now for the first time in a form accessible to all. Price—Single copies 37½ cents. 3 copies $1. It can be mailed to all parts of the Union, and Canadas. Readers of the RURAL, send in your orders.

Address, WILBUR M. HAYWARD,
163-tf No. 4, Burns Block, Rochester, N. Y.

### READ THE SUBJOINED

Credentials of the Rural, from Reliable Sources.

WITH this number we add largely to the former edition of the RURAL, and may, if we have them to spare, circulate a few hundred copies as specimens. In order that those unacquainted with the paper may know the estimation in which it is held, we annex a few notices of the Press:

MOORE'S RURAL NEW-YORKER—Is already making its arrangements for the new year. Reader, if after taking a home paper, you are in want of an eastern journal, one which will be invaluable to yourself and family, send for the one the name of which heads this paragraph. We venture to say it is not excelled as a family paper by any other, we care not the name or pretensions. Its various departments are calculated especially for each member of your family. Father, mother, son, daughter, may all find articles appropriate to their several pursuits and stations. If you wish to make the members of your household a present which will increase in worth as the year grows old, subscribe for the New-Yorker.—*Colchester Sentinel.*

It is a family paper of intrinsic merit—just such a one as families ought to patronize, when they seek for papers away from home. It is worth ten times more than any of the flash papers in our cities, which circulate so largely through the country. The Agricultural, Literary, Moral and Religious character of the Rural, are well calculated to make it the most useful "Family Paper" we have seen. We thus speak, because we believe it worthy of our commendation, apart from all puffing considerations.—[Montgomery (Pa.) Ledger.

For judicious selection, mechanical execution, and ability in the preparation of original articles, we do not hesitate to pronounce the Rural New-Yorker "the best Rural, Family and General Newspaper," that we have any acquaintance with; and we are glad to learn that its merits are so well appreciated by the public as to warrant further improvements, and to stimulate yet higher exertions by its publisher in the forthcoming volume.—[Ontario Repos.

A few such papers as the Rural New-Yorker will convince the people that all excellence is *not* confined to the "Model Couriers," and the "Star Spangled Banners," and the "Waverly Magazines" of the day. The Rural is an admirable paper for the fireside and contains a vast amount of valuable information for the farmer and mechanic.—[Pittsburgh (Pa.) Saturday Visitor.

MOORE'S RURAL NEW-YORKER.—The number before us closes the third volume of one of the best Agricultural and Family Newspapers in the world. It is conducted by four able editors, at the head of whom stands D. D. T. MOORE, Esq., the enterprising publisher.—[Louisville (Ky) Journal.

The Rural New-Yorker is one of the most ably edited, interesting and successful papers of its class in this country, and during a period of the three years which it has been published, has acquired a very large circulation.—[Boston (Mass.) Journal.

The proprietor spares no pains to make the Rural New-Yorker one of the best Agricultural and Family Newspapers published in America, and we certainly think it is second to none that we have ever seen.—[Bowmanville (C. W.) Messenger.

The Rural New-Yorker has completed its third volume. It is a paper that we delight to praise—and should be in the hands of every citizen farmer. No better thing, in tone and various interest, meets our eye. To farmers it is almost indispensible.—[Youngsville (Pa.) Express.

We have been almost a constant reader of the "Rural," since its first number, issued three years ago, and can most cordially recommend it to all our readers as one of the very best Family Journals published in the country.—[Saturday Budget.

MOORE'S RURAL NEW-YORKER is the best Family Newspaper we know of, for the country, as it is devoted to Agriculture and Education, together with Literary and Miscellaneous reading. It is ably conducted and neatly printed, and will give satisfaction, we are confident.—[Hillsdale (Ind.) Journal.

Its leading feature, perhaps is agricultural; but in the departments of the arts, the sciences, education, history, literature and the daily news, it is most ably and admirably sustained—is an honor to the newspaper family, as well as to its editor and proprietor.—*Mich. Christ. Herald.*

Independent of it's being the very best agricultural paper that has ever come under our notice, its literary merits are unsurpassed. It is certainly the best and most useful paper of the kind we have ever seen.—*Pa. Whig.*

MOORE'S RURAL NEW-YORKER is one of our exchanges, which we always open with pleasure. It is free from politics and party, and always comes to hand filled with a choice variety of well written, and well selected matter.—*New York Observer.*

THE WOOL GROWER AND STOCK REGISTER, at Rochester, is one of the neatest printed, as it is one of the most valuable, of publications. We dip into its pages with interest. The NEW-YORKER is also one of the best Agricultural publications in the world, and deserving the wide and increasing patronage it receives.—*Cayuga Chief.*

### Those Premiums.—To Agents and Others.

MANY friends are already entitled to specific premiums in Books, etc., for obtaining subscribers to our present volume, and we are now forwarding (by express and mail) to those who have designated the works desired. But as several have requested us to publish a list of Agricultural Books, from which they could make a selection, we give below the titles and prices of such as we have recently procured. If any wish books not mentioned in this list, we will furnish them at the regular cash prices.

Johnston's Ag. Chemistry, $1,25; Boussingault's Rural Economy, $1,25; Downing's Fruits and Fruit Trees of America, $1,50; Amer. Fruit Culturist, by Thomas, $1,25; Dictionary of Gardening, by Johnson, $1,25; Farmer's Dictionary, by Gardner, $1,75; Farmer's Every-Day Book, by Blake, $2,50; The Complete Farmer and Gardener, by Fessenden, $1,25; Rural Architecture, by Allen, $1,25; Ladies Companion to the Flower Garden, by Mrs. Loudon, $1,25; American Flower Garden, by Buist, $1,25; American Farm Book, $1; The Kitchen Garden, by Buist, 75c; Comparative Agriculture, by Colman, $1; Scientific Agriculture, by Rodgers, $1; American Lady's System of Cookery, by Mrs. Crowen, $1,25.

Youatt on the Horse, by Randall, $1,50; Youatt and Martin on Cattle, by Stevens, $1,25; Randall's Sheep Husbandry, $1,25 Morrell's American Shepherd, $1; Cardell on Sheep, $1; Youatt on Sheep, 75 cts; The Pig, by Youatt, 75 cts; Clater and Youatt's Cattle Doctor, by Skinner, 50 cts; American Veterinarian, by Cole, 50c; The Dairyman's Manual, $1; Browne's Poultry Book, $1; Bennett's do., $1; Bee-Keepers Manual, $1; Townly on Bees, 38c.

The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following works are bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture; Dana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

It will be sold for $45 per acre Inquire of J. B. SANDS, Camandaigua, or on the he premises, of L. TAFT.

Macedon, N. Y., Jan. 29, 1853. 163–3t–eow*

### ETHAN ALLEN

AND THE

### GREEN-MOUNTAIN HEROES

OF '76.

By HENRY W. DE PEY, author of "Louis Napoleon and his Times," "Kossuth, &c." 423 pages 12 mo with a steel engraving of Kinney's Heroic Statue of Gen. Ethan Allen, a Map showing the route of Gen. Burgoyne, previous to his surrender at Saratoga, Oct. 17th, 1777, and a view of Old Ticonderoga.

This book, full of thrilling interest, should be in the hands of every American independent of its being historically valuable, it contains many accounts of hair-breadth escapes, hardships, and sufferings, almost past belief, and of bloody battles where the heroic Green-Mountain Boys fought in the defense of their homes, their children, and their wives. Although Ethan Allen is the principal subject of the work, brief historical and biographical reminiscences of many others, who are identified with the early history of New England, are given; thus weaving all together into one succinct and interesting historical narrative.

AGENTS WANTED.—This work affords a rare opportunity for Agents, and others, wishing to engage in a light and profitable business, as a liberal percentage will be allowed to all persons canvassing for the work.

Single copies, done up in substantial wrappers and delivered free of postage to any post-office in the United States, will be furnished for $1.25.

Address, *post-paid,* BEADLE & BROTHER,
*Buffalo, N. Y.*

### VALUABLE FARM

### FOR SALE AT AUCTION.

BY order of the Surrogate of the County of Livingston, N. Y., the farm of Eri Webster, late of Lima, in the said County of Livingston, will be sold at Public Auction, to the highest bidder, at one of the clock, in the afternoon, on Thursday, the 24th day of March, 1853, the sale to take place at the North Dwelling House, situated in the said town of Lima.

The premises will be sold subject to mortgage and judgment incumbrances, and contains, at the time of sale, principal and interest, to the sum of four thousand and ninety-two dollars and twenty cents. The balance of the purchase money over and above the incumbrances, is to be paid as follows, viz:—one fourth cash; and the other three-fourths in three equal annual instalments, with interest annually; and secured by mortgage on the premises sold, and the bond of the purchaser.

The premises are described briefly as follows:—Beginning at the junction of the two roads near Lord Sterling's late farm, on the road leading south from Richard Peck's; and running thence north in the centre of the last named road to the south line of lands owned and occupied by the heirs of Ebenezer Rathbone, and by John Decker;—thence running east on said line to the east line of said John Decker's land; thence running north on said last line to the south line of the original portion of the factory lot, sold for the flouring mill known as the Eggleston Mill; thence east on said mill lot line, eighty-six rods across the Honeoye creek, one rod beyond the east bank; thence up the said creek on a line parallel with the said creek one rod east of the east bank eighty rods; thence up said creek upon the east bank to a small walnut tree near the old saw mill formerly owned by Thomas Peck, deceased; thence westerly to the corner of the Grey road so called, on a line which is a continuation of the road leading east from the point of beginning; thence up the centre of said last named road to said point of beginning, containing one hundred and sixty-six acres and forty-five rods of land, one of which however are reserved one acre, situated on the Honeoye creek, heretofore deeded to Warren Pierpont, with a water privilege and easements sufficient to run a fulling mill with one stock, or one set of woollen carding machines; and reserving also one acre and one fifth, near the same, deeded to Holum Hutchinson and Ward Mann, with water power and easements sufficient for one run of stones with elevators and conveyors, after said Pierpont and the saw mill on the premises are supplied with water; and also reserving the privilege of carrying water from certain springs in pipes under ground across the premises above described.

The premises are in a compact form, and also capable of division into two farms. They will be sold together, or separately, as will appear to the undersigned most advantageous to the creditors and heirs.

There are on the premises two good houses, barns and outbuildings; a superb orchard of grafted fruit; an excellent saw mill privilege and saw mill, the dam of which however has lately been carried away by a freshet; and fifteen or twenty acres of timber and wood land. Besides the Honeoye creek which runs upon the premises, there are at least *three* never failing springs of pure water.

☞ Immediate possession will be given of the premises. The growing crops will be reserved out of the sale, and the privilege of entering to harvest, thresh and carry the same away.

EDWARD WEBSTER,
MERCY WEBSTER,
Lima, N. Y., Jan. 31, 1853. Administrators.

N. B. The undersigned, in his individual capacity, for the benefit of the creditors and heirs, and for the convenience of purchasers, has made arrangements with Alexander Duncan, Esq., of Providence, R. I., the Executor of the Will of the late Cyrus Butler, whereby $1,000 which is secured to him by bond and mortgage on the premises, may remain three years, on the payment of interest semi annually, the purchaser giving his bond as collateral security with the further assurance from Mr. Duncan, that in all probability the same can be renewed at or the close of the three years on the same terms if the purchaser should desire. Chas. Seymour, of Canandaigua, for a small per centage, will receive and receipt the interest, and transmit it to Mr. Duncan

On the payment in cash of a sum, which, together with the quarter of the surplus required by the Surrogate, will make up a cash payment of two thousand dollars, the balance of the incumbrances, exclusive of the $1,000 above mentioned, will if the purchaser desires it, be so divided as to make with the other three-quarters surplus required by the Surrogate in three years, four annual installments, on which equal sums, interest will be required annually.

165w3. EDWARD WEBSTER.

### IMPROVED FARM FOR SALE.

ONE HUNDRED and forty-five acres of land, highly cultivated, on traveled road, in one of the healthiest and pleasantest spots in Western New York—one and a half miles from the village of Wyoming, Wyoming Co., N. Y. The soil of this rich Valley is unsurpassed by any in the Genesee country—about one half is wheat land, twenty-five acres wood land. The Hornellsville, and Attica Railroad runs within six miles of the house, and affords a good market for every thing produced.

The house is a cobble stone, two story building, in good condition, recently improved, which cost over $2,000.—There is a large barn and horse barn, also, a good grafted fruit orchard, containing apples, cherries, plums, and peaches.

To a person having a family of children to educate, the Wyoming Academy, an old and flourishing institution, affords superior advantages, within one and a half miles of the house—altogether this is a most desirable farm and will be sold cheap.

Stock and farming implements can be had with the farm if desired. Apply to WILLIS KEMPSHALL, Wyoming, Wyoming county, N. Y., or application for information may be made to D. M. DEWEY, Bookseller, Rochester.

161eow3 J. B. DEWEY, do.

### FARM FOR SALE.

A SMALL Farm of twenty acres, under good cultivation. Seven acres fall plowing done; remainder corn-stubble and meadow; all feasible, good land; situated in East Penfield, eleven miles from Rochester, near the Free-will Baptist Church—pleasant and desirable location. Good dwelling house, newly fitted up, and out-buildings good. Fruit abundant; large orchard, all grafted when small, of choicest fruit. Peaches of the choicest kinds; quinces, cherries, plums, grapes, and shrubbery tastefully arranged.

The above is a part of the Abram Beeker farm. If not sold will be rented with or without the land. Inquire of the subscriber near the premises

163-3.* TRUMAN MATTISON.

### FARM FOR SALE.

THE Subscriber wishing to retire from business offers his very valuable Farm, known as the "Armstrong Hill Farm," of one hundred and seventeen acres for sale. Said farm is delightfully situated in the town of Pittsford, nine miles south-east from Rochester, and three from Canal and Railroad, is in a high state of cultivation, adapted to wheat and all other grains, has an excellent orchard of grafted fruit, good buildings and fences, and is well watered. There are twenty-two acres of wheat on the ground.

JOSEPH ARMSTRONG.

Pittsford, Monroe Co., N. Y., Jan. 7, 1853 153-tf

### CLOVER AND TIMOTHY SEED.

200 Bush. medium Clover Seed; 100 bu. large or late Clover seed; 200 bu. Timothy seed, on hand and for sale at the lowest market price, at the Genesee Seed Store, 65 Buffalo st., Rochester, by

153-tf J. RAPALJE & CO.

# Poetical.

### GENTLE SMILES.

THE sweet young flowers of early spring,
Are beautiful to me,
And bright the many stars that shine
Upon the calm blue sea;
But gentle smiles and loving hearts,
And hands to clasp my own,
Are better than the brightest flow'rs
Or stars that ever shone.

The sun may warm the grass to life—
The dews the drooping flow'r,
And eyes grow bright and watch the light
Of autumn's opening hour;
But gentle smiles of tenderness,
And smiles we know are true,
Are warmer than the summer time,
And brighter than the dew.

*Louisville Democrat.*

# Rural Sketch Book.

## A STORY FOR RURALISTS;

### GOOD MANAGEMENT vs. BAD MANAGMENT.

THE last garment was mended, neatly folded, and placed in the drawer on Saturday afternoon, when Mrs. Lee took her knitting, for there were a few spare moments just now.

Mr. Lee enters, and speaking of his new neighbor, Mr. Prentice, says.

"Ah! Stranger things have happened, Ellen. Why, don't you remember how, thro' bad management, Major Simes lost his farm and all his property. Prentice has bought another plow, subsoil, they call it, that's the third he has bought since he came here.—I rather think he will 'improve himself out of doors' one of these days, as old Col. Durgin used to say, when people talked to him about improvements on a farm. Why, Ellen, Prentice spends more for tools in a year, than you and I do for clothes in twice that time!

"But, as I said before, I really think he is a fine man and means well; but you see he has begun at the 'big end of the horn,' and if he is not amazing careful, he will come out at the 'little end.' This being 'more nice than wise' on a farm, don't pay. That farm will have to be sold again, and if *we* should have it, why, as I said before, 'twould be no stranger than many things we have known."

"Well, Jerry, I don't know what we should do with it, for don't we have as much as we can do now?"

"Yes, but if it has to be sold, it's handy to us, and if we have good luck, I mean to show you a 'pocket full of rocks,' half-a-dozen years hence, without going to California, either. One must invest money somewhere, and I believe land is as safe as any thing."

Mr. and Mrs. Lee were, in "Yankee parlance," very "*clever folks.*" At the death of his father, Jerry, being an only son, inherited the homestead; and now, a dozen years from that time, we find him comfortably settled, with four bright-eyed boys, and little Ellen, the much-loved pet of the whole household.

Was Mr. Lee a stingy, crabbed man? By no means; was he cross to the children? Ah, no—a kinder father, you nor I don't often see.

And now, with this farm productive, easily-worked, and everything apparently favorable for success, what is to hinder Mr. Lee from having that "pocket full of rocks," to pay for that farm if it is sold! We mean the "Nelson farm," that Mr. Prentice bought last spring.

Mr. Prentice was not "brought up" on a farm, but in the city; and having acquired a snug little fortune, he chose to buy a small place where he could "sit under his own vine and fig tree;" and then he never found it easy to banish from his mind the few happy days of his boyhood, which were spent on his grandfather's farm. That dear old man—"peace to his ashes," how kindly he smiled as he patted the curly-headed boy, and said,—

"If Billy lives, he must have a farm, and not always live with brick and mortar, dust and heat."

But we have wandered from our story—and now the sound of merry voices upon the bridge tells us that school is out; and now the boys come rushing in, and with their voices raised to the highest pitch, one exclaims—

"Mother, there is going to be a great thunder shower, wont father's hay all get wet?"

"O, mother, why *didn't* father buy that 'horse rake?' Mr. Prentice has bought it and is raking now with it; his black horse goes complete in it—there, hark! don't you hear it, mother? don't it make a queer noise?—Mother, what *was* the reason father didn't buy it? I wish he had—George Prentice said father engaged it a week ago, and the man brought it for him, but he concluded not to have it, this afternoon; so Mr. Prentice has taken it on trial. I think his old one might have done for him. See, they have finished, and it will be in before the rain comes."

"Wouldn't I like to see our Nelly harnessed in that rake, making such nice rolls of hay in our smooth field!"

"Here comes sis,—she is always behind us boys—she has so many last words for the girls, that one would think every Saturday was the last day of school."

"Yes, but I guess you don't know that father has sold Nelly, and got a strange horse! Look quick, pa is leading him into the stable now."

"Nell gone—gone—she was the kindest creature in the world! 'Tis too bad—I declare it is!"

"Children, you have said enough: why, you are talking so fast, I cannot 'get a word in edgewise.' Now, boys, out and see if you cannot help father rake up his hay, for the shower will soon be here."

And now as the three boys, rake in hand, are scampering for the hay field, let us sit down quietly with little Ellen, the pet of the household, and after mother, we mean Mrs. Lee, has closed the windows so that the rain may not come in, she will join us.

It was a hot day in August, the thermometer at ninety degrees; but as Mr. Lee remarked in the morning, "a capital hay day."

"Now, Ellen," said Mr. Lee to his wife, on the Monday previous, "I am going to (by the way, 'I'm going to,' was a very frequent expression of Mr. Lee's, a sort of watchword, that begun and ended many excellent plans,) I am going to get additional help and finish our haying in short meter. If we have fine weather, I wont be behind-hand this season. And then I'm tired seeing you work so hard. I suppose Prentice will finish Saturday night; I will be up with him, and Ellen, I believe I shall buy a horse rake, although I do not think much of new-fangled notions about farming; yet I'll venture to buy this and see how it works; so if it holds fair by Saturday night, you may expect to see my hay in the barn."

"Well, it's just my luck, Ellen," exclaimed Mr. Lee, as after changing his wet garments and taking little Ellen upon his knee, he seated himself with the rest of the family in the front room. "How it pours—it is all for the best, I know, but I can't help thinking, if Prentice had half a dozen tons of hay out just fit for the barn, it would not have rained so. Well, he has been a lucky dog about his hay, this season, if he don't manage so saving as some. Scarcely a load wet any—none to do any injury, and here I've had two-thirds of mine wet, and I fear a good part of it spoiled; but I sha'nt fret, I never did and I sha'nt begin now."

"Father, what is that horse's name, you have got?" A sharp flash of lightning accompanied by a tremendous peal of thunder, prevented any reply: but little Ellen was not so easily satisfied without an answer.—Upon the question being repeated, Mr. Lee whispered in the child's ear, while he gave a half anxious, inquiring glance at his wife,

"I don't know, dear, but don't you say any more about it, now, Ellen dear; now mind pa."

"I will, pa; but you will tell me about it, and what you let Noll go for, as soon as it is done raining, wont you father?"

The truth is, Mr. Lee, like all sensible people, found it quite satisfactory to himself, to be able to give a good reason even to his children.

But now he would rather talk with Mrs. Lee alone than to be questioned by the children.

Ah, Jerry, you well know, or you may know if you will only look at matters candidly, that you forgot for the moment what your old grandfather used to say to you, quite as often as you wish to hear it, "never give up a certainty for an uncertainty." And now as you look out at the heavy masses of black clouds, that with the strong east wind give indication of a long storm, you don't care to acknowledge to yourself even, that if you had "let well enough alone," your "best hay" would now have been nicely stowed away in your barn.—You don't want to let Mrs. L. and the children know that the vicious animal you have exchanged kind Nell for, despises a horse rake, and will have no more to do with it, than you with a subsoil plow. As the music of neighbor Prentice's rake resounded in your ears, this afternoon, what were your feelings? I fancy you felt something as you would have done, were you doomed, with pinioned hands, to listen to the music of your nearest neighbors, and those neighbors were —*musquitoes!*

But we will let it all go, as Jerry said to himself, we'll let it go, as the money which you saved to pay for that rake, and to pay for this week's hired hands, has gone to pay the difference in value between a kind family horse, and as vicious and good for nothing an animal, as you will often find on a farm.

"But hark! What is that rumbling noise," exclaimed George. "It wasn't thunder, no; ah, it's the stage just come over the bridge."

"I know somebody's coming here—it don't come this way for nothing. Let us all run for the front door; it *is* going to stop here—who can it be coming here in the stage coach!"

"Umph! think I don't know," exclaimed Bill, "it's somebody made a mistake;" and he was about to rectify the same, when an exclamation of joyful surprise and recognition from the father prevented him from so doing.

"O, it is Aunt Fanny," exclaimed every one, as the coach door was swung open and Mr. Lee and the driver assisted a grave-looking lady to alight. A warmer and more hearty welcome, Fanny Lee never received after a long absence, not even when she had upon that same threshold, been clasped in the arms of her own dear father and mother.

Long years had no power to dim the affection of that brother for his only and orphan sister. Fanny was, as we have said, Jerry Lee's only sister, and while with her brother, she inherited from her mother a large share of "good nature," she also possessed much good sense, or as Aunt Judy used to say, a "dreadful sight of discrimination."

Be that as it may, yet we are sure that Fanny, reserved and quiet as she was, exerted a silent, but powerful influence wherever she moved.

Her hand seemed to shed abroad order, regularity and peace, and under her eye everything found its proper place, and everything was done at the proper time. As Jerry said to his wife, "Fanny has such a pretty way with her, and then she always had, and then she sees into anything so quick; 'tis true, she makes no noise or parade about it. But did you mind how quick she noticed my wet hay—and also that the Prentice field was all clear? One word from her is enough, although she never twits one about one's bad luck."

No wonder the children loved Aunt Fanny, for she was a capital story-teller.

"Done reaping! done, all done," exclaimed Bill, as entering the kitchen he tossed his cap on the hook, "and now if Aunt Fanny would like it, father says we may all go down to the oak pasture. Are you rested, Aunty?—over a week since you came."—Aunty was rested, but of course she well knew the children would enjoy the walk quite as well when haying was over, to say nothing of the additional pleasure of having Mr. Lee's company.

"All ready, Aunt Fanny, all ready for that walk! Father says we must be quick, for that good-for-nothing horse wont stir an inch, and father says we must walk all the way: but it is so pleasant we wont mind, will we, Aunt Fanny," said little Ellen, as she placed her little warm, soft hand in Fanny's, and with father and the boys before, proceeded down the hill, and over the bridge.

And now, as little Ellen leaves Aunt Fanny, and joins the boys in their search for berries, let us follow the brother and sister.

As they pass the old moss-grown and dilapidated school house, memories come rushing back—days of their happy childhood: and now, seated on a rock, beneath a wide-spreading oak, as Mr. Lee recounts one by one his plans for the future, and his bright hopes of success, why does that sister remain silent, till urged by Mr. Lee to give her opinion in regard to the matter?

"I reckon you don't think much of farming, Fanny. You've been down south, where labor is disreputable and degrading, and I guess you, with all your New England sense, can't shake off this feeling in a minute.—Nothing strange, though, but I tell you Fanny, farming is the best business in the world, if well followed."

"Well *managed*."

"Yes, sister, I calculate if you come to see us half a dozen years hence, to show you a little of the *profits* of farming—there, do you see at the foot of the hill, those men digging that deep ditch, there in the Nelson swamp?"

"Yes, what of it?"

"Nothing, only that is what I call a fair specimen of folly, or mismanagement.—Money thrown away. Would you believe it, if I were to tell you that the clearing of that piece of land cost Prentice two hundred dollars, and I think sixty more, at least, will be expended in draining it. Money out of pocket. I longed to tell him better when he told me this, but then it would have been useless; well, some must buy their experience, dearly, too.

"Well, Fanny, I wouldn't say it to every one, but 'it is an ill wind that blows good to no one.' That farm will have to be sold again, no two ways about it. I don't want it exactly, that is, I don't *need* it; it may do for one of the boys—it's handy; say, what think of it, Fanny?"

"Brother, mine, did I ever differ from you, needlessly, foolishly? Your attachment to this home of our childhood cannot be stronger, or more enduring than mine.

"Often, as I have reclined beneath the beautiful dark cypress of Alabama, have my thoughts wandered back to this very spot; yes, often in imagination, have I been seated upon this rock, beneath the branches of this wide-spreading oak, where were passed many hours of our fresh and happy childhood, and affections long slumbering have been recalled in all their purity. And how has my bosom yearned towards home! You need but to go where I have been, to see what I have seen, to know the true *dignity of labor*. Where such pleasant homes, where such pure hearts as here in New England? You have but to see as I have seen, the effect of sloth, indolence, exemption from labor and care, to appreciate your own highly-favored position, that of the 'tiller of the soil.'

'But brother, I must speak plainly; beware, lest in avoiding what you consider a useful expense, you commit a greater error. No matter if you do not put the cash *in your pocket*, if you make a free and happy home for your own family, if with pure and loving hearts you find and cherish what money cannot buy in this selfish world, true happiness, then be content.

"But do not suppose for one moment, that money uselessly expended in improvements, or rather supposed improvements, for may be I shall differ from you there, is the only evil to be avoided. There is an evil, greater than all the ditching and subsoiling of which you have been speaking.—It is an improvident, careless, neglectful way of farming, which brings misery and want in its train. 'He that dealeth with a slack hand,' you know the rest of it, brother.

"By the way, have you thus far been successful in your plans—have your expectations been realized—do you know how you stand—what is your yearly income?"

"O, ahem, I don't exactly know, now; but then 'I am going' to reckon up one of these days, and then I can tell: but then you must know, Fanny, that keeping accounts, &c., *on a farm*, is what one can do or not, just as one chooses; its well enough, though, if one has plenty of time to do everything, no harm perhaps can come of it, then, but hang it, (excuse me sister) if I would have the name of my wife's keeping books or accounts for me if 'twas never done. They say Mrs. Prentice assists her husband in such matters."

"I shall begin to think quite highly of this Prentice family, if I remain here through the season, I suspect," replied Fanny with a smile.

"O, I have nothing against them, save perhaps a little prejudice; it's their *management*, I speak of," said Mr. Lee.

"Now, Fanny, don't you remember Major Simes? Well, he undertook to manage something after this fashion; he bought new-fashioned tools of all descriptions, drained all his low lands, grafted his apple trees, and tried all sorts of book farming, took I know not how many agricultural papers, and what was the end of it, do you remember, Fanny?" said Mr. Lee with a triumphant smile.

"Yes, I remember it all, and do *you* remember when we children went to school, how the tools and machines all lay by the road side, piled and covered with snow—what strange fantastic forms they were; how the gates were off the hinges, fences down, and the cattle traversing the fields, breaking the young fruit trees, the well sweep broken, and the pole with a tin pail fastened on the end to draw with?

"Do *you* remember how *you* used to snow ball the house where no smoke issued from the chimney, on your way to school in the morning, with no fear of a remonstrance from its inmates, who seemed to care for nought but 'a little more sleep?' Do *you* remember how 'his grafts' died for want of care? and again my memory is not at fault; if Major S. *read* agricultural papers, you and I know he *never paid* for them!

"Yes, Jerry, I remember all these things, and it was not *book* farming that ruined him, it was down-right—shall I say it, brother, *shiftlessness;* not a very pretty word, is it? If the Major had united habits of regularity, industry and economy, with energy, his book farming could never have harmed him; but, alas! all these impotrant requisites were wanting.

"As well might you suppose that the locomotive which is now flying past us in the distance, would reach its destination with its burden of living freight, at the given time, safe and sound, without wood or water, and the constant and unwearied care and oversight of man,—as to think farming, with the most complete tools to work with, and correct ideas of their use, can be made a profitable or useful employment without a systematic arrangement of one's affairs with skill and prudence, and the same order which is requisite to render any other business prosperous.

"In truth, brother, I do not believe it is a *money-making* business; but that is of little consequence; do not teach your children that money-making is of the most importance, but tell them by your example, that 'money is nothing, that greatness is nothing, that *goodness* is the real jewel in the casket,' and learn them to cherish it well. And, brother, let me again speak plainly, do not let cares press too heavily upon your wife. You may not have noticed as I have, that Ellen is looking quite care-worn; believe me, brother, 'tis not time alone, that has deepened and widened the furrows on her pale brow—hard work, brother—hard work"—

How long the conversation would have continued, we know not, had not the sound of merry voices and the lengthening shadows told them it was time to return.

(*See page 73, this No.*)

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

### JUMPING THROUGH YOUR FINGERS.

HOLD a piece of wood of the size of a common cedar pencil between the forefinger of each hand, as represented in the above figure, and without letting go, try to jump over it both forward and backward. With a little practice it can be done very easily, the feat mostly consisting in the difficulty of clearing the heels; so that it can only be performed with low-heeled boots or shoes.—You may also jump over your middle fingers placed together, without touching or separating them with your feet.

For the Rural New-Yorker.

### MISCELLANEOUS ENIGMA.

I am composed of 16 letters.
My 12, 10, 8 is a domestic animal.
My 1, 2, 6, 15 is a part of the body.
My 5, 3, 10, 11 is a girls name.
My 12, 5, 3, 14 is a farmer's tool.
My 5, 3, 2, 7, 13, 2 is a famous city.
My 4, 3, 13, 5 is very warm.
My whole is a useful motto.

Lakeville, N. Y., Jan., 1853.

☞ Answer next week.

For Moore's Rural New-Yorker.

### CHARADE.

My first, all true friends dread to do,
My second's a range of mountains;
My whole is a bird that hunters prize,
And is found near the forest fountains.

Floyd, Poolville, N. Y., 1853.

☞ Answer next week.

### A PUZZLE.

CUT a piece of apple or turnip into the shape of a horse-shoe, stick six pins in it for nails, and then by two cuts divide it into six parts, each containing one pin.

☞ Answer next week.

A RIDDLE.—Half a carman, and a whole country, will form the name of a beautiful flower.—What is it?

☞ Answer next week.

## TO AGENTS AND OTHERS.

ENCOURAGED by the brilliant success which has thus far attended the publication of MOORE'S RURAL NEW-YORKER, the Proprietor has resolved to make still greater efforts to furnish *the best and cheapest Agricultural, Literary and Family Newspaper in America.* And he is likewise disposed to remunerate, as far as possible, all Post-Masters and others, who may aid in augmenting the circulation and usefulness of the paper. Former agents and friends are aware that he was the first agricultural publisher who offered prizes for subscribers—and he now signifies [see evidence below] a determination to *keep in advance* of all imitators and competitors, by offering the *most liberal and valuable* PREMIUMS. But, satisfied with offering greater inducements than any other publisher, he dispenses with all circumlution, and invites your attention to the following list of

### SPLENDID PREMIUMS!

To the person or persons who shall send us the greatest number of yearly subscribers to the RURAL NEW-YORKER from any one town in *the State of New York*, IN PROPORTION TO ITS POPULATION, (according to the U. S. census of 1850,) previous to the 1st of May, 1853, forwarding payment according to our terms, WE WILL SEND THE NUMBER OF COPIES SO ORDERED, ANOTHER YEAR, FREE OF CHARGE!

For the largest number of yearly subscribers from any town *out of the State of New York*, on like conditions, we will send the paper another year, as above specified, FREE.

### GRAND PRIZES!

1st. FIFTY DOLLARS, IN CASH, to the person who shall send us the greatest number of yearly subscribers, (six month subscriptions to be counted proportionably,) according to our terms, previous to the 1st of May, 1853.

2d. THIRTY DOLLARS, in BOOKS or AGRICULTURAL IMPLEMENTS, to the person who shall send us the second greatest number, as above.

3d. TWENTY DOLLARS, in Books or Implements, to the person sending the next (third) greatest number.

4th. FIFTEEN DOLLARS, in Books or Implements, to the person sending the next (fourth) greatest number.

5th. TWELVE DOLLARS, in Books, to the person sending the next (fifth) greatest number.

6th. EIGHT DOLLARS, in Books, to the person sending the next (sixth) greatest number.

7th. FIVE DOLLARS, in Books, to the person sending the next (seventh) greatest number.

☞ Persons competing for premiums should give us notice to that effect, in the letter containing first remittance.

[In order to give Subscribers, Local Agents and Post-masters, a fair and equal chance, traveling agents, post-riders and citizens of Rochester are excluded from competion for any of the above Premiums.]

### SPECIFIC PREMIUMS!

In order to reach and reward *every one* who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1st. FIVE DOLLARS, in CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Agl. Books,) to *every person* sending payment for FIFTY or more yearly copies (six month subscriptions proportionably,) according to our terms, previous to the 1st of May next.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers as above.

3d. THREE DOLLARS in Books, or a handsomely bound volume of the RURAL for 1852, to every person remitting payment for THIRTY subscribers.

4th. To every one remitting payment for TWENTY copies, we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in books.

5th. To every one remitting for TEN copies, an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in books.

6th. To every one remitting for SIX copies, an extra copy of the RURAL and either volume of Wool Grower.

7th. To every one remitting for THREE copies ($3,) either volume of the Wool Grower, *and* a bound volume of Gen. Farmer for 1848 *or* '49.

8th. To every person remitting for ONE copy, ($2) we will give a copy of either vol. Wool Grower, *or* the Farmer for '48 or '9, as preferred.

All competitors for Premiums are expected to adhere tricly to the following

### TERMS,—IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year, for $5—Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Six month subscriptions in proportion. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different post offices if desired.

Friends of the RURAL and its objects! will you not respond to these offers in a spirit of liberality such as is therein manifested? The premiums are certainly worth contending for by Subscribers, Agents, Post-Masters, and all others who desire to benefit themselves and community.

☞ Specimen numbers, &c., furnished free to all disposed to compete for the Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk.

Address D. D. T. MOORE,
Rochester, N. Y.

MOORE'S RURAL NEW-YORKER is one of the very best family journals with which we are acquainted. Its mechanical execution, its illustrations, and the arrangement of its contents are complete. The character of its editorials, communications, &c., are of the highest order. It must obtain a wide circulation.—*Louisville Journal.*

The RURAL NEW-YORKER, we say again, is as interesting and useful a paper as can be found in the State or Union. This is no puff, but our real sentiments, and expressed because justly demanded.—*Sackett's Harbor Gazette.*

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

## For both Country and Town Residents.

### TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies, one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

### Terms of Advertising:

ONE DOLLAR per square (ten lines—100 words, or less,) for the first insertion, and 50 cents for each subsequent publication,—*in advance.* ☞ With a single exception, the circulation of the NEW-YORKER is much larger than that of any other newspaper in the State, west of Albany. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen.—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brie advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fourth Volume commenced in July.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 10. ROCHESTER, N. Y.—SATURDAY, MARCH 5, 1853. WHOLE NO. 166.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper.**
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### MARCH.—FARM AFFAIRS.

"Thou variable Tyrant of the year!
March! in thy snow or frosty vestment clad,
Or making Nature weep a general tear,
Thou hast some attributes which make us glad—
Thou bring'st the sunny April showers more near,
And therefore do we take thy embassy,
Rude as it is, to be precursor sent,
Saying: 'At length the seasons do relent,
And flowery May all joyous ye shall see!'
Mild zephyr soon will kiss the buds and flowers,
And through the disentangled woods and bowers
Breathe his warm breath upon the waiting things,
That long to have their winter-closed springs
Unlocked as throat of tuneful bird that sings."

MARCH was the first month of the ancient Roman Calender—and so named in honor of Mars, worshipped by the Romans as the god of war—also supposed to be the tutelar deity of the city of Rome. By the heathen Saxons it was called Rhedmonth, in honr of their goddess Rheda; and by the Christian Saxons, Lentmonth, signifying spring-month.

March is regarded by many as the windiest, and, in not a few respects, the most disagreeable month of the year. The frequent changes from cold to quite mild, from cloudy to sunny, long ago established its character for great fickleness.

The temperature, as already remarked, is very variable—ranging from zero, and sometimes below, to 70 or more above.—The average mean, however, will not vary much from 40—probably a little below in this latitude. The evaporation is usually very great, generally exceeding the fall of rain and snow. This month is not unfrequently accompanied with severe and shifting snow-storms.

Vegetation not unusually begins to show indications of life toward the close of the month. The robin, blue-bird and red-winged blackbird usually make their advent during the fore part of the month. The earth-worms make their appearance towards the last. So do some species of the butterflies and some other insects.

The farmer now begins to feel that the days of his comparative leisure have nearly ended—and those of labor, and care and anxiety are just at hand. Although he may, as he looketh forth upon the days of toil that await him, feel a little at times as if he would avoid them if he could, yet he is rather glad, on the whole, that he is about to enjoy another season with a new opportunity to improve upon the labor and experience of the past, and so please himself a *little* better than ever he has yet done.

THE FARM WORK of this month consists of a repetition of that mentioned in the last, with regard to his live-stock. Cows and ewes, requiring still more vigilant care and attention. See that they are not only well fed with feed suitable for them at this season, but also well protected from the winds and the storms that prevail at this time in the year.

Do not during this month permit your cattle to tramp over your grass-land, thus breaking the sward and rendering it unoven. Every farmer should, if possible, have water for his stock in the yard, or very near the barn. Running water is always preferable if you can obtain it—but otherwise, dig a well and put a pump into it and thus supply your thirsting herds.

If hay be rather scarce use a little meal—cabbage if you have an ample supply—a few carrots—for carrots are an excellent article at this season for both cows and sheep. Besides taking care of the animals beforementioned, your fowls will require more special attention. If they are cooped they should be well fed and permitted to have access to the ground or should otherwise be supplied with gravel; their coops, or places of abode, should be limo-washed in order to destroy the vermin. They should be fed on corn, buckwheat, boiled potatoes, and occasionally on fresh meat.

The wood-pile should be cut and split and piled up in the wood-house the fore part of the month—for no prudent and provident husbandman who desires pleasant days within doors will neglect to have a good supply of dry wood always on hand.

Manures should be moved for top dressings before the frost is out of the ground, if this work has not already been performed. Fences may be put in order toward the last of the month—trees should be transplanted if not done last autumn—a few early potatoes, peas and a few other early garden vegetables should be planted, if the weather will permit. You remember how well you were pleased last season with early vegetables. If you would enjoy them again, get your ground in readiness as soon as it will do and put in the seed—with-hold not by reason of the cold, unless the earth be really frozen. Perform every work in season; so shall you prosper and be happy, though it is your lot to toil.—W.

### AN ESSAY ON LIQUID MANURES.

BY N. DAVIDSON REDPATH.

IN THREE PARTS.—PART FIRST.

THE value of the urine of animals, as a fertilizer of the soil, though long known and highly appreciated by the farmers of Holland and Belgium, began only to attract the attention of the Agricultural community of Great Britain about the commencement of the present century. A Scotch farmer by the name of ALEXANDER, near Peebles, was the first to direct the public attention to this important branch of rural economy. In 1812, Mr. ALEXANDER, through the medium of the Farmers' Magazine, addressed a letter to the well known Sir JOHN SINCLAIR, in which he describes a series of well conducted experiments regarding his method of collecting and applying it. He commenced, he says, by digging a pit or cistern contiguous to the feeding-stall, thirty-six feet square, and four feet deep, (surrounded on all sides by a wall,) the solid contents of which were one hundred and ninety-two yards. This pit he filled with loamy earth taken from the surface of some adjoining field under cultivation, and with the urine, conducted by a sewer from the interior of the building, he saturated the whole from top to bottom. The quantity conveyed to it he estimated at about 800 gallons. The urine was supplied by fourteen cattle, weighing about 476 lbs. each, and fed for five months on fodder and turnips. The contents of the pit produced 288 loads, allowing two cubic yards to be taken out in three carts; he spread forty of these on each acre, so that in five months, and from fourteen cattle, a compost was produced sufficient to fertilize seven acres of land. Mr. ALEXANDER states further, that for the ten years during which he had tried the experiment, he had indiscriminately used in the same field, either the rotted cow-dung or the saturated earth, and in all the stages of his crops he has never been able to discover any perceptible difference. He found, too, that his compost lasted in its effects as many years as his best putrescent manures.

Since the period above referred to, a more correct knowledge has been attained, by the practical farmer, of the value of liquid manures, with their various appliances and methods of composting. Science has shown that muck from swamps and marshes, or other matter replete with aquatic or vegetable substances, are better than more earth, as the urine acting on the fibrous matter promotes decomposition and fermentation, and thereby gives an additional value to the product.

The practice of the Belgian farmers, according to Mr. GEO. NICHOLS, in his Report on Belgian Husbandry, laid before the British Parliament, is to stall-feed all their cattle within doors during the whole year, and carefully collect all their urine into subterraneous vaults of brick-work. These *Urinaries*, of course, correspond in size with the extent of the farm and the number of live stock kept upon it.* The smallest, however, will hold a thousand barrels of thirty-eight gallons each; and in that quantity from two to four thousand cakes of rape seed, weighing two pounds each, will be mixed. About 2,480 gallons are generally allowed by the Flemish farmer, to the English acre. It is no uncommon thing for the Dutch and Belgian farmers to throw water upon their dung heaps, after fermentation, and these washings are alone carried to the field.—The straw and other matter which remain after these washings, they apply as manure for potatoes. While the utility of this latter method is exceedingly questionable, yet any system by which the urine can be saved must receive the unqualified approbation of every enlightened cultivator of the soil.

In Scotland, it has been ascertained that the quantity of liquid given by one cow daily, is 2½ gallons, or about 450 gallons in six months; but if fed upon turnips one cow will give a gallon of urine for every twelve pounds consumed. It has also been proved by experiment, that an ordinary sized person will pass daily half a gallon of urine, which when diluted with water would, according to the Flemish method, be sufficient to enrich half a rood of ground every year. It ought to be well known, that urine of every kind, when properly diluted with three or four times its quantity of water, forms a food highly nourishing to plants. "It should be diluted with water," says Sir HUMPHREY DAVY, "before being applied; because it contains too large a quantity of animal matter to form a fluid nourishment for absorption by the roots of plants." Although there is a difference of opinion regarding the state in which it ought to be applied with greatest advantage, yet it is universally conceded, with Sir HUMPHREY, that "it contains the essential elements of vegetables a in state of solution."

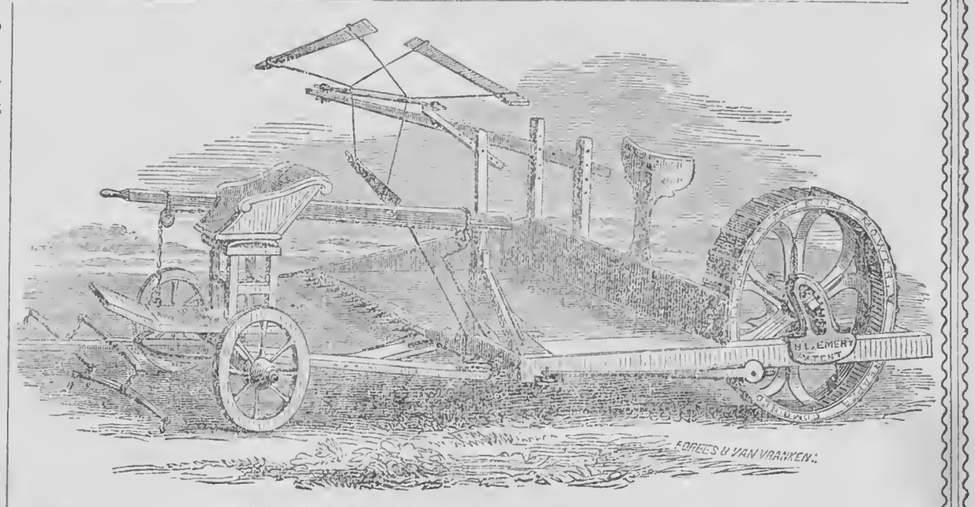
*In general these receptacles are forty feet long, fourteen feet wide, and seven or eight feet deep, with one aperture to receive the urine or other ingredients, and another to pump it up by. The best constructed ones are generally divided into compartments with valves to admit the liquid from one division into another; as it is found that age and fermentation add to its efficacy. When these tanks are built separately from the feeding stall, a circular form would be an improvement.

### HEDGE PLANTS.—THE HAWTHORN.

EDITORS RURAL:—In the various Agricultural papers of the day I perceive symptoms of apprehension in regard to the lack of timber for fences, and an occasional pen advocates live fences or hedges; but scarcely any two agree as to the most suitable plant for the purpose. This induces me to make a few observations on the subject, as I have given my time and attention for some years, to the making of hedges and raising hedge plants.

I will begin with the BUCK THORN, so highly recommended by theorists. No doubt in some localities the Buck Thorn may answer well, but I never saw a hedge made of it that was satisfactory. I have seen some that were considered good, in the town of Newburgh, but when without foliage the plants looked too devoid of beauty for an ornamental fence, and too willow-like, even at six years of age, to intimidate trespassers. I am much of the English farmer's sentiment, "its naught for fence," but I am willing it should have a trial—it may suit some, though my neighbors who have tried it, at great expense, are tired of it.

2d. CEDAR. This, I think, may answer well on some soils, but whether it will answer in all, is a question with me that requires solving; also how plants are to be propagated for the purpose—your correspondent in the RURAL of the 5th inst., perhaps can give some light on the subject.—The plan he has proposed will answer only on a small scale, for two reasons,—risk in transplanting, and the vast labor to collect plants and transport them from the woods and swamps to the place of planting.



EMERY'S REAPER AND MOWER COMBINED.
For description, and further illustrations of this recent invention, see next page.

3d. LOCUST. This, I think, may make a quick and effective fence, but rather unsightly for ornament. The common locust is unfit from its root rambling and undying, sucker-increasing propensities; but I am told the dwarf, or hedge locust, is innocent in regard to these evils—as all plants proper for hedges should be.

4th. THE NORWAY SPRUCE. This has also been recommended, and I surmise from the same cause that a certain horticulturist, a few years since recommended the Buck Thorn, the recommender having too heavy a stock for market on hand. Norway Spruce sown into fence boards, I doubt not, may make a good close or an open fence to suit some, but in no other way.

5th. OSAGE ORANGE. Like many other persons, I tried it on the advice of others, and without due reflection. Can it be supposed that a plant, a native of the torrid zone, can be suitable for hedges in this oft inclement climate? I think not—and in no case have I seen success result from its adoption. I am sorry it is so; the plant is formidable enough in all conscience, to make a hog grunt and turn tail—but so it is, our winters are too severe for it, and in clay soils it leaves out like clover, even when the plants are quite large.

6th. PRIVET. This is a plant well adapted to make an ornamental hedge, easily raised, retains its foliage a long time, looks well when bare of leaves, and grows in almost any soil.

7th. WILLOW. I know of no situation where this useful plant could be used to advantage for hedging. Cattle and sheep are too fond of browsing it.

8th. WHITE OR HAWTHORN. This plant answers in all situations where the apple tree thives. It is subject to the diseases of that tree; never throws up suckers; its cuttings will not grow; is easily raised, and if properly managed it makes a quick fence, and if not properly managed will *never make a good* fence. I have one now, planted four years ago the coming season, that is fit to throw open, and I shall do so in the spring.

Nurserymen and others, I know, are much opposed to the use of this plant for hedges. The reason is they know not how to plant it, or how to manage it after it is planted. Few, very few of those who come from Europe know any thing about—neither the English, Irish nor Scotch plan will answer here. In fact, it is impossible to lay down any one plant—the soil and situation has to be considered. One thing I will assert, without fear of contradiction. I have raised the Hawthorn hedge and plant to greater perfection here, than I ever knew it in England.

Furthermore, the White Hawthorn is perfectly hardy, retains its foliage, which is a beautiful rich green, quite late in the fall, and when stripped of leaves has a substantial and comely appearance.

When I commenced, I intended to have described some of my modes of planting and after treatment, but having written a more lengthy article on the various hedge plants than I intended, I fear now to trespass on your reader's time, and will take some further opportunity so to do, only, as now is the season for hedge planting, I will add a word of caution. If a hedge is wished for that will be impervious to dogs, fowls, cats, &c., avoid a double rowed hedge—for beauty, compactness, and durability, a single hedge, I know from experience, to be far superior to a double one.

I place my plants fifty to the rod—one thousand will plant twenty rods—this, in four or five years will make a formidable barrier, provided care be taken to replace defective plants the first two years. I begin planting in October, and continue to plant as long as the ground is open enough through the winter, until the last of May—the earlier planting is the best, as the plants are less retarded than those planted late. The price of planting here is one dollar per rod, with board, lodging and traveling expenses. For this the workman finds plants, prepares the ground, grading and removing obstructions excepted, looks after the plants, supplies dead or defective ones, if necessary, and gives up the hedge at the expiration of the season in growing condition—but he is not answerable for injury to the hedge by trespass. Four years will generally be sufficient to allow of its being thrown open, and each succeeding year will add to its strength and efficiency. W. M. B.

Skaneateles, N. Y., Febuary 9th, 1853.

### MY EXPERIENCE—NO. 1.

#### Potatoes.

A FEW years since I procured from a friend, some pure "Mercer" potatoes, which I planted in my garden for family use.—With the exception of the usual small fibrous stripes of red, they were purely white, and very fine for the table. I continued to raise them in my garden some three or four years—other kinds were also planted in the garden, such as the *red*, *yellow*, and *English* white, but none more deeply colored than the common *red*, and all in seperate patches. After three or four replantings of the "Mercer," I observed that they began to assume a dark hue; and the third or fourth planting produced potatoes which were almost wholly *blue*. So much so that one of my laborers found fault with them, and said that they "did not look fit to eat"—at the same time, saying that he would "let me have a few pure *white Mercers* for seed. I received from him some twelve or thirteen, which were certainly of as pure white color, *inside and out*, as any which I ever saw.—Wishing to keep them so, to use for seed, I planted them in a part of my garden, quite remote from my other potatoes—some 3 or 4 rods of space intervening between the patches. For the purpose of making the most of my seed I cut the potatoes before planting. They were well cultivated, with my own hands, and grew well. But, to my surprise, when I dug them in the fall, *there was not a white potato among them.* Every one of them was *blue*, and *very blue, too*—much more so than any of those which I had previously grown in my garden, or elsewhere.

This strange freak of nature completely upset all my preconceived notions, that "*like would always produce like*," or that "*every thing would produce its kind.*" I could not, at first, imagine how the change of color was effected. If there was *any mixing of the "pollen"* from the other potatoes in the garden, (which would seem to be very improbable, because of the large intervening space,) yet it was scarcely possible that *every one* of these potatoes could have been changed by that cause—and to a color too, (*blue,*) which was not found either in the *seed* or produce of any of the other potatoes. Satisfied that the cause of the change must be looked for in some other connection, I immediately set my philosophy to work to find it out. The soil of my garden was originally, in part, "black muck," or vegetable mould. My potatoes were usually planted in that kind of soil in which I supposed there might very probably be some impregnation of iron in one or the other of its various forms. That, combining with the juice of the potato, wherein is contained all the elements of fermentation, when sufficient heat is supplied, had caused the change of color. I had, many years since, been informed that light sandy soils would produce whiter wheat, rye, and other grains, than heavy clay soils. But, until the experiment was thus tried, I was not prepared to expect that a black vegetable mould would change the color of *white potatoes* to that of a *deep blue*. 'HIEL.

## CONDENSED CORRESPONDENCE.

### Poland Oats.—Potato Seed.

FRIEND MOORE:—The Poland, a new and extraordinary variety of oats, are but little known or cultivated in this part of the country, hence I send you a brief account of my experience in raising them. Some five or six years ago I received a small parcel (less than half an ounce,) by mail, from a gentleman in New Hampshire; I have cultivated them ever since, and no others. I first planted them with care, in good garden soil. The product was incredible—the birds, however, (being like most other bipeds, fond of new things,) destroyed a large portion of this and the succeeding crop. What remained of the second crop I sowed on a fair soil—probably capable of producing twenty bushels of wheat to the acre—and it produced a crop to look upon. The birds could make little impression on this field. The man who harvested it declared he never saw so handsome a crop before, and proposed to thresh them with a flail for what there might be over two hundred bushels. I never knew exactly how many were produced, as I fed a portion of them in the straw—but think it within the fact to state this third crop at two hundred bushels.—The Poland oats are white, large and heavy—very prolific—and require but a bushel of seed to the acre on a good strong soil.—They weigh from 40 to 42 lbs. per bushel, and are from six to ten days earlier than any I have raised before. The straw is stiff and tall, and the oats branch out equally on all sides, like a well balanced tree top.

Last spring I went in for a patch of Mr. LANGWORTHY'S celebrated seedling potato, the White Mercer. Along side, and in the same field, I had a patch of the Black Mercers, another new variety with me, and, of all others the most prolific, and the same which gave a yield of two and three-fourth bushels from a single potato. It is a fine table potato, the purple color of the flesh being the only objection which I ever heard urged against it. There were a great many potato balls on both varieties, and I saved quite a quantity of seed, a sample of which as well as of the oats I shall leave with you on my next visit to the city.—I. W. BRIGGS, *West Macedon, Wayne Co., N. Y.*

REMARKS.—If any of our readers wish to try a small sample of the oats, we are authorized to say that Mr. B., on the receipt of a pre-paid order, enclosing three letter postage stamps, will send a small paper of Potato seed, another of Tobacco seed, and enough to make up the half ounce in Poland Oats, to any part of the United States free of postage. This small remuneration is necessary to cover expenses of putting up the seed, &c.—EDS.

### Liming Gravelly and Slaty Lands.

MESSRS EDITORS:—Wishing to obtain some information with regard to the use of lime, I take the the liberty to make my wants known to you, in the hope that you or some of your correspondents will give my queries an answer through the RURAL. It is generally admitted that lime is beneficial on moist or cold land, but not on dry or gravelly land. I wish to know if experiments of its use on the latter have been carefully made, and what their results have been, also the amount used and the manner of application. The farmers in this section have been in the habit of using large quantities of gypsum for the past few years, but I think not with the same beneficial effects after a few applications, hence there seems a necessity for supplying its place in part by some other fertilizer.

We have had an unsually open winter,—one very favorable for stock as regards fodder, which is very scarce and consequently high. Hay is selling from $12 to $15 per ton and is not likely to be much higher, as our stock was reduced by selling off in the fall. I think the scarcity of fodder is likely to do good in some respects; for instance, cutting feed has been "all the rage" here, and it is a practice not to be abandoned after a thorough trial.—A. B., *Salem, Washington County, N. Y.*

### Abortion in Cows.

EDS. RURAL:—I noticed in No. 163, an inquiry as to chess causing abortion in cows. I cannot say but that chess may have that effect—it is a thing I am little acquainted with. I was educated from a child, a dairy farmer, and now have forty-two cows, and can say that I have had experience in this disease, for the last two years, that exceeds anything I ever heard of before.—Last year in a dairy of forty-two cows seven slipped their calves, and up to the present time this year, nine more. Nor am I alone in this loss; many of my neighbors suffer equally as bad, and even worse than myself. One of my neighbors, last year, lost fourteen in a herd of thirty-five.

With respect to myself, I can safely say that chess was not the cause. My feed consists of good bright herd's-grass, with a little oat straw—the same I always have been in the habit of wintering my cows on. I have plenty of good water, six rods from my stables, where the cows can get it easily. I always keep my cattle housed in storms, unless it is when they are out to drink.—They are all in good condition for dairy use. Nor are we a little puzzled to find a cause for this disease. It is supposed by some to be a contagious disease, by others to be caused by something in the feed; and by others to be conveyed through sympathy. I am of the first opinion; and as proof in my own mind, that it is not in the feed, two of my cows, last year, slipped their calves after they were turned to grass, one about the first and the other about the middle of June, and three more last fall before I commenced to fodder. One of my neighbors lost twelve before he commenced to fodder. It is a curious circumstance that not one of my cows, that lost their calves last year have this. If any of the readers of the RURAL who have had experience in this matter will give us the cause and a preventive they will oblige.—S. MARTIN, *Newport, Herkimer Co., N. Y.*

### "Information Wanted."

WE give two more queries upon which information is desired by subscribers. Who will answer them by facts and experience?

1. D., of Sheldrake, N. Y., "would like to enquire of those raising sheep, what breeds or kinds they think best for the farmer, the fine or coarse wooled, and where the best can be obtained, and the price?" We presume several different, and yet *true*, answers can be given to this question.

2. ROBERT CRIBB, of Racine, Wis., asks "where he can procure Guano, and at what cost per ton or barrel?" He also inquires about the Basket Willow, the price per hundred, &c., and the mode of preparing the same for market.

We shall be glad to hear from Mr. C., as he proposes.

## BREEDING HORSES.

THE report of the Committee on Horses, for the Chittenden County (Vt.,) Agricultural Society, contained some good remarks. In addition to the hereditary transmission of qualities, it observed:—"The progeny will inherit the united qualities of their parents. The good as well as the bad qualities will descend from generation to generation. Hence you will see the importance of a knowledge of the parentage, not only as to the sire but also as to the dam. Peculiarity of structure and constitution will also be inherited. This is an important consideration, though too much neglected, for however perfect the sire may be, every good quality may be neutralized, if not overcome by the defective structure of the dam. Let the essential points be good in both parents, but if there must be some minor defects in the one, let them be met and overcome by excellencies in those peculiar points, in the other parent. We would also advise you, to let your breeding mares be in the full vigor of life. Do not put them to the horse too young, and especially do not let your mares be incapaciated for work by reason of old age. If so, you may expect that the foal will have a corresponding weakness, and scarcely will a single organ possess its natural strength. Our farmers are usually too negligent in the selection of their mares. They are tempted to part with their best mares, and to breed from those which are inferior."

The Committee speak of a young horse of the Morgan stock, bred by Judge BENNETT, as having "great compactness of structure and action of the best kind."
